MISSOURI: The making of good roads is receiving more attention in Missouri now than was ever before given to any public improvement in the state. There is hardly a county that does not intend to increase its work on roads this year. St. Louis County, with 1165 miles of roads, 565 of which are of rock and gravel, recently decided by a vote of 12,706, to 2190 in favor of a \$3,000,000 bond issue, no part of which can be sold except to pay for a road the contract for which has been let to the lowest bidder and on which work is ready to begin. Besides the plans for local roads in every county, work is well along on one north-and-south and two east-and-west cross-state links of national highways.

NEVADA: The women of this state, under the leadership of the Women Citizens' League of Reno, are making an effort to have the Pittman land bill, which grants 7,000,000 acres in Nevada for schools, so guarded by Congress that the lands will be sold to actual settlers instead of to large holders and speculators. Past experiences are said to show that Nevada legislatures cannot always be depended on to protect the interests of the schools and of the state against ranchmen and influential speculators; that funds have been unlawfully diverted from the schools, and that under loose legislative methods the expense of selling school lands has been, in many cases, equal to the amounts received from the sales.

NEW HAMPSHIRE: The recently inaugurated movement for a revival of agriculture in New Hampshire is meeting with more success than its most sanguine friends expected. Eight of the ten counties in the state have already formally adopted the county agent plan. Sullivan County has set an example, which others are expected to follow, by employing two agents—a man and a woman—in order that woman's work on the farm may be made as efficient as man's. Under the county agent plan funds are available from the Federal Government and the New Hampshire College of Agriculture and the Mechanic Arts to afford the county organizations such assistance as they may require during the current year.

NEW YORK: For several weeks the New York City Commission on Building Districts and Restrictions has been holding hearings at which residents and property owners in different sections of the city have given their views concerning city planning as against haphazard building. The instability of real estate values caused by the location of unsightly factories, tenements, etc., in fine residence sections and by the invasion of retail districts by small manufacturers has created much dissatisfaction with present methods. Hence the effort of the commission to assemble all the suggestions possible in the hope that from them a plan may be evolved for future building operations which shall encourage the esthetic and sanitary as well as the commercial advancement of the city.

NORTH CAROLINA: It is the announced purpose of the association which has the National Music Festival of America in charge to make Black Mountain, in this state, "the greatest musical center in the world." The festival this year will include a presentation of "The Creation" and "Elijah" by the New York Symphony Orchestra of 100 pieces and a chorus of 1000 trained voices under the leadership of Walter Damrosch, and next season's program, already in course of preparation, is to be much more elaborate.

NORTH DAKOTA: After extensive and convincing experiments made last year, Bottineau County early this spring began a systematic campaign for the complete extermination of gophers, which, it is estimated, destroy more than \$1,500,000 worth of grain in North Dakota every year. Under the direction of the county board and the United States Department of Agriculture every acre in the county is to be treated with a strychnine solution known to be safe and effective. Each township is supplied with enough oats and strychnine to treat all lands within its boundaries, the cost, which is from 2 to 4 cents an acre, being assessed against the township, whose board is to see that every acre is treated. If the results are satisfactory a state-wide campaign will be instituted.

OKLAHOMA: The entire state is aroused over what is known as the Oklahoma City third degree case. It seems that Loren Wilson, a boy of eighteen, never before arrested, was charged with having stolen a suit of clothes by the unsupported statement of another boy who had been first arrested for the theft. Wilson denied the charge, but it is said the police beat him so unmercifully that, after three days of this brutality, fearing for his life, he made a false "confession." For many days afterward doctors said he was in a precarious condition. When arraigned in court he withdrew his statement to the police and the judge said there was no evidence against him. State Commissioner of Charities and Corrections Matthews has notified the Oklahoma City Board of Commissioners, in substance, that if they do not prosecute the police he will.

PENNSYLVANIA: It is reported that the University of Pittsburgh is preparing to establish a course in aviation in honor of Prof. Samuel P. Langley, whose pioneer experiments, so cruelly ridiculed thirty years ago, are held to be responsible for the successful heavier-than-air flying machines of today, since his failures were due solely to want of a proper engine, which was not then available. In addition to being a fitting, tho belated, tribute, a course in aviation is declared to be one of the prime needs of preparation for our national defense.

WEST VIRGINIA: Judge H. C. Hervey of the Circuit Court, sitting in Wheeling, has set a precedent which, it is said, will be followed in all cases of injunction granted to restrain owners from permitting their property to be used for the illegal sale or storing of liquor. In granting a permanent injunction Judge Hervey declared the property a public nuisance and assessed not only the ordinary costs against the owners, but added \$100 as a fee for the attorney who prosecuted for the state. As several similar cases are on the dockets of the state, it is expected that this ruling will be contested in the higher courts.

HOW WASHINGTON HEARD THE PRESIDENT'S MESSAGE

BY ONE WHO LISTENED

WHEN Washington waked up on the morning of the 19th of April, it read the morning paper as usual. Then the telephone bells began to ring, and every member of the House of Representatives, every senator, every judge, every head of department, every ambassador, and everybody else who could be supposed to have influence, was called from his breakfast or his morning mail to say that it was impossible to supply the tickets asked for to admit those at the other end of the wire to the House of Representatives at one o'clock to hear the message of the President.

There were 600 tickets, and to say that 6000 people wanted them, and believed they were really entitled to them, is to speak with studied moderation. My own case was certainly not exceptional. I had sent my luggage to the station before I saw the morning papers, counting on the eight o'clock train for New York. I decided, of course, to stay and hear the President's speech. Three friends joined me—each with wide and influential acquaintance. Each began to use the telephone, calling up congressmen, cabinet officers, journalists, senators, ambassadors, friends. The replies were perfectly friendly, even solicitous, but perfectly uniform: "To grant the request is impossible." From the Speaker's office came word that only eight persons could occupy eight chairs. From the press gallery the statement that 250 at least wished to be provided for in space crowded with one-fifth the number. From one of the great embassies the statement that only a single ticket was available for the whole staff. Every Congressman consulted had already assigned his one ticket, and could neither beg, borrow nor steal another.

But at one o'clock I stood within the chamber, and heard the applause as the President followed the members of the Senate up the aisle, shook hands with the big Missouri Speaker, whom the whole country likes to call affectionately Champ Clark, and, erect and grave, faced the men comprizing the national Congress,

and the galleries brilliant with color and having no empty chair.

Fifteen minutes later the Speaker's gavel fell, and the joint session was declared adjourned.

In those fifteen minutes the President of the United States had reviewed the history of the submarine warfare waged by the Imperial German Government during the past fifteen months, and uttered the fateful words that, unless that government should "now immediately declare and effect an abandonment of its present methods of warfare against passenger and freight-carrying vessels, this government can have no choice but to sever diplomatic relations with the Government of the German Empire altogether."

As the clear-cut sentences of the compact message fell upon the ears of those who listened, there was no demonstration of approval or dissent—every man and woman was tense and eager, keenly conscious of the vital import of the words, and the profound gravity of what might follow as their consequences developed.

The message itself all have read. There was no request for action by Congress—no opening for discussion, then or later. It was made clear that the final decision had been made, the ultimate word spoken: "We owe it to a due regard for our own rights as a nation, to our sense of duty as a representative of the rights of neutrals the world over, and to a just conception of the rights of mankind, to take this stand now with the utmost solemnity and firmness."

When the President said, with

deepened emphasis, "*I have taken it, and taken it in the confidence that it will meet with your approval and support,*" the audience obviously felt the thrill, but was still silent and intent, as the closing hope was uttered that "the Imperial German Government, which has in other circumstances stood as the champion of all that we are now contending for in the interest of humanity, may recognize the justice of our demands and meet them in the spirit in which they are made."

As the last word was spoken the Congress rose, and hearty but moderate applause, beginning with the adherents of the Administration, extending to the opposition, and then to the galleries, express or seemed to express a general approval of the spirit of the address, while it left on one mind at least a sense of reserving final judgment as to the complete effectiveness of the message.

Following the applause, the President, tall, stately, and stern, left the chamber; the House was called to order; and the further consideration of the agricultural bill, which was interrupted to give way for the joint session, was resumed in the usual prosaic fashion.

I fell in with a member of the Administration on my way to the street, and he express some disappointment that the ultimatum had not been a shade more definite and "ringing," as he express it. A foreign journalist of high ability said it was "all right," and in line with his own recent predictions. The people on the street car with whom I rode back to the city were mostly talking

about something else. Washington had enjoyed the surprise which the President had given it, appreciated its dramatic quality, and was ready to turn to other things.

The man in the White House, who must use the first person singular and say "*I have taken it,*" goes back to his desk, and waits for the answer that the man in Berlin will make to the demand which, in the name of a hundred millions of people, was in that fifteen minutes made upon the German Empire.

OUR CROWN OF PRAISE

BY KATHARINE LEE BATES

A praise beyond all other praise of ours
This nation holds in jealous trust for him
Who may approve himself, even in these dim,
Swift days of destiny, the soul that towers
Above the turmoil of contending powers,
A beacon firm, while seas of fury brim
The world's long-labored fields and vineyards trim,
Remembering forests and unconscious flowers.
Our nation longs for such a living light,
Kindred to stars and their eternal dreams,
A steadfast glow whatever breakers roll,
Cleaving confusions of the stormy night
With gracious lustres and revealing gleams,—
Longs for the shining of a Lincoln soul.

THE AMERICAN FLYING SQUADRONS

BY HAROLD HOWLAND

THE uniform was not unbecoming. Or to my sense of the fitness of things—the entirely commendable masculine substitute for the deplorable feminine vice of vanity—assured me as soon as I had it on. The big khaki overcoat made me feel military and official. The little khaki fatigue cap—a Glengarry bonnet without the ribbons—made me feel jaunty. The yellow puttees—*real* puttees made of endless strips of cloth wound round and round the legs in neat and graceful spirals—satisfied an ancient longing bred of an earnest perusal of attractive pictures and enticing advertisements in English sporting periodicals. The starred and striped bronze shield on the cap and the gold AA on the collar of the overcoat infused me with a warm glow of patriotic altruism.

Here I was, for the moment a perfectly good member of the transportation squad of the American Ambulance.

In the late afternoon a couple of dozen of us were loitering in the courtyard of the American Ambulance—we should call it a hospital at home—at Neuilly, just outside the walls of Paris. Some of the drivers were looking over the motors of their ambulances, filling petrol tanks and radiators, pumping up tires, making certain of connections and adjustments. We orderlies were chatting, smoking or playing with Margot, the guardian magpie of the Ambulance, picturesque in his brave coat of white and purple and green and blue and bronze. We were waiting for the call to action.

L'ambulance Americain is a splendid institution. It occupies, by grace of the intelligent coöperation of the French Government, a fine group of buildings in the suburb of Neuilly, just outside the Maillot gate of Paris. The buildings are perfectly new; they were built to house a school, the Lycée Pasteur. When the war broke out they were all but completed, and the government promptly requisitioned them and turned them over to the group of American volunteers who offered to cre-

ate a modern hospital equipment for the care of the French wounded.

The Ambulance has two different aspects—hospital and flying squadrons. To describe the former would be a little commonplace; for a hospital is, after all, only a hospital—even when it is thoroly modern, generously equipped and ably managed. It is true there is something unusual about this hospital, a spirit, an atmosphere, a quality. It is an organization of amateurs, in the real sense of that hardly used word. They are in it not for gain, nor for fame, nor for any worldly advantage; not even for patriotism; but for the love of it. They work without pay, without publicity or popular applause for the individual, with only the sense of a good job well done for brother men as intangible reward.

THIS spirit of service, keyed up to concert pitch in some cases perhaps by a touch of the spirit of adventure, has produced some interesting phenomena. The wife of one of the leading men in the Ambulance organization is a lady of so-

cial prominence in the American colony in Paris. In the course of her daily activities—for she, too, is a worker among these volunteers—she found that she was getting coöperation of a high order of intelligence and fidelity from one of the orderlies. His appearance seemed somehow tantalizingly familiar to her, but not quite familiar enough. So one day she put the question squarely:

"Have I not known you somewhere?"

"Not exactly," was the reply. "But I have often waited on you at dinner. I was the second footman at Lady —'s."

The service of humanity is a great leveler.

Another orderly was a gilded American youth of quite unnecessary wealth. He was a splendid orderly, quite as good as the second footman—but, by the same token, not a bit better. Which should afford comfort alike to the believer in aristocracy and to the devotee of democracy.

Consider the case, now, of Mr. X. He was the Paris representative of a great American drug house. When

the war broke out his job vanished into thin air. He straightway volunteered for service at the Ambulance, and his special knowledge and training fitted him into an appropriate corner as pharmacist. He soon became indispensable. But before many months had passed word came from the home office of his concern that a splendid position was waiting for him if he would return at once. The choice was a hard one. One of his Ambulance chiefs wrote to his employers, without his knowledge, telling of the important work he was doing for the Ambulance and asking if the position at home could not be held open for him. But the time when he must sail for America or lose the opportunity came and no reply had been received. He had to decide—and he did not sail. He chose to sacrifice his opportunity rather than the inconspicuous service. Then the letter came; and it contained a whole hearted recognition by his employers of his unselfish desire and a

WAITING FOR THE TRAIN

WHERE THE WOUNDED COME INTO PARIS

The red line and green benches are on the right, the operating room on the left

promise that the chance at home would be kept open until he came back.

In one obscure corner of the Ambulance may be found at any hour of any day an American woman who has lived in Paris a decade or so as a portrait painter. Her official job is that of supervising the supplies of linen bandages, and such like hospital supplies. But she has developed, by the application of sheer feminine wit and Yankee ingenuity, an astounding ability as an inventor of mechanical appliances for the treatment of surgical cases. Modern shrapnel and shell fragments and bomb splinters have a devilish inventiveness in producing new problems in reconstructive surgery. But their ingenuity is nothing to hers. Let us imagine a scene:

The little cubby hole where the mistress of the linen chest presides. Enter a surgeon.

Surgeon—"Here's a new one for you, Miss Y. This *poilu* has a smashed up arm. We've set the bones, but the nerve centers are affected so that he can't bear the slightest pressure on any part of the arm. We must suspend the arm to relieve every bit of pressure, and at the same time it must be possible to have motion in the elbow joint to prevent its stiffening and becoming useless. We don't know of any appliance that will do the business. Please make us one."

Miss Y. (with such a look in her eyes as an artist might have when trying to pierce thru the flesh and blood semblance of his sitter to the portrait behind) — "Um—yes. Yes—I see. Give me till tomorrow."

When tomorrow comes the appliance is ready, made perhaps out of a couple of splints, a wire or two, a piece of string, and—one is inclined to suspect—a hairpin. But it works, and the surgeons marvel once more, and before long surgeons from other hospitals drop in and go away with some new ideas in their heads that it took a simple American woman—with an artistic temperament—to discover for them.

Then there's—but the boys of the flying squadron are waiting in the courtyard, and the call to action has just come. The adjutant has come to the

door of the Ambulance and announced, "Everybody down to La Chapelle. Three trains coming in tonight."

LA CHAPELLE is a huge barn of a freight station—in the piping times of peace. Now it is a well organized receiving station for the wounded from the front. It lies well out toward the city walls on the northeast, where the enemy's trenches are still less than fifty miles from Paris. As our bunch of a dozen ambulances filters into the station yard, there are already scores of other cars there and more arriving every minute. They are military ambulances, cars from other hospitals, and those provided by the splendid organization of the women of France which has done the finest kind of service for their wounded countrymen. We line up our cars, take out the *brancards*, the little four legged stretchers that have already borne thousands of smashed up soldier bodies, and set ourselves to wait. Trains from the front do not come in on time. The railroads from over there are very busy things; and more often than not the wounded have to make way for troop trains and food supplies and ammunition stores. So we wait.

As we wait, we grumble. For that is the inalienable prerogative of the man of action when he has nothing to do. We grumble at the military authorities—we *know* how easy it would be for them to get their trains in on time if they only wanted to. We grumble at our own officers—they might have let us stay comfortably at the Ambulance until the trains were really coming, if they only cared anything for our well being. We grumble at the whole thing. We recount the hours that we have spent in useless waiting, we bewail the sleep that we have lost because some one has been stupid. We declare roundly that we are *thru*, that we shall refuse to come down the next time the call comes, that we shall quit the Ambulance. We are a bunch of two dozen assorted grouches.

Then, when five hours of waiting and grumbling have pounded us into mutinous misery, there is a stir of life thru the station, the atmosphere becomes electric with expectation, a train slides in. Where are the grouches now, where the grumblers, where the mutiny? Where are the snows of yesteryear? You only see a group of fellows in khaki, eager, cheerful, tense like terriers at a rat-hole or football players ready for the referee's whistle. Youth does not like to wait, but youth does like to do.

There is admirable system in this station; lost motion is conspicuously absent. Let us keep the train standing for a minute while we look about. The wounded, poor devils, have nothing to do but wait.

Next one wall of this huge oblong barn lies the train, a score of ordinary freight cars, with here and there a special hospital car donated by some good friend of France—or of humanity. Beside the train are four barracks like portable houses, painted severally red, blue, green and yellow. They are empty now. Three other similar houses provide offices and sleeping quarters for the administrative force, and an emergency operating room. Open spaces at either end of the station hold benches around great braziers filled with glowing charcoal. A kitchen, spotless and fragrant, occupies one corner. Around one brazier are nurses in

FEEDING THE WOUNDED JUST LANDED FROM THE TRAIN

THE KITCHEN AT LA CHAPELLE

Sister of Mercy garb; around the other lounge a half company of infantry men, of the middle aged reserve type, without arms. Army officers, surgeons, gendarmes, ambulance drivers and orderlies fill the intervening spaces in shifting groups.

Now the car doors are opened. The infantrymen, *brancardiers* now, pick up their stretchers, two men to a *brancard*, and enter the cars. They lift their wounded comrades on to the stretchers and carry them into the barrack, the red, the blue, the yellow, the green. There come the Sisters with hot soup and great baskets of bread to feed and comfort the uncomplaining sufferers. Once one hears a scream of pain as a shattered body is lifted to a stretcher; but it only serves to emphasize the general rule of stoical endurance. Your mercurial Frenchman knows how to suffer with his tongue between his teeth.

AS each barrack fills, clerks go down the line of stretchers and copy down on cards—four names to a card—the particulars of each case as shown upon the slip pinned to each man's clothing. They try, so far as possible, to put like cases together. Each card is marked with the color of the barrack in which the group lies. In the office these facts are entered in record books; then the officer in charge assigns each group to some one of the hospitals in the city. The cases are now ready for transportation—and here we come in.

I have been standing with the driver of the car to which I have been assigned, watching the *brancards* go by. He is a British-American, chauffeur to a Philadelphia captain of industry. When the war broke out he wanted to enlist in Kitchener's army; but his family already had six boys at the front or in training and his parents did not want him to go too. So he got a leave of absence from his employer and joined the American Ambulance, to "do his bit" in one way if not in another.

Out comes our senior officer and hands Harry a card. He takes a look at it and assigns me my job:

"Get eight *brancardiers* and come to the red barrack."

It is a totally inexperienced but entirely willing orderly that approaches the non-commissioned officer by the brazier and

ventures in his best French—of Stratford-att-Bowe:

"*Huit brancardiers, s'il vous plait.*"

Almost to my surprise, I get them, and stride off to the little red house, swelling a little with the pride of my first military command. Harry has meanwhile hunted up our charges in the red barrack. My *brancardiers* pick up the four stretchers, lug them out to our car, and under my confident direction slip them into place in the ambulance body. Harry cranks up, we mount to the front seat, and roll off thru the dusky, deserted streets of Paris to the appointed hospital. This time it is the improvised government hospital in the Palais des Beaux Arts, on the Champs Elysées. It might have been any one of hundreds of other hospitals in and about Paris. There are all kinds, from the great military hospital of Val de Grace to little private ones of the type characterized as possessing "only a license and a clinical thermometer." Our second trip takes us out to the American Ambulance with a quartet of surgical cases; the Ambulance is noted for its excellent surgical work, and the authorities are glad to turn the hardest kind of cases over to the volunteers from over the water. They know from experience what splendid results are achieved by the Yankee surgeons out there, and what fine care and nursing the *poilu*—the French Tommy Atkins—gets from the Yankee girls. The *poilus* know it, too; it is good for American eyes to see the contented

smile with which the poor fellows take the news that they are going to *l'ambulance Americain*. It has a reputation, that Ambulance, all thru the army.

Which reminds me that I heard only two criticisms of the Ambulance during all my stay. One was that it was equipped and managed too extravagantly. Not, mind you, that money was wasted; there was no suggestion of that. But that the work could have been carried on with something less than the finest and most elaborate equipment; and those responsible for the direction of the work had refused to be satisfied with anything less than the best. Well, that's good American doctrine. There's just one way to take any possible sting out of that particular criticism. Let the folks at home go on supporting the Ambulance in such generous measure that it can always afford the best.

The other criticism is that the Americans spoil the French boys that fall into their hands. Which again is hardly a criticism to be vigorously resented.

Our second load safely delivered at the Ambulance, we slip off to bed for a few hours, for the third train is not due now till eight o'clock in the morning. In the long dormitory we drop off without sleeping potions; grumbling mutineers no longer, but healthily tired young men, satisfied with our job and looking forward already to more of it next day. Bright and early we are at it again. This time the train brings in, quite on time, a load of convalescents and *mala-des*, the victims not of German shells, but of exposure and disease germs.

Harry and I this morning draw a consignment of "birds"—just whence came this not unfriendly epithet as applied to all kinds of *blessés* and *mala-des* I do not know; I only know its universality in the Ambulance vocabulary—to go to a sanitarium, run by a sisterhood thirty miles from Paris. It is a delightful trip under a warm September sky thru a smiling bit of the pleasant land of France. We lunch royally at a quiet inn, the only possible suggestions of war about us a single biplane that goes booming across the sky and the uncanny dearth of men in the village and on the roads, for a fine Sunday

A SECTION AT THE FRONT

THE AMBULANCE AT NEUILLY

morning. Then back to Neuilly, ready for the next night's work.

So goes the life in one of the flying squadrons. But this has been easy compared to a week ago. The G. O. G.—the grand general offensive—had just begun then, and the wounded poured into Paris as thru a broken dike. One night, they said, there were two trains standing alongside the La Chapelle station and one inside, and eight more waiting in the yards outside the city to come in. Wounded men were taken from the train on the very *brancards* on which they had been picked up where they fell. The mud of the

trenches was thick on stretchers and uniforms. The dressings on shattered arms and legs, on mutilated heads and faces—so many of the wounds in these days of trench fighting are about the head—were the blood-soaked emergency bandages of the dressing stations just behind the firing line. These grimly patient *poilus* were hot off the fire—the hellish hot fire of a modern battlefield. They came in a running flood like a mountain stream under a torrential rain.

The flying squadron was ready for them. While the flood persisted, those quondam grumblers, who in their hours of idleness were all resolved to “quit,” took neither sleep nor rest. For three full days, making no difference of night and day, snatching

“SOMEWHERE IN FRANCE”

Down on that plain an American Ambulance section has lived and worked for months under fire and been rewarded with the Croix de Guerre

random bits of food at curious hours, they drove their cars, lugged stretchers, cheered their broken charges with cigarettes and genial chaff, and “stayed on the job.” You see, it isn’t doing his job that such a man dislikes, it’s waiting for the next job that’s to be done. Men are like that; at least these ambulance fellows are. It makes one glad to be American.

THIS is one flying squadron. I tell about it, for all of this I saw, and a tiny part of it I for a moment was. But there are other flying squadrons, “somewhere in France,” doing the same faithful, unremitting, merciful work. Those others, tho, lead a more thrilling life. Close behind the battle line they live, and work—and grumble when they have to wait.

They live under fire all the while; they drive their cars blithely over roads pitted by bursting shells; they play at hide and seek with hissing shrapnel and earthquaking “Jack Johnsons”; they lead breathless lives—and they bear charmed lives. There is nothing they do not dare, when the wounded *poilus* need them—and daring, “get away with.”

The *poilus* love them, the people of France bless their careless, selfless, chivalrous devotion, the military authorities bestow upon them their most coveted honors. A score of them already have won the Croix de

Guerre, the Victoria Cross of France. Last July one of the ambulance sections was cited in the divisional order of the day in these hearty words:

“Composed of volunteers friendly to our country, it has never ceased to draw attention to itself by the dash, the courage and the zeal of all its members, who, careless of danger, have employed themselves without respite in assisting our wounded, and have thus acquired their gratitude and friendship.”

This is the way the people of France appreciate the splendid service that the men of the American flying squadrons are rendering in their time of national suffering. Here is one aspect of the great war in which the American people need feel nothing but pride.

WHAT YOU CAN DO FOR THE FLYING SQUADRONS

THERE is no work being done by Americans for alleviating the suffering caused by the Great War that should make a stronger appeal to the support of the people of the United States than this of the American Ambulance in Paris. The entire expense of the work of the Ambulance is borne by Americans thru individual contributions. The expense is considerably more than \$1000 a day. In the sixteen months ending with the first of February, 3760 patients had been treated at the Ambulance, most of them serious cases, for the high quality of the Ambulance's equipment and treatment causes the French authorities to send there chiefly the grands blessés, the dangerously wounded. The transportation service of the Ambulance both at the front and in Paris has in the same time carried 105,000 wounded. To carry on this great work and maintain it on its present high plane of effectiveness, new and increased contributions are continually needed.

\$1.25 will pay the salary of a trained nurse for one day.

\$1.65 will keep a patient for one day. (This includes medical attendance, drugs and foods.)

\$37.50 pays the salary of a trained nurse for one month.

\$400 pays the traveling expenses of a nurse and her salary for six months.

\$600 will support a bed for a year. This bed will be marked in the name of the donor and the nurse in charge will send reports about the work. You or your society or church can be represented in this way.

\$1500 will buy, equip and maintain for six months an ambulance which will be marked in the name of the donor. The volunteer driver will report to the donor regarding the work the ambulance is doing.

Cities, societies or communities can arrange for the support of wards to bear commemorative names.

It is a noteworthy fact in relation to the financing of this work that the contributions are sent to the Ambulance without the deduction of a single cent for expenses of administration, office rent, secretary or clerk hire, printing, postage or advertising, so that every cent of every dollar goes directly and entirely to the purpose for which it is contributed.

The wounded get it all.

Give your subscription to your own bank, which will forward it to Messrs. J. P. Morgan & Co., the financial agents in New York of the American Ambulance Hospital in Paris.

A PROPAGANDIST BOMBARDMENT

DE LLOYD THOMPSON FLYING OVER WASHINGTON ON APRIL 15 AND DROPPING FIRECRACKER "BOMBS" TO SHOW HOW EASILY HOSTILE AIRMEN COULD ATTACK THE CAPITAL. A FEW DAYS LATER HE TREATED NEW YORK TO A SIMILAR OBJECT LESSON. THE TRAIL OF SMOKE LEFT BY HIS MACHINE SHOWS HIS DEVIOUS COURSE

THE VANISHING GENTLEMAN

BY LOUISE COLLIER WILLCOX

AUTHOR OF "THE HUMAN WAY," "THE ROAD TO JOY"

HE passed very quietly and quickly. One might almost assert that it was accomplished in one generation. The fathers still held a tradition of which the sons were unaware. There was no pomp and circumstance about the end; there was very little lamentation.

Mrs. Comer proclaimed loudly and eagerly the vanishing lady. She raised a pean of praise to the housed, headachy, hampered mid-Victorian type and she saw no good in the candid, athletic, open air, open minded creature who replaced her. But has anyone spoken of the vanishing gentleman? It is said that the bustle and hurry of modern life is the cause of his passing and one must admit that it is in the mart, in the centers of commercialism that one meets his successor. I have conversed with him in his office with his hat on and a cigar in his mouth. I have met him and lunched with him, when he was a representative in Congress, and winked across the table at a confrère when anything amused him. He is short and incisive of speech and definitely prefers bad grammar. In certain localities and grievous to state, from one university, he is capable of sitting in the presence of ladies, with his feet higher than his head. Yes, he even spits! He is the apotheosis of the lowbrow in manners. His speech is wrecked on a false ideal of freedom and ease; his traditions are huddled up under aggression and haste; his manners are sacrificed to a false democracy.

Since the days of Confucius, men have been outlining and defining the gentleman. We have been told that it takes three generations at least to make one. But I have seen two generations of perfect gentlemen produce the up-to-date hoodlum.

There are varying theories as to where a gentleman begins. It used to be the theory that if the heart was right, the manners followed. If I read William James aright, he says that we begin to cry and then are sorry and I know the New-thought prophets say that if you will but persistently smile, you will become happy; ergo, perhaps if you make the manners, the heart will grow right.

There are certain schools, one, at least, in this country and two in England who still lay stress upon all their graduates being gentlemen. Winchester has carven all over it "Manners maketh man." And of a certain school, in our land, it is said

that you can always recognize a representative by the way he apologizes for a mistake or an inadvertency.

Some one asked a Southern gentleman to define the difference between a Northern and a Southern gentleman, "Well," he said, "the difference is this, one is born in the North and in a different environment, with different traditions, but whatever his thinking and his trappings, the gentleman part of him is just the same as the Southerner's." For after all being a gentleman is having a trained heart, just as being a scholar is having a trained mind. There is a hero of fiction whose life maxim was *tristem neminem fecit*. This type of gentleman may be found in every walk of life. He may load coal or collect pictures for a profession and live in an attic or a palace, but he is trained not to sadden or insult his fellow-sojourner. He may be a college professor or a butler, but at heart he is courtly and self-restrained. He may be a gentleman because he owes it to other people, or because he feels that he owes it to himself, but he has learned somehow to "go softly." He is thoughtful because thoughtlessness may do injuries; he is gentle because he knows that he is not alone in the world and that each person in it has a claim to consideration. He has been trained to believe that the world must be kept lovely as well as vigorous. Laffadio Hearn speaks somewhere of someone who "never did anything which is not—I will not say right, that is commonplace—but beautiful." This then is the aim of manners, to make life beautiful.

When one unexpectedly runs across a gentleman in an unexpected spot, it comes over one with a rush of pleasure, that a gentleman was after all nearly as wonderful a thing as a lady. Life is more fluid, more colored, freer in his presence. He is not listening for an inadvertence; he is taking his hearer on trust and for granted and he sets him at ease. He wants no advantage and he refrains from bullying or browbeating.

Oddly enough, this definition of a gentleman is some two thousand years old.

"A gentleman has nine aims: to see clearly; to understand what he hears; to be gentle in manner; dignified in bearing; faithful in speech; painstaking at work; to ask when in doubt; in anger to remember difficulties; in sight of gain to remember right. His modesty escapes insult;

his truth gains trust; his earnestness brings success; his kindness is a key to open men's hearts."

Tho the species is vanishing, there are still gentlemen in the world, and if the ideal were held aloft and waved there would still be many who would enroll themselves in the order of those who believe in the value of fine manners.

Paul Elmer More has recently made an eloquent plea that there should be a conscious solidarity at the core of the aristocratical class; that class which is capable of finer discriminations into grades of taste and character than exist in untutored nature. Tho he speaks for scholarship and moral and political standards, the result would include the manners also of the Vanishing Gentleman.

Norfolk, Virginia

ELECTRIC COACHING

A novel electrical device for keeping a crew in perfect time with the stroke is being tried out this spring on the rowing machines at Cornell University. Its purpose is to synchronize the movements of the eight oarsmen who make up the crew, so as to produce a single smooth pull from their eight separate efforts.

The apparatus is a very simple one, described in *The Cornell Daily Sun* as "a series of tiny electric bulbs, a red and a white one in front of each oarsman, with a set of eight together, one representing each rower, in front of the entire combination.

"Pulling the stroke oar of the combination, number 8, lights all of the white lights down the row and the one representing stroke in the group in front. Then as each of the other oars is pulled the individual red lights, together with the given one in the front group, flash on. Exact correspondence of action between the red and white lights in front of any oarsman shows that he is in time with the stroke. Exact correspondence of the eight lights of the group shows that the entire crew is rowing in perfect regularity."

The mechanism has the double advantage of making a complete and accurate record and of freeing the overworked coach from much of his routine observation and so enabling him to devote his attention to perfecting the oarsmen individually in necessary points of form and style.

The chief point of interest in the invention is the peculiar design of the switch, which is so arranged as to complete the circuit on the forward stroke of the oar and to break it instantly on the beginning of the return. The inventor of the apparatus is W. F. Beachey, a 1917 Cornell man.

JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

HIS Preparedness talk," said the Cynical Sciolist, with an angry glance at his newspaper, "makes me everlastingly tired."

"Me, too," said the Genial Philosopher, nodding his head approvingly.

"More than that, it gives me a positive pain in my spiritual innards; and the worst of it all is that there doesn't seem to be any kind of concoction known to the *materia medica* that can relieve it."

"I am glad to hear you say that," said the Cynical Sciolist. "I don't know how, but somehow or other I'd got the notion in my head that you were for Preparedness."

"O I am," said the Genial Philosopher. "I am for Preparedness to the last turn of the wheel. That's why I suffer so acutely from all the *talk* about it. Talk is a first-class weapon of Offense, but for Defense it is a rimless zero, and we are wasting more good, bad, and indifferent English on the subject than would be needed to supply an ordinarily loquacious world with gab for a thousand years; and it's all so futile!"

"Still," said the Cynical Sciolist, "I had supposed that an ordinarily sane man like yourself would be against War—War, the most heinous, hideous, hateful crime in the whole category of the Divvle's offenses against God and Man, combining as it does all the others, murder, arson, theft, rapine, false-witness, blasphemy, covetousness—"

"That'll do—I know," interrupted the Genial Philosopher. "You don't have to give us the whole bill-of-fare. I'm as familiar with the list as any of us. I read a snappy little article once entitled *The Decalogue* that told all about 'em. It was divided up into Ten Chapters, very short, and called *Commandments*. They gave us a fairly comprehensive idea of the things we'd better not do if we wished to lead a comfortable, happy, and moderately healthy life. You ought to read them over some time, Mr. Sinnick. I fancy you can get them at most any bookstore if you'll ask the clerk for—"

"O Tut!" retorted the Cynical Sciolist. "You needn't think you are the only man in the world who has ever read the Ten Commandments."

"Well, then, if you have read 'em, old man," smiled the Genial Philosopher, "perhaps you will recall one very concise little Chapter that has always seemed to me to be a complete résumé of all the others. It ran something like this: *Honor thy Father and thy Mother that thy days may be long upon the land which the Lord, thy God, giveth*

thee. Remember that? Wasn't that a first-class plank for any kind of a human being to stand on? Eh? What?"

"None better," said the Cynical Sciolist, "but I fail to see what it has to do with what we were talking about. We started in on the subject of *Preparedness*."

"I'm afraid that is the trouble with many of us," sighed the Genial Philosopher. "We fail to see what that little injunction has to do with many things. We think we are honoring our Father and our Mother when we sit down and tell their grandchildren what corking good people they were, when as a matter of fact we are not honoring them at all. We are only gassing about them. If we really honored those dear old people we'd take stock of all the fine creations of their genius which have become our heritage—our splendid institutions, not their pies—our wonderful country made habitable and fructiferous by their toil and self-sacrifice; and we'd demonstrate the honor in which we held them by resolutely resolving that no conceivable combination of earthly circumstances, no conspiracy of hostile forces either inside or outside of our borders, should ever invade or destroy, or take from us and squander on others, the splendid fabric in which their very life's blood was interwoven."

"What is it, Sir, but the persistent Preparedness of our forebears that has made of you and me the most perfect specimens of human horticulture known to the ages? From the dawn of that great day back in 1620 when they first landed on Plymouth Rock, with that marvelous cargo of Highboys, Four-Poster Bedsteads, and Fiddle-Back Kitchen Chairs, that has propagated even faster than the guinea-pig, the rabbit, or the common-garden housefly, it has been old *Semper Paratus* that has ruled the roost. Life was, and has ever since remained, just one endless sequence of Preparations. It was the man who was Unprepared with a good husky wood-pile who either curled up and expired in winter, or accumulated an internal surplusage of frigidity, traces of which are even today to be discerned in the manners of the most exclusive social circles of the Hub."

"Later on it was nothing but the Spiritual Preparedness in the hearts and souls of Washington, Jefferson, Hamilton, Franklin, and the rest of those gallant old ancestral heroes of ours, that preserved our Liberties for us in the free air of America rather than in alcohol in a bottle in the British Museum. And what's more it was the lack of Preparedness that enabled those same cousins of our's once removed to come again to pay us a party call and make a pretty little bonfire of our Capitol Building at Washington."

"And so it has gone from the begin-

ning. The solid, substantial growth of this Republic of ours has not been the result of mere chance, but of foresight and preparedness. The reasonably well-made thing they have handed on to us, not for our own selfish enjoyment, but to hand on to *our* children that they in turn may pass it on to theirs. We may not care much for our country ourselves. Some of us may have grown weary of it—but that doesn't alter our duty. *It isn't our exclusive possession. It is entailed, and we are acting today merely as Trustees for Posterity! We MUST protect the Trust!*"

"O Posterity nothing," sniffed the Cynical Sciolist. "Posterity! What on earth has posterity ever done for us?"

"An old question, my friend," said the Genial Philosopher, "and one of the easiest to answer. *Posterity has done pretty nearly everything for us*. Those poor infants of the future have built our railroads for us. They are up to their chins in debt for our postoffice buildings and our water supply. They owe millions—some three hundred of 'em—for our Panama Canal. The unconstructed cradles made of unplanted trees, and to be occupied by millions of unborn children ten generations hence will be taxed for all these splendors that you and I enjoy today. If you don't believe it foot up the totals of the Bonds floating about the market today, payable in 1947, 1999, 2028 and 2135. *What has posterity done for us?* Why man, we of this generation have been playing the middle against both ends for a quarter of a century. We have accepted the glorious gifts of a watchful ancestry, and mortgaged the prospects of a helpless series of generations yet to be born; and the least we can do in return is to honor our Fathers and Mothers by preserving intact, and defending to the last gasp, the goodly structure they have built up; and to vow by all that we hold most sacred that when it finally does pass into the hands of posterity, there will be not less than seven cents' worth of equity left in the property after the mortgages have been paid."

"Ha! Hum!" said the Cynical Sciolist. "There is something in that. I hadn't thought of it in just that way. And you think this nation needs—what? Just what to make it right?"

"A stiff dose of spiritual ginger," said the Genial Philosopher.

"And a little knowledge?" suggested the Cynical Sciolist.

"No," said the Genial Philosopher. "A little knowledge is a dangerous thing. We already have too much *little knowledge*. What we really need is a good deal of knowledge—knowledge of the kind that will teach us that while *hindsight* is very revealing, *foresight* is the only safe insurance for a house that is not fireproof, and built in a world red with the flames of war."

DEMOCRATIZING THE MOTOR CAR

BY ALBERT L. CLOUGH

EVERY important invention that conduces to human comfort or efficiency has, when first introduced, been appropriated almost exclusively by the rich. It could not be otherwise, for the apparatus embodying it is developed at great experimental cost, is at first produced very expensively in very small quantities; and is very costly to operate and maintain because of its crudity and inefficiency. Gradually, however, the experimental stage passes; it is produced more economically in larger quantities, is perfected so as to give more economical service, and can thus be bought and used more cheaply. Little by little a larger class can afford to buy and use it, and its employment is gradually popularized, this wider use being reflected in lower prices due to quantity production, so that in time its benefits accrue to all classes of society.

Electric lights, the telephone, cameras, and even watches, are a few among countless available examples of this economic phenomenon, but no better illustration could be chosen than the automobile.

Motor car history, condensed as it is within the last fifteen years, is familiar to all, but it may be worth while to note certain of the influences which have transformed the automobile from the exclusive vehicle of the wealthy to the accepted conveyance of all but the least financially favored classes. The fact that this process is even now going on at an ever-quickening rate gives it especial interest. It may safely be taken for granted that the desire for automobiles is and has long been practically universal, and that the sole impediment to its gratification has been the pecuniary one. Thus, the discussion of the democratization of the motor car narrows down to a consideration of how the cost of acquiring and of running one has been and is being reduced.

Sweeping reductions in prices of cars have certainly been the principal factor in realizing the "motor age" which is now being entered upon, and a few of the causes contributing to lower prices for cars will here be mentioned. These may mostly be summed up under the head of economies in cost of production and the reduction of the manufacturer's profit upon the individual car.

By all means the most important condition acting to reduce the productive cost of the finished vehicle as delivered to the user is the enormous increase which has been made in the scale upon which cars are now

built. There is a cumulative action here, for the more cars there are built, the cheaper they can be produced, and the greater is the resulting demand, which can be met only by more cars built at a still lower factory cost.

Mainly thru the influence of a few concerns which equipt themselves to build more cars in enormous numbers, automobile prices have been forced down to the point at which the general public can purchase, and at present a small number of such manufacturers are producing a large proportion of all the cars being turned out, while the tendency is strongly toward a further concentration of production.

What are some of the advantages enjoyed by the manufacturer of 100,000 cars annually over the manufacturer of 1000 cars annually, in point of low cost of the individual finished car delivered to the user?

In order to keep its name prominently before the public the big plant need spend little more on advertising than the small one, and the advertising cost per car is much lower in the case of the former. The very largely used car advertises itself; the other gets little of this kind of publicity.

The maintenance of local selling branches to dispose of 100,000 cars calls for an outlay in no way proportionate to that required for distributing 1000 cars and the vending cost chargeable to each car is much lower in the case of the larger manufacturer. And the agent of the large manufacturer disposes of so many more cars annually than the small manufacturer's agent that he can afford to accept a lower commission.

Manufacturing upon a stupendous scale implies the buying of raw materials in colossal quantities, and therefore at prices lower than the smaller manufacturer can secure. The largest scale operators, moreover, can secure materials conforming to their own specifications as to quality and form and thus more economical to use, while the small operator may have to be content with stock materials.

Not only raw materials but finished component car parts, such as axles, radiators, transmissions, and the like, can be bought much cheaper in immense quantities, and the big manufacturer, again, can secure parts built to his specifications, while the small one may have to accept standard parts.

Obviously, it costs little or nothing more to design a model of which 100,000 cars are to be manufactured

than one of which 1,000 are to be produced, and thus the engineering, drafting and pattern making costs per car are much lower in the case of the big concern.

In order to minimize labor costs, extremely expensive special dies and machine tools are required, and sometimes the special apparatus for economically producing a single part costs tens of thousands of dollars. The cost of such apparatus is necessarily divided among the parts which it is used to produce, and the larger this number is, the smaller is the charge per part for such equipment.

The division of labor, with its great economic advantages, can be carried much further in the immense establishment than in the smaller plant.

And finally, the immense concern can operate profitably on a smaller profit per car than can the small one.

Leaving the effect of stupendous scale production upon the reduction of productive costs and selling prices, there are certain other factors that have made possible the low-priced car.

No longer is there any considerable experimentation required in bringing out a car of ordinary model, for practise is so thoroly standardized that the expectations of the drafting room are very nearly realized on the road. Manufacturing operations have been greatly reduced in number, complexity and time, and special automatic tools have immensely curtailed the human labor required. The development of the automobile parts industry, a gigantic recently organized business, which is as highly developed as the automobile industry itself, has cut down costs greatly. Motor car manufacturers can now buy from their specialized producers very many component parts at lower prices and of better quality than they themselves can make them.

The result? For from \$600 to \$700 one can now buy a better four-cylinder touring car than was obtainable at any price six or seven years ago, or for twice this sum five years ago. Six-cylinder, five or seven passenger touring cars, not long ago the exclusive possession of the wealthy, can now be bought around \$1100, or less than good "fours" sold for five years ago. Closed cars, until lately a most exclusive type, are now sold as low as \$650, and sedan or other closed bodies for touring cars for \$200 or so.

All attempts by certain manufacturers to bring out exclusive "inno-

LONDON AND
NEW YORK

The Course that Fits the Average Man and Woman for Mental Domination

Have you been as successful in life as you thought you should have been, with your capacities? Then, again, look at your health. You may think it is fine, and it may appear to be, but does it impart to your brain that vivacity and virility it needs, and without which it cannot exercise its greatest abilities? If it does not, you are missing much of the joy of living.

Then, what about your business? You tell me that you have not made a fortune yet, and that fortunes are not to be made nowadays; that it is not your fault, but that you are a "Creature of Circumstances." Now this is hardly correct; men **do** make fortunes—thousands of them do—and these are the men who have developed and trained their brains; so that we are not really "Creatures of Circumstances." The fact is, we are just what we **MAKE OURSELVES**, nothing more and nothing less. **YOU** are just what you made **Yourself**, either consciously or unconsciously, and the same law applies to your business. If it is not a flourishing concern, it may be either because you have not the power to combat difficulties when they arise, or because your ordinary everyday ideas are wearying to those with whom you wish to do business. I wonder whether you would go to a gloomy, pessimistic, uninteresting person when you had the opportunity of dealing with a happy, genial, optimistic business man? As to the limp, over-done, go-as-you-please feeling that you so bitterly complain about—well, it is just the state of your Blood, Nerves, Brain and Mind. Yes, that is just it; most of your troubles are due to the fact that you have not your **MIND** under proper control. Imagine what life would be like if you could **RE-MAKE Yourself**. Just think of it!

The Course Re-makes Men and Women

How about the women who succeed? What are the qualities that make success for them? Why, it is just that indefinable "something" that we call Personality, or Magnetism. That's it! Appearance and Character, a developed mind in an attractive-looking body. Perhaps the most important class to which we have to appeal is the housewife—she who rocks the cradle truly rules the world. Do you wish to develop that tact and sweetness of character that makes you firm but kind, loved and loving, with the foresight to control the home and hearth, making it your little world of happiness? A healthy and genial appearance, intelligence, quickness of thought and an understanding, capable, and sympathetic intuition—all these go further than merely educational Training.

You may **appear** outwardly to be all right, and yet you know you are not at your best. I will show you the reason, and how to overcome it.

A Happy and Successful Life

Throughout this Course the Mental side predominates, but part of it deals with Physical Efficiency Training, and it is a marked advance over anything yet brought forward for the rapid cultivation of Health and Physical Fitness. The simple exercises rapidly bring the student to a high state of glorious, exuberant and overflowing health and energy which makes life a joy, and in itself this forms a perfect foundation for a happy and successful life.

CHAS. A. WASE, M.A. Ph.D.
Longacre Building
1476 Broadway, New York

A NEW LIFE FOR YOU!!!

Have you considered why it is some men and women succeed while others fail? Have you considered why some businesses go up by leaps and bounds while others, in spite of the greatest efforts, do not succeed? Have you considered why some people are content with a menial position, with poverty as a reward in old age? Have you considered why some people enjoy good health while others are never ill but never well? Have you considered why some people are vivacious and full of expression while others are faded and expressionless? Now, there **MUST** be a cause for all this. **THERE IS:** The law of cause and effect teaches us this. *But what is this cause?* I will tell you. Success or Failure depends upon—
(1) Your Mental Condition.
(2) Your Physical Condition.
(3) Knowledge of how to apply what you know. The vividness, ingenuity and inventiveness of your thoughts depend upon the quickness of your brain to generate nerve power, while these in turn are dependent upon the richness of your blood, the sunniness of your disposition, the sureness of your concentration, the strength of your will, and the reliability of your memory. It is the harmonious development of *all these that insures Success.* The Nicholson-Wase Course of Mental and Physical Efficiency trains the entire person. **IT FITS YOU FOR A BETTER BUSINESS AND SOCIAL POSITION IN LIFE—IN FACT, IT MAKES YOU LORD OF YOURSELF!**

THE NICHOLSON-WASE MENTAL AND PHYSICAL EFFICIENCY TRAINING COURSE GIVES YOU:

Virility of Speech—Power to Combat Difficulties as They Arise—Shrewdness in Business—Strength of Purpose—Power of Observation—Retentive Memory—Power of Facial Expression—Graceful Carriage—Strong Nerves and a Balanced System.

vations" in motor cars have failed; for example, the eight-cylinder car was originally marketed at about \$2000, but cars with this type of motor are now marketed at below \$1000, while twelve-cylinder cars at first introduced at almost \$3000, are now obtainable at \$1000. Knight motored cars, introduced at \$4000, are now to be had at \$1000. In short, when a desirable innovation has been introduced at a high price, it has soon been popularized by sweeping price reductions.

Leaving now the democratization of the automobile thru reductions in its first cost, a few reasons why it may now be more economically operated will be mentioned. The repair bill, formerly the strongest deterrent against owning a car, has been shorn of its terrors, as all car parts are now of such materials and proportions as to be proof against breakage and premature wears, assuming that intelligent care is given them. A modern car should serve several years and cover at least 25,000 miles without any important repairs. People generally have now learned to use and care for automobiles, destructive driving speeds are no longer "good form" and roads have been so improved as to reduce wear and tear.

Until recently most manufacturers sold touring cars weighing nearly or quite 4000 pounds; necessarily such cars consumed tires and fuel at an excessive rate. It is to the credit of the general public that it never believed in these heavy cars. Praise for initiating the modern movement toward light cars must be accorded to the manufacturer of America's most popular light car, the name of which has become a household word.

The employment of improved materials, such as alloy steels, and of designs which place every bit of properly formed metal just where it is needed for strength, have brought about much of the weight reduction which is responsible for light four-cylinder cars of from 1400 to 2400 pounds and for sixes well below 3000 pounds, but the introduction of the small-bore, high-speed motor has also been an important factor.

The faster a motor is run the more explosions it makes in a given time, and the greater horsepower can be obtained from a certain number of cylinders of a given capacity. By lightening the pistons and connecting rods, by enlarging the valve openings and improving the lubrication, American designers, following the lead of European engineers, have more than doubled the speeds at which their motors can safely be

"Not the name of a thing, but the mark of a service"

No lamps can ever be marked
MAZDA unless they embody
MAZDA Service standards
of excellence

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

By William Brown Meloney

A spirited challenge to the patriotism of America as stirring in its way as Owen Wister's "The Pentecost of Calamity." *Boards* Fifty cents.

Shakespeare's Theater

By Ashley H. Thorndike

Professor of English, Columbia University.

A volume of large interest to readers of theatrical history as well as to students of Shakespeare. *With unusual illustrations*, \$2.50.

Jack London's New Novel

THE LITTLE LADY of the BIG HOUSE

"A novel of large significance and unquestionable interest, executed with the fine finish, even the fine flourish, of an indisputable master."—*Book News Monthly*. \$1.50.

THE MACMILLAN COMPANY, Publishers, NEW YORK

operated and have nearly doubled the horsepower obtainable from a certain number of cylinders of a certain size. Thus the weight of a motor capable of developing a certain horsepower has been greatly reduced and the total car weight has been reduced more than accordingly. Increasing motor speed proportionately reduces the mechanical stresses acting on shafts and other transmission parts, and permits their elements being made of lighter weight.

The development of lighter cars has greatly reduced that "bugbear" of motoring, the tire bill, and the introduction of better designed springs, the more rational distribution of car weight, the reduction in tire prices, the passing of the "speed mania," and the more general understanding of how to care for tires, have all contributed to this result.

Fortunately for the user, the modern high speed motor is not only lighter but is more economical of fuel, horsepower for horsepower. Not only so, but in recently designed cars no effort has been spared to secure high gasoline economy. Carburetors and fuel-feed systems have been improved and great pains have been taken to heat the fuel charge properly as it enters the cylinders, with the result that these modern light cars, even the sixes, run much further on each gallon of fuel than the cars of a few years ago. Economy of lubricating oil is also marked in the modern small-bore motor, with its tight pistons and oil-proof crank case and the prices of lubricants are lower than formerly.

With all these factors reducing the purchase prices of cars and the cost of running them it is not strange that the number of automobiles has increased so that there is now one car owned in the United States for each fifty persons, and that the purchase of cars has increased rapidly even thru the recent period of hard times.

This process of democratization of the automobile bids fair to continue until a car is owned by every family in the land, which possesses any appreciable margin of income over actual living expenses.

Manchester, New Hampshire

Judge—You let the burglar go to arrest an automobilist?

Policeman—Yes. The autoist pays a fine and adds to the resources of the state; the burglar goes to prison, and the state has to pay for his keep.—*Life*.

Our esteemed contemporary says that in reciting "Sheridan's Ride" at the Methodist Church festival last week we looked and acted like a jackass. We could retort in a way that would embitter the man's whole future, but we have learned to pass such things by. Suffice it to say that he is an infernal liar and a crawling scoundrel!—*Leesville (Col.) Light*.

The New Books

BUSINESS AND GOVERNMENT

That government is primarily a matter of economic systems and relations was but a few years ago a dogma of a small political party; today the proposition is the center of earnest and heated controversy, and the fundamental issue in approaching political contests. Professor Samuel P. Orth, of Cornell University, has gathered some of the most important studies and essays on various aspects of *The Relation of Government to Property and Industry*, in a volume that should be of value to the lay student of practical administration of a modern democracy, as well as to the college students for whom the "readings" are primarily intended. The material is classified roughly into seven divisions, dealing respectively with the changing conception of property and of government, response of legislatures and courts to new demands, the police power, corporations, commissions and boards as instruments of regulation, labor laws, and the tendency toward federal control of commerce and industry.

The Relation of Government to Property and Industry, by Samuel P. Orth. Ginn. \$2.25.

TRAINING FOR WORK

It is a promising sign when those who address the public on matters of public concern take the pains to explain what it's all for. If we always insisted upon a definition of aims we should save ourselves the trouble of attending to a deal of talk and writing. In *Learning to Earn*, J. A. Lapp and C. H. Mote have undertaken to discuss education in terms of the kind of life people want to live. In addition they have discussed the problems not merely on the basis of opinions and pious wishes, but on that of expert knowledge. The method, equipment and spirit of these authors are commended to all who sit down to write for other people to read. The authors point out that "democracy" requires a certain distribution of the advantages of civilization, and show the relation between traditional educational methods and the life that was common when these were established, and the maladjustment between these educational elements and the life of today.

After this survey attention is directed to the need for a continuation of education for those who "go to work." The methods of the various grades of schools, in their relation to the modern needs, are explained briefly—and adequately. The types of specialized education, their advantages and disadvantages are presented in terms of human beings living and adjusting themselves to further living. There is an excellent

The Highest Choice

Do not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

DON'T BE ONE OF LIFE'S WOODEN SOLDIERS—
YOUR FOOT RAISED BUT NEVER MARCHING

EFFICIENT LIVING

By EDWARD EARLE PURINTON

Author of "The Triumph of the Man Who Acts"

This book by one of the greatest personal efficiency experts in the country is intensely practical and inspirational in its application to everyday problems of self analysis and self expression. It aims to teach everyone, young or old, the science of self management; how to preserve health and physical tone, to increase personal resourcefulness, social equipment, earning power and happiness.

12mo. \$1.25 net. Postage 10 cents.

THE INDEPENDENT,

119 West 40th St., New York

chapter on the opportunities for the library to meet the vocational needs of today and tomorrow. There are chapters on vocational guidance, the training of teachers, work and culture, training for citizenship, meeting the cost, and "the ideal school."

The outlook of the authors is comprehensive, and sympathetic. They see the social advantages of increasing the workers' efficiency, but also the danger of exploiting this efficiency for the benefit of the employer too exclusively. They are not deluded by the frequent association of unemployment with lack of training and they see in vocational efficiency something more than increased wages.

Not too technical for ordinary folk, every parent should make an effort to read this book, while for educators there are few books on this subject likely to be of so much value.

Learning to Earn, by John A. Lapp and Carl H. Mote. Bobbs-Merrill. \$1.50.

AT HOME AND ABROAD

SICILY

The story of *Taormina* is ancient tho little known history. Little remains to the town save its beauty, but that still lures travelers, and to these Ralcy Husted Bell's account, with its attractive pictures, will be of interest.

Hinds, Noble & Eldridge. \$1.25.

THE LAND OF THE NILE

W. Laurence Ball has prepared an excellent, well illustrated handbook, *Egypt of the Egyptians*, which includes a history, a study of the present conditions and the influence of the foreigner, data for the tourist and a bibliography.

Scribner. \$1.25.

ON LAKE MICHIGAN

Among the many attractive drawings with which Earl H. Reed illustrates his records of *The Dune Country*, the sandy lands of the eastern and southern shores of Lake Michigan, are several etchings which deserve warm mention for the delightful sense of space and motion.

Lane. \$2.

PORTUGAL

Some space in *Portugal of the Portuguese* is taken by such vital facts as the population of districts and per cent of wooded areas, but A. F. G. Bell tells also of the picturesque life of the peasants and enlivens his guidebook by amusing scenes from the sixteenth century but still living pages of Gil Vicente.

Scribner. \$1.25.

BIG GAME

Moose, grizzlies, caribou and white Dale sheep are the animals Harry A. Auer hunted in the far north, and tells of in his *Camp Fires in the Yukon*. The appendix contains notes on the appearance and habits of these animals, and the illustrations, from pictures taken on the trip, are singularly clear.

Cincinnati: Stewart, Kidd. \$1.75.

PICTURESQUE AMERICA

John Martin Hammond's *Quaint and Historic Forts of North America* is something new in travel in America. Till one turns the attractive pages one does not realize how many military mementoes, outside the region of the Civil War, there are upon these shores. Mostly Spanish, French and Dutch, very picturesque and full of interest they are, as the many and really beautiful illustrations show.

Philadelphia: Lippincott. \$5.

SPORT AND ARCHEOLOGY

Mr. Roosevelt's recent essays, gathered under the title, *A Booklover's Holiday in the Open*, range from the Andes to Canada,

and from California to Zambesi. To him hunting includes a study of any and every animal he sees, including the personality of the guide. The future of the Indian shares interest with the future of our wild birds. This hunter finds this world so full of a number of things that he is never uninterested nor uninteresting.

Scribner. \$2.

THE SHAKESPEARE TERCENTENARY

FOR THE TERCENTENARY?

The two books in which "Brander," as his Columbia students call that facile essayist, Professor Matthews, has made his greatest contribution to literary scholarship, *Shakspeare as a Playwright* and *Molière*, have just been reissued in handsome dress—each with a fine frontispiece, in a "University Edition."

Scribner. \$2 each.

THE SHAKESPEARE MASQUE

The article on the Shakespeare Tercentenary by Percy Mackaye, published in *The Independent* for April 10, contained several extracts from *Caliban*, the masque that is to be given late in May at the Stadium in New York. The entire text, with illustrations and descriptions of the scenery and action, is now on sale.

Doubleday, Page. paper 50 cents, cloth \$1.

WHEN BURBAGE PLAYED

The intelligent reader who wants to learn in considerable detail what scholars have found out about *Shakespeare's Theater* will do well to read this book by Professor A. H. Thorndike of Columbia. He will particularly enjoy the common-sense handling of controverted questions and the rather lively picture of the Elizabethan public. Some repetition mars a well-rounded presentation of a large body of fact.

Macmillan. \$2.50.

IN SHAKESPEARE'S HONOR

Louise Ayers Garnett has written a delightful play, *Master Will of Stratford*. The prolog and epilog are pictures of the boy Shakespeare in his home, the play itself his dream in which mingle Sir Thomas Lucy, Queen Bess and the Fairy folk, destined to be immortalized later in "A Midsummer Night's Dream." The play takes in so many characters that it will be especially useful for a club or school wishing to include a large number in a tercentenary celebration.

Macmillan. 50 cents.

HALF A DOZEN STORIES

MEXICO

Chained Lightning, by Ralph Graham Taber, is the story of two youths, telegraph operators in Mexico. It is a well told account of adventures among the mining camps and Indians, and in the more civilized parts of the country.

Macmillan. \$1.25.

ARABS

Masoud the Bedouin, by Alfred Post Carhart, is a volume of vivid, dramatic pictures of desert life. A few deal with the missionary in relation to the native, but most of them are tales of modern Bedouin life and excellent stories.

N. Y. Missionary Education Movement. \$1.

IN FAERYLAND FORLOREN

With an excellent foreword John Galsworthy introduces us to the whimsical beauty, strange simplicity and natural romance of W. H. Hudson's *Green Mansions*. We have here the tale of an elusive passion in a tropical forest, a passion that is thwarted but immortal, the true love of a spiritual ideal.

Knopf. \$1.50.

THE ETERNAL BATTLEGROUND

The Mastering of Mexico by Kate Stephens, tho a tale thrice told, is also a

tale told rather differently from its predecessors. We have here a narrative of the exploration and conquest of Mexico based on the artless story of a sixteenth century adventurer, that is interesting at a time when Mexico is once more remodeling her destinies.

Macmillan. \$1.50.

A NEW ENDING

In *The Spinster*, Sarah N. Cleghorn has developed a character to a logical climax. The incidents of Ellen Graham's life in a Vermont village, her girlish talks at Radcliffe, the experiences which go to the forming of her social consciousness, are well described. Thru struggles, amusing, pathetic, fine and very real, she finds a solution, not matrimony, of the problem of what to do with her life.

Holt. \$1.35.

A GENTLE TALE

In his dedication "to Pity and Faith" James Lane Allen strikes the keynote of his latest story, *The Cathedral Singer*, a pseudo-sermon disguised as fiction. Sentimentality is its chief characteristic, and a multiplicity of words effectually conceals most of its meager action. The Cathedral of St. John the Divine in New York City, which "flings across the land its spiritual shaft of light," is taken as the text.

Century. \$1.

ON SUNDAYS

SUNDAY SCHOOL LESSONS

The Monday Club publishes yearly a volume of *Sermons on the Sunday School Lessons*. These are for the International Series. They are by well known preachers and often deal with the subjects from a standpoint quite different from the usual lesson helps. They should be suggestive to teachers of older classes.

Boston. Pilgrim Press. \$1.

LIGHT BEARERS IN MANY LANDS

One of the most inspiring books published by the Missionary Education Movement is Miss Margaret E. Burton's *Comrades in Service*. There are eleven sketches of the life and work of noted servants of enlightenment and progress in many lands. Jacob Riis, Dwight L. Moody, Grace Dodge, Chundra Lela, of India, and Kaji Yajima, of Japan, will indicate their character and range.

Missionary Education Movement. 60 cents.

WHY I BELIEVE

Dr. George Williamson Smith, formerly president of Trinity College, Hartford, writes *A Short Apology for Being a Christian in the Twentieth Century* in the form of a reply to a letter received from a friend who announced that he had been led to repudiate Christianity by the claims of science and historical criticism. One by one the attacks are met, and a belief in the Bible, the atonement, the resurrection and the supernatural justified.

Longmans, Green. 80 cents.

SACRED HISTORY IN COLOR AND LINE

Too much praise cannot be given to the *Atlas of the Historical Geography of the Holy Land*, designed and edited by Principal George Adam Smith, and prepared under the direction of the well-known cartographer, J. G. Bartholomew. The best historical scholarship has been united with the finest facilities for map making in the production of these sixty clear and beautifully colored maps and plans and the notes, explanations, chronological tables and bibliographies.

Doran. \$7.50.

CHURCH EFFICIENCY GUIDE

The new conception of the church as the servant of the community is calling for new methods. To make the organization effective in these new ways it is necessary to know the needs, the environment, as well as the resources of the church. How to secure this knowledge and make it available in church work is concretely set forth

in Rev. Charles E. Carroll's *Community Survey in Relation to Church Efficiency*, a splendid guide for workers in city, town and country parishes, and profusely illustrated with charts, diagrams and photographs.

Abingdon Press. \$1.

HANDY BOOKS

PIGEONHOLES FOR IDEAS

In the *Universal Plot Catalogue*, H. A. Phillips advises those who have taken the short story as their job as to the collection of plot suggestions and their filing in a plot file warranted to keep ten thousand items handy enough for even the most unsystematic genius.

Larchmont, N. Y.: Stanhope-Dodge. \$1.20.

WHAT THE WORLD DID IN 1915

In combining comprehensiveness, convenience, compactness, promptness and accuracy the *American Yearbook* is unique among the annuals. Merely as an index to important articles it is worth the money. Its surveys of recent progress in arts, science, literature, religion, government and business are useful to any one who wants to keep up with the procession.

Appleton. \$3.

A UNIVERSAL WHO'S WHO

Of course we have marked "keep in the office" on A. M. Hyamson's *Dictionary of Universal Biography of All Ages and All Peoples*. Each notable has a line, with his dates and nationality. Giving only the data needful for further research, this has many times the number of entries to be found in other biographical works and is invaluable for ready reference.

Dutton. \$7.50.

REAL CRITICISM

The *Brief Bibliography* of books relating to Latin-America prepared by Peter H. Goldsmith, Director of the Pan-American Division of the American Association for International Conciliation, differs from most bibliographies in that the author tells just what he thinks about each book in frank and often very uncomplimentary language. But nowhere is such drastic criticism needed more than in the voluminous and in large part worthless literature of Latin-America.

Macmillan. 50 cents.

ESSAYS: GRAVE AND GAY

A NOVEL ESSAY

Dr. Frank Crane has written a charming and philosophical book entitled *Adventures in Common Sense*. In it he has explained why he exchanged a certainty for an uncertainty, and has given other biographical details. His exploitation of a new note in literature provokes attention. Dr. Crane has deftly snatched the essay away from superannuation, and by his enthusiasm and skill, has given it virility. It will pay any one to read this little volume.

Lane. \$1.

THE ROMANCE OF A LIFE

In his book of memoirs called *My Harvest*, Richard Whiteing carries us lightly over 300 odd pages of excellent reading. He tells of his life discursively, with a keen humor, much historical knowledge and a convincing sense of values. The introduction of celebrities is liberal, but not overwhelming, the theme of self so unusually unobtrusive that we close the book regretfully feeling that we have just failed to become intimate with a charming personality.

Dodd, Mead. \$2.50.

"THIRD LEADERS"

Short discussions of all sorts of non-political topics, from the Victorian Age to Horse Chestnut Burrs and Learners and Teachers, are to be found in *Modern Essays*, a collection of sometimes wise, sometimes witty and always pleasant pa-

JOURNEYS TO BAGDAD

Charles S. Brooks plays gracefully with
the English of Lamb, even of Sir Thomas
Browne, and the leisurely whimsical essays
of *Journeys to Bagdad* are charming even
tho today's journalist may call them "pre-
cious." But why this recent fashion in
pictures, when wood engraving may be so
beautiful, of harking back to the style of
Webster's Spelling Book?

Yale Univ. Press. \$1.50.

A LIVELY SHILLALAH

Nothing save Japanese tea is quite right
to the eyes of Marian Cox, as she sets forth
her views in the vivacious essays of *Ven-
tures in Worlds*. One would sometimes
agree with her did she leave out the rea-
sons for her beliefs, but her scientific
proofs lead to an extraordinary universe,
and it is hard, for instance, to lay the
entire problem of domestic service to our
unintelligent interest in music.

Kennerly. \$1.25.

JAPANESE FLOWER ART

The Japanese idea of flower arrange-
ment is that one perfect individual
flower, together with leaves and stem,
is more beautiful than masses of them
bunched together.

In the Flowery Kingdom they work
wonders with their flowers. They make
calendars of them. They tell stories
with them. They symbolize aeroplanes,
dainty women and everything else by
means of floral units, which we in
America would use merely for a
bouquet. The folklore and mythology
of Japan are often vividly exprest in
flower arrangement.

In arranging flowers, the Japanese
try to place them in the same position
that they would naturally take. An
American would put a bunch of
cherry blossoms into a vase, upright;
a Japanese would place the branch in
a horizontal position, such as they oc-
cupy in growing.

By using special containers and sup-
ports, the Japanese make flowers last
twice as long as we do. In arranging
flowers in a receptacle they trim the
leaves from the stalks below the water,
and for a short distance above. This
gives the flower the appearance of
growing. By taking a piece of bamboo,
the Japanese will conventionally place
flowers in it in such a way as to repro-
duce a ship in a calm or in a storm.

The Japanese do not like the rose
and the lily. Flowers that have thorns
are cruel and those whose petals drop
off symbolize inconstancy. The cherry,
wistaria, magnolia, azalea, peony,
camellia, peach, plum, maple, pine,
chrysanthemum, iris, lotus and morn-
ing glory all find more popular favor.

The foregoing reflections were sug-
gested by a visit to the Yamanaka ex-
hibition of Japanese flower arrange-
ment recently held in New York, and
the tea ceremony at which lectures and
demonstrations were given by Miss
Mary Averill, of Boston, Massachu-
setts, the author of "Japanese Flower
Arrangement" and "The Flower Art
of Japan." The exhibition was a par-
ticularly realistic presentation of the
Oriental ideas of flower arrangement.
It is to be hoped that it will be re-
peated next year.

"Took car-fare to bed with me."—*Yale Record*.

The "peace" hat is hailed out West as the latest note in feminine headgear. Meaning, apparently, that it must be had at any price.—*New York Herald*.

Every now and then this reporter concludes that about the only special privilege a married woman has is that of talking and the men complain about that one.—*Atchison Globe*.

"I see that Charlie Chaplin gets \$10,000 a week just to make people laugh. Why, that is almost as much as a state senator gets in a year."

"Just to make people laugh, too."—*Life*.

"Old Millyuns says that since he made his pile of money he feels like a neutral nation."

"Why is that?"

"Because he has so many diplomatic relations."—*Judge*.

"Why can't I come to see you tomorrow night?"

"Don't blame me," said the beautiful girl. "Our cook has the use of the parlor under the new domestic relation law."—*Louisville Courier-Journal*.

Friend—Any innovations in your 'Uncle Tom's Cabin' show this season?

Showman—Oh, yes! Instead of having Eliza escape by crossing the river on the floating ice-cakes, we have her escape by crossing Broadway at Forty-third street.—*Judge*.

Willis—Then you don't think there is any danger of us New Yorkers ever being prisoners of a foreign foe?

Gillis—Absolutely none. How could the enemy get in? The trains don't run in the winter, the roads are too muddy in the fall, and the streets are all torn up in the spring, and if they did get in during the summer they'd find everybody away.—*Life*.

All this talk of hyphenated citizenship has evidently had its effect upon a San Francisco youngster, American-born, who recently rebelled fiercely when his Italian father punished him.

"But, Tommaso, your father has a right to whip you when you are bad," some one of the family said.

Tommaso's eyes flashed. "I am a citizen of the United States," he declared. "Do you think I am going to let any foreigner lick me?"—*Argonaut*.

Now it's GLACIER NATIONAL PARK

Established as America's Vacation Paradise

Discovered by thousands of American tourists, who, deprived of the Old World, found a still greater wonderland at home. They came last year to Glacier National Park, Uncle Sam's greatest playground, twenty thousand strong. Many of them were second- and third-timers—answering again the call irresistible of the "land of shining mountains."

YOU step into a new world at Glacier Park. You measure Nature with a newer, bigger vision. Above you rise the towering Rockies—the far-stretching Continental Divide—cloud-piercing peaks and glistening glaciers; skyland lakes of turquoise and emerald.

Tour by auto-stage or go by saddle-horse, or over wide, safe trails afoot. Stop at splendid modern hotels or Swiss chalets, or live in a tepee, cook your own meals.

Vacations, \$1 to \$5 per day.

Great Northern through trains of supreme comfort daily reach this vacation country. Low round trip summer tourist fares via Great Northern, from June 1 to September 30.

Handsomely illustrated Glacier Park booklets giving exact expense figures—mailed free. Send for copy now. Write for information concerning Pacific Coast and Alaskan tours.

SHORT-STORY WRITING

A course of forty lessons in the history, form structure, and writing of the Short Story taught by Dr. J. Berg Egonwein, Editor Lippincott's Magazine. \$50-page catalogue free. Please address THE HOME CORRESPONDENCE SCHOOL Dept. 305, Springfield, Mass.

Here Is the Camp for Your Boy

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at CAMP YUKON, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about CAMP YUKON. Write personally to Frank D. Smith, Director, 200 West 96th Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

THE MARKET PLACE

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

MUNICIPAL BONDS FOR INVESTMENT

IN periods of drastic reorganization in the world of finance, the careful investor finds himself in possession of securities upon which principal and interest are paid when due. Foremost among investments of this class are bonds of American municipalities—more properly towns, cities and counties, but now generally regarded as including states as well.

No class of investment security has a better record in the last quarter of a century or so for safety of principal and interest than bonds which are the direct obligations of our states or their political subdivisions. Defaults have only occurred, with minor exceptions, during the reconstruction period after the War of the Rebellion; so the statement is quite appropriately made that no American municipality of any importance has defaulted in recent years in the principal or interest of any of its obligations.

The good faith of the inhabitants of a municipality is pledged for the payment of the principal and interest, and sinking fund where one exists, of such bonds. The fact that American municipal bonds of the highest grade are selling at equal or better prices than the best railroad bonds is an infallible indication of their high standing as investments. There are sold yearly to investors hundreds of millions of dollars of such securities and the demand for municipal bonds from postal savings depositories, federal reserve banks, savings banks, institutions, trust companies and private investors is so steady that the investment basis upon which such bonds are sold is about the best gauge of a municipality's credit that can be found. It is quite obvious that a city that can sell its 4 per cent bonds at par is not so highly rated as one that can get 102.

Municipalities issue bonds for varied purposes, such as construction of water plants, school buildings, hospitals, and libraries, also other public buildings, parks, playgrounds, docks, roads, etc., some of which are self supporting or produce revenue while others are not. Water plants are built by municipalities to provide a steady water supply to the city for domestic and manufacturing purposes, and such plants entail

the expenditure of a considerable initial amount which cannot be, and should not be, readily obtained by ordinary yearly taxation.

Funds are borrowed for a term of years thru the issuance of bonds and taxes are levied to meet the annual interest and other charges on the bonds. Often a certain percentage of the bonds is retired each year thru the operation of a sinking fund. The most approved and modern plan of financing for municipalities is to issue bonds which mature yearly in series during the life of the improvement for which they were issued. In this manner future generations need not be taxed unjustly for an improvement which will have become depreciated and which the coming generation will not, therefore, have an opportunity to enjoy.

For example, a road which cost \$1,000,000 may last for ten years or twenty, depending upon construction, amount of traffic passing over it and annual maintenance charges. In ten years, a small expenditure may place it in a condition to last a decade more without the necessity for extraordinary expenses. Nevertheless, the time does come when an extraordinary expenditure must be incurred to place the road in usable condition. If the road bonds are issued to mature in twenty equal annual instalments, the debt is retired during the probable life of the road and future generations can be justly taxed for any further improvements or additions to the road.

The serial method is not only used for road financing, but in case of bonds issued for construction of public buildings, schools,

parks, docks, etc. The serial bond issue is of great advantage to the issuing municipality, as it provides a "pay-as-you go" policy which is very commendable and more economical in the long run. While this form of bond is becoming quite generally adopted by progressive municipalities, and, in time, will replace the long term bond, the latter is to all intents and purposes a perfectly safe investment so far as the investor is concerned.

Interest and serial payments are met by taxation of property located in the boundaries of the municipality issuing the securities.

When a municipality has need of funds for a public improvement, the proper legal resolutions are passed by a governing board and the controller is instructed to advertise for bids for a new bond issue. The advertisement will set forth the amount of bonds to be issued, rate, maturity, purpose of issue, legality, etc., and banking houses, institutions, banks and private investors submit their bids for the bonds accompanied by a check for a nominal amount as a proof of good faith. At a specified time the bids are opened and the bonds awarded to the person, firm or corporation offering the highest figure.

As a matter of course, the municipality furnishes the successful bidder with copies of all resolutions and other papers in connection with the issue of bonds, together with the opinion of counsel competent to pass on the legality of securities of the class, certifying that the bonds are legally issued. For this reason, circulars on municipal bonds issued by banking firms will contain the phrase "Legality approved by Messrs. Blank & Blank, Attorneys, New York." Investment houses furnish to the investors copies of legal opinions on the issuance of the bonds.

As a matter of precaution municipalities are guided by law as to how many bonds they may issue. The law limits a city's right to borrow, spend

money and levy taxes; so the borrowing of funds is not a haphazard proposition. Municipal bonds are usually legal investments for trustees in the states where the municipality is located, and the savings bank laws of the various states provide that bonds of cities in other states which have complied with certain requirements are legal investments.

Municipal bonds are safe because ordinarily nobody can own tangible property and escape taxation. Vacant land, buildings, public service corporations, bonds, mortgages and corporate property are taxed in order to pay interest and principal on the bonded debt of a municipality and the tax is levied every year without fail. A booklet recently issued by a municipal bond house very pertinently says: "Taxes are a first lien upon any property; a mortgage can only be a lien second thereto."

In many states bonds of municipalities are exempt from taxation when held in the state where issued, but all municipal bonds are exempt from the Federal Income Tax, both normal and super-tax, and no mention of the income received from such bonds is required on the income tax return. This is a distinct advantage to the small as well as the large investor. To the small investor it obviates the necessity for ownership certificates to accompany the coupons, while the large investor does not have to pay a super-tax on his income from municipal bonds.

Bonds of the United States Government, states and municipalities are the only class acceptable by the Post Office Department as security for postal savings deposits, and banks which receive the privilege to carry such deposits for the government are required to turn over a specific amount of eligible bonds in exchange for the government funds so deposited.

Municipal bonds have stood the test for many years, but, as is natural, along with safety one must accept low yield. The best grades of municipal bonds are now selling on from a 3.75 per cent basis to a 4.25 per cent basis, when a year ago they were .25 higher. Along with the many railroad receiverships came the demand for bonds which were not likely to be affected by business conditions, and with the great demand for bonds that followed the tremendous activity in commercial lines, there was experienced a steady rise in the prices of municipal bonds and high grade railroad bonds.

It does not necessarily follow that an investor must content himself with 4 per cent, for while bonds of large cities sell on about a 4 per cent basis, that is because of some special feature, such as legality for savings banks, or exemption from local taxes, and not because of any relatively better security. There are many bonds of small cities that are obtainable on from a 4½ per cent to a 5 per cent basis which are as sound as bonds can be and form desirable holdings for the small or large investor.

The following dividend is announced:

Federal Sugar Refining Company, preferred, quarterly, 1½ per cent, payable May 1.

Good 5% Bonds Still Selling Below Par

Insurance

Conducted by

W. E. UNDERWOOD

THE COINSURANCE CLAUSE

A correspondent asks for an explanation of coinsurance as practised in fire insurance. As this is a subject that is either not understood at all, or misunderstood, by many people, it will be given special treatment here.

The principle of coinsurance rests on the theory that the whole value of any given risk should contribute to the payment of any loss by fire incurred by it. The owner of uninsured property bears the whole of any loss sustained. He is his own insurer.

Suppose the value of the property is \$10,000. If he insures it for its full value, then the whole risk contributes to any fire loss suffered. But if he insures it for \$5000, thus saving one-half the premium, virtually carrying the remaining \$5000 himself, unless there is a coinsurance provision in the company's policy, his half will not contribute to the payment of any partial loss. This would work no inequity to the insurance company if the property were totally destroyed, for in that case the owner would actually bear his full share of the loss. But experience shows that the greater number of the losses incurred are partial losses.

To meet this inequity the coinsurance clause is employed—generally, the eighty per cent clause. In substance, this clause provides that the owner of the property shall keep it insured for an amount not less than eighty per cent of its value, failing in which, in the event of loss, he shall become liable, as a coinsurer with the company, for such proportion of any loss or damage as the amount insured by the company shall bear to eighty per cent of the property's value.

Reverting to the illustration, under the eighty per cent coinsurance clause, the owner must have at least \$8000 insurance on the property. He is carrying but \$5000. This makes him a coinsurer for \$3000. In the event of loss the company's liability would be five-eighths of it; the owner's, three-eighths. If the loss is total, the company would have to pay \$5000, because five-eighths of \$10,000 more than uses up its policy. But suppose the whole loss is \$5000 only. The company's contribution to it would be five-eighths of \$5000, or \$3125; the owner's contribution would be three-eighths of \$5000, or \$1875.

The use of the clause also prevents discrimination in insurance service between insured persons. To illustrate: A and B each own property valued at \$10,000, the insurance rate on each piece being 1 per cent. A insures for \$5000, paying \$50 premium, and B insures for \$8000, paying \$80. Each has

Filing Desk Keeps Your Records At Your Finger Tips

Solid Oak, as shown, with choice of 10 kinds of drawers for filing Letters, Index Cards, Catalogs, Notes, Clippings, etc.

Freight Paid—See Note—\$25.50

Any assortment of filing drawers may be arranged to meet your special needs. This is the ideal desk for department heads, students, writers, clergymen, etc.

a \$5000 loss. Without the clause A gets as much protection for \$50 as B gets for \$80. With the clause in both policies, A would have received five-eighths of \$5000 (\$3125) and B, five-eighths of \$8000 (\$5000).

H. G. C., Sioux City, Iowa.—The Mutual Benefit Health and Accident Association of Omaha is an assessment organization, the financial standing of which does not appear in any of the insurance handbooks to which I have access. Read the article, "Low-Priced Accident Policies" in The Independent of February 21, 1916. The Mystic Workers of the World is a fraternal assessment order, accumulating an insufficient fund to meet future increases in mortality, therefore I cannot recommend it as an institution furnishing permanent security.

C. A. B., Cassopolis, Mich.—The Ancient Order of Gleaners is a fraternal assessment life insurance order which is not making adequate provision for increasing mortality due to the advancing age of its membership. It has \$56,000,000 outstanding insurance, supported by about \$525,000 of net assets. Contrast these figures with an established old-line company of approximate insurance liabilities, say the Michigan Mutual. That company's outstanding insurance aggregates \$54,000,000, behind which there is a necessary cash reserve of about \$11,000,000. I cannot recommend the Gleaners as an insurer.

G. A. N., Washington, D. C.—You are probably inquiring about the Puritan Life of Providence, R. I. There is no company in Pittsburgh bearing that title. This company was organized in 1907; its assets are \$472,879; surplus, \$171,946, which includes \$151,000 of capital. It is a slow-growing, sound old line company. Its expenses for new business are a little heavier than normal and its mortality rate is a trifle high. It writes participating and non-participating insurance. In my judgment a life company should not be permitted to transact both kinds. The Puritan has about \$2,500,000 insurance in force.

L. C. H., Dandridge, Tenn.—You say that your policy will be fully paid up in September and that its surrender and loan value is \$412.63. You also say you can get eight per cent for money in your locality. Now, the loan from the company will cost you five per cent. Wouldn't it be better to borrow at five per cent and loan the money at eight per cent, thus keeping the insurance in force, plus the annual dividend you will get, than to surrender and cancel the insurance? I think so. Another thought: Would you not do better in the long future by leaving the money where it is and having all future dividends converted into additions payable with the policy at death? All your ventures with money might turn out unfortunately. Old age is a risk to be insured against. You can always get the full cash value of your policy. It is wise to leave it until needed.

C. R. P., Anaheim, Cal.—I am quite sure that no insurance institution can maintain thru life a level premium rate of \$9 per \$1,000 at ages 21-30. Therefore, I am constrained to assert that the Western Mutual Life of Los Angeles is mistaken. The actual mathematical reserve, calculating at 3 per cent, at age 25, is \$8 at the end of the first year; the tabular mortality is \$8.07. That is \$16.07. The mortality increases every year and, unless the premium contains enough money in addition to that each year for investment, higher or additional assessments will be necessary. In the tenth year the accumulated reserve is \$98.94, greater than at the end of the ninth year by \$11.27; the mortality in the ninth year is \$8.83. These figures prove that it has been necessary for the policyholder to pay during the ninth year the sum of \$11.27 plus \$8.83, which equals \$20.10. And so it runs upward thru the years.

"I know an easy way to clear your skin"

Bathe your face for several minutes with Resinol Soap and warm water, working the creamy lather into the skin gently with the finger-tips. Then wash off with more Resinol Soap and warm water, finishing with a dash of clear, cold water to close the pores.

Do this once or twice a day, and you will be astonished how quickly the healing Resinol medication soothes and cleanses the pores, lessens the tendency to pimples, and leaves the complexion clearer, fresher and more velvety.

If the skin is in bad condition through neglect or an unwise use of cosmetics, apply Resinol Ointment and let it remain on ten minutes before the final washing with Resinol Soap.

Resinol Soap is sold by all druggists and dealers in toilet goods. For trial size, free, write to Dept. 11-D, Resinol, Baltimore, Md.

Resinol Soap

The medication in Resinol Shaving Stick prevents shaving discomforts.

CONCENTRATION SPELLS SUCCESS

when rightly used, but when wrongly used it is sure to bring failure. Most persons concentrate on that which annoys, irritates and makes for failure. When we are despondent it is hard to concentrate on anything but our troubles. When we are sick it is difficult to concentrate on the thought of being well. When we have lost money it is easy to concentrate on our loss but almost impossible to concentrate on our being able to replace it.

"CONCENTRATION—Its Mentology and Psychology" By F. W. SEARS, M. P. (Master of Psychology) teaches how to concentrate rightly.

The person who can concentrate rightly for what he wants, when and where he wants to—whether for money, health, love, increased business, political power, social position, good memory, or whatever he may desire—possesses the Greatest Power in the World and is the master of himself and his environment.

You have this Power and can learn to use it rightly by persistently applying the lessons taught in this book. No matter how many books you have read THIS BOOK IS DIFFERENT. Price 50 cents postpaid. Worth a thousand dollars. Money back if you want it.

THE PRESIDENT'S LAST WORD TO GERMANY

THE NOTE DATED ON THE ANNIVERSARY OF CONCORD AND LEXINGTON

INFORMATION now in the possession of the Government of the United States fully establishes the facts in the case of the "Sussex," and the inferences which my Government has drawn from that information it regards as confirmed by the circumstances set forth in Your Excellency's note of the 10th instant. On the 24th of March, 1916, at about 2:50 o'clock in the afternoon, the unarmed steamer "Sussex," with 325 or more passengers on board, among whom were a number of American citizens, was torpedoed while crossing from Folkestone to Dieppe. The "Sussex" had never been armed; was a vessel known to be habitually used only for the conveyance of passengers across the English Channel, and was not following the route taken by troopships or supply ships. About eighty of her passengers, non-combatants of all ages and sexes, including citizens of the United States, were killed or injured.

A careful, detailed and scrupulously impartial investigation by naval and military officers of the United States has conclusively established the fact that the "Sussex" was torpedoed without warning or summons to surrender, and that the torpedo by which she was struck was of German manufacture. In the view of the Government of the United States these facts from the first made the conclusion that the torpedo was fired by a German submarine unavoidable. It now considers that conclusion substantiated by the statements of Your Excellency's note. A full statement of the facts upon which the Government of the United States has based its conclusion is inclosed.

The Government of the United States, after having given careful consideration to the note of the Imperial Government of the 10th of April, regrets to state that the impression made upon it by the statements and proposals contained in that note is that the Imperial Government has failed to appreciate the gravity of the situation which has resulted not alone from the attack on the "Sussex," but from the whole method and character of submarine warfare as disclosed by the unrestrained practise of the commanders of German undersea craft during the past twelvemonth and more in the indiscriminate destruction of merchant vessels of all sorts, nationalities and destinations.

If the sinking of the "Sussex" had been an isolated case the Government of the United States might find it possible to hope that the officer who was responsible for that act had wilfully violated his orders or had been criminally negligent in taking none of the precautions they prescribed, and that the ends of justice might be satisfied by imposing upon him an adequate punishment, coupled with a formal disavowal of the act and payment of a suitable indemnity by the Imperial Government.

But, tho the attack upon the "Sussex" was manifestly indefensible and caused a loss of life so tragical as to make it stand forth as one of the most terrible examples of the inhumanity of submarine warfare as the commanders of German vessels are conducting it, it unhappily does not stand alone.

On the contrary, the Government of the United States is forced by recent events to conclude that it is only one instance, even tho one of the most extreme and most distressing instances, of the deliberate method and spirit of indiscriminate destruction of merchant vessels of all sorts, nationalities and destinations which have become more and more unmistakable as the activity of German undersea vessels of war has in recent months been quickened and extended.

The Imperial Government will recall that when, in February, 1915, it an-

nounced its intention of treating the waters surrounding Great Britain and Ireland as embraced within the seat of war and of destroying all merchant ships owned by its enemies that might be found within that zone of danger, and warned all vessels, neutral as well as belligerent, to keep out of the waters thus proscribed or to enter them at their peril, the Government of the United States earnestly protested. It took the position that such a policy could not be pursued without constant gross and palpable violations of the accepted law of nations, particularly if submarine craft were to be employed as its instruments, inasmuch as the rules prescribed by that law, rules founded on the principles of humanity and established for the protection of the lives of non-combatants at sea, could not in the nature of the case be observed by such vessels. It based its protest on the ground that persons of neutral nationality and vessels of neutral ownership would be exposed to extreme and intolerable risks; and that no right to close any part of the high seas could lawfully be asserted by the Imperial Government in the circumstances then existing.

The law of nations in these matters, upon which the Government of the United States based that protest, is not of recent origin or founded upon merely arbitrary principles set up by convention. It is based, on the contrary, upon manifest principles of humanity and has long been established with the approval and by the express assent of all civilized nations.

The Imperial Government, notwithstanding, persisted in carrying out the policy announced, expressing the hope that the dangers involved, at any rate to neutral vessels, would be reduced to a minimum by the instructions which it had issued to the commanders of its submarines and assuring the Government of the United States that it would take every possible precaution both to respect the rights of neutrals and to safeguard the lives of non-combatants.

In pursuance of this policy of submarine warfare against the commerce of its adversaries, thus announced and thus entered upon in despite of the solemn protest of the Government of the United States, the commanders of the Imperial Government's undersea vessels have carried on practises of such ruthless destruction which have made it more and more evident as the months have gone by that the Imperial Government has found it impracticable to put any such restraint upon them as it had hoped and promised to put. Again and again the Imperial Government has given its solemn assurances to the Government of the United States that at least passenger ships would not be thus dealt with, and yet it has repeatedly permitted its undersea commanders to disregard those assurances with entire impunity. As recently as February last it gave notice that it would regard all armed merchantmen owned by its enemies as part of the armed naval forces of its adversaries and deal with them as with men-of-war, thus, at least by implication, pledging itself to give warning to vessels which were not armed and to accord security of life to their passengers and crews; but even this limitation their submarine commanders have recklessly ignored.

Vessels of neutral ownership, even vessels of neutral ownership bound from neutral port to neutral port, have been destroyed, along with vessels of belligerent ownership, in constantly increasing numbers. Sometimes the merchantmen attacked have been warned and summoned to surrender before being fired on or torpedoed; sometimes their passengers and crews have been vouchsafed the poor secur-

ity of being allowed to take to the ship's boats before the ship was sent to the bottom. But again and again no warning has been given, no escape even to the ship's boats allowed to those on board.

Great liners like the "Lusitania" and "Arabic" and mere passenger boats like the "Sussex" have been attacked without a moment's warning, often before they have even become aware that they were in the presence of an armed ship of the enemy, and the lives of non-combatants, passengers and crew have been destroyed wholesale and in a manner which the Government of the United States cannot but regard as wanton and without the slightest color of justification. No limit of any kind has in fact been set to their indiscriminate pursuit and destruction of merchantmen of all kinds and nationalities within the waters which the Imperial Government has chosen to designate as lying within the seat of war. The roll of Americans who have lost their lives upon ships thus attacked and destroyed has grown month by month, until the ominous toll has mounted into the hundreds.

The Government of the United States has been very patient. At every stage of this distressing experience of tragedy after tragedy it has sought to be governed by the most thoughtful consideration of the extraordinary circumstances of an unprecedented war and to be guided by sentiments of very genuine friendship for the people and government of Germany. It has accepted the successive explanations and assurances of the Imperial Government, as of course given in entire sincerity and good faith, and has hoped, even against hope, that it would prove to be possible for the Imperial Government so to order and control the acts of its naval commanders as to square its policy with the recognized principles of humanity as embodied in the law of nations. It has made every allowance for unprecedented conditions and has been willing to wait until the facts became unmistakable and were susceptible of only one interpretation.

It now owes it to a just regard for its own rights to say to the Imperial Government that that time has come. It has become painfully evident to it that the position which it took at the very outset is inevitable, namely, the use of submarines for the destruction of an enemy's commerce is of necessity, because of the very character of the vessels employed and the very methods of attack which their employment of course involves, utterly incompatible with the principles of humanity, the long-established and incontrovertible rights of neutrals, and the sacred immunities of non-combatants.

If it is still the purpose of the Imperial Government to prosecute relentless and indiscriminate warfare against vessels of commerce by the use of submarines, without regard to what the Government of the United States must consider the sacred and indisputable rules of international law and the universally recognized dictates of humanity, the Government of the United States is at last forced to the conclusion that there is but one course it can pursue.

Unless the Imperial Government should now immediately declare and effect an abandonment of its present methods of submarine warfare against passenger and freight-carrying vessels, the Government of the United States can have no choice but to sever diplomatic relations with the German Empire altogether. This action the Government of the United States contemplates with the greatest reluctance, but feels constrained to take in behalf of humanity and the rights of neutral nations.

B E R C E U S E

The justly famous orb of day
Had sought the celebrated West
To take—(and who would say it nay?)—
In its inimitable way
A needed rest.

The moon—whose light is hardly less
Esteemed than is Apollo's own—
Came up and shone with that success
Which not to know is to confess
Oneself unknown.

'Twas night—But I need hardly speak
Of ev'ning's charms altho they are
So beneficially unique
And, with the rather younger clique,
So popular.

And some of us—please don't infer
We were in any way alarmed
By nightfall—*au contraire sans peur*
We laid us down to sleep and were
Quite pleased and charmed.
—T. N. Metcalf, in New York Evening
Post Magazine.

POTENT PREPAREDNESS

Perhaps you have heard the story
about the Kaiser's visit a year or two
before the war. He exprest his desire
to go to Switzerland, and was cordially
invited to come at the time of the
maneuvers. He was taken about and
given every chance to see and admire
the fitness of the men and their ac-
curate marksmanship and skill.

The story goes that he stopped before
one of the soldiers and said: "Yes, you
are splendid fellows, but only four hun-
dred thousand of you at the most. What
would you do if I should bring my
army of a million men thru here?"

"Why, sire," as proudly responded
the Swiss, "it's very simple. Each one
of us would shoot twice; that's all."

There is a sequel to this tale: It is
said that in the council called to decide
as to which road Germany should take
into France—Switzerland or Belgium
—Switzerland was saved by two votes,
and those opposed to molesting it were
the staff of military officials who had
accompanied the Kaiser upon his visit
to the maneuvers.—*The Ladies' Home
Journal.*

REMARKABLE REMARKS

DORIS BLAKE—Flirting is ill bred.
WINIFRED STONER, JR.—How far can a
cat spit?
MARY PICKFORD—It is all my own nat-
ural hair.
ED. HOWE—Most men prefer to eat fast
like a dog.
REV. J. HOWARD MELISH—Love alone
can save the world.
W. H. TAFT—The nerve center of this
country is Chicago.
AMY LOWELL—Chicago is the greatest
center of the new school of poetry.
REGINALD KAUFMAN—The backbone of
knowledge is whenness.
WOODROW WILSON—It is a pity that
this is a campaign year.
GENERAL EMILIO ZAPATA—I am fight-
ing for the common people.
SPEAKER CLARK—You Republicans
haven't got the world by the tail.
WILLIAM BARNES, JR.—Mr. Roosevelt is
an enemy of the American Republic.
PROF. BRANDER MATTHEWS—The great-
est enemy of the theater is the high-brow.
LUKE MCLUKE—Quick now, who was
Vice-President when Taft was President?
JOHN MASEFIELD—I suppose Vachel
Lindsay is your best writer of verses to-
day.
PROF. H. H. TURNER—Life has a ter-
rible way of getting more and more diffi-
cult.
POLICE INSPECTOR FAUROT—Not one-
tenth of the loot in precious stones is ever
returned.
PUBLISHER GEO. P. BRETT—The best
slang of today becomes the language of to-
morrow.
COMMISSIONER OF MARKETS DILLON—
There is not an average of one bad egg in
a thousand.
JESS WILLARD—Of the several methods
of defense ducking is perhaps the most
dangerous.
SENATOR POMERENE—If necessary, I
would have the troops follow Villa to
Patagonia.
COL. EDWARD F. GLENN—The American
army is the most pathetic thing that ever
came along in history.
WILLIAM BRADY, M.D.—Every six
months every adult should undergo a com-
plete physical examination.
CONGRESSMAN HEFLIN—If we can pros-
ecute bulls for putting up the price, we can
prosecute bears for putting down the price.
ATTORNEY GENERAL GREGORY—Wood-
row Wilson would not be willing to be
President unless he felt in his heart that
he was right.
H. G. WELLS—The western nations
have taken a peculiar pride in having a
free press; that is to say, a press that can
be bought by any one.
SENATOR SMITH—When Woodrow Wil-
son took the oath of office, one man in
every four in this country had a bank ac-
count, where are they now?
EVERETT P. WHEELER—Politics are ex-
citing and engrossing, and once women are
drawn into the vortex they are more ex-
cited and engrossed than men are.
BILLY SUNDAY—I could preach sermons
that would make the gum-chewing, face-
painted manicured, highball-guzzling, card-
playing, marcel-waved society women say
"Oh, isn't Mr. Sunday a nice man."
MARJORIE DORMAN—The worst thing
which could happen to the wage-earning
woman would be for the law to place her
on an equality with men. She needs equal-
ity plus.
ARNOLD BENNETT—These hogsheds of
blood, lacerated limbs, smashed bones,
glazing eyes, screams of pain, are exactly
what we all in every country asked for
when we voted supplies.

TO RIDE IN THE CADILLAC IS TO REVISE YOUR IDEAS OF WHAT CONSTITUTES LUXURIOUS MOTORING

BETWEEN two cars, even of excellent riding qualities, you may be able to observe certain slight or indifferent distinctions.

But you will recognize that the difference between the smoothest, steadiest car you have ever known, and the eight-cylinder Cadillac, is not merely slight or indefinite.

It is impressively brought home to you that you must reject your previous ideals and that you must adopt new standards of what constitutes real motoring luxury.

Before you have ridden a mile in the Cadillac, you find that the qualities which you have most desired in a motor car have been developed to a point that is absolutely new to you.

You discover—immediately the car glides into motion—that the quality of quietness has been given a new significance.

You find that neither the engine nor any other part of the marvelously efficient mechanism intrudes itself upon you.

You relax into forgetfulness of the means by which you are carried forward.

You find that you are traveling more continuously on direct drive than you had thought possible in any car.

Pick-up, from a snail's pace to express train speed, is accomplished with so little effort that it is scarcely apparent.

Hills which, before, had compelled a car to strain and labor, seem almost to subside into a level roadway—so easily, so quietly and with so little exertion does the Cadillac surmount them.

Fatigue and exhaustion, which may have characterized your journeys in the past, are replaced by a sense of intense exhilaration and keen enjoyment.

The most enthusiastic Cadillac admirers are those whose motor car experience has been most extended.

There have been no exceptions to the astonishment and delight of those who have ridden in this unusual car.

The handling and control are so easy; the springs and the deep, soft upholstery are so yielding; the smoothness, the quietness, the activity and the flexibility are so delightfully soothing; there is such a sense of velvet softness in every movement of the car, that you cannot resist its supreme charm.

And so your experience with the Cadillac, resolves itself into something even broader than complete satisfaction.

It carries with it the gratifying sense of owning something different and something superior—a car which surpasses ordinary standards and deepens and intensifies the enjoyment of every phase of motoring.

No. 3518

THE INDEPENDENT HAS ACQUIRED HARPER'S WEEKLY

[This memorandum was given to the daily press on Friday, April 28]

"HARPER'S WEEKLY" has been acquired by the Independent Corporation, and, after fifty-nine years of existence, it is to be incorporated in The Independent. This brings together two of the oldest and best known of American weekly periodicals.

The Independent is sixty-eight years old, "Harper's Weekly" fifty-nine. The older periodical has during all its history been associated with a single family. The present editor, Hamilton Holt, is the grandson of the founder, Henry C. Bowen. Two and a half years ago Mr. Holt was joined in the ownership and management of The Independent by William B. Howland, for twenty-three years publisher of "The Outlook," and his two sons, Karl V. S. Howland and Harold J. Howland, who had also been associated with "The Outlook" in the advertising and editorial fields.

"Harper's Weekly" was for fifty-six years one of the well-known group of periodicals published by the famous house of Harper and Brothers. Prior to and during the last presidential campaign it was edited by Colonel George Harvey, who was the first publicist to propose and urge the nomination and election of Woodrow Wilson as President.

For the past three years "Harper's Weekly" has been owned by an independent corporation, and has been edited by Norman Hapgood, the former editor of "Collier's Weekly."

The incorporation of "Harper's Weekly" in The Independent is a logical event. The purpose and spirit of the two periodicals have been similar from the beginning. Both have had for their prime functions the treatment and interpretation of the current history of the world, and the cultivation of sound opinion on the questions of the day. Both periodicals have not feared to be radical and to utter vigorous editorial views even when they were most unpopular. If at any time in the last sixty years a librarian or well-informed reader had been asked to name the leading American periodicals, he would certainly have mentioned among the foremost The Independent and "Harper's Weekly." These two, as friendly rivals, have always stood for the best in American life, for purity in politics, for social reform, for national progress, for high ideals in literature and art. The eighty-six volumes of The Independent and the sixty-two volumes of "Harper's Weekly" form a contemporary history of the United States and of the world of extraordinary value, a treasury of information of current events and opinions such as few libraries are fortunate to possess.

To "Harper's Weekly" belongs the honor of publishing the essays of George William Curtis, the cartoons of Thomas Nast, and the farces of William Dean Howells, while The Independent has credit for publishing the editorials of Horace Greeley, the sermons of Henry Ward Beecher, and the poetry of Tennyson, Lowell, Whittier, Browning and Kipling.

The headquarters of the Sinn Fein, demolished on April 29, has been a labor center for a long time. In 1913 Jim Larkin's striking transport workers gathered here, and the photograph shows some of his "citizen soldiery" on guard during one of his revolutionary enterprises

HOW GERMANY'S REPLY WILL COME

GERMANY has not replied to the American note on the submarine situation. Ambassador Gerard is busily conferring with the Foreign Office and has even journeyed to the German General Headquarters "somewhere in France" to consult face to face with the Kaiser. Many rumors, reports and conjectures are going about as to what the German answer will be and there is much debate as to whether it will be "satisfactory."

It will be interesting, of course, to read the German note when it comes. If it should contain a hearty and unqualified acceptance of the American point of view, it would be very gratifying.

But the main point should not be overlooked. Germany's real answer is not to be made thru diplomatic

channels. It will be made on the high seas. If Germany from this time forward does actually cease to use its submarines in violation of the accepted principles of international law, the American people will go on living in amicable and harmonious relations with the German people. But if a German submarine should attack a merchant vessel with an American citizen on board, that act of itself would cause the severance of diplomatic relations.

There is no need for Germany to argue the case longer.

The latest note of the United States is this nation's final word—or it is nothing.

Not German words, but German acts, will determine the future.

THE IRONY OF IRELAND

TWO years ago the Irishmen of Ulster were getting guns from Germany to fight the King's troops. Last week the Irishmen of Dublin were getting guns from Germany to fight the King's troops. Sir Edward Carson, who was two years ago conspiring against the government, was only a few months ago made a member of that government. Sir Roger Casement, who is now under arrest for conspiring against the government, was the man who made out the government's case against Belgium in 1903.

The Blue Book on the "Belgian atrocities," prepared by Mr. Casement thirteen years ago, was, if we remember aright, about the size and shape of the Blue Book on the "Belgian atrocities" prepared last year by Lord Bryce, but the contents were different. The former told how the Belgians cut off the hands of children in the Congo; the latter told how the Germans cut off the hands of children in Belgium. On July 9, 1903—that is, before the report of the Casement investigations had come out—The Independent published a photograph of one of these maimed children in an article by the Rev. Dr. Morrison, telling how a missionary had seen eighty-one human hands drying over a fire to be turned in to the state officer as proof of a successful raid. It was also shown that the Belgians were monopolizing trade and permitting slavery.

The British public was so shocked by these revelations of cruelty and oppression in the administration of a state founded for the purpose of protecting the natives and opening up the territory to free trade that the British Government interposed a veto to the proposed acquisition of the "Congo Free State" by Belgium. It was in fact not until 1914 that Great Britain consented to the Belgian annexation of the territory. The United States, altho it took part in the international conference which founded the Congo Free State and declared its perpetual neutrality, made no protest when it was taken over by Belgium.

But England, which did oppose with all its power the acquisition of the Congo by Belgium, is now, curiously enough, fighting that Belgium may retain the Congo. For it has been more than once intimated that Germany would be willing to stop the war at once and evacuate Belgium if Belgian Congo be ceded to her. But such a transfer would not be to the advantage of the natives if

we may judge by Germany's cruel treatment of the Hereros.

So it happens that Sir Roger Casement, knighted for his exposure of the iniquities of "red rubber," lies now in the Tower of London, caught in the act of rebellion and liable, according to existing English law, to be beheaded for high treason. He is more likely, however, to be made Attorney General like Sir Edward Carson, who organized the Ulster rebellion, or made Premier, like General Botha, who led the Boer armies against Kitchener, or set at liberty, like General De Wet, who was a few months ago convicted of high treason, or elected to Parliament like Arthur Lynch, the Irish colonel in the Boer army. Such is the British way of treating malcontents; illogical, ironical, absurd, it may be called, yet it works, and no better way has been discovered of turning foes into friends. Most of the Irish have been won over by the conciliatory policy which the British Government has in recent years adopted toward Ireland. The reform of the land laws has in large part removed the economic grievance, and the passage of home rule promises to remove in large part the political grievance. But the evil effects of the old injuries still trouble the world. It is quite probable that the Kaiser would have hesitated to make war if he had not relied upon Irish discontent. This effect was anticipated in an article written for The Independent of January 30, 1902, by Arthur Lynch, then under sentence of death for treason, who said:

The South African war has shown the weakness of England and has aroused the hopes and rekindled the hatred of her Continental foes. The attitude of Ireland, so pronouncedly hostile to England in this undertaking, has been a source of weakness not only in its direct moral effect and by the influence on public opinion in America, but also in the most material way by the limitation of the recruiting ground of England for her soldiers and sailors.

Every point in this paragraph is verified by the news of the day. The recruiting ground of England has been limited, for the British Government has not dared to extend its enlistment acts to Ireland. The Democratic party, which in its platform denounced England for the destruction of the Boer republics, is now in power at Washington. The Dublin insurgents have received encouragement if not more substantial aid from Irish in America. The hopes and the hatreds of England's continental foes have precipitated the Great War.

But now, when Ireland's hopes are highest, they are blasted by her own act. Never in the last three hundred years has an Irish rebellion had less justification and less chance of success. The factionalism which has always been the curse of the country has again brought ruin to its cause in the hour of its triumph. The same paper that tells of the Irish attack on the English at Dublin tells also how the Irish fought for the English at Loos.

CAST OUT FROM EDEN

THE capture by the Turks of General Townshend's army on the Tigris is a severe blow to British prestige. Three-quarters of the second year of the Great War have now gone. Great Britain has raised an army of four million and they have been fighting on eight distinct fields in three continents, yet nowhere have they achieved a distinct victory. Twice they have suffered distinct defeats, and—what is most humiliating—by the Turks. The Turks! who for more than a century have been regarded as incapable of carrying on an aggressive campaign against any of the great powers of Christendom. At Gallipoli the British thought themselves lucky to get their troops away. At Kut-el-Amara they were not so lucky.

To be sure, the numerical loss is small, 2970 British and 6000 Indians. The Germans reported on the same day the capture of 5600 Russians and little attention is paid to it. The Germans have lost as many in a single charge at Verdun. But the surrender of the army of the Tigris means more than these. It means the definite failure of the British attempt to take Bagdad, and Bagdad is a sort of symbol of the prize for which Germany and Great Britain have been contending. The two powers came into conflict thru the desire of each to gain possession of Mesopotamia, the land between the rivers where tradition locates the Garden of Eden, and where the great empires of the ancient world flourished for thousands of years. With this region again brought under irrigation as it was in those days it may become rich and populous as of old. At Bagdad the ambitions of the rival powers clashed. Before the war the Germans were getting to Bagdad from the west by rail and the British were strengthening their hold on the water approach from the east. When the war broke out both sides pushed forward on the same lines, the Germans building their Bagdad railroad with feverish haste thru the Taurus Mountains and over the Anatolian desert, the British taking possession of the Persian Gulf and sending expeditions up the Tigris and Euphrates Rivers.

But ten miles from Bagdad the British were turned back and the expeditionary force, caught in the bend of the river at Kut-el-Amara, has been besieged for 143 days. The world has watched with amazement General Townshend's plucky stand, for it was not expected that he could hold out long without relief. Realizing, tho faintly, what he must be enduring in the midst of a desert, surrounded by Turks and Arabs, cut off from supplies of food, medicines and ammunition, we have felt the courage which dictated the facetious messages he has sent out by wireless, his requests for new needles for his phonograph, for his dress suit, and for flower seeds to plant in the spring.

According to a government statement in Parliament, General Townshend's force consisted of "considerably

more than a division," which must mean at least 25,000 men. The number surrendered, according to the same authority, was less than 9000. A simple subtraction tells us a little of what has happened during those terrible five months on the Tigris.

The blame for this foolhardy expedition rests not upon General Townshend, but upon Sir John Nixon, who was removed from command of the Mesopotamian campaign some time ago. The blunders disclosed were numerous. There was lack of light draft river boats. There was scandalous lack of medical supplies for the wounded and sick. There was lamentable lack of information about the strength of the enemy. If the statement is true that Field Marshal von der Goltz died of spotted fever the other day at Bagdad, then the Turks were commanded in person by one of the ablest strategists of the generation, whose text-books on the art of war are used at West Point. What is still less excusable is the lack of knowledge of their own men, shown by the British Government of India, the expectation that Mohammedan soldiers would willingly follow a Christian leader in the capture of one of their own sacred cities. It is said that the expedition started out with Mohammedan troops who had to be withdrawn and replaced by Hindus, because of their reluctance to attack Bagdad.

So the Tigris campaign must be added to the list of the fatal mistakes of the British command, to the Antwerp expedition, the Gallipoli expedition, the Salonica expedition, the battle of Loos and the battle of Neuve Chapelle. All these are blunders that have been publicly recognized and frankly admitted. The British soldier has everywhere fought bravely. The British fleet is supreme on the seas. The British people have cheerfully borne unprecedented taxation and raised an unprecedented volunteer army. What has kept that army comparatively inactive and unsuccessful must be mostly a matter of surmise for the present. It has held from thirty to fifty miles of the line in France and Flanders and that is about all. So far the British army has not retrieved the reputation that it lost in the Boer War.

VON DER GOLTZ

VON DER GOLTZ is dead.

Von der Goltz was assassinated in Constantinople when news was received of the fall of Trebizond. No; seeing that his army was driven back by the Russians and that twenty years of labor was lost, he made a rush upon the enemy, with his staff, and was killed. No; he died from the rigors of retreat on horseback when pushed by the enemy. No; he died from spotted fever contracted at Bagdad. No? We don't know what he did die of, but it is agreed that he is dead, and his labors of twenty years in building up the Turkish army have resulted in ruin for Turkey.

His work was for war, for the glory of war, for the glory of Germany, to create a strong ally in war likely to come. His work was not quite all a failure. He drove back the British at Gallipoli, captured the army at Kut-el-Amara, and with great success he starved and slaughtered some hundreds of thousands of Armenians. He had the power and might have prevented it. Because he dared not prevent, he assented. The curse rests on his name, for he ruled the Turkish army.

Some years before Von der Goltz went to Constantinople, a number of American missionaries and teachers

went to Turkey from America with no prestige behind them, backed by no Kaiser or President, all unarmed, to preach love and knowledge. They carried books, and opened schools and colleges. They used no force, no violence, but they taught the ignorant and they healed the sick. It is in their way and not with cannon that Turkey is being regenerated, and therefore it is that in the ages to come monuments will be built and pilgrimages be made to the shrine of the soldiers of peace, and the names of Cyrus Hamlin and George Washburn and the Blisses, father and son, and a hundred other good men and women, will be held in everlasting remembrance when the name of Von der Goltz shall rot.

CHAIN CHARITY

NOT long ago the Editor received the following letter:

No. 34.

DEAR SIR—I have been asked by a friend of mine to help this party along. I am doing the necessary with one dime and trust that you will be able to do the same, and pass the letter along until it has reached No. 50.

This chain is started for the purpose of raising a fund to assist an old railroad man, Mr. W. D. Westbury, who is down and out on account of a long siege of illness. He can never get well, and having only one arm, a widowed mother, and no means of support, we will assist him in this way, and if all will respond (under the circumstances they surely will) a sufficient fund will be raised to make "Billy" comfortable while he is with us.

Please make five copies of this letter, as I have done, only changing the date and put the next highest number and date of each letter the same, sign your name and mail the five copies to your friends, whom you feel will do likewise.

This chain will end with No. 50. The party receiving No. 50 will please return the letter with ten cents and make no copies at the end of the chain.

Please do not break the chain, and I earnestly appeal to you to give it prompt attention and assist a worthy railroad boy, who has devoted his life to the cause.

Mail this letter with ten cents to Mr. W. Y. Proctor, general agent, C. & St. P., 309 Marquette Building, Chicago, Illinois. Mr. Proctor will see that the funds are promptly delivered.

Now, we do not begrudge ten cents to a poor railroad man. Nor the other ten cents necessary to dispatch the five letters. But before asking our friends to contribute to the worthy cause we thought it best to figure up how much the chain was bringing in, and we were pleased to find that we need not bother our friends, for the recipient of this charity was already rich beyond the dreams of avarice. This letter is Number 34, and if the other branches of the chain have gone as far as this, Mr. Proctor has turned over to Mr. Westbury the tidy sum of

\$11,641,532,182,693,481,445,312.50.

This seems to us sufficient "to make Billy comfortable while he is with us," even tho he should live to the age of Methusaleh.

We appreciate the thoughtfulness of the originator of the scheme in limiting the number to fifty. Otherwise all the money in the world—or at least all the money in the pockets of the charitable—would in the course of time have flowed into the pocket of the one-armed railroad boy, and caused more ruin than the war. Even with fifty as the limit, he would have received, if our figures are right (tho they are not really our figures, but those of the expert accountant of our business office, for the Editor never had occasion to calculate such large amounts of money), the sum of

\$11,102,230,246,251,565,444,236,285,680,231,712.50.

The fine thing about this is that the United States will have received two-fifths of that sum for postage on the letters. This ought to be enough to remove the deficit of the Post Office Department, and no other method has ever been able to accomplish this.

If Little Marjorie, instead of sending her ten-cent piece to Secretary Daniels to start a new battleship, had only started a multiple chain with it, the government might now be in a condition to carry out the President's desire for the biggest navy in the world.

A few months ago a New York nurse, discovering that there was a shortage of anesthetics in the hospitals of the Allies, was inspired to send out a similar chain letter asking for twenty-five cents to buy chloroform. Since nobody wants to feel that he is responsible for some poor wounded soldier suffering "untold agony," she is now receiving quarters by the bushel, and if the receipts keep on increasing in geometrical progression she will soon have enough chloroform to put all the Allied armies to sleep—or all the Germans, if the Allies used it in their asphyxiating bombs. The Post Office Department has been asked to put an end to it, but there seems to be no way of stopping a snowball when it once gets going.

It would, therefore, be well for one who contemplates sending an unlimited draft upon the charity of the world to figure out in advance just how much he is asking for and not leave it to chance or hardheartedness to prevent him from precipitating a financial crisis.

WOMAN SUFFRAGE AND THE CONSTITUTION

MR. ROOSEVELT has announced his endorsement of the movement for an amendment to the Federal Constitution extending the suffrage to women. He states the grounds for his belief thus:

I believe the time has come for a greater and truer nationalism in this country. I believe in the nationalization of the issues which affect not only men, but women also. The great problems of our country are national. In the matter of the railroads, for example, forty-six different sets of laws for their regulation merely check and handicap their development and management. A universal Federal law is essential for railroads. In the same way, the question of enfranchisement of women has become national and demands Federal action.

Mr. Roosevelt's championship of the cause of a federal suffrage amendment, if he should by any chance be nominated for the presidency, would bring this issue squarely before the country. President Wilson has repeatedly declared that in his judgment woman suffrage is a matter that should be left to the states.

Mr. Wilson is wrong and Mr. Roosevelt right. The fundamental conditions of suffrage should be the same everywhere regardless of state lines. If it is right that women should vote—and its rightness is beyond question—all women should vote, whether they live in Colorado or in New York.

Democracy, the foundation principle of the American nation, and the exclusion of women from the ballot are mutually destructive conceptions. It should be no prerogative of a state, no matter how "sovereign," to determine whether democracy within its borders shall be partial or complete.

The right of citizens of the United States should not be denied or abridged by the United States or any state on account of sex.

THE STORY OF THE WEEK

Conferring Over the Mexican Expedition

The American expedition into Mexico passed last week into a quasi-diplomatic stage. The question of the future status of the expedition in relation to the de facto government of Mexico is under discussion between representatives of the War Department and of the Carranza administration. Meanwhile, the American troops mark time. Where Villa is nobody knows. He may be dead, he may be recovering from his wounds, he may be merely hiding from his pursuers, he may be planning some new offensive. Only one thing is certain. He has not yet been captured, either by his American pursuers or by his Mexican enemies.

Last week General Hugh Scott, Chief of the General Staff of the United States Army, accompanied by General Funston, went into conference at El Paso with General Obregon, Señor Carranza's Minister of War, and other Carranzista officers. No official reports of the first meeting were given out, but it was intimated with some show of authoritativeness that the two sides presented widely differing proposals.

General Obregon communicated a practical demand that the American troops withdraw from Mexico forthwith. There is no reason to believe that such a demand was entertained for a moment by General Scott, or will receive the slightest favorable consideration from the American Government. Indeed it is asserted that

General Scott informed the Mexican representatives that he was not authorized to discuss this question.

General Scott presented, it is said, the proposal that the Carranza Government cooperate with the American force in Mexico in an energetic pursuit of the Villista bandits. Up to the present time there has been little such cooperation, which ought to have been forthcoming if General Carranza had desired in good faith the success of the American purpose of punishing Villa and the bandit raiders of Columbus.

It is reported that the general conditions upon which the American representatives at the conference will insist are about as follows:

Open and effective coöperation of the Carranza forces with the Americans.

Extension of the American lines into Mexico at least as far south as Casas Grandes and probably further.

Relegation to the American military of the duty of policing "a northern zone," consisting of the territory directly south of the international boundary.

Policing of the remainder of the territory—a "southern zone"—by Carranza forces.

Coöperation in the handling of supplies for the American troops.

Granting of use of the Mexican railways to the expeditionary force.

The acceptance of these conditions would secure from the American Government an agreement that the American forces would not go farther south than an agreed upon line, and would retire just as soon as it was made evident that the Villa bands had been eliminated.

In Congress

The Army Reorganization bill makes no progress in conference. There appears to be an insoluble difference of opinion between the conferees of the Senate and the majority of those of the House on three points: The size of the regular army, the proposals for a volunteer reserve army, and the establishment of a government nitrate plant. The Senate conferees are determined in their insistence upon a regular army of 250,000 men. One of the House conferees, Congressman Kahn, agrees with them, but the two others, Representatives Hay and Dent, are equally insistent upon the House provision for only 140,000. It seems probable that the conference will continue to disagree, and a complete deadlock result. In that case the House and the Senate will be asked to consider the bills again in the light of their conflicting desires.

Last week there was serious dissension in the House Democratic caucus over the Philippine bill. An attempt was made to commit the party members to the passage of the bill just as it came over from the Senate. The attempt was reinforced by a letter from President Wilson, but twenty-eight Democrats refused to pledge themselves to vote for the measure with all the Senate amendments included.

The main point of dissent is, of course, the Clarke amendment decreeing absolute independence for the Philippines in from two to four years. This amendment was one of the two points

COLORED TROOPERS OF THE TENTH CAVALRY ON THE MARCH IN MEXICO. THEY ARE MORE POPULAR WITH THE MEXICANS THAN THE WHITES AND HAVE DONE GOOD SERVICE

that led to the break between Secretary Garrison and the President. President Wilson has apparently changed his mind on the Clarke amendment since the Secretary of War's resignation, for at that time he declared in a letter to Mr. Garrison that he believed such action was "unwise at this time," whereas now he urges the Democrats in the House to accept the bill as it stands, including this provision. In view, however, of the defection of the twenty-eight Democrats, it seems probable that the definite promise of the Clarke amendment will be at least modified, if it is retained at all.

No Strike in the Anthracite Fields

The joint conference of anthracite operators and representatives of the United Mine Workers of America, which has been meeting daily behind closed doors at the Union League Club since March 9 in an effort to negotiate a new wage agreement for 176,000 miners, has resulted in an unexpected agreement. If the proposed terms are accepted by the Miners' Convention, which was to have been held at Pottsville, Pennsylvania, on May 2, there will be no strike in the hard coal fields.

At the sessions of the conference the miners presented demands which had been drawn up at the anthracite convention in Wilkesbarre, last September and endorsed at the Indianapolis convention of the United Mine Workers in January last. The miners were represented by a sub-committee consisting of John P. White, president of the union, and the heads of the three anthracite district boards. S. D. Warriner, president of the Lehigh Coal and Navigation Company, headed the operators.

The principal demands of the miners, which numbered eleven, were for an eight-hour day, a twenty per cent increase in wages, and recognition of their union. About five weeks were consumed in a discussion of the demands in detail, and just when it seemed probable that no agreement would be possible, the operators accepted the bulk of the miners' demands. The new wage scale agreement drawn up by the conference provides for recognition of the union, for an eight-hour day instead of a nine-hour day, for specific increase in wages ranging from three per cent for day workers to seven per cent for contract miners (it being estimated that the shortening of the working day is equivalent to a general increase of twelve

and a half per cent in wages), for the establishment of a price scale for mining by machine, for an arrangement for speedier adjustment of grievances, for the readjustment of the selling of mining supplies to the individual miners by the operators, so that no more than a fair profit will be charged.

This outcome of the conference is intensely gratifying, both because it was hardly expected by those who have followed the negotiations and because it is one more victory for the cause of the peaceful settlement of industrial disputes.

A New Ambassador to Turkey

Henry Morgenthau has offered his resignation as Ambassador to Turkey and it is to be accepted by the President. Mr. Morgenthau is now in this country and will take up immediately important organization work for the Democratic party in the coming campaign. The retiring Ambassador has made an admirable record in his three years at Constantinople, and the President has been reluctant to acquiesce in his retirement from the post.

Besides the important American interests in Turkey, Mr. Morgenthau has had to take under his protection the nationals of most of the allied powers. When the Turkish Government proposed to utilize Constantinople College for Girls as army barracks he put a stop to it by saying that he would move the American Embassy into the building. His vigorous protest prevented the Turks from putting British and French civilians of prominence in the towns of Gallipoli, to protect them from British bombardment. He did all that could be done to rescue the Armenians and Greeks from massacre and alleviate their sufferings.

The nomination of his successor is to go to the Senate as soon as the formal inquiries as to his acceptability have been responded to by the Turkish Government. He is Abram I. Elkus, a prominent lawyer of New York. There are few men in New York City who have such an unusual record in promoting legislation for the correction of industrial abuses and the furtherance of commercial welfare as Mr. Elkus. He was the counsel for the New York State Factory Investigation Commission, whose recent report is recognized as a model of thoroughness and impartiality. The set of laws which he drew up to safeguard the lives and health of workers was subsequently

passed by the New York Legislature. He has been counsel for the Merchants' Protective Association of New York City, and has long been active in stamping out fraud in mercantile life, particularly in bankruptcy cases. He was nominated for judge of the Court of Appeals of New York on the Democratic ticket in 1913, and is now an active worker in many benevolent and civic organizations.

The Defense of the Allied Blockade

The British Government has addressed to the American Government a long and elaborate explanation and defense of the blockade which the British navy has been maintaining about Germany. The note indicates no intention to relax the stringency of the blockade; but it does express a desire to make the exercise of what the Allies "conceive to be their belligerent rights as little burdensome to neutrals as possible." The note is concurred in by the French Government.

The United States has protested against the methods which have been adopted to interrupt American trade with Germany on several grounds. It has declared that these methods do not constitute a lawful blockade on several grounds:

1. Because the blockade is not, as required by international law, effective, or impartial as between neutral nations, since the British fleet cannot blockade the Baltic and thus cut off shipments to Germany from Scandinavian countries;
2. Because it involves the capture of goods destined for neutral countries, on the supposition that their actual ultimate destination is Germany;
3. Because the blockade, as administered, works unnecessary hardship to innocent shippers, since vessels are taken into British ports for examination of their cargoes, and subjected to long and costly delay before their cases are finally decided.

To these contentions the British Government makes the following rejoinders:

1. The blockade is effective, since "it is doubtful whether there ever has been a blockade where the ships which slipped thru bore so small a proportion to those which were intercepted. The passage of commerce to a blockaded area across a land frontier or across an inland sea never has been held to interfere with the effectiveness of a blockade.
2. The blockade of Southern ports by

the United States in the Civil War established the doctrine of continuous voyage to cover all cases where there was an intention to thwart or evade the blockade by "whatever means, direct or indirect." Much evidence is available to show that goods in great quantities ostensibly intended for neutral countries were actually destined for use in belligerent countries. For instance, the total import of lard into Sweden during 1915 from the United States was 9,029 tons, while the average annual import from all countries for the preceding three years was 888 tons. "It is difficult to believe that the requirements of Sweden in respect of lard even when every allowance is made for possible diversions of trade due to the war, could suddenly have increased more than tenfold in 1915. The inference indeed is irresistible that the greater part of these imports must have had another and an enemy destination." When the Allies found it necessary to intercept shipments of cotton to Sweden, it transpired that tho the quays and warehouses of Gothenburg were congested with cotton, none was available for the use of the spinners of Sweden. Contracts falling into British hands proved that goods were not intended for consumption of neutrals to whom they were consigned, but were in reality bound for Germany.

3. It is often necessary to bring suspected vessels into port for examination of their cargoes, because of the difficulties of making searches at sea, imposed by weather conditions, the size of modern steamships, the manner in which contraband can be concealed, and the possibility of submarine attack while the search is in progress. Vessels are also brought into port because of the necessity for close examination of all suspected persons made necessary by "the German practise of misusing United States passports to procure a safe conduct for military persons and agents." On this point the British note says further: "The difference between the British and the German procedure is that we have acted in the way which causes the least discomfort to neutrals. Instead of sinking neutral ships engaged in trade with the enemy, as the Germans have done in so many cases, in direct contravention of their own prize regulations . . . we examine them, giving as little inconvenience as modern naval conditions will allow, sending them into port only where this becomes necessary."

The note announces that an "impartial and influential" commission has been appointed to find ways to minimize delays, and pledges the Allies to make their restraints on trade as little burdensome to neutrals as possible.

It closes with the following interesting statement:

"In every theatre and in each phase of the war has been visible the same shocking disregard by the enemy of the rights of innocent persons and neutral peoples. His Majesty's Government would welcome any combination of neutral nations, under the lead of the

United States, which would exert an effective influence to prevent the violation of neutral rights, and they cannot believe that they or their allies have much to fear from any combination for the protection of those rights which takes an impartial and comprehensive view of the conduct of this war and judges it by a reasonable interpretation of the generally accepted provisions of international law. . . ."

The Irish Revolt

For some months it has been noticed that the anti-British movement in the south of Ireland was growing and assuming a dangerous form. Seditious literature was printed and circulated in spite of the extraordinary powers conferred upon the government by the Defense of the Realm Act. Recruiting posters were torn down or defaced or satiric posters pasted up beside them. At the outbreak of the war civil strife seemed imminent in Ireland, for the Ulster Volunteers were openly armed and drilled to oppose Home Rule when it should pass Parliament, while in the south of Ireland the Nationalist Volunteers had been organized to fight them. But in August, 1914, the leaders of the antagonistic factions, Sir Edward Carson and John Redmond, both declared their support of the British Government and a large proportion of the Ulsterites and many of the Nationalists enlisted in the regular army. Mr. Redmond took an active part in the recruiting campaign at first, but his request to have distinct

Irish brigades formed under their own officers was refused by the government. Of late recruiting has languished in Ireland and the government has not dared to apply any of the semi-compulsory measures which have been adopted for Great Britain. In spite of the promise of Home Rule after the war and of the reform measures which Parliament has passed in recent years there remained a faction of irreconcilables who would be satisfied with nothing less than complete separation. "England's extremity is Ireland's opportunity" has been their motto, and the continued failure of British armies seemed to give them their chance. The organization of this extreme wing of the Nationalist party is the Sinn Fein (Gaelic for "Ourselves Alone"); a society for the promotion of Celtic language and literature and the revival of the race spirit.

The young Irishmen who were unwilling to serve in the British army tried to escape to America, but the authorities refused to allow them to embark on any of the steamers. Many of these thereupon joined the militant organization, which daily became stronger and began openly to display revolutionary aims. The Sinn Fein Volunteers paraded publicly in arms and even practised sham battles and the tactics of street fighting in the city of Dublin. A few months ago a band of them rehearsed an attack on Dublin castle, which was theoretically captured at midnight. These various manifestations of disaffection were

Weed in Philadelphia Public Ledger

THE TIGHT LITTLE ISLE!

called to the attention of the government, but neither Baron Wimbourne, Lord Lieutenant of Ireland, nor Augustine Birrell, Chief Secretary for Ireland, took any efficient measures to suppress them, probably for fear of making the matter worse by a display of force.

The Landing of Casement

How much help or encouragement the militant movement

in Ireland received from Germany is not known. It is said, however, that some of the guns found on the insurgents are marked "made in Germany" and it is certain that an attempt was made last week to land a cargo of some 15,000 rifles on some part of the west coast of Ireland. The arms were on board a German vessel so skilfully disguised as a Dutch merchantman that she passed the inspection of the two British patrols on her way out of the North Sea. She was under convoy of a German submarine, but was captured before the arms could be put ashore. Sir Roger Casement, who had put off from the vessel in a small boat, was taken prisoner and is now confined in the Tower of London on the charge of high treason.

Sir Roger Casement is well known thru his exposures of the cruelties practised in the collection of rubber, first, by the Belgians in the Congo River basin and later by the British and Peruvian companies in Putumayo on the headwaters of the Amazon. His report in the Congo case was confirmed by American missionaries and in the Peruvian case by a commissioner of the American Government.

On the outbreak of the war he fled to Sweden, where, according to his own account, the British consul tried to entrap him and offered a bribe to his servant to betray him. Since then he has been in Germany trying to enlist the support of the German Government for the Irish insurgents. He is of an erratic and irresponsible disposition and his enemies call him insane.

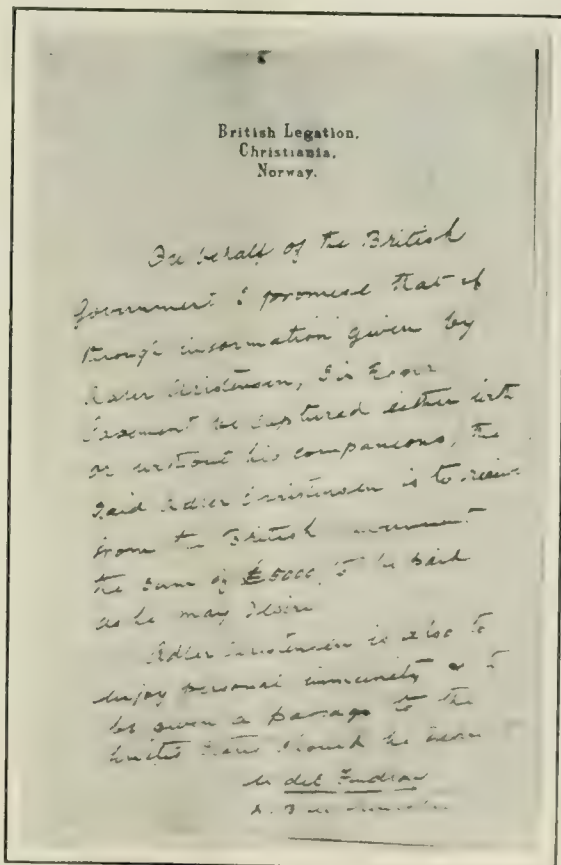

The Outbreak in Dublin

About the same time that Sir Roger Casement was caught at gun-running the insurgent movement came to a head in the Irish capital. Taking advantage of the absence of many of the officials at the races on Easter Monday, April 24, the Sinn Feiners gathered in the heart of the city and at noon seized the post office on Sackville Street. This and the Imperial Hotel opposite were put in a state of defense with sand bags and then the insurgents crossed the Liffey River and took possession of St. Stephen's Green, a park square not far from the bridge. Here they entrenched themselves in military fashion and erected barricades on all sides by overturning tramcars, busses and automobiles. The streets were closed

A NEW SEAT OF WAR

The anti-British feeling in the south of Ireland culminated in open revolt at Dublin and elsewhere. Local disturbances are reported from the counties shaded in the above map

"MADE IN GERMANY?"

by barbed wire entanglements. The gas works were seized and a biscuit factory and a distillery converted into fortresses. The insurgents only took such provisions and supplies as they needed, but the shops on the fashionable streets were looted by men and women.

A wireless sent out from the post office announced the establishment of an independent Irish republic and the flag of the republic, white, green and orange with a harp, was flown over Liberty Hall, the headquarters of the insurgents, and over the captured buildings. Peter Pearse, headmaster of St. Enda's School and editor of a Gaelic journal, was named as president, and James Connolly, a labor leader and the author of "Labor in Irish History," assumed the rank of "Commandant General of the Irish Republican Army."

The insurgents were many of them in dark blue uniforms, with slouch hat and black shoulder straps. The number of those actively engaged at Dublin is estimated at 1500. Their arms were various; some were modern rifles, others old guns with balls of lead slugs or iron nuts, and in some cases shotguns. They seemed to have an abundance of ammunition for they frequently fired recklessly and uselessly. But from the roofs and from the corner houses the snipers covered the streets in the center of town and picked off any uniformed soldier who showed himself. The insurgents were inspired by the presence of the Countess Markiewicz, in a neat green uniform. She is the wife of a Polish nobleman, sister of Sir Josslyn Booth, and cousin of the Marquis of Zetland. She supported the strikers of Jim Larkin in 1913 and last January, when her house was raided, revolutionary and pro-German literature was found there.

The telegraph and telephone lines leading out of Dublin were mostly cut but the one leading to Curragh Camp was overlooked and thru this the

troops were summoned to the city. With their machine guns they were more than a match for the insurgents, but they made slow progress and at the end of the week the insurgents still held the center of the city. Liberty Hall was demolished by shells from a gunboat in the river. Most of the other buildings held by the Sinn Feiners were set on fire by the artillery. Trinity College, where most of the students belong to the Officers' Training Corps, was converted by them into a regular fortress, from the loopholes and windows of which the students kept up a hot fire upon any Sinn Feiners in sight. Finally, after both Pearse and Connolly were wounded or killed the remnant of the insurgents surrendered.

In the six days of street fighting the non-combatant population suffered severely. Over a hundred deaths have been reported, including women and children. Arrangements had been made for two simultaneous risings in various parts of Ireland, and in a half dozen counties these took place but none of them except Dublin seems to have been serious. The commandant of the home forces is Sir John French, recently recalled from France, and the subjection of the rebellion has been placed in the hands of General Sir John Maxwell.

The Irish Republic The seven men who styled themselves the "Provisional Government of the Irish Republic" issued from Liberty Hall, Dublin, the following proclamation:

Irishmen and Irishwomen, in the name of God and of the dead generations from which you received the old traditions of nationhood, Ireland, thru us, summons her children to her flag and strikes for her freedom, having organized and trained her manhood thru her secret revolutionary organization, the Irish Republican Brotherhood, and thru her open military organization, the Irish Volunteers, and the Irish citizen army.

Having patiently perfected their discipline and resolutely waited for the right moment to reveal itself, she now seizes that moment, and, supported by her exiled children in America, and by her gallant allies in Europe, by relying on her own strength, she strikes, in full confidence of victory.

We declare the right of the people of Ireland to the ownership of Ireland and to the unfettered control of Irish destinies to be sovereign and indefeasible. Long usurpation of that right by a foreign people and government has not extinguished that right, nor can it ever be extinguished except by the destruction of the Irish people.

In every generation the Irish people have asserted their right to national freedom and sovereignty. Six times during the past 300 years they have asserted it in arms. Standing on that fundamental right, and again asserting it in arms in the face of the world, we hereby proclaim the Irish Republic as a sovereign, independent state, and we pledge our lives and the lives of our comrades in arms to the cause of its freedom, its welfare and its exaltation among nations.

The Irish Republic is entitled to, and hereby claims, the allegiance of every Irish man and Irish woman. The republic guarantees religious and civil liberty, equal rights and equal opportunities to all its citizens, and declares its resolve to pursue the happiness and prosperity of the whole nation, and of all its parts, cherishing all the children of the nation equally, and oblivious of the differences, carefully fostered by an alien government, which have divided the minority from the majority in the past.

THE GREAT WAR

April 24—Sir Roger Casement caught while trying to land guns from German vessel on Irish coast. Irish insurgents seize heart of Dublin.

April 25—Liberty Hall, Dublin, shelled by British gunboat. Premier Asquith notifies Parliament in secret session that conscription will have to be adopted unless 50,000 have volunteered by May 27.

April 26—Second contingent of Russian troops landed at Marseilles. Zeppelins raid English coast for the third consecutive night.

April 27—All Ireland under martial law. Germans attack British lines in France and Flanders.

April 28—Germans take 5600 Russian prisoners at Narocz Lake. British battleship "Russell" sunk by mine in Mediterranean, with loss of 125 lives.

April 29—British troops clear St. Stephen's Green, Dublin. British army at Kut-el-Amara surrenders to Turks.

April 30—Dublin insurgents surrender. Russians repulse Turks near Diarbekr.

Until our arms have brought the opportune moment for the establishment of a permanent national government, representative of the whole people of Ireland and elected by the suffrage of all her men and women, the provisional government hereby constituted will administer the civil and military affairs of the republic, in trust for the people. . . .

The unfortunate British expedition in Mesopotamia has come to an end. The force under General Townshend, which was defeated at Ctesiphon near Bagdad four months ago, was overtaken by the Turks in its retreat down the Tigris, and has ever since been beleaguered in the bend of the river at Kut-el-Amara.

The expedition which was sent up the Tigris to the relief of General Townshend has not yet been able to get nearer than twenty miles of Kut-el-Amara. Here the Turks occupy a

strongly fortified position on high ground with the right resting on the river and the left protected by swamps of Suwekie, two miles to the north. The Turks also hold the southern bank of the Tigris just opposite.

The river, swollen by the spring freshets, has overflowed its banks and both sides, making it difficult for the British to advance. General Gorringe is in charge of the force on the left or northern bank and General Keary on the right. A frontal attack by General Gorringe on April 5 broke thru the Turkish lines at Umm el Henna, altho there were successive rows of entrenchments for a distance of 2500 yards stretching between the swamp and the river and the front trenches were nine feet deep.

But in trying a week later to force the next Turkish position at Felahie, five miles beyond, General Gorringe, it appears, met with a severe setback. The report from Constantinople states loss of more than three thousand men in the battle of Felahie, but according to the London report the British loss is by no means so great as this. Another attack on Felahie was made by a force of some ten thousand men on April 22-23, but this also was repulsed with losses to the British of some two thousand.

On the night of the 17th the Turks attacked on the right or southern side of the Tigris with ten thousand men and succeeded in driving back the British half a mile. But, according to the British report, the Turks suffered a loss of more than three thousand men, while the British losses were considerably less. In front of one of the British brigades 1200 to 1500 Turkish corpses were counted.

After holding out for 143 days against overwhelming odds General Townshend surrendered the army at Kut, numbering 2970 British and some 6000 Indian troops and their followers. He destroyed his guns and munitions before capitulating.

THE COLLAPSE OF THE BRITISH MESOPOTAMIAN CAMPAIGN

The British expedition under General Townshend, which has for nearly five months been besieged at Kut-el-Amara, has at last surrendered unconditionally to the Turks. The force which was sent up the Tigris to his relief was defeated with heavy losses twenty miles below. The shaded area represents territory acquired by the Russians and British. On another page of this issue will be found an article on the literary and historical interest attaching to this region.

FROM STATE TO STATE

ALABAMA: The increasing scarcity of materials from which paper can be made has caused a revival of effort in this state to establish a large plant for the manufacture of paper, alcohol and other things from cotton stalks. For many years this subject has been discussed, but never before with so good prospect of action upon it. It is estimated that the South pays \$75,000,000 a year to have its cotton stalks gathered and destroyed, whereas for \$2 a ton they might be gathered, baled, shipped to central points and converted into pulp for making many useful materials.

COLORADO: Vast preparations are being made in this state for the entertainment of a large number of expected summer visitors. As a result of the war in Europe and of the two great expositions in California last year thousands of Americans who had habitually spent their summers abroad paid their first visit to the Rocky Mountain states. Many of those who passed thru Colorado were so delighted with the scenery and climate that they planned to come back for longer stays this summer. Local capitalists are therefore putting large sums of money into making the many resorts of the state more attractive. Also the United States forest officers announce that they will be glad to make surveys for summer home sites in the national forests of Colorado or to lease "special use" cabins, 279 of which have been built.

DELAWARE: After years of discussion of many various plans for improving the city's water front the people of Wilmington have generally concluded that the suggestion of Mr. Joseph S. Wilson, of the Wilson Line, is the best that has been made. He says: "Let the Chamber of Commerce consider ways and means of raising funds to employ a first-class authority on harbor improvement to come to Wilmington, study our conditions and needs and make recommendations." This course will probably be adopted.

FLORIDA: The completion of a forty-foot dipping vat at the Union Stockyards at Jacksonville marks the beginning of the end of the tick in this state. The fight against this destructive pest has been a long and a hard one, and there is still much to do before Florida takes her place among the tick-free states; but with a convenient vat large enough for the safe-dipping of horned cattle, horses and mules, and the segregating pens that go with it, the infested sections must rapidly become fewer and smaller.

IDAHO: The first jury composed entirely of women to serve in one of the higher courts of this state recently decided an appealed case in the District Court of Ada County at Boise. The action was brought in two causes involving an intricate transaction in a sale of sheep with the question of commissions to be de-

cided. The jury allowed the commission in one cause and denied it in the other, which was precisely what the lower court had done, tho the women were not permitted to know this until after their decision had been rendered. Of the venire of twenty-four women, only one asked to be excused, her reason being that her young children needed her.

INDIANA: An entertaining and instructive procession of more than 1000 employees of the City of Indianapolis recently paraded the streets of that city for the purpose of showing to the taxpayers where and how their money goes. Each department of the city government was accompanied by its machines or implements or by floats or pictures which showed the nature of its work and what it is accomplishing. Such of the more important activities as could not be thus illustrated were briefly outlined by printed banners which were easily read by the thousands of citizens who lined the streets.

KANSAS: For three years the club women of this state have been making a determined fight for a "clean Kansas." During two of these years they had little help or encouragement, but this year they have the aid of a state law and many local ordinances as well as organizations of school boys and girls thruout the state. In every community that supports a street department officials must set the machinery of the law at work on every bad spot reported by any of the women's inspectors. It is said the streets and yards are cleaner than ever before.

MISSISSIPPI: Gubernatorial abuse of the pardoning power has been for many years a subject of popular complaint in Mississippi. Now, under a new law, Governor Bilbo has appointed five citizens as a board of pardons. Those familiar with the situation, while admitting that division of authority and responsibility may do some good, say that the real trouble arises from the common practise of signing petitions for pardon without looking into the merits of the cases. It is said that in several instances in the past influential citizens have signed such petitions with so little thought that they have afterward publicly censured the governors who acted favorably on them.

NEW JERSEY: The referendum proposition, passed by the Legislature and approved by Governor Fielder, to bond this state for \$7,000,000 for the construction of a state highway system provides for the payment of principal and interest from the motor vehicle department receipts, but adds that if these receipts are insufficient the payments shall be made from the state fund. Opponents of the proposition say that this contingency is not to be mentioned on the ballot for the voters. They also assert that, since no provision is made for the maintenance of roads from

the motor vehicle department's funds, money for this purpose will have to be raised by taxation or by largely increased automobile license fees.

NEW MEXICO: A proclamation just signed by President Wilson changes the boundaries of the Alamo national forest in New Mexico and, among other things, provides for the restoration of 28,810 acres of the public domain. This area will be subject to settlement June 5 to July 2, and thereafter to entry and disposition under any applicable public land law. The excluded land, most of which is in rough hills, lies in the southeastern part of the state.

OHIO: The Garden Club of Cincinnati, comprizing a large number of prominent women, is not confining its efforts to the beautifying of the city, but is adorning the country highways for many miles in several directions. For example, thousands of rosebushes have been planted along Wooster pike and other main roads leading into the city. As an indication of the interest this club has awakened, it is said that the 6000 rambler rosebushes which it had provided for a recent public sale were all disposed of in a single day.

OREGON: A mammoth ship-building plant to construct wooden vessels for river service and transoceanic trade is to be located at Portland; work upon it to begin at once. Portland, Seattle, Spokane and Eastern capital is behind the enterprise. The plant itself is to be built largely of wood, one of the objects of the project being stimulation of the lumber industry of Oregon.

RHODE ISLAND: The commission appointed a year ago to make a detailed study of the farm situation in Rhode Island and to suggest how the state may promote a back-to-the-land movement has made its preliminary report to Governor Beeckman. It finds that farm lands are now at a minimum use, there being only 5292 farms in the state, twenty-six per cent of which are under twenty acres in extent. Among the commission's suggestions is a plan for the state to buy lands and colonize upon them. Another suggestion is that mill corporations in towns where there is much unused land buy large tracts and build neat homes on five or ten acre lots, to be sold on amortization payments to their employees.

SOUTH CAROLINA: The farmers of South Carolina are said to be organizing to defeat the proposition for state fire insurance, which some of the political leaders regard as the only answer to the foreign companies which have withdrawn from the state rather than submit to its new insurance laws. The farmers are calling attention to the fact that they pay taxes on about one-third of the property assessed for taxation by the state and buy only one-tenth of the fire insurance sold in the state. They also argue that,

since most of the heavy losses by fire are sustained in cities, the risking of the state's money would amount to extreme discrimination against the rural taxpayers.

SOUTH DAKOTA: The commercial clubs of several counties have taken up the matter of putting the roads of this state in good condition. Each of them invites everybody who knows of a bad piece of road in its vicinity to report it. The entire influence of the club is then brought to bear, if necessary, on the officer whose duty it is to repair that road. Some of the clubs are arranging to hire men to patrol the roads of their counties regularly, as trackmen patrol railroads. As a result of the club's activities, it is said, road-officials are giving more attention to their duties than ever before and the highways of the state are in better condition.

TEXAS: The State Pure Food and Drug Department, having made independent experiments which proved beyond doubt that flies carry disease germs, has begun an active campaign for the screening of all food-stuffs in the state. Inspectors have been sent out with strict orders to compel all storekeepers, hucksters and others who offer anything edible for sale to keep it covered in such a manner that flies cannot get to it. In most of the cities the women's clubs are giving active aid to the inspectors and promising to withdraw their trade from merchants who persist in violating this law.

VERMONT: Under the leadership of several large woolen manufacturers, aided by State Commissioner of Agriculture Brigham, another attempt is to be made to enact legislation favorable to a revival of sheep raising in Vermont. The first step to be taken is toward the education of the public to the necessity of restraining dogs. For many years it has seemed that dog lovers have exerted more influence over legislation than the sheep-raising interests. But now that short supplies of meats have sent prices so high, it is believed that the financial advantage of having large flocks of sheep grazing on the thousands of untillable acres in this state will be influential.

VIRGINIA: The Supreme Court of Appeals of this state has decided that Superintendent Hodges of the Alexandria County public schools must pay back \$970 which he has unlawfully received in the last three years as increased salary, the court holding that salaries of public officers cannot be increased during their terms of office. For many years it has been a common practise of Virginia state and county legislative bodies to alter salaries during such terms. It is believed thousands of past and present public officials will come under this ruling; and since very few salaries have been decreased, it is expected that a large sum of money will have to be paid back to the public treasuries.

THE NAVAL GUN WORKS AT WASHINGTON WHERE
BIG GUNS FOR THE NEW BATTLESHIPS
ARE BEING TURNED OUT

THE COMING FLOOD OF IMMIGRATION

BY ISAAC DON LEVINE

THERE has been a great deal of discussion in this country since the war began about the volume of immigration to the United States after the restoration of peace in Europe. There are those who argue that conditions in the Old World will be such after the war is over that there will hardly be any increase in the present rate of immigration, which is negligible. But the overwhelming number of authorities on immigration, among whom are the numerous representatives of immigrant aid societies as well as most of the United States Immigration officials, are of the opinion that immigration to this country after the war will assume unprecedented proportions.

It may be safely said now that this latter view has come to be generally recognized as the right one. Those who believe that for years to come this country will know no immigration problem disregard economic conditions. They hope for an era of marvelous recuperation and reconstruction in Europe, an attractive hope, but hardly justified by reason.

HOWEVER, to settle all doubts as to the proportions of the immigration following after and resulting from the European War there is one convincing source of information that has been overlooked so far, and that is to ask the immigrants who are in this country themselves about it. The millions of immigrants in the United States are linked with as many more of their relatives and friends across the ocean so closely that to them the sentiments of the people of the Old World are a certainty, and *vice versa*. And these sentiments cannot be mistaken. Whatever the foreign press in this country is saying about American neutrality and whatever the American jingo press is saying about hyphenism, the fact remains that the vast body of immigrants in America are immensely appreciative of the haven they have found here. If one considers the number of subjects of Russia, Italy, Austria-Hungary and Great Britain (the four leading contributors to American immigration) that have actually responded to the call to the colors from home in comparison with those who have not, one will discover what the immigrant thinks of America and how he feels about the peace he has found here. And whatever he thinks and feels about it, his brother or father or cousin or friend abroad is sure to think and feel.

Mr. Levine is a young Russian Jew who has been in this country several years. He worked on the staff of the Kansas City Star and has more recently been doing various journalistic work in New York. His own appreciation of the haven of America may be judged from the fact that out of his savings he has brought over, one by one, all the eight members of his family, whom at first he left behind in Russia.—THE EDITOR.

A canvass of the rank and file of the immigrant body in this country would speedily reveal the fact that with the conclusion of peace in Europe a colossal increase in immigration to America will occur. The fact that the country has proved impregnable in perhaps the greatest catastrophe in history is a recommendation that will appeal more strongly than ever to the war-tortured, tax-burdened Slav, Teuton and Saxon as well as Jew, Hungarian and Italian. If up to the present time America has attracted millions mainly because it was to them the symbol of Light, Liberty and Prosperity, how many more will she entice from now on, when it will also become the emblem of Peace, Safety and Protection?

In face of the expected vast stream of immigration, this already important and complicated problem looms up before us in all its new magnitude and demands our immediate attention. As a problem of the near future, as one that vitally concerns all parts of the country and all classes of the population, it has no equal in urgency and importance. But it is evident that the country has not yet come to realize its full import, for what preparations is she making to meet the rushing current of immigrants? Has the government taken any steps in the direction of such preparation? Has she devised any means and methods to cope with extraordinary conditions? The answers to these questions are all negative. Our government has not so far demonstrated any real disposition to deviate from the narrow course to which its immigration activities are confined, activities limited to the admitting and barring of the immigrants.

Perhaps it is in the latter that the government hopes to find a solution of all the difficulties that may arise from a heavy post-bellum immigration. Truly, an easy way of getting rid of the immigrant is simply not to admit him. But what about the

Constitution? What about the professed mission of this nation to serve humanity? What about the large foreign population's attitude toward such a means of settling the immigrant problem? How could the government turn away healthy, enterprising people who come to this haven of peace to build their homes under the protection of the Stars and Stripes? And, then, if the government prefers to deal with the immigration problem at the time it reaches its most critical stage, does she forget that at the same time she would most probably have her hands full with the financial and industrial crisis that is certain to come in this country upon the conclusion of peace? Or, is it in order to avoid this latter crisis by keeping the ammunition factories busy that the government has evolved its program of Preparedness at a time when half the world is in ruins and all the great nations are nearly exhausted physically and economically?

TO be sure, we are just at present in need of preparedness, but not with the capital "P." We must finally rise to the demands of civilization, of history, upon us, and be prepared to meet adequately the multitudes of newcomers to our shores. If this country has a mission to perform in the world in this crucial day, that is its mission. I cannot refrain from quoting a remark made by a fellow-immigrant: "If this country were to spend the hundreds of millions of dollars intended for military purposes on the immigrant, what glorious results she could achieve, what an immense amount of good and strength she would derive from it! Nothing can be more wonderful than actually building up a nation!"

Of course there are very few people in this country to whom it ever occurred that such large sums could be profitably spent on the immigrant, for there are very few Americans who are aware of the vast latent possibilities contained in the material furnished us by the immigrant. It is time, however, to drive it home to every American that it is not Tariff nor is it Preparedness that is on the *Tagesordnung* of our national life, but Immigration or Preparedness for Immigration. Immigration is the paramount question of the day, and the sooner the government and the people of these United States realize it the better for the country.

There is one good thing at least that the Preparedness movement has begotten, and that is the idea of the

Naval Advisory Board. This idea should be utilized by the government in another field, and should take there the bodily shape of an Immigration Advisory Board. The foremost naturalized citizens of this country plus a group of eminent representatives of all the classes of the country's population should cooperate with the government in an endeavor systematically to help the immigrant do what he is unable to do himself and what the country expects him to do. This board should make it its chief aim to help the immigrant become a permanent member of the nation as soon as possible, to take care of him in all the phases of Americanization, to bring out and make full use of all the potentialities of the immigrant so as to aid in the material upbuilding and spiritual uplifting of this nation.

Such a board would have at its command for its initial activities the Immigrant Head-Tax Fund amounting to about \$10,000,000 and constantly growing. Many suggestions have been made for the use of this fund. Perhaps none of them deserves more attention than that proposing its employment in a colonization scheme. Immigration has so much to do with unemployment, and unemployment is to a great extent the result of the urban life of a country. To relieve the pressure upon the

cities of this country by a formidable "Back to the Soil" movement would certainly serve a double purpose. It would be beneficial to the country's old citizens as well as to the new. That such a movement, backed by the government's financial support, launched among the immigrant population, would prove very successful no one who knows the immigrant will doubt. There is no one so eager as the immigrant to have his permanent home built upon the soil of this "land of the free." The large majority of the immigrants in this country have the elementary agricultural experience that should soon make of them a healthy and productive part of population, if properly supported.

There is nothing visionary or impracticable in such a suggestion. The Baron de Hirsh Fund, a private corporation, has been engaged in similar work for years. It has bought large tracts of land in Argentina, Canada and the United States, distributed it among members of the Jewish nationality, and lent them money to start as independent farmers. Thousands of prosperous colonists scattered thruout this hemisphere are a good proof of the success accomplished with the help of that fund. And when one remembers that the Jews, having been away from the soil for eighteen centuries, are not easily transformed into agri-

culturists, while the material at the disposal of the United States Government was originally largely rural; that the Baron de Hirsh Fund as a foreign corporation had to *buy* land and was hampered by all kinds of federal and state laws in its activities, while the United States *owns* extensive tracts of land and commands numerous facilities both as a state and as a business institution, one will be inclined to believe that the idea of immigrant colonization on a vast scale promoted by the government merits the highest consideration of the entire nation, and in itself constitutes a problem that warrants the creation of an Immigration Advisory Board.

Now is the time to tackle the immigration situation as it will be forced upon this country after the war. Now is the time to become prepared. The government should inaugurate immediately a strong organization which should make the country ready for emergencies. In the court of civilization this government will be condemned should a flood of immigration make this nation hysterical and cause it to commit grave errors. The country needs preparedness for immigration, and the government should realize that at present this is the *real* preparedness that we need.

New York City

GERMANY

BY MORRIS GILBERT

Germany?—Why that's the land
That children seem to understand.
They know about the sunny hills
Crowned with chattering bustling mills,
Where a Miller's Son may seize his staff
And swing his pack up with a laugh,
And gayly go 'mid blessings hurled
To seek his fortune in the world. . . .

And children know just how the way
Winds onward all the livelong day,
Until at last the Miller's Son
(The last, the third and youngest one)
Gets himself lost, at night, alone,
Within a forest overgrown.
But there he'll find without a doubt
Some friend to seek adventure out—
Perhaps a fiddler debonnaire
A-prancing with a dancing bear,
Perhaps a soldier old and gray
Back from the wars and out of pay,
Perhaps a talking wolf or owl,
Perhaps a giant on a prowl,
Or dwarf, or tailor's 'prentice wise
With whom a youth could fraternize.

And probably towards break of day
They'll discover far away
A tiny spark of light—and then
They'll see it is a robber's den!
And so will plot and plan to go
(The children—ah, the children know!)
And scare that robber from the spot,
And eat his meal and make his cot
Their own to use like honest men—
(The robber won't come back again)

Next day the dauntless Miller's Son
Will start once more when breakfast's done
To roam the wide world up and down—
Perhaps to win a royal crown,
Perhaps to help his brothers when
They are attacked by evil men—
Always happy and fine and free
And shrewd as Miller's Sons must be,
Kindly and quick and penniless
And glad to share his merriness,
And not a bit surprized to find
A princess in a pumpkin-rind—

And that's what little children see
In Germany

Ah, Germany!

REFORMING THE GROCER'S BOY

ONE MORE PRIZE ARTICLE ON "THE BEST THING IN YOUR TOWN"

BY E. W. BEIMFOHR

THE best thing in our town must be locally well known and generally approved; it must contribute in no uncertain sense to the economic and moral welfare of the majority of the citizens of our community; it must exemplify the principle of "the greatest good to the greatest number." I am convinced that our Merchants' Coöperative Delivery Company best fulfils these requirements.

This company was incorporated about a year ago. Its purpose was to systematize the delivery of goods by the retail stores, especially the grocery stores, and to eliminate the waste of time, energy and money incident to individual deliveries.

The delivery equipment owned by each merchant was turned over to the company and stock was issued for its appraised value. While only fifteen merchants were original subscribers to the stock, twenty-six more added their names after the company began demonstrating its ability to handle the business. Now there remain but few merchants in the city making deliveries who are not having this work done thru the company. The manager and the delivery men were also allowed an allotment of the stock, so the company is coöperative in every feature.

Everett has a population of approximately thirty-five thousand. Both its business and residence districts are widely scattered. It was necessary, therefore, to have a central station where goods from all coöperating stores could be collected and routed for distribution. This central station serves a purpose not unlike that of the post office in receiving mail and arranging its delivery thru carriers assigned to different routes. The city was then divided into definite delivery districts. These were numbered and a map showing the boundaries of each district was posted in a place where it could be conveniently referred to.

Information regarding the proposed operations of the company was given thru a letter and time card mailed to the customers of each store coöperating. The time card showed the hours at which deliveries were scheduled to leave the stores and the hours of arrival at the homes of the customers.

The company supplied each merchant with sanitary boxes built specially for delivery purposes, and instructed the merchants and their clerks to place the order of only one customer in a box, to prevent mixing and needless handling of the goods.

On the morning the company began making deliveries, drivers called at all stores coöperating, loaded the outgoing goods and brought them to the central station for the 8 o'clock delivery. When all goods had been sorted, each driver loaded his vehicle in the order in which the goods were to be distributed in his district, made the deliveries and returned to the stores to pick up the goods for the 10 o'clock delivery. These trips were repeated at 2 and at 4 o'clock in the afternoon. This schedule has been maintained daily, except Saturdays, when three afternoon deliveries are made: at 1:30, 3:30 and 5:30 o'clock.

Each driver delivers the goods from all coöperating stores billed to addresses in his district. This eliminates entirely overlapping of territory and reduces to a minimum expense of delivery. Fifteen vehicles, eleven horse-drawn and four motor-driven, make all the deliveries for forty-one stores and are taking the place of forty-five vehicles formerly in service.

This outlines in brief the purpose, organization and operation of our Merchants' Coöperative Delivery Company. Let us now consider its effect upon the community.

Let us first consider the merchants. It has brought them together in a common cause. This closer associa-

tion developed an acquaintance which has ripened into a spirit of friendly coöperation seldom seen among competitors. It has systematized, simplified, improved and cheapened an annoying and costly item of their business. It has shifted the entire burden of deliveries upon a responsible company organized and equipped for this purpose, and has given the merchants more time for other details of their business. It has also developed greater efficiency in the service of the clerks. Orders are now put up more promptly to meet the scheduled deliveries.

The effect upon the delivery men has been entirely wholesome. They work with more spirit, knowing that when the last scheduled delivery has been made they will not be asked to make another trip on account of a few belated orders. And with a financial interest in the company, they feel a sense of ownership and responsibility which assures better service and also avoids strained relations between them and their employers.

The effect of the company has been to make the customers more thoughtful and systematic in time and method of giving their orders. These are now placed at regular hours and are more complete because given more thoughtful consideration. A careful record kept by the company shows a steady decrease in the number and a marked increase in the size of orders given. With a time card at hand, the customers know when to place their orders and when to expect deliveries, and so the systematic service of the company is reflected in greater system in the homes.

Surely, it would seem as if a company which thus daily affects the majority of our citizens, which teaches and exemplifies system, coöperation, economy and efficiency, deserves the distinction of being considered "the best thing in our town."

Everett, Washington

THE MERCHANTS OF EVERETT ARE PREPARED TO DELIVER THE GOODS

THE PEOPLE vs. ALCOHOL

SOME WITNESSES FOR THE PROSECUTION

BY LEIGH MITCHELL HODGES

ONE summer evening five years ago the editor of one of the best-known American newspapers and a member of his staff who just had finished a 20,000-mile tour of the country were talking about the liquor situation.

"Within twenty-five years we'll have nation-wide prohibition," said the editor.

"Impossible!" exclaimed his associate. "If it ever comes, your children and mine will be dust before the day of its arrival."

That was only five years ago.

And within the past year the man who was foolish enough to use the word "impossible" has been looking into the situation thru the eyes of assorted observers.

The resultant scrap-book is so eloquent in a certain direction that even a few of its pastings may serve to strengthen the case of the People vs. Alcohol.

Because of his well-known aversion to sensationalism, Dr. Charles W. Eliot, president emeritus of Harvard, cannot be accused of anything worse than an interest in humanity when he says:

The German investigations on the mental effects of very limited doses of alcohol, doses which most people have always supposed to be completely innocuous, . . . seemed to me to prove that even, twenty-four hours after taking a small dose of alcohol the time-reaction in the human being is unfavorably affected. Now the quickness of the time-reaction is important to every mechanic and to every artisan.

By way of contrast, the next whack is selected from the *New York Clipper*, a periodical devoted to theatrical and circus interests.

Showfolk, has John Barleycorn and his numerous offshoots been draining your bankroll? Did they eat up the better part of your earnings last season? Have you a bank account upon which to rely when the dark days come? Did booze ever do you any good?

No! We are not preaching. We are just giving you some food for thought.

Boys! There's nothing to it. Let's all get together and give old John Barleycorn and his piratical crew such a wallop that he never can come back.

The fact that this nation spent more than \$2,000,000,000 on drink last year—the total cost of our public schools for the same period was less than half that sum—lends interest to the following editorial quotation from *The Umpire*, a paper published by and for the convicts in the Eastern State Penitentiary of Pennsylvania:

When the bill for abolishing the death penalty in New Jersey was be-

fore the State Legislature, one of the members, a former prosecuting attorney of Camden, stated that of forty capital punishment cases he had been connected with, *every man who committed a murder was actuated either directly or indirectly by liquor.*

Governor Goldsborough, of Maryland, recently stated that in his investigations of the many applications for pardons that have come to him since he has been the state's chief executive, he has found that in a least ninety per cent of the cases, the crimes committed by the persons seeking pardons were either directly or indirectly the result of their indulgence in intoxicating liquor. . . .

According to the report of the State Superintendent of Prisons in New York for the year ending September 30, 1914, there were received 1403 prisoners at Sing Sing of whom 860 acknowledged the use of liquor; a total of sixty-two per cent.

During the same year, 702 prisoners were received at Clinton, of whom 506 drank liquor; a total of seventy-two per cent.

At Joliet, Illinois, there were 1618 prisoners committed during the past two years, of whom only 328 were abstainers, leaving eighty per cent as drinkers of liquor.

For Exhibit Number Four I choose a dialog recently quoted in the *Kansas City Star*, in which a man who for years had owned saloons in that city is addressing an attorney who has filed with the police commissioners many remonstrances against the renewal of licenses:

"I want you to do me a favor," he said. "I want you to put in a protest against a license for me."

"Why, what's the matter?" asked the lawyer, astonished, as he remembered the many times the saloon owner had been before the board to urge a new location for his own saloons.

"I'll tell you something mighty serious is the matter. A fellow has filed for a license in the block where I live. Why, he wants to put a saloon just two doors from my children and I've got a daughter just growing up. I don't want her put up against a saloon two doors away."

"Why don't you file the protest yourself?" asked the lawyer.

"Say, I would be a fine person to file a protest against a saloon because it is near my home after the times I have asked for saloons in residence districts, wouldn't I?"

And following this aroused father, in my drink book, comes a man whose name is pretty generally known thru-out the world—Professor Irving Fisher of Yale—who says:

In studying the conditions of health and efficiency during the last ten years, the conditions which enable an athlete, for instance, to be at his best, I have had occasion to examine the conflicting popular ideas concerning alcohol. I began the study quite willing to be convinced that alcoholic beverages had some virtues. But I have ended in

the conviction that they have none, and I have found that this conclusion is almost universally reached by those who have examined the facts.

These facts demonstrate that a man who takes alcohol, in even moderate degree, is harming himself physically, mentally, morally and economically.

Some folks have a special hankering for "government" figures. So let me insert here a note from a Government official, John H. Snodgrass, consul general at Moscow. He says that, according to statistics gathered by a reputable newspaper, the consumption of vodka during the months of July, August, September and October, 1914, was only a little more than one-tenth what it was during the same months in 1913—before the Czar's ukase against intoxicants—and adds:

It is observed in the manufacturing concerns that labor has become much more productive than before. Formerly at the Moscow mills many workmen would not appear on Monday, and a number of those who did were unfit for duty in consequence of their Sunday excesses. This is no longer the case; both the quality and quantity of labor performed have improved.

As a companion piece to this war-flavored note, it is quite in place to quote the following statement made by Colonel Maus, recently retired as surgeon-general of the Eastern Department of the United States after forty-one years of service, during which he organized the health service in the Philippines:

Practically all of the crime committed in the army, directly or indirectly, can be traced to the effects of alcohol.

And when the next edition of that ponderous and official tome, the *U. S. Pharmacopeia*, comes out, for the first time in its long and useful history it will contain no mention of either whiskey or brandy as drugs.

A majority of the members of the national committee in charge of the revision think alcohol should not be classed as a medicine.

Of course, there's an economic strain running thru all the quotations here given—for whatever affects health, morality or conduct is of economic importance.

But just to give the right finish, it is well to quote an official of the Du Pont Powder Company who, when issuing an order prohibiting use of intoxicating liquors by the company's workmen at Penn's Grove, New Jersey, took occasion to remark that "A man with a bottle of whiskey in his possession is as dangerous around a powder plant as a bomb thrower."

Doyleston, Pennsylvania

RODIN'S GIFTS TO TWO NATIONS

THE sculptor whom some critics choose to name in the same breath with Phidias and Michelangelo, and who leaves with others chiefly "an impression of the sordidness and ugliness of life," Auguste Rodin, has made a lasting expression of his devotion both to France and to her ally across the Channel. Early in the war, when the threat to Paris made it wise for the sculptor—then seventy-five years old—to seek safety in London, he presented to the British nation "as a token of his admiration for the British soldiers who have been fighting side by side with my compatriots," eighteen of his statues

Medem Photo Service

AUGUSTE RODIN

which were then on exhibition at the Victoria and Albert Museum. Among them were a replica of the exquisitely modeled "Age of Brass," the figure of a young man in whom the impulses of civilization have just begun to dawn, and a study for the brusque portrait of Balzac which aroused such commotion.

Even before making this gift to Great Britain he had offered to the French nation the complete collection of his works housed in his studio in Paris, the Hôtel Biron.

But there was opposition, led by Calmette, the editor of *Le Figaro*, whom Mme. Caillaux murdered, and the offer was refused. Recently, however, the good sense of the

French Government has reasserted itself and the gift has been accepted, to be maintained perpetually as a museum.

"Auguste Rodin is in person a man of middle height," wrote Camille Mauclair in 1905, "with an enormous head upon a massive torso. At first sight one sees nothing of him but this leonine bust, the head, with its strong nose, flowing gray beard, and small, keen, light-colored eyes."

After "The Thinker," "The Hand of God" is perhaps the Rodin statue best known to Americans. The Metropolitan Museum in New York has a marble original. Bernard Shaw declares the hand

is a reproduction of his own, and critics have pointed out how its modelling suggests the artist's hand, the creative hand. "The Wounded Lion," the photograph of which we reproduce by courtesy of the owner, Mr. Samuel P. Colt, and of *Vanity Fair*, is a recent work. It was made since the war by Rodin and is now at Bristol, Rhode Island.

De Witt C. Ward
WOUNDED LION

WHO GOES TO SCHOOL?

Of the 20,792,879 students enrolled in the educational institutions of this country in 1913, about 19,000,000 were in elementary schools, about 1,367,000 in high schools, academies and preparatory schools, and about 361,000 in higher institutions. These students were graded as follows:

Grade.	Enrollment. Estimated
First grade.....	4,480,225
Second grade.....	2,819,682
Third grade.....	2,651,912
Fourth grade.....	2,531,804
Fifth grade.....	2,150,508
Sixth grade.....	1,763,493
Seventh grade.....	1,454,643
Eighth grade.....	1,212,520
Total elementary.....	19,064,787
First year high school.....	560,397
Second year high school.....	369,752
Third year high school.....	252,862
Fourth year high school.....	183,838
Total high school.....	1,366,822
Higher institutions.....	361,270

Grand total..... 20,792,879

Of those above high school grade about 200,000 were in universities and colleges, about 66,000 in professional schools, and the remainder in normal schools.

The very large enrollment in the first grade of the grammar schools is due to the fact that kindergarten scholars, beginners and repeaters or retarded pupils are all included in this number. It is a somewhat remarkable fact that only about two-fifths of the students who enter high school complete the course. Out of every 1000 pupils entering the first grade of the grammar schools in 1904, only 109 will graduate from the high school in 1916. Nearly nine-tenths have fallen by the wayside for one cause or another. In 1920 the number of students completing a four-year college course will amount to about 27,000. This means that of every 1000 scholars who entered the first grade of the grammar school in 1904 fourteen will obtain a college degree. If we assume that the average length of the professional school is three years, it is probable that not more than two-thirds of the number of college graduates will obtain an additional degree.

The cost of the public elementary schools in this country is \$450,000,000 a year or \$26 per student. The high schools cost \$64,000,000 or \$56 per student. The universities, colleges

THE EDUCATION OF THE VIRGIN
A sixteenth century French statue now in the
Metropolitan Museum in New York

and professional schools spend \$90,000,000 each year or \$335 per student.

It is estimated that the following proportion of the population distributed by age groups is enrolled in schools.

Age.	Enrollment Per Cent.
Five years.....	18.6
Six to nine years.....	80.4
Ten to fourteen years.....	96.4
Fifteen to seventeen years.....	55.9
Eighteen to twenty years.....	16.6
Twenty-one to twenty-four years...	4.8

COLLEGE VS. WORK

The black pyramid represents the diminishing enrollment in school, college and professional school. But the large white spaces on each side are representative of the much larger number of pupils who "left school to go to work"

From ten to fourteen years all but 3.6 per cent of the children are at school. After the seventeenth year the proportion falls rapidly. The Bureau of Education has estimated that in 1870 the number of years of 200 days schooling for the average individual before leaving the public school was 2.9 years. This has gradually increased until, in 1913, the average was 5.5 years.

Figures of this kind make us wonder whether grammar schools should aim primarily to enable their students to enter the high school, and whether the high school should focus attention upon college entrance examinations. Should the grammar schools have in mind the one scholar out of a hundred who graduates from college, or the ninety and nine who never get so far?

SAINT ANNA

Even in its best days, some three centuries ago, it was of a dingy color, this statue of the wise Anna and her little daughter, the Virgin Mary. Mottled and stained by time it is but one of the lesser treasures in the wonderful Hoentschel collection of Gothic art, long a loan, now recently given by Mr. Morgan to the Metropolitan Museum in New York. One would never dream of a dish of gossip with the stately gods and goddesses of the Greek sculptors, but the men and women beloved of Gothic artists are fellow-saints and sinners. They are lovable or hateful, beautiful or homely, glad or sorrowful, like our neighbors, and there is no better illustration of the intimacy and realism of Gothic art than this unpretentious brown carving by some long forgotten French sculptor. Its rough stone recalls the weather worn images of wayside shrines, but the lines are still sharp, and the figures are full of life. The Virgin's lesson is from a bound book such as Palestine never saw.

A docile little figure is the small maiden with her childish face, her long frock, her flowing hair and her gay little chaplet of flowers. Her eagerness to turn the pages to another lesson is altogether human. But the mother, with her grave, strong features shadowed by her veil, her beautiful, straight draperies, her patient hands, is so simple, so sincere, so real that one wishes one might know the name of the unknown master carver whose own mother or grandmother, still stands before us.

A LITERARY WAR MAP OF ASIA

BY EDWIN E. SLOSSON

IN The Independent of November 16 and December 21, 1914, I referred to the wealth of poetry and romance which is associated with the European battlefields. But my survey stopped with the Caucasus and the Danube and since then the war has swept over mountain and river into lands yet richer in history and legend than western Europe. In fact the latest war news comes now from countries whose wars first found record in literature, Egypt, Persia, Mesopotamia, Byzantium, Greece and Italy.

The other night a great crowd gathered in the station at Budapest to watch the first Balkan Express pull in, but their triumph was marred by the fact that the train was twenty-three minutes late, an unpardonable sin in Teuton eyes, but which Americans would be disposed to overlook, considering that the train on its way from Constantinople had to pass thru Serbian territory, where a few weeks before tracks and bridges had been destroyed.

Now if in imagination we take this Balkan Express on its return trip we arrive at Constantinople and, ferrying across the Bosphorus, we find another German railroad, the famous *Bagdad-bahn*, leading, with how many and how wide gaps none but Turks and Teutons know, to the Tigris at Mosul. This road, we may presume, is not yet open to tourist traffic. When it is we shall expect the Cook—or Koch—guide to go thru the train announcing to his party that they will here change to the river steamers, but will have plenty of time, twenty minutes, for lunching, inspecting the ruins of Nineveh on the opposite bank and listening to a lecture on the history of Assyria from B. C. 2000 to the present. Doubtless the personal conductor will conclude his peripatetic lecture at the gangplank with Rossetti's poem to the Bull-God in the British Museum:

So may he stand again, till now,
In ships of unknown soil and prow,
Some tribe of the Australian plow
Bear him afar,—a relic now
Of London, not of Nineveh.

Curious this feeling on the part of British authors that the antipodal branch of their race will take the lead in civilization when the mother country has sunk into decay like the empires of Assyria and Rome. In Macaulay's vision of the future it was a New Zealander who sat on the broken arch of London bridge sketching the ruins of St. Paul's. Well, old England is most emphatically still in the ring, but the Australasians

have given her valiant aid on the Nile, the Dardanelles, the Tigris and Euphrates.

How the hearts of our literary pilgrims will throb as the excursion steamer bears them down the Tigris to Bagdad. Those who have a good memory or a good guide book will be quoting from Tennyson:

A goodly place, a goodly time,
For it was in the golden prime
Of good Haroun Alraschid.

Or from Southey:

Thou, too, art fallen, Bagdad! City of
Peace,
Thou, too, hast had thy day;
And loathesome Ignorance and brute
Servitude
Pollute thy dwellings now.

Then Pomp and Pleasure dwelt within
thy walls;
The merchants of the East and the West
Met in her arched bazaars;
All day the active poor
Showered a cool comfort o'er her
thronging streets;
Labor was busy at her looms,
Thru all her open gates
Long troops of laden camels lined the
roads,
And Tigris bore upon her tameless
stream
Armenian harvests to her multitudes.

But more will turn to the tale which was told by that wideawake lady, Shahrazad, on the Five Hundred and Thirty-Sixth Night of her marriage with the jealous Sultan of Persia:

There lived in the city of Bagdad, during the reign of the Commander of the Faithful, Harun al-Rashid, a man named Sindbad, the porter, one in poor case who bore burdens on his head for hire. It happened to him one day of great heat that . . . when he set his load upon the bench to take rest and smell the air, there came out upon him from the court-door a pleasant breeze and a delicious fragrance, . . . the melodious sound of lutes and other stringed instruments and mirth-exciting voices, singing and reciting, together with the song of birds warbling and glorifying Almighty Allah in various tunes and tongues, whereat he marveled to himself and was moved to mighty joy and solace. . . .

Now we have a right to include Bagdad in our literary war map because General Townshend's soldiers got within sight of its minarets when they were defeated by Turks and driven back down the Tigris to Kut-el-Amara, where they were besieged. But the fighting mostly took place at Ctesiphon. Here, under the shadow of the great palace of Chosroes, General Townshend was checked and turned back, as was the Emperor Julian sixteen centuries and a half ago. The Apostate Emperor retreated up the Tigris to Samara, the present terminus of the German rail-

road from Bagdad. Here he was struck down by a Persian javelin and died with the words upon his lips—or, if tradition be uncredited, at least the feeling in his heart,—of "Thou hast conquered, Galilean!" The life of Julian the Apostate has so often figured in literature that I may only mention Merejkowski's novel *The Death of the Gods*, Ibsen's drama *Emperor and Galilean* and Swinburne's poem.

Just across the Tigris River from the Parthian city of Ctesiphon was the Greek colony of Seleucia, founded by Alexander the Great, and here also the British met with defeat and were driven back into that region from which our first parents were with equal reluctance driven out. Poor Tommy Atkins, I fear, will come back skeptical, for in his opinion the Garden of Eden is "not what it was cracked up to be," to which, however, the orthodox will reply: "But you should have seen it before the fall."

The other British column under General Brookings is at Nasirjeh on the Euphrates, better known to some of us as "Ur of the Chaldees," where Abraham was born. General Townshend's expedition, which has surrendered at Kut-el-Amara, was some sixty miles from Babylon, so we need not yet consider its ten thousand years of history and legend, but will hasten on eastward to Persia, where the British from Shuster and the Russians from Hamadan are trying to get together. It is an ancient and well-worn highway, this from Ctesiphon to Susa, and we will use the vehicle of verse provided by Nicholas Michell since he goes our way, tho at a stage coach gait:

Two cities molder here—and can it be,
Seleucia ! Ctesiphon! we gaze on ye?
Boast of the Greek and pride of Parthia's kings,
How has your glory flown on eagle wings!

Far south of Ctesiphon, where Ulai flows,
That heard of old the song of Israel's woes,
Ye meet a shapeless building, low and rude,
Wild as the scene, where all is solitude.

Towers near a mighty mound—'tis all ye see
Of Persia's boast, of Susa's majesty.

Susa! that held the wealth of Persia's kings,
Gold, silver, gems and luxury's sweetest things;
Susa! the pleasant city of delight,
With groves so shady and with streams so bright,
Where sang the bulbul to his flashing rose,

Half matched by Beauty's lyre at evening's close.

Yet interest haloes still fair Susa's name,
And hearts unborn shall treasure up her fame,
Shall thrill sweet Esther's varied tale to hear,
And for the wrongs of Vashti ask a tear.

Shuster, the center of the oil fields which the British Government bought up shortly before the war to supply their navy, was not, as we might suppose, named after our young American financier who tried in vain to rescue Persia from bankruptcy. It is derived instead from the old Persian capital of Susa or Shushan, whose ruins are near. Here reigned Ahasuerus over an empire extending from Ethiopia to India and here hung Haman on a gallows fifty cubits high. The Jews to this day celebrate by their Feast of Purim their narrow escape from massacre. What a pity they had no Esther in the court of the Czar to save them from the horrors of Kishinef. At Susa the tourist will be shown the tomb of Daniel, and he may believe it or not as he please. He may exercise a similar option of credence or incredulity as to the legend that from Susa came Memnon whom Achilles slew upon the plains of Troy, not far from where the French landed in their recent attempt to take the Dardanelles.

The Russians moving down from the north to join the British at Shuster have passed Hamadan and reached Kermanshah, where the rugs come from or are supposed to. Here are to be seen the monuments of Sapor III of the Rawlinson's Seventh Great Monarchy, the Sassanian or Later Persian empire.

Hamadan is the ancient Ecbatana, with its seven walls each of a different color, the outermost white, the next black, then scarlet, blue, orange, silver and finally gold. It must have looked like a Bakst stage setting. Within the golden citadel dwelt Cyrus the Great and his successors, ruling his wide realm by laws which differed in durability from ours. Chained to the palace door in the time of Darius might have been seen the last of the Median kings, his nose, ears and tongue cut off. Here Alexander put to death his last safe councillor, Parmenio, and here are still to be seen, or at least to be shown, the tombs of Esther and Mordecai.

But to get the best stories of those times and places you must hunt up your grandfather's big Bible. Somehow there have been dropt out from our modern Bibles two sections which used to lie between the Old

Testament and the New, and which used to interest me when a child quite as much as any other parts. One section contained the records of births, deaths and marriages of the family, and the other contained some good stories and very sensible advice. The child of today knows Judith thru Griffith's movies, tho he gets the impression that the scenery about Bethulia looks remarkably like that about Los Angeles. The story of Judith begins by telling us that the walls of Ecbatana (alias Hamadan) were 105 feet high and 75 feet wide. Then the scene shifts to Nineveh (alias Mosul), where King Nebuchadnezzar and his army celebrated their victory by a banquet that lasted a hundred and twenty days. This, I guess, beats the Broadway record on banquets both for numbers and duration. Starting from the Tigris at Mosul his chief captain, Holofernes, marched eastward by the German Bagdad railroad route, then south along the line of the Aleppo and Jerusalem Railroad, which the Germans will take if they go to Suez. The rest of the story is familiar to the movie fan.

But let me direct his attention to the book that lies next to Judith in the Apocrypha and is called Tobit, because this, so far as I know, has not yet been used in motion pictures, altho it would make a fine scenario. In it he will find the same towns named, for Tobias journeyed from Nineveh-Mosul to Ecbatana-Hamadan accompanied by his man-servant and his dog. At Ecbatana he found his cousin Sara, who had become unpopular among the eligible young men of the city because her seven bridegrooms had been strangled in succession by the demon Asmodeus, who was in love with her himself. But his man-servant, who turned out to be Raphael, one of the seven holy angels, showed him how to get rid of the demon and marry the girl in safety. It was a simple expedient but effective, just throwing some fish liver on the coals. But anybody who has smelt burnt fish will know why the demon Asmodeus flew away to the Sudan and never came back.

The line of march which the Russians are taking from Erzerum by Lake Van to Bagdad is familiar to all the older college graduates. They know what a hard road to travel it is, for they have painfully plodded over it, day by day, parasang by parasang. But Xenophon took it in the reverse direction from the Russians, marching up from near Bagdad to the mountains overlooking Trebizond, where the shout of "Thalassa! the sea!" burst from the lips of the Greeks.

May Sale at McCutcheon's

THE time for our May Sale has come 'round once more and finds us wholly prepared for it.

Table Linens, Bed Linens, Towels, etc. Our stocks have never been more abundant notwith-

standing the constantly limiting supplies in the hands of manufacturers, and the difficulties of transportation. While prices are not quite so low as a year ago, we are able to offer Housekeeping Linens at this time at prices which are for the most part much below present market values.

Ladies' Suits, Dresses, etc.—The styles and models are so attractive this season that this Department has won a great many new friends and has caused much favorable and congratulatory comment on the variety, values and styles exhibited.

French Lingerie—We considered last year's display remarkable, especially under war conditions, but this year's display is larger and better. Happily the war has not noticeably changed the prices.

Our assortment of American-made Lingerie is equally complete and attractive.

CONCENTRATION SPELLS SUCCESS

when rightly used, but when wrongly used it is sure to bring failure. Most persons concentrate on that which annoys, irritates and makes for failure. When we are annoyed it is hard to concentrate on anything but our troubles. When we are sick it is difficult to concentrate on the thought of being well. When we have lost money it is easy to concentrate on our loss but almost impossible to concentrate on our being able to replace it.

"CONCENTRATION—Its Mentology and Psychology" By F. W. SEARS, M. P. (Master of Psychology), teaches how to concentrate rightly.

The person who can concentrate rightly for what he wants, when and where he wants to—whether for money, health, love, increased business, political power, social position, good memory, or whatever he may desire—possesses the Greatest Power in the World and is the master of himself and his environment.

You have this Power and can learn to use it rightly by persistently applying the lessons taught in this book. No matter how many books you have read, THIS BOOK IS DIFFERENT. Price 50 cents postpaid. Worth a thousand dollars. Money back if you want it.

CENTRE PUBLISHING COMPANY,

108-110 West 34th Street (at Broadway) New York

OLD MEN WHO LOOK YOUNG

DOCTORS will tell you that the secret of this hale old age is perfect elimination. It is constipation that is chiefly responsible for the tragedies of premature age which the pressure of modern life has made increasingly common.

To keep young you must keep free from constipation. Laxatives and cathartics frequently aggravate the very condition they are supposed to cure. A far better remedy is the use of **Nujol**, which physicians everywhere are now prescribing.

Nujol is not a drug nor a laxative, but acts in effect as a bland internal lubricant, facilitating the processes of evacuation and so helping to restore the bowels to normal tone.

Most druggists carry **Nujol**, which is sold only in pint bottles packed in cartons bearing the **Nujol** trademark. If your druggist does not carry **Nujol**, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75 cents—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation." Address Dept. 12.

Trebizond, which the Russians have just captured, has a strange and romantic history of more than twenty-five centuries. It was originally a Greek colony, which, of course, was why the Ten Thousand Greek mercenaries under Xenophon fled there for refuge. After the fall of Byzantium in the Fourth Crusade, A. D. 1204, a young man of twenty-two, Alexius Comnenus, propelled by an ambitious mother, set himself up as "Emperor of the Romans" at Trebizond. This upstart empire lasted, until 1461, when Sultan Mohammed II captured Trebizond. After that it remained Turkish until it was taken by the Grand Duke Nicholas of Russia on April 18, 1916.

So far as I am aware, no poet, novelist or dramatist in English has used the Empire of Trebizond as a *mise en scène*, which seems strange considering its wealth of picturesque material. It was at that time the richest and most luxurious city in the world, renowned alike for the beauty of its scenery and its inhabitants. But enervated by ritualism, athleticism and similar vices, the splendid city was easily conquered by the vigorous young republic of Genoa. It happened that a Genoese merchant was struck by a page, the favorite of the Emperor, in a quarrel over a game of chess. The Genoese came back with two armed galleys, took the palace, and cut off the ears and noses of everybody in it—except the page; he was kicked downstairs.

In their march inland to the Tigris the Greeks under Xenophon took much the same route as is now being used in sending the Turkish and German troops from Aleppo to Mesopotamia; that is, the line of the projected Bagdad railroad. This is the old "Royal Road," the ancient and the modern channel of communication between Occident and Orient, followed by Alexander, the Greek, when he conquered Persia, followed by Xerxes, the Persian, when he set out to conquer Greece.

From Ecbatana departing
Or Susa or the Kissian fortress,
Forth they sped upon their journey.

So says Aeschylus in *The Persians*. And now the British are departing from Susa and the Russians from Ecbatana for the same destination, and along the same route as Xerxes took nearly 2400 years ago, when, with 2,000,000 men, he crossed the Dardanelles into Gallipoli over a pontoon bridge strewn with myrtle boughs, and perfumed with incense. Here we must leave him for the present, for to follow him would carry us into a region too rich in literature and legend to be here considered.

SOULS ON FIFTH

Granville Barker calls Fifth avenue "a relentless street." In a weird, arresting story he finds it just before dawn swept by a swirl of souls, drifting before the wind, aimlessly and endlessly. A spiritual gravitation holds them to the spot which was their highest ambition while they were alive. "We can achieve no new desires here," he is told by a restless, dissatisfied Soul, unhappy in its eternal drifting. The story of the soul of a former popular pastor, the Rev. Evan Thomas, is most interesting in its delineation of the gradual hardening of an eager spirit of helpfulness into a contented worldliness; and he explains, in part, why the souls are there: They had taken Heaven so much for granted that it had become the vaguest of ideas to them, and had entirely ceased to believe in Hell. "Now people cannot possibly go to places they don't understand or believe in—a man died and went to his own place." The description of the sermons he had found palatable to his fashionable flock is full of veiled but biting sarcasm. The story ends on a less tragic note in the finding of the Little Soul of a finer quality than the rest. *Souls on Fifth* is a modern "morality," provoking the query: What is the highest ideal of the average New Yorker?

Souls on Fifth, by Granville Barker. Boston: Little, Brown. \$1.

WAR BOOKS AT RANDOM

Occasionally a narrative comes to hand which for its unaffected simplicity, its total lack of striving for effect, produces in the reader an equal liking for the book and its author. In this not easily won class we place William J. Robinson's *My Fourteen Months at the Front*. At the outbreak of war, this young American found himself in London with business connections severed. Stirred by the onswEEPing enthusiasm around him, he enlisted as a trooper in the Fifth Dragoon Guards. He faithfully tells of the beginning of a soldier's career, which had barely proceeded beyond a drastic initiation when at his own request he was ordered to the front in Flanders. Of those fourteen months of almost daily peril, dread periods when the "fear of God" was truly upon him, he writes in straightforward fashion. He frankly confesses to terror, but out of it wins respect by sticking to his task as a staff motor car driver, a task that led him along the Ypres road to one of the most calmly heroic and horrible incidents thus far recorded. He came to know the British soldier as a comrade, and he was "proud to belong to such an

HERE IS THE CAMP FOR YOUR BOY

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at **CAMP YUKON**, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about **CAMP YUKON**. Write personally to Frank D. Smith, Director, 200 West 96th Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

The Story of the Fact-Hunters

"And I've been airing my opinions about this war pretty thoroughly for about two years now," said Jamieson, gloomily.

"Well, it's high time we began to collect facts," said Mrs. Jamieson, briskly. "Where can you and I find out about those things?"

* * * *

TO every intelligent man or woman the march of world events that came to so shocking a climax in August 1914, is of course common knowledge.

Jamieson read this aloud to his wife from an editorial in his favorite magazine.

"Such momentous affairs as the Ems telegram," continued the editorial, "Fashoda, the Kiel Canal, the Helgoland bargain—such names as Boulanger, Algeciras, Marchand, Delcasse, Lord Lansdowne, Zola, von Buelow, Draga, Kirk Kilisseh, Jaures, Bagdad, Erzerum, Verdun, Salonika, Dardanelles—all of these and many more must of necessity be readily familiar to any one who would so much as attempt an intelligent discussion of the war.

"And likewise such matters as the influence of the war on fine arts, science, political science, economics, engineering, politics, government, law, literature, etc."

Jamieson put down the magazine and stared blankly at his wife, who stared blankly back.

"Whe-ew!" said Jamieson, finally.

"Gracious!" exclaimed Mrs. Jamieson. "Why, I hardly know any of those things."

The Jamiesons' hunt for facts took them to many places—to their book store, where the amount of reading necessary to get any comprehensive survey of what they sought frightened them away; to their newspapers, where they found only tantalizing hints of the big, vital things they were after; to the library, where books and magazines seemed strangely antiquated; and finally to their librarian, Mr. White, who said: "My dear friends, what you want is an Encyclopædia. Only an Encyclopædia can answer these questions; everyone who wishes to read intelligently should have an Encyclopædia at hand. Every subject in the editorials to which you refer is covered by a first-class Encyclopædia, provided, of course, that it is late. It must be late, remember. An Encyclopædia five or ten years old will not be satisfactory. And it must be easily consulted—no confusing index to direct you to different places where you get only smatterings of information which you must patch together to obtain the facts you want. Each subject should have its own article and the subjects arranged alphabetically like the words in a dictionary."

"Well, Mr. White, where can we get such an Encyclopædia—is such a work published?"

"Oh, yes. Dodd, Mead & Co., Inc., are now publishing a thorough, complete revision of the New International Encyclopædia. It is late, just now coming from the press. It is authentic, prepared by the best men whom money can interest; it is easily consulted, every subject has its own article; no index is necessary; a schoolboy can understand it; its language is not technical."

Full information regarding this work, how it can be obtained, etc., will be given anyone sending us the attached coupon. Better mail this today.

Dodd, Mead & Co., Inc., 449 Fourth Avenue, New York City.

Brookfield

The Open Air School for Her

Teaches your daughter how to realize the durable satisfactions of life. The Directors believe that this end is attained through helping the growing girl to establish habits which keep her well, make her think clearly, make her live in right relations to her world.

The aim at Brookfield is to give the girl her fullest power, rather than to cram her mind with a specified quantity of book-learning.

Open air sleeping, study and recitations. Open air dining room. Domestic arts, gardening, physical training, summer and winter sports, dancing, story telling, dramatic training, music.

Write personally to

Miss Helen Fairman Cooke,
The Brookfield School,
North Brookfield, Mass.

New-Church Theological School

48 Quincy Street, Cambridge, Mass.

Established 1866. Three years course. College preparation desired. The curriculum includes systematic study of the theological writings of Emanuel Swedenborg and spiritual interpretation of the Scriptures. Courses by correspondence when desired. For catalogue and information, address

William L. Worcester, President

BOSTON UNIVERSITY

Law Medicine
College of Liberal Arts
Theology Graduate Department

The College of Liberal Arts now occupies its new building next to the Boston Public Library and offers the advantages of a modern college course. The building is equipped with Laboratories, Department Libraries and has fullest use of the Boston Public Library. The professional schools located in the heart of the city not only offer the usual courses of instruction but afford unusual opportunities for self support and for the practical training in the several professions. The Graduate School offers exceptional opportunity for research work.

LEMUEL HERBERT MURLIN, President
Copley Square, Boston, Mass.

army." He praises the British officers under whom he served, and he reveals the peculiar characteristics of the British soldier better than has any other war writer.

Arthur Ruhl is an extremely rapid literary traveler. In his *Antwerp to Gallipoli* you have no sooner thrillingly escaped with him from Antwerp to Paris and from the aftermath of the Marne, than he whisks you off to Bordeaux. You are just beginning to settle down comfortably there with the French Government in secure semi-exile, when you turn a page and—presto!—you find yourself in the middle of Berlin. Then you begin to learn things not hitherto imagined. You gather that "nobody had ever heard of Bernhardt," "Treitschke—who was he?" Prussian militarism is a foreign invention, and the Ruhlleben British prisoners' camp has quite a cheerful atmosphere. You are eager to know more about all this, but no, this tireless spirit is off again to dandified Rumania, sturdy little Bulgaria, the amiable Turks at Gallipoli, charming Austria, and the dust of a Russian retreat. You have been going at a terrible pace with Mr. Ruhl, but nevertheless grasped the impression that the Teutonic Allies treated him very well indeed. England ought straightway to catch this traveler and entertain him at a Lord Mayor's banquet, to beat the Germans in the social field, otherwise he will likely accept an Iron Cross—"of the second class worn inside." As it is, his graphic and entertaining book will please those of German sympathies.

It has been forecast that none of the countries involved in the war will present the same national and social aspects as heretofore. To us in the United States the outlook for our close kin to the north must appear as a bright and progressive future. It is with this attitude we read *Canada in Flanders*, by Sir Max Aitken. What can we add to this record of a young people rising spontaneously to the summons of what they believe to be manifest duty, passing in splendid manner thru their national baptism of fire, to stand in the breach and hurl back the foe where an empire tottered? Ypres, Festubert, Givenchy; is it too much to venture the prediction that after the war these names will be found to have given historic birth to a nation—no longer a dependent colony, but taking equal part and responsibility with Great Britain herself, Australia, New Zealand and South Africa in the affairs of empire?

If politics are said to make strange bedfellows, war would seem to make extraordinary ones. Otherwise there is no accounting for *The War Lords*, by A. G. Gardiner. Even so it takes mental ingenuity to group President Wilson and Karl Liebknecht with Von Bernhardt, the German Crown Prince, and Ferdinand of Bulgaria—the "old fox of the Balkans." The author has courage even to the point of rashness. As to Herr Dernberg, he is "stupid," while Mr. Bryan impresses him as "a quiet, still man, who does not live with his ear to the ground and his eye on the weather-

cock, who refuses to buy popularity with infinite handshaking and robustious speech." One feels inclined to make a note of "robustious speech" for future use. About the rest of his war lords Mr. Gardiner writes in a robustious (that word simply will not keep off the paper), sure-about-everything style. If he had applied the art of shading his characters a trifle—not presenting them for the most part as either white or black—and adopted a less toplofty method of expression, he would have saved himself in places from being regarded as amusing when he apparently intended to speak with almost desperate earnestness.

In presenting the case for Italy, W. O. Pitt in *Italy and Her Unholy Alliance* lucidly and logically argues that no other course was open to her but to break with the Teutonic Alliance and cast in her fortunes with the Entente Powers. The long struggle for Italian national unity was jeopardized by an old peril from the north, commercial as well as military, carried on with every device toward the subjugation of her bitterly won liberties. It was the voice of the Italian people which would not down, and the king was heartily in accord with his subjects. There may be, of course, another view, but this is a strong defense of Italy's action. While his sequence of historical and political data will need an able controversial pen to outweigh him, Mr. Pitt is also personally well equipped for his task by a sympathetic grasp of Italy's economic and other problems. It is a book to be read by everyone wishing to know why Italy entered the war.

My Fourteen Months at the Front, by William J. Robinson. Boston: Little, Brown. \$1. *Answer to Gallipoli*, by Arthur Ruhl. Scribner. \$1.50. *Canada in Flanders*, by Sir Max Aitken. Doran. 50 cents. *The War Lords*, by A. G. Gardiner. Dutton. 40 cents. *Italy and the Unholy Alliance*, by W. O. Pitt. Dutton. \$1.

THE BUSINESS WORLD

TRUST CASES

Some four hundred pages of new matter is included in the revised edition of W. Z. Ripley's *Trusts, Pools and Corporations*. This book deals with the topic by applying the principles of economics to discussions of recent notable cases in point.

Ginn. \$2.75.

WORLD COMMERCE

Professor Russell Smith's *Commerce and Industry* is designed as a textbook, but is such good reading, so admirably illustrated by diagrams, maps and pictures, that anyone will find it interesting and will gain from it in a brief time a comprehensive view of natural resources and their modern utilization.

Holt. \$1.40.

HOW TO BECOME AN ENGINEER

The vocational guidance movement creates a demand for definite information regarding various occupations. In *Engineering as a Career*, F. H. Newell and C. E. Drayer have edited a volume of papers by prominent engineers. Amid the many platitudes about advice and application, industry and honor, are scattered a number of valuable suggestions as to the requirements in various branches of engineering service, and as to opportunities.

Van Nostrand. 75 cents.

mercial Work, by B. M. Stevens, a report (one of a series of twenty-two forthcoming monographs) on the work, wages and training, opportunities for promotion, etc., of those entering the various commercial offices of that city. While the study is based on local statistics, still the appeal raised in behalf of the potential wage-earner who will have to shoulder business responsibility, however limited, is one that should be recognized by schools and ruling powers.

Cleveland, Ohio: Cleveland Foundation. 25 cents.

ADVENTURES

IN THE ROCKIES

If you like exciting stories, stories full of hard riding and gun play, stories where the hero would have died seven times before the happy ending, if he had not been the hero, then read *Nan of Music Mountain*, by Frank H. Spearman. It is a well written story of what happened when Henry de Spain, manager of the Thief River State Line, fell in love with Nan, one of a family of outlaws.

Scribner. \$1.35.

A ROMANCE OF ENGINEERING

The Cyrus Townsend Bradys have taken two magnificently dramatic romances of engineering and diluted them with a very bad love story. *Web of Steel*, so long as it deals with engineers in the wilderness is interesting. The fall of a great bridge and the heroic struggle to save a dam are well told. The men in these scenes are real, but we could dispense with the other characters without a tear.

Revell. \$1.35.

A GOOD WHALING STORY

The Real Story of the Whaler, by A. Hyatt Verrill, is the history of the rise and progress, decline and fall of the whaling industry. Its romance and adventure, the hardihood, the daring, the courage required in the day's work, are clearly pictured. Here are interesting data, concerning whaling ship logs, and their quaint, symbolic illustrations, whaling chanteys, "gamming," and the whaler's scrimshaw work.

Appleton. \$2.

IN THE ADIRONDACKS

In *The Shepherd of the North*, Richard Aumerle Maher has mingled a rather forceful plea for the Catholic Church with a plot involving thrilling adventure in a forest fire, a fight with an unprincipled railroad company and a murder trial. The hero, a Catholic bishop, of New England extraction, with a diocese on the Canadian border, is fairly well done, but the other characters are uninteresting.

Macmillan. \$1.35.

AN IDYL OF CRIME

F. Berkeley Smith has written a picturesque tale of provincial France, Montmartre and the underworld of crime. Theft is treated as an interesting game, tho of course it is better to live honestly if you can afford it. The hero is a dashing, gentlemanly rogue, and the heroine, *Babette*, a peasant girl for whose sweet sake he reforms and becomes a detective. Babette's father, keeper of the dungeon at La Fourche, is a person worth meeting.

Doubleday, Page. \$1.25.

LAST STORIES

A long short story, *Somewhere in France*, gives the title to the book published just before Richard Harding Davis' sudden death. The principal character is Marie Gessler, a German adventuress, useful to the German Intelligence Department, who is ordered to remain in an old chateau at Neufchelles after the German retreat, to aid in relaying messages to their general staff. Five tales on other themes make up the book, written with all this author's skill, strong characterization and polished style.

Scribner. \$1.

Change of Address

If you are going away for the summer, you will want The Independent to follow you. Let us know your new address, if possible, three weeks ahead. Be sure to give us your old address also.

THE INDEPENDENT

MR. PURINTON'S EFFICIENCY QUESTION BOX

246. Mrs. A. M. L., Ohio. "I should greatly appreciate a list of publications to which I may submit an article on health conservation."

Health magazines pay little or nothing for general articles. Their contributors are mostly people who have a hobby to ride or pet theory to lead around in public, or who strenuously desire to see their name in print. Only writers with an established reputation, or experimenters who have done something novel and useful, may reasonably hope for adequate pay from health journals.

A few representative magazines are as follows: *Health Culture*, Passaic, New Jersey; *Physical Culture*, Flatiron Building, New York; *Herald of Health*, 110 East Forty-first street, New York; *Health*, Eureka Springs, Arkansas; *Brain and Brawn*, Los Angeles, California; *Good Health*, Battle Creek, Michigan; *Your Health*, Burke, Sonoma County, California; *Nautilus*, Holyoke, Massachusetts.

247. Rev. S. C. S., Nebraska. "I am a Baptist minister, with two small children. Have just returned from four years of missionary service in Burmah, India. Have had full academy and seminary training, but no college education. I feel I could do more efficient work if I could take a college course; but I have no money for this purpose, and a family to maintain. What do you advise?"

Get over the notion that a college course is fundamental to efficiency and usefulness. It is not. For a man who has done pioneer service in India to go back and herd with college striplings would be like sending a master road-builder to a kindergarten. You probably know more about life than the average college professor—why pay him to teach you?

There are special studies that you could take to advantage by correspondence. Make a list of these from a good college catalog. Then apply to your State University, to the University of Chicago, and to the University of North Dakota, for particulars of all extension courses given by mail. Try to take a summer term at the University of Chicago.

248. Miss I. G., Minnesota. "I am a teacher of languages, like the work, and think I have a talent for translating. I could do plays or scientific articles, but prefer the fiction of Keller, Storm, Heyse and men of that school. Is there a field for such translating?"

A limited field, already somewhat crowded. You would have a much better chance if you first became an authority, made a name for yourself, in some branch of English literature. Unknown translators have a harder time even than unknown authors. Ask the Professor of German in several colleges near you for names of publishers of German books and periodicals—then write the publishers. Consult also the secretary of the Deutscher Akademischer Bund, 225 Fifth avenue; of the German Historical Society, 1680 Second avenue; of the German Press Club, 21 City Hall place; of the German Publication Society, 597 Fifth avenue; all of New York City.

249. Dr. L. M. D., Connecticut. "Should a man past thirty change his profession for work more congenial? I am a physician of thirty-five, with a good practise; but I realize now, from a study of vocational science, that my talents lie in the realm of business. Should I stay in medicine and be always discontented—or give it up and waste all the years of medical training?"

Neither. A wise man does not "choose between the lesser of two evils." He learns to find, and to blend, the good in both "evils." Your age is immaterial—a man is never old while he has something to learn and to love. But your previous training should not be lost, and need not be.

The Kingdom of the Subscriber

In the development of the telephone system, the subscriber is the dominant factor. His ever-growing requirements inspire invention, lead to endless scientific research, and make necessary vast improvements and extensions.

Neither brains nor money are spared to build up the telephone plant, to amplify the subscriber's power to the limit.

In the Bell System you have the most complete mechanism in the world for communication. It is animated by the broadest spirit of service, and you dominate and control it in the double capacity of the caller and the called. The telephone cannot think and talk for you, but it carries your thought where you will. It is yours to use.

Without the co-operation of the subscriber, all that has been done to perfect the system is useless and proper service cannot be given. For example, even though tens of millions were spent to build the Transcontinental Line, it is silent if the man at the other end fails to answer.

The telephone is essentially democratic; it carries the voice of the child and the grown-up with equal speed and directness. And because each subscriber is a dominant factor in the Bell System, Bell Service is the most democratic that could be provided for the American people.

It is not only the implement of the individual, but it fulfills the needs of all the people.

"Don't tell me you never had a chance!"

"Four years ago you and I worked at the same bench. I realized that to get ahead I needed special training, and decided to let the International Correspondence Schools help me. I wanted you to do the same, but you said, 'Aw, forget it!' You had the same chance I had, but you turned it down. No, Jim, you can't expect more money until you've trained yourself to handle bigger work."

There are lots of "Jims" in the world—in stores, factories, offices, everywhere. Are you one of them? Wake up! Every time you see an I. C. S. coupon your chance is staring you in the face. Don't turn it down.

Right now over one hundred thousand men are preparing themselves for bigger jobs and better pay through I. C. S. courses.

You can join them and get in line for promotion. Mark and mail this coupon, and find out how.

I. C. S., Box 4508, Scranton, Pa.

INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4508, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

FACTS, arguments, briefs for debates. Outlines, literary, historical, scientific and other material for club papers, orations, speeches and lectures. BUREAU OF RESEARCH, 318 E. 5th Street, New Albany, Ind.

EVANSTON ACADEMY of NORTHWESTERN UNIVERSITY

A preparatory school emphasizing high scholastic standards, wholesome and carefully directed athletics, literary and social activities, and attention to individual needs and interests.

All the advantages of Northwestern University gymnasium, libraries, lectures and debating societies. Write for 'Student Life.' E. W. Marcellus, Box 50, Evanston, Ill.

The large corporations, foundations, and civic associations now employ physicians on their staff, to conduct health research, offer health advice, prepare health publications. Get literature of Safety First Society, 6 East Thirty-ninth street; Life Extension Institute, 25 West Forty-fifth street; United States Steel Corporation Safety Exhibit, 71 Broadway; The Rockefeller Foundation, 61 Broadway; then plan how to remain a physician, but enlarge your field of action.

250. Mrs. A. T. K., New Jersey. "I have grown up in the habit of speaking very slowly, drawing out the syllables in a monotonous way, tho I am seldom conscious of it. My friends say it is a strain on their nerves to hear it. Would you kindly suggest some kind of exercise that would help me to overcome the habit?"

The best one we can think of is a college yell. Or, a "rag-time" selection in six-eight or two-four time, sung twice as fast as the tempo indicates, would be almost as effective. Consult Grenville Kleiser, care Funk and Wagnalls, 354 Fourth avenue, New York; or the Emerson College of Oratory, Huntington Chambers, Boston; or the Department of Elocution and Public Speaking of your State University. Get a big sheet of cardboard, print on it in large letters "TALK FASTER," hang it over your table, where you will see it the first thing every morning.

251. Miss L. B. R., Pennsylvania. "How can I discover a nurses' training school that will teach one how to care for both mind and body?"

Ask the editor of *American Medicine*, 20 East Forty-first street; editor of *Trained Nurse and Hospital Review*, 38 West Thirty-second street; Superintendent of New York Medical College and Hospital for Women, 19 West 102d street; all of New York City.

252. Miss B. P. H., Tennessee. "Please advise me how I may best dispose of photoplays. Also please tell me if little verses or rimes suitable for occasions are ever in demand, and by whom."

First make sure that your plot is in acceptable form. Have you read a standard book, or taken a correspondence course, on photoplay writing? Do you study regularly one of the best motion picture magazines, for suggestions and cautions? A few leading companies are these: American Vitagraph Company, 116 Nassau street; Pathé Frères, 115 East Twenty-third street; Reliance Motion Picture Corporation, 29 Union Square; Colonial Motion Picture Corporation, 18 East Forty-first street; Imperial Motion Picture Company, 1476 Broadway; Thanhouser Syndicate Corporation, 71 West Twenty-third street; all of New York. Ask these companies if they will consider your productions.

You might compose verses for a local advertising agency on goods to be advertised; for a city newspaper on current events or topical themes; for a publisher of Christmas or birthday cards—ask your bookseller or stationer for addresses of such publishers.

253. A Woman Reader from Georgia. "I was a successful teacher till seven years ago, when a great family sorrow broke something in me so that I have lost my power of decision. I went into mission work, to try to forget my trouble; but am now secretary of a college for well-to-do girls. A position is offered me in the far West, to teach delinquent girls—wards of the Juvenile Courts. This is my problem: Can I do more good by staying here and helping to build up this school, or by serving and advising the other 'down-and-out' little sisters? I have debated the question too long to see it straight."

While it is hardly within the province of an efficiency counsel to offer suggestions in so personal a matter, we shall say your finest work would be for the "down and out" little sisters. Your own sorrow will put you in touch with those who have suffered; and enable you to fill their needs. Unfortunately, the girls of modern well-to-do families have not had sufficient pain or privation to render them susceptible to your kindness and sympathy. To reclaim, guide and develop the wayward girls who never had a fair chance seems to us a nobler, and also more fascinating, life work than to become a cog in the wheel of a classical institution.

Special low prices Dutch Bulbs

Good only until July 1st

Hyacinths, Tulips, Narcissus. Crocus, give, for a small outlay of time and money, an abundance of flowers in the house from December until Easter, and in the garden, from earliest spring until the middle of May. Bulbs are

grown almost exclusively in Holland, in enormous quantities, and sold at very low prices. Usually they cost double before reaching you.

By ordering from us now instead of waiting until Fall, you make a large saving, get a superior quality of Bulbs not usually to be obtained at any price in this country, and have a much larger list of varieties to select from.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

DARWINTULIPS—We can now supply the magnificent and high priced Darwin Tulips at a great reduction. They are sensational in their beauty and should be included in every garden. They last for many years.

If you wish to take advantage of our very low prices, we must have your order not later than July 1st, as we import Bulbs to order only. They need not be paid for until after delivery, nor taken if not satisfactory. (References required from new customers.) For prices on smaller quantities see our import price list, the most comprehensive catalog of Bulbs published, which may be had for the asking.

A FEW PRICES	Per 100	Per 500
Fine Mixed Hyacinths	\$2 90	\$14 00

First Married Man—What are you going to do with it?

Second Married Man—Put it in my pocket.—*Yale Record*.

If they keep on deciding that Shakespeare didn't write his own plays it may yet make a revival of them profitable. What is needed is a boisterous discussion of the subject to arouse true public interest.—*New York Evening Sun*.

A New Yorker tells of a married couple he observed at a county fair in Ohio. They found themselves in the center of quite a crowd near one of the amusement booths and the husband addressed his wife in this wise:

"I say, dearie, I think you'd better give me the lunch-basket. Don't you see we are apt to lose each other in this crowd."—*Harper's*.

Dear Sir: Will you kindly publish directions for tying a bow-tie?

ROGER COOT.

Well, Roger, you hold the tie in your left hand and your collar in the other. Slip your neck in the collar, and cross the left-hand end of the tie over the right with the left hand, steadying the right end with the other hand. Then drop both hands, catching the left with the right and the other with the other. Reverse hands, and pick up the loose ends with the nearest hands. Pull this end thru the loop with your unengaged hand, and squeeze. You will find the knot all tied and all you have to do is to untangle your hands.—*Dartmouth Jack-o' Lantern*.

Teaching People How to Eat for Health, Strength and Efficiency

By ARTHUR TRUE BUSWELL, M. D.

IF YOU have ever lived on a farm you have heard of "balanced rations" and what remarkable results they have accomplished when fed to cattle and other animals. The United States Government has a department devoted to teaching farmers how to feed their stock so as to develop it to the highest point of health and efficiency.

Yet until recently I have never heard of "balanced rations" for humans or, in fact, of any serious attempt made to teach people what to eat and what not to eat. I was therefore greatly interested in the work of the Corrective Eating Society of Maywood, New Jersey, founded by Eugene Christian, the eminent food scientist. It seems that this Society is dedicated to teaching people how to combine and proportion food for greater health and efficiency and their work is meeting with success so great that it almost seems too good to be true.

Twenty years ago Eugene Christian was at death's door. For years he had suffered the agonies of acute stomach and intestinal trouble. His doctors—among them the most noted specialists in this country—gave him up to die. He was educated for a doctor, but got no relief from his brother physicians, so as a last resort he commenced to study the food question, especially its relation to the human system, and as a result of what he learned he succeeded in *literally eating his way back to perfect health* without drugs or medicines of any kind—and in a remarkably short space of time.

Today Eugene Christian is a man 55 years young. He has more ginger, more vitality, and physical endurance than most youngsters in their 'teens. He literally radiates energy and power.

So remarkable was his recovery that Christian knew he had discovered a great truth which fully developed would result in a new science—the science of Correct Eating.

From that day to this he has devoted his life to telling others of the power of Correct Eating. From his research work he became convinced that 90 per cent of the ills of mankind originate in the stomach and intestines. He found that these ills responded to corrective eating. Since then he has told 23,000 people how to eat, what to eat and what not to eat with the result that almost invariably they were brought back to a type of health that they never dreamed they could reach.

Very often good foods, when eaten in combination with other good foods, create a chemical action in the digestive tract and are converted into dangerous toxic poisons, which are responsible for nearly all sickness. In other words, good foods wrongly combined will cause acidity, fermentation, gas, constipation and numerous sympathetic ills leading to most serious consequences.

These truths have been strongly brought out by Professor Metchnikoff in his treatise on the "Prolongation of Life" and by many other modern scientists. But most efforts in the past have been designed solely to remove the effect, by cleansing out the system and

removing the poisons *after* they had formed, wholly disregarding the cause.

The Corrective Eating Society, however, has gone a step further. Instead of waiting until the poisons accumulate, they tell you how to prevent them. They have shown that just as some combinations of food produce slow consuming poisons that wreck the system, other combinations of food taken in the right proportions become the greatest tonics for health, efficiency and long life ever discovered. And a wonderful feature of their method is that results come practically with the very first meal.

As Christian explains, in no case are patented or proprietary foods prescribed. All of the foods may be obtained from your garden, at your local stores or in any restaurant. It is not necessary to upset your table to follow his remarkably simple suggestions.

In order to help as many people as possible, not only those who are ailing but those who want to maintain their health, The Corrective Eating Society has prepared a book based upon Eugene Christian's 20 years' experience. This book, *Corrective Eating in 24 Lessons*, is being offered for free examination to those who are interested. This work was written expressly for the layman. Technical terms have been avoided and every point is explained so that there can be no possible misunderstanding.

But the lessons do not merely tell you why you should eat correctly and what the results will be, they also give actual menus for breakfast, luncheon and dinner, curative as well as corrective, covering every condition of health and sickness for all ages from infancy to old age and covering all occupations, climates and seasons.

Christian says that every thinking man or woman—young or old—well or sick—should know the science of correct eating. That most people dig their graves with their teeth is as true as gospel, in his estimation. Food is the fuel of the human system. And just as certain fuels will produce definite results when consumed in a furnace, so will certain foods produce the desired results when put into the human furnace.

Yet not one person in a thousand has any knowledge of food as fuel. Some of the combinations we eat every day are as inefficient and dangerous as soggy wood, wet leaves, mud, sawdust and a little coal would be for a furnace. No wonder most of us are only 50 per cent efficient.

The relationship of health to material success is so close that the result of the Society's teaching is a form of personal efficiency which puts people head and shoulders above their less fortunate brothers. Everyone knows that the best ideas, plans and methods are worked out when you are brimful of vitality—when you feel full of "ginger." The better you feel—the better work you can do. I understand that The Corrective Eating Society's lessons have times without number been the means of bringing great material prosperity to its students by endowing them with health so perfect that work seems like play.

If you would like to see the Book of 24 Lessons in *Corrective Eating* written by Eugene Christian out of his vast experience, merely write and ask the Society at the address given below to send the lessons for five days' free examination with the understanding that you will either return the lessons within that time or remit \$3, the small fee asked.

If the more than 300 pages contained in the course yield but one single suggestion that will bring greater health, you will get many times the cost of the course back in personal benefit—yet hundreds write the Society that they find vital health on every page.

I suggest that you clip out and mail the following form instead of writing a letter, as this is a copy of the official blank used and will be honored at once.

CORRECTIVE EATING SOCIETY, INC., 45 Hunter Ave., Maywood, N. J.

Gentlemen:—You may send me prepaid a copy of *Corrective Eating in 24 Lessons*. I will either remail these to you in five days or send you \$3.

STEEL PROGRESS

Interesting news in relation to the business and affairs of the United States Steel Corporation continues to be forthcoming.

The unfilled orders on the corporation's books at the end of the first quarter of the year amounted to \$9,331,000. This is an increase of nearly nine per cent over the figures of the preceding month and of practically 120 per cent over the condition on the same date a year ago.

The distribution of finished products in the quarter just ended was also a high record. The shipments of rolled steel products in the first three months of this year were only a little less than 4,000,000 tons. In the same period last year they were a trifle over 2,000,000 tons.

Another increase of wages, amounting to ten per cent, goes into effect in the plants of the Steel Corporation on May 1. This follows a similar advance made in February.

Most of the other steel companies are following the lead of the Steel Corporation in thus advancing wages, and it may be estimated that 500,000 workers will be benefited by the unprecedented increase in activity in the steel industry. Comparing the present payroll of the Steel Corporation with its payroll a year ago, it appears that if the new wage scale continues thru the year, it will involve an added expenditure of \$26,000,000 over the same period of last year.

The stock books of the Steel Corporation show that in the past two years more than half of the Steel Common owned abroad has been returned to this country. On March 31, 1914, European investors owned 1,285,636 shares of Steel Common, constituting about one-quarter of the common stock of the corporation. On March 31, 1916, Europe's holdings had shrunk to 639,469 shares. This affords an interesting measure of the liquidation by foreign investors of their American investments. It is such liquidation as this that was feared when the war broke out, and that led to the closing of the New York Stock Exchange. The fact was that when, after the reopening of the Exchange, the selling of European holdings did actually come and continue in such volume as these figures suggest, the American market was able to absorb the offerings and thrive on the diet.

It should be noted, however, that the

Weis' EXPANSIBLE BOOKCASES

provide for your increasing stock of books and harmonize with your home or office furnishings. Add sections as you need them. Metal framed glass doors slide horizontally in steel lined grooves. Exclude dust, do not stick or slam.

This Solid Oak Bookcase has 8 feet of book space and roomy drawer. Golden, Fumed or other popular finishes. Elimination of superfluous parts, not "cheapness" of material or manufacture, makes the prices low. \$12.80, freight paid—see note.

\$1280

INCREASED DESK SPACE

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

DIVIDENDS

PACIFIC GAS AND ELECTRIC CO.

FIRST PREFERRED DIVIDEND NO. 7.

ORIGINAL PREFERRED DIVIDEND NO. 41.

The regular quarterly dividend of \$1.50 per share upon the full-paid First Preferred and Original Preferred Capital Stock of the company, for the period commencing February 1, 1916, and ending April 30, 1916, will be paid by checks mailed May 15, 1916, to shareholders of record at 12:00 o'clock noon, April 29, 1916.

San Francisco, California, April 29, 1916.

A. F. HOCKENBEAMER,
Vice-President and Treasurer.

LIGGETT & MYERS TOBACCO CO.

St. Louis, Mo., April 26th, 1916.

A quarterly dividend of three per cent (3%) was this day declared upon the Common Stock of Liggett & Myers Tobacco Company, payable June 1st, 1916, to Common stockholders of record at the close of business on May 15th, 1916. Checks will be mailed.

T. T. ANDERSON, Treasurer.

European holdings of the preferred stock of the Steel Corporation have not shrunk in anything like the same proportion. Two years ago 312,832 shares of preferred were held in Europe, while today the holdings are still 262,091 shares. European investors evidently realize, in these days of financial upheavals, the value of high-class American securities as investments.

THE PHILADELPHIA IDEA

A joint committee, composed of representatives of ten leading trade and business organizations of Philadelphia, has begun a nationwide campaign for a simpler and more centralized system of railroad regulation. The basic principle of the committee's recommendations is the removal of the railroads from the jurisdiction of state commissions and their exclusive regulation by the Federal Government.

The committee has completed a nine months' study of the problem which has convinced them that the present dual regulation by the Federal Government and state governments is one of the most apparent evils of the present situation, impairing the efficiency of the roads and handicapping shippers. Accordingly, while the preliminary investigation is made the basis for a detailed study, the findings of the committee are to be laid before between 700 and 800 trade associations for their consideration and action. The committee has endorsed the proposed Congressional joint commission to investigate railway transportation and legislation, and, if the commission is created, it will be asked to consider the findings of the Philadelphia committee.

The campaign booklet, which the committee is sending out, contains the report of the preliminary study and the recommendation for unqualified federal regulation. While the joint committee as a whole merely suggests to other organizations the consideration of a number of solutions, the Philadelphia Bourse, in an appendix, urges the following:

1. Legislation providing for the federal incorporation of companies engaged in interstate transportation of persons or goods.

2. All companies engaged in such business under charters granted by any state or territory or the District of Columbia to be privileged to accept federal charters without surrender of their state charters, and without impairment of the rights of the several states with regard to taxation of property value of corporations within their borders.

3. All corporations accepting federal charters to be subject to regulation by the Federal Government alone thru the Interstate Commerce Commission.

4. The Interstate Commerce Commission to be reformed into district courts, one for each freight traffic district, as now organized in the form of territorial freight traffic districts.

5. Each court to have a president judge, a jurist and six association justices, three being business men and three expert railroad men. The district courts to have full power to regulate the corporations operating under federal charters within their districts without appeal except as to questions of principle.

6. The president judges to form a supreme interstate commerce court, sitting in Washington, to determine questions of principle of country-wide application.

TOWNSEND'S TRIPLEX

The Greatest
Grass-Cutter
on Earth

Cuts a
Swath
86 Inches Wide

Floats Over the Uneven Ground as a Ship Rides the Waves

One mower may be climbing a knoll, the second skimming a level while the third pares a hollow

Drawn by one horse and operated by one man, the TRIPLEX will mow more lawn in a day than the best motor mower ever made, cut it better and at a fraction of the cost.

Drawn by one horse and operated by one man, it will mow more lawn in a day than any three ordinary horse-drawn mowers with three horses and three men. (We guarantee this.)

Does not smash the grass to earth and plaster it in the mud in springtime, neither

does it crush the life out of the grass between hot rollers and hard hot ground in summer as does the motor mower.

My Lady of the Moor: A Novel

By JOHN OXENHAM, Author of "Barbe of Grand Bayou," "Carette of Sark," "Bees in Amber," "All's Well," etc. With Frontispiece. Crown 8vo. \$1.35 net.

It is not often that a novelist adopts a living fellow-worker as the central figure of his story. This is, however, the case with Mr. Oxenham's new novel. While wandering on Dartmoor the author stumbled into a living actual romance, of which Miss Beatrice Chase, author of several popular books about Dartmoor, was the center. This book tells the tale, which is named after Miss Chase, MY LADY OF THE MOOR, and it has, of course, been written with her full consent and approval.

The Play-Acting Woman: A Novel

By GUY FLEMING, Author of "Life's Little Tragedies." Crown 8vo. \$1.35 net.

"Full of entertaining Scottishness, and rich in racy characters, . . . the book is always alert and lively."—*The Times*.

"I very strongly recommend *The Play-Acting Woman*, by Guy Fleming, both as a study of aspects of Scotch life and the human treatment of a fine love story. . . .

The character of the 'play-acting woman' is a fine one."—*The World (London)*.

Dr. Esenwein

SHORT-STORY WRITING

A course of forty lessons in the history, form structure, and writing of the Short-Story taught by Dr. J. Berg Esenwein, Editor Lippincott's Magazine. 250-page catalogue free. Please address THE HOME CORRESPONDENCE SCHOOL Dept. 305, Springfield, Mass.

Public Speaking Taught at Home

Write for our special offer. Become a powerful speaker in spare time by mail. Overcome "stage fright," enlarge your vocabulary, train your memory, gain self-confidence. Learn how and when to use gestures; how to suit the speech to the occasion. Increase your earning power—become more popular. We have trained hundreds of successful speakers by mail. Write quick for details of our special limited offer. No obligation. Write while this offer lasts. Public Speaking Dept. American Correspondence School of Law, 945 S. Manhattan Bldg., Chicago, Ill.

A HANDBOOK OF AMERICAN PRIVATE SCHOOLS

The 2d Edition, revised and enlarged, of the HANDBOOK of the BEST PRIVATE SCHOOLS.

A critical and discriminating account of the Private Schools as they are, with historical chapters. Among the new features are a complete list of PRIVATE SECONDARY SCHOOLS, new EDUCATIONAL DIRECTORIES, a LIST OF SECONDARY SCHOOL PERIODICALS.

New Introductory Chapters: Measuring Educational Results, The Year in Education, Review of Recent Educational Literature, etc., by Prof. Clayton C. Kohl of New York University, Prof. Arthur O. Norton of Wellesley College and others.

768 pages, round corners, crimson silk cloth, gold stamped, \$2.50.

A HANDBOOK OF NEW ENGLAND

Descriptive of Town and Country along the Routes of Automobile Travel, with Introductory Chapters.

768 pages, round corners, crimson silk cloth, gold stamped, \$2.50.

Porter E. Sargent, 50 Congress St., Boston, Mass.

GRAY

MARINE MOTORS

BOATS

More boats are shown in the 1916 *boat builders catalog* than you could see at any motor boat show. This book is published by the Gray Motor Co., in conjunction with the leading boat builders throughout the United States and Canada—it tells you where you can buy the kind of boat you want at the price you want to pay.

BOATS A GIRL CAN OPERATE

These boats operated the same as any motor car—nothing exposed but instrument board and controls. Motors equipped with self-starters.

Write for this book today—also the new marine engine catalog and "Book of Boats," showing a complete line of 2- and 4-cycle guaranteed Gray motors, 3 to 90 H. P.—1 to 6 cylinders.

The "Book of Boats" is a splendid guide for selecting either hull or engine.

**These 3 books are free—
a postal card will do.**

**Gray Motor Co. 556 Gray Motor Bldg.
Detroit, Michigan**

SUMMER CAMPS

Pine Tree Camp for Girls On beautiful Naomi Lake, 2000 feet above sea in pine-laden air of Pocono Mountains. Four hours from New York and Philadelphia. Bungalows and tents on sunny hill. Experienced counselors. Hockey, basketball, canoeing all outdoor sports. Tutoring if desired. Endorsed by parents and girls. Penn., Philadelphia, 906 S. 47th St., Miss Blanche D. Price.

Sargent Junior

The Camp for Girls from 8-13

Dr. Dudley A. Sargent, President, Peterboro, N. H. All the equipment of the big Sargent Camp. New buildings erected especially for this camp. All activities adapted to the age and health of each girl. Each camper under personal care of camp mother. Address Secretary, 8 Everett St., Cambridge, Mass.

CAMP CHAMPLAIN

An Ideal Summer Camp for Boys on Lake Champlain. 23rd Year opens June 30th. Special attention to safety and comfort. Waterproof tents and floors. Two motorboats. Rowboats, canoes. Fishing, swimming, baseball, tennis, all land and water sports. Trips to Adirondacks, Green Mts. and Montreal; also numerous short hikes. In charge of experienced college graduates. Tutoring if desired. Large Assembly Hall, with piano, games, etc. Best of food and plenty of it. Camp physician. No mosquitoes or malaria. Long distance phone. Number limited. References invariably required. Illustrated booklet.

WM H. BROWN, 307 West 70th Street, New York City.

CAMP WINNAHKEE

On Malletts Bay, Lake Champlain, between the Green and Adirondack Mountains.

An Ideal Camp for the Mental and Physical Improvement of Girls. In charge of experienced directress and counselors, who share in sports and daily occupations. Large bungalow with all improvements, sleeping porch, or tents. Nature study, woodcraft, manual training, swimming, boating, fishing, horseback riding, tennis, under competent direction and chaperonage. Trips to points of interest. Unimpeachable references required. All expenses \$200, including fares. Booklet from Wm. H. Brown, 307 W. 70th St., New York City.

Choice Fresh Flowers

Hardy Plants for House Decoration

Hotels Supplied on Contract

N. E. Corner 44th Street and Madison Avenue, New York

7. The district courts to sit at some central point in their respective districts and to hold court for six weeks out of each three months of each year. The supreme court to hold court for one month twice a year. All decisions to be rendered within sixty days of final argument.

8. Definite limits to be placed upon the powers of the commission along the lines of regulations of rates, corrections of inequalities and abuses and arbitration of labor disputes, with such other features as a closer study of the subject may suggest.

GERMAN DYES TO COME OVER, PERHAPS

One of the most serious effects of the war upon American industries results from the shortage of dyestuffs. The vast majority of the dyes used by the world are "made in Germany," for German scientific ingenuity and industrial efficiency have largely put an end to the production of natural vegetable dyes by the introduction of the manufactured coal tar colors.

Recent action of the German Government will afford the manufacturers of the United States an ample supply of dyestuffs for the next half year—provided two other conditions can be effectively met. Berlin will permit the export of 15,000 tons of dyes to this country, if definite assurance will be given that none of them will be re-exported to Germany's enemies.

The two problems that remain to be solved are getting past the British blockade and securing the ships to bring the cargoes over. Licenses have already been issued by the British Government permitting the bringing out of the port of Rotterdam of \$5,000,000 of German dyes which await shipment there. An attempt is to be made at once to secure from London additional licenses covering the rest of the 15,000 tons which Germany will now permit to be exported. The success of this attempt is of course problematical. The shipping question is no less perplexing. The British licenses already granted expire on June 1; and it is likely to prove a hard task to get the necessary tonnage for their shipment before that date. If the amount to be brought over should be something like trebled, the difficulty will be increased manifold.

But we need the dyes, unless we are all to take to wearing white; and great needs often produce effective remedies.

It is reported that the rapid recovery of the stock market last week from the depressing effect of the diplomatic crisis with Germany was largely due to the odd lot buying of the general public. Thousands of small speculators, who formerly patronized bucket shops and other brokerage concerns having no Stock Exchange connections have transferred their trading to Stock Exchange houses and those having Stock Exchange connections.

They have been forced to do so, or not trade at all. For the bucket shops have been driven out of business. The Stock Exchange, by long and painstaking effort, has made it impossible for the bucket shops—those institutions that pretend to be bona fide brokerage houses, but that in reality are purely gambling houses, where no stocks are actually bought and sold—to continue their business. The effect upon the actual, legitimate trading in stocks upon the Stock Exchange is already marked.

Insurance

Conducted by

W. E. UNDERWOOD

LIFE INSURANCE AND ENDOWMENT

A correspondent at Rutherfordton, N. C., gently disagrees with a piece of advice I recently gave a young man respecting the advantages of the endowment form of life insurance. My Southern friend regards the life forms (continuous or twenty payment), the difference in annual premiums considered, the more serviceable. "He could," observes my correspondent, referring to my inquirer, "almost buy \$1000 ordinary and \$1000 twenty-year life for price of \$1000 endowment."

True; but the young man's chances of outliving the twenty-year period are so many times greater than those of dying within it, and the cash fund at the end is so much greater under \$1000 of endowment than the combined values of \$1000 ordinary and \$1000 twenty-payment life, that I lean to the endowment. Of course, if protection against death is of paramount importance to a young man, the life plans should be used. Each individual's circumstances must govern in these matters. As observed here on several occasions, all the regular forms of life insurance are endowments at some age.

My correspondent errs in believing that companies and agents stimulate the sale of endowments for selfish purposes. In fact, there are many leading companies which either discourage the writing of endowments by their representatives, or fail to encourage them in securing applications on that form. As evidence tending to show that the life forms are easy leaders, I quote from the New York Insurance Department's report on the business for the year ending December 31, 1914, the latest statistics available, the distribution of the total insurance in force on that day in the thirty-five life companies reporting to that department:

Total insurance in force \$14,933,150,899, under 7,849,680 policies. The total insurance under life forms was \$9,795,393,878, the number of policies being 4,896,234. There were 2,297,816 endowment policies, carrying \$3,305,860,013 insurance. Of all other forms there were 655,630 policies for \$1,720,902,468 insurance. In other words, there were more than twice as many policies, and nearly three times as much insurance under the life forms as under the endowments.

W. L. C., Joplin, Mo.—The Mutual Benefit and Northwestern Mutual rank as two of the best managed life companies in the country. My solution of your problem would be that you divide the business between them.

ANOLA

THE sugar wafer confection which adds the final perfect touch to a delectable dessert. Ices and creams are made complete when they are served. Tea has an added enjoyment with them. Everybody likes them.

Crisp and inviting, chocolate flavored throughout. In ten-cent tins.

FESTINO—A favorite confection in the guise of an almond, with a kernel of almond-flavored cream.

BOTH SIDES

SHOULD THE UNITED STATES FIGHT?

A DEBATE

RESOLVED: That the United States should now enter the Great War on the side of the Entente Allies.

THE President of the United States has threatened to put an end to all diplomatic relations with Germany and her allies if these powers do not at once abandon their present submarine warfare against merchantmen or so modify it that the lives of American citizens may not be endangered by it. This decision of the President may eventuate in war. Many critics of the administration maintain that the United States should long ago have entered the Great War on the side of the entente allies. Others oppose any abandonment of the traditional policy of the United States which enjoins neutrality and non-intervention in all extra-American wars. This debate was prepared by Preston William Slosson.

ARGUMENT FOR THE AFFIRMATIVE

I. American interests demand that we should participate in the Great War.

A. Diplomatic isolation is impossible for any power under modern conditions.

1. All the other powers have their allies and all the smaller nations their protectors, and to this they owe whatever security they enjoy.

2. When we adopted our policy of non-intervention in European affairs we were a small, weak nation without colonial obligations; today we have extensive commercial and financial interests all over the world and aspire to play the part of a great power in international politics.

3. By taking part in the conferences at The Hague we have put ourselves on record as concerned in the upholding of international law thruout the world.

B. The United States cannot if it would remain neutral in this war.

1. By permitting loans and the sale of munitions of war our government is effectively assisting the entente allies; by forbidding the sale of munitions or participation in war loans it would greatly assist the central powers.

2. Neutral rights are not respected by any warring nation. As a neutral, we are disliked and disregarded by both opposing groups.

C. Participation in the Great War would give this country representation at the coming peace conference.

1. This would give the United States an opportunity to see that American rights were not menaced by political or commercial treaties and agreements after the war.

2. Our moral influence would be potent to make a satisfactory world peace, since we would be the most disinterested of all the nations at the conference.

II. American interests demand that we give aid to the entente allies.

A. The central powers have given us just cause for war.

1. On repeated occasions American lives have been lost by the submarine warfare on merchant ships conducted by the central powers.

2. In spite of numerous warnings and protests these injuries have continued and there is no evidence of their ceasing in the future.

B. The victory of the central powers would endanger our future security.

1. Germany, Austria-Hungary and Turkey are all autocratic and bureaucratic in government and militaristic in policy. Their victory would put an end to democracy and liberty wherever they conquered and would force all other countries, including the United States, to adopt burdensome armament in self-defense.

2. Germany is desirous of colonial expansion, and is therefore opposed to the Monroe Doctrine.

3. Germany would find cause for quarrel with the United States in the aid and sympathy given by the people of this country to her foes.

C. The United States would profit by joining the entente allies.

1. Our commercial prosperity and our political security alike depend upon an understanding with the greatest naval power—Great Britain.

2. An alliance with the numerous powers already leagued together might form the nucleus of a league to guarantee world-peace after the war.

III. Our intervention would be effective.

A. Our navy is usually reckoned the third most powerful in the world.

B. Altho our standing army is small, we could raise a volunteer army in a few months that would make the outcome of the war absolutely certain.

C. Our financial and industrial resources for carrying on the war are of illimitable importance.

D. The entry of the United States into the war would induce the central powers to sue for an early peace.

ARGUMENT FOR THE NEGATIVE

I. American interests demand that we remain neutral during the Great War.

A. The cost of intervention in life, in wealth, in social development would be incalculable. We would be impoverished and militarized as the nations of Europe have been. Our country would be divided against itself by conflicting sympathies.

B. The fundamental foreign policy of the United States has always been to avoid entangling alliances and participation in European wars.

C. We have duties that lie nearer home. It would be folly to leave the Mexican question unsettled to intervene in a war beyond the Atlantic.

D. By intervention we would lose our chance to act as impartial mediator between the warring powers.

E. By our participation in the war the neutral nations would lose the only champion of their interests.

F. The philanthropic work which our government has performed in Belgium, in Poland and elsewhere would end upon our entrance into the war.

II. American interests do not demand that we give military aid to the entente allies.

A. The policy of submarine warfare pursued by the central powers need not involve us in the war.

1. The exact nature of maritime law upon the points at issue is open to discussion.

2. It is still possible that a working agreement upon these controverted matters may be reached by further negotiations.

3. The entente allies have inflicted more serious injuries upon our trade than the central powers and have been equally defiant of international maritime law.

B. American interests do not at all correspond with the policies of the entente allies.

1. The British maritime policy of seizing private property at sea if destined for the enemy is widely different from that which the United States has always supported.

2. Japanese expansion in China is contrary to the American "open door" policy.

3. The United States has no interest in the territorial ambitions of Russia, France and Italy in continental Europe.

C. America could gain nothing from participation in the war.

1. The United States expects neither territory nor indemnity from a victory in the war.

2. All that could be obtained for this country would be a pledge on the part of the defeated powers that they would observe maritime law more strictly in future wars; but this pledge would be unenforceable.

3. Upon the actual entrance of the United States into the war the central powers would be free to wage their submarine war against merchantmen without restraint, so the security of American citizens would be lessened.

III. Our intervention would be futile.

A. The entente allies already enjoy complete command of the sea, so the American navy could accomplish little.

B. Our army is wholly inadequate to undertake a foreign war.

1. It would take years to reorganize the army on the European scale.

2. A large force must be retained in the Philippines and on the Mexican border.

3. We lack officers and equipment for a large volunteer army.

C. If we should enter the war we could not afford to ship munitions to Europe; they would be needed to equip our own forces.

D. The aid we could render the entente allies by military intervention would be so slight that it would give us very little influence in the peace conference at the end of the war.

ST. THOMAS AGAIN

Frequent conversations between Sec-
retary Lansing and the Danish Minister
have led to renewed talk of the sale of
the Danish West Indies to the United
States.

The visit of Colonel Roosevelt to the
Danish Islands was, as he was careful
to explain, purely recreational and un-
official. Nevertheless the people, remem-
bering his efforts as President to buy
the islands from Denmark, did not fail
to find in this visit an encouragement
of their hopes for annexation. He re-
fused to grant interviews to the news-
paper men, but one eagle-eyed editor
detected a symbolic significance in his
attitude as he landed, for it was noted
that he kept a tight grip on "his Pan-
ama" with one hand while the other
was outstretched toward the people
who thronged to meet him.

In the *St. Thomæ Tidende* appeared
the following greeting and advice:

TO COLONEL THEODORE ROOSEVELT

Welcome to our shores, dear Colonel,
Right welcome to old St. Croix;
May you have a pleasant time, Colonel,
Ere from us "ye gang awa."

And when you leave our shores, dear
Colonel,

To visit the southern isles,
May you find them so charming, Colonel,
That you'll be wreathed in smiles.

When you get to Panama, Colonel,
May you find the ditch O. K.;
May your deal prove a success, Colonel,
And earn Uncle Sam big pay.

When you return at home, dear Colonel,
May our isles engage a thought;
Whisper a "square deal" to him, Colonel,
"Unk, these islands should be bought."

"Seward got scared and left them, Uncle,
In the earthquake of sixty-seven.
He never went back, dear old Uncle,
To see if they had gone to h-eaven.

"Thirty-five years after, good old Uncle,
Strenuous efforts again were sought;
But 'in the neck' we got it, Uncle,
The answer was 'they could not be
bought.'

"Let's try the move again, kind Uncle,
St. Thos would be our all in all;
Her geo. po. is splendid, Uncle,
For she holds the key to the Canal."
—R.

Frederiksted, St. Croix, Danish West
Ladies, 16th February, 1916.

From a literary point of view this
poem is hard to classify on account of
its originality in rime and cadence. But
it shows good sense if not poetic genius,
and we should not think of finding fault
with its form any more than with the
peroration of the Jamaican preacher:
"God bless the American eagle and
hasten the time when Jamaica shall
come under the shadow of the wings of
that great bird of prey."

A MOVIE OF THE NEWS

These heads, from successive editions
of a journal especially fertile in head-
line variations, suggest the dramatic
way in which the latest German note
became public. The early sections, de-
fiant and ironical, caused resentment
and apprehension, which were some-
what lessened as, after long delay, the
rest of the note, with its more or less
definite concessions, came over the sea
by wireless and filtered out to the pub-
lic thru the news agencies and news-
paper composing rooms.

U. S. ACCEPTS NOTE; NO BREAK IF BERLIN FULFILLS PROMISES

THE PRESIDENT'S ANSWER TO GERMANY

After this issue of *The Independent* had gone to press the following note, dated May 8, was given to the public. Comment in the editorial pages is, of course, based on the situation prior to the publication of this brief and altogether admirable reply to the German note (which is reprinted in full on page 235).

The note of the Imperial German Government under date of May 4, 1916, has received careful consideration by the Government of the United States. It is especially noted, as indicating the purpose of the Imperial Government as to the future, that it "is prepared to do its utmost to confine the operation of the war for the rest of its duration to the fighting forces of the belligerents," and that it is determined to impose upon all its commanders at sea the limitations of the recognized rules of international law upon which the Government of the United States has insisted.

Thruout the months which have elapsed since the Imperial Government announced on February 4, 1915, its submarine policy, now happily abandoned, the Government of the United States has been constantly guided and restrained by motives of friendship in its patient efforts to bring to an amicable settlement the critical questions arising from that policy. Accepting the Imperial Government's declaration of its abandonment of the policy which has so seriously menaced the good relations between the two countries, the Government of the United States will rely upon a scrupulous execution henceforth of the now altered policy of the Imperial Government such as will remove the principal danger to an interruption of the good relations existing between the United States and Germany.

The Government of the United States feels it necessary to state that it takes it for granted that the Imperial German Government does not intend to imply that the maintenance of its newly announced policy is in any way contingent upon the course or result of diplomatic negotiations between the Government of the United States and any other belligerent government, notwithstanding the fact that certain passages in the Imperial Government's note of the 4th inst. might appear to be susceptible of that construction.

In order, however, to avoid any possible misunderstanding the Government of the United States notifies the Imperial Government that it cannot for a moment entertain, much less discuss, a suggestion that respect by German naval authorities for the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other government affecting the rights of neutrals and noncombatants. Responsibility in such matters is single, not joint; absolute, not relative.

The Independent

VOLUME 86

MAY 15, 1916

NUMBER 3519

THE IRREDUCIBLE MINIMUM

THE German reply to the "Sussex" note is an adroit mixture. It gives so much with one hand that the United States would not be justified in breaking off diplomatic relations forthwith. But it withholds so much with the other hand that the situation remains full of difficulty and potential danger. The note may be condensed to two significant passages. The first is this:

German naval forces have received the following order: "In accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives, unless the ship attempt to escape or offer resistance."

This is eminently satisfactory. It is what the Government of the United States has contended for from the first. It is the irreducible minimum. With nothing less will the American people be content.

So long as the German navy carries on its operations against merchant shipping in accordance with the letter and the spirit of this order, there will be no cause for rupture between the two nations.

But the other passage in the note lays down an unacceptable condition, and makes a scarcely veiled threat. It reads thus:

But neutrals cannot expect that Germany, forced to fight for existence, shall for the sake of neutral interests restrict the use of an effective weapon if the enemy is permitted to apply at will methods of warfare violating rules of international law. . . .

Accordingly, the German Government is confident that in consequence of the new orders issued to the naval forces, the Government of the United States . . . will now demand and insist that the British Government shall

forthwith observe the rules of international law universally recognized before the war. . . .

Should steps taken by the Government of the United States not attain the object it desires, to have the laws of humanity followed by all belligerent nations, the German Government would then be facing a new situation in which it must reserve to itself complete liberty of decision.

This can mean nothing but that, unless the United States can and will compel England to bring to an end its blockade of Germany as at present enforced, the German Government will feel free to return to the methods of submarine warfare which it has been carrying on for more than a year.

Such a proposal we cannot consider. It involves an intolerable threat. The sufficient answer to it was made in the American note of July 21, 1915:

The Imperial German Government will readily understand that the Government of the United States cannot discuss the policy of the Government of Great Britain with regard to neutral trade except with that Government itself, and that it must regard the conduct of other belligerent governments as irrelevant to any discussion with the Imperial German Government of what this government regards as grave and unjustifiable violations of the rights of American citizens by German naval commanders.

On this position we must stand.

Our duty is clear. We should inform the German Government without delay that the pledge implied in the order to the German submarine commanders is satisfactory, but the condition sought to be imposed is not.

We shall continue to act toward each nation as our honor and our conscience demand, regardless of any attempt by any other nation to dictate our course. Meanwhile, we should make it unmistakably plain to Germany that any single violation of its pledge will automatically break off diplomatic relations.

ROOSEVELT, HUGHES OR — ?

WHOM will the Republicans nominate for President?

The Democratic nominee is certain. No opposition worth a minute's thought has arisen to Mr. Wilson. By his achievements as President and as the leader of the Democratic party he has made himself the logical candidate.

But the outcome at Chicago is shrouded in uncertainty. There are plenty of avowed aspirants for the Republican nomination. Many state delegations will propose favorite sons. Nevertheless, there are just two personalities that stand out with the distinctness of probability.

Theodore Roosevelt or Charles Evans Hughes? That is the question.

In considering the answer there are several categories to be considered: character, ability, temperament, ex-

perience, convictions, political availability. The balance sheet of the two should contain all these items.

Two of these categories may be dismissed with a word. Both Mr. Roosevelt and Justice Hughes are men of proved ability and high character. They cannot, however, be said to be equal in ability, for their abilities are of different kinds.

Mr. Hughes is primarily a thinker. Mr. Roosevelt is first of all a man of action. With Mr. Hughes the thought is the thing; the action which may follow is of subordinate interest. With Mr. Roosevelt action is the one consuming passion; thought finds its important function in directing and controlling the action.

Any difference that there might seem to some—on one side or the other—in point of character is in reality a difference of temperament. Their characters manifest themselves thru different mediums. Mr. Roosevelt is a

very difficult personality to analyze. He is something of a paradox. It is almost impossible to make any generalization about him that is strictly true. Mr. Hughes, however, is more easy to define. You may like him or not, but every one agrees on what manner of man he is.

On the point of experience it is a matter of degree. No man in the country has had more experience to fit him for the presidency than Mr. Roosevelt—for no man living has already been President so long as he. But Mr. Hughes was for three years Governor of New York State and for six years he has been a justice of the United States Supreme Court. His previous activity as counsel for the legislative commissions investigating the gas and insurance situations in New York City brought him into intimate touch with important questions of American public life. His contribution to the solution of the underlying problems in those cases has been as permanent as it was brilliant.

The most important item on the balance sheet must, of necessity, be that of convictions. What do these two men profoundly believe about the fundamentals of government, business, industry, human rights, national duties, and international responsibilities? What views do they hold as to the problems of immediate and insistent importance which confront the American people today?

Fundamentally the two men are not far apart. They are both true democrats; they both believe in the people and would have the rule of the people a real and living thing. They both believe in social justice, in the right of the men and the women who work with their hands to the largest possible measure of consideration and fair dealing in the working out of our industrial conditions. To them both human rights mean more than the mere privilege of existence subject to all the vagaries of fortune and the oppressions of unrestricted natural forces and unregulated human passions. They both believe in government, not merely as a necessary evil—"that government is best which governs least"—but as an effective instrument to be used for the protection of the general warfare against individual greed and self interest, and for the constructive development of the conditions of living of the whole people. Both hate the political boss, the corrupt alliance of predatory interests and greedy politicians, the exploitation of humanity for private gain.

So much for fundamentals of government. What of the more immediate issues of this present troubled time?

Here the comparison is not easy. What Mr. Roosevelt believes no man in the United States can have any excuse for not knowing. For a year and a half he has been giving utterance to his convictions with definiteness, particularity, and vigor. Mr. Roosevelt sees two great issues before the American people today: our national duty and responsibility in the field of international relations, and adequate preparedness for national defense and for the assumption of that national responsibility.

His views on the first point—and one aspect of the second—are well set forth in an address at Williams College eleven years ago:

I demand that the nation do its duty and accept the responsibility that must go with greatness.

I ask that the nation dare to be great, and that in daring to be great it show that it knows how to do justice to the weak no less than to exact justice from the strong.

In order to take such a position of being a great nation the one thing that we must not do is to bluff.

The unpardonable thing is to say that we will act as a big nation and then decline to take the necessary steps to make the words good.

Keep on building and maintaining at the highest point of efficiency the United States navy or quit trying to be a big nation. Do one or the other.

In order that we may be prepared for defense Mr. Roosevelt would have us create and maintain the second navy in the world, provide a regular army of 250,000 men and establish a system of universal military training on the general lines of the Swiss and Australian systems. In his book, "Fear God and Take Your Own Part," he wrote:

A democracy should not be willing to hire somebody else to do its fighting. The man who claims the right to vote should be a man able and willing to fight at need for the country which gives him the vote. I believe in democracy in time of peace; and I believe in it in time of war. I believe in universal service. Universal service represents the true democratic ideal.

These Mr. Roosevelt declares to be the great issues that confront the people of the United States today. He is convinced that the demand of events for the settlement of these issues is peremptory. He would have us subordinate for the moment the consideration of the other great problems which we must ultimately solve in order to safeguard our national future and continue to make our national contribution to the progress of mankind. Whether these will continue to be the issues of the campaign with a man other than Mr. Roosevelt running against Mr. Wilson is by no means certain. Even with Mr. Roosevelt as nominee, the Democrats may be able to shift the issue so that he will be on the defense rather than the offense. They did that during the last campaign. It must also be remembered that the next President, whosoever he may be, can hardly put into effect any military policy for two years unless we go to war, for the new Congress will not assemble till next March, and it will take months to agree on a policy and months more to execute it.

With Mr. Hughes the matter is not so easy. For six years his voice has been heard only in the judicial utterances of the bench. What at this moment are his views on our national relations to the rest of the world and on our duty in the matter of preparations for national defense must be largely a matter of conjecture. On these points he has not spoken; he may not speak while he remains within the judicial borders.

As far as the single issue of preparedness is concerned, however, he did give expression in a general way, to his views on these questions eight years ago, when he said:

We are devoted to the interests of peace and we cherish no policy of aggression. The maintenance of our ideals is our surest protection. It is our constant aim to live in friendship with all nations and to realize the aims of a free government, secure from the interruptions of strife and the wastes of war. It is entirely consistent with these aims and it is our duty to make adequate provision for our defense and to maintain the efficiency of our army and navy. And this I favor.

This, of course, might have been said by Mr. Wilson or any other less extreme man than Mr. Roosevelt. It is entirely conceivable that if Mr. Hughes were to speak out today fully and frankly he would be found to be much nearer to the President than to the President's most ardent critic. The party does not know, and under present conditions cannot know, exactly where Mr. Hughes is to be found.

The question of political availability is an important

one. It is the business of a political party to select as candidate for President not only a man who would make a good President, but a man who will have a good chance of being elected. How lies the balance of political availability between Mr. Roosevelt and Mr. Hughes?

Both are popular men. Both have multitudes of admirers. But Mr. Roosevelt has many more enemies than Mr. Hughes—both the fact that he has been President and the special characteristics of his personality make that inevitable. It is probable that more regular Republicans would "bolt" Mr. Roosevelt than Mr. Hughes, but which would draw the greater proportion of independent votes is a puzzling question.

But suppose neither Mr. Roosevelt nor Mr. Hughes is to be the man? What then? It all depends upon what the Republican party wants.

An indefatigable advocate of preparedness? There is Leonard Wood, a soldier, with two great achievements of administration to his credit, in Cuba and the Philippines, a hard-headed, high-minded, solid man.

An uncompromising advocate of anti-militarism? Henry Ford has already received astonishing support in several states in the Middle West. He is a tyro in politics. But he is a man of vision, in business as in more spiritual concerns; a great constructive genius, as the article we publish elsewhere in this issue attests.

A man of distinctly progressive tendencies, tho not a last-ditch Progressive? There is Herbert S. Hadley, of Missouri, enemy of bosses and machines, liberal minded, believer in preparedness.

A conservative? There is Senator Root, the "best Secretary of State the country has ever had," brilliant and profound intellectually, stern critic of the Wilson administration. But no such man could secure the hearty support of the confirmed Progressives. The nomination of such a conservative would mean disunion and a possible third ticket.

After these, the field, full of the shadowy forms of the proverbial "dark horses." Which shall it be? It all depends upon what the Republican party wants.

COINCIDENCE OR CONSEQUENCE ?

WOMEN have voted in New Zealand for twenty years. The lowest death rate for babies in the world is in New Zealand.

Women also vote in Norway, Australia, Sweden, Denmark and Finland. The next lowest death rates for babies in the world are in these countries.

ONE WOMAN

NOTHING has done more to align the sentiments of humanity against the Central Powers than their mistreatment of women, especially the execution of Edith Cavell.

The latest case is that of Alice Mazaryk, a devoted and beautiful Bohemian girl now in a Vienna prison awaiting trial for her life on a charge of high treason.

The case is one to appeal to the American people. Her mother is an American. Her father, a professor at the University of Prague, is perhaps the greatest living Bohemian champion of democracy and the rights of small nations. As a member of the Austrian Parliament he was often outspoken for Serbia and Bosnia. At the beginning of the war he refused to take up arms against

Serbia. When his newspaper, *Cas*, was suppressed he and his daughter were both arrested. He was only saved from execution by the activity of his compatriots at home and in the United States. The daughter is still in peril of death.

Miss Mazaryk has many friends in the United States. Some years ago she spent a year at the University Settlement in Chicago writing a history of the Bohemians. We rejoice that a large body of American women are interesting themselves in her behalf. May success crown their efforts. Amidst the frightful taking of life in this sad war, surely such a gentle and rare spirit can be spared.

THE CLOAK AND SUIT MAKERS' LOCKOUT

IN the conflict now in progress in the cloak and suit industry in New York City we have a new and unusual alignment on a matter of principle. The manufacturers have declared a lockout in order that they may fight out their differences with their employees. The union is standing for the opposite principle. It wishes to arbitrate.

Up to 1900 the employers and employees fought out all their differences by means of strikes and lockouts, and the public was put thereby to great expense and inconvenience. But in 1900 they established the famous "Peace Protocol," with its board of arbitration and the preferential shop as a compromise between the closed shop and the open shop, and for five years there was peace in the industry. In the spring of 1915, however, there began to be rumblings of discontent, and finally the protocol was abrogated. In order to avert the conflict toward which both sides were drifting Mayor Mitchel appointed a Council of Conciliation. This succeeded the board of arbitration. In July, 1915, the council rendered a decision adverse to the union in the matter of the preferential shop—and the union accepted it. In March, 1916, it rendered a decision adverse to the manufacturers—and the manufacturers repudiated it.

In a further effort to avert trouble, however, the mayor requested representatives of the Manufacturers' Association and of the union to meet the Council of Conciliation and a group of public spirited citizens in his office. The representatives of the union came, but the manufacturers took the position that their conduct of their business is none of the public's affairs and declined to come.

Upon this point Mr. Oscar S. Straus, chairman of the New York Public Service Commission, said at the conference:

The public is deeply interested in the matter. I maintain that no two groups of men have a right to make trouble in a great city; that a great city should not be dependent upon two groups of men for the peace of that city, and that the manufacturers have assumed a mighty responsibility in refusing to come before the mayor and to conciliate their differences.

But in spite of all the efforts of the public, on April 28 the manufacturers declared a lockout, throwing 30,000 employees out of work, and this was followed last week by a strike of some 30,000 more union workers who were employed in shops technically independent of the Manufacturers' Association, but which were largely engaged on sub-contracts from them.

At the present time about 60,000 cloak and suit makers are out of work, and between 200,000 and 300,000

people are without income. The workers are still anxious to arbitrate their differences, but the manufacturers still refuse to do so. The obligation of both sides to show a decent respect for the public and public opinion has come to be the leading issue in this industrial war. And just as in our political life no party or group of men would be justified in breaking off relations with the gov-

ernment because an election or a court decision had gone against them, so neither side to an industrial agreement is justified in breaking off relations because of the adverse decision of a board of arbitration on which both sides as well as the public are represented. The time has long since passed when the public can be either ignored or defied. Its verdict will in the end prevail.

A POLL OF THE JURY ON THE GERMAN NOTE

A HASTY reading of the German reply leads me to think that it should be accepted as satisfactory. Germany has now ordered the conduct of her submarine warfare in strict conformity with the rules of international law. The United States must accept that order as an accomplished fact. The issuance of these orders by the German Government constitutes apparently and in all sincerity a compliance with the demands of the President.

GEORGE E. CHAMBERLAIN

Chairman of the Senate Committee on Military Affairs

I SHOULD say that Germany has measurably met the first demand made by the United States, which was for a revised public policy of submarine warfare. This has been granted. The second demand was that Germany make effective this revised policy. It is to be assumed from the temper of the note that the new order will be made effective. The suggestions regarding Great Britain's blockade, to my mind, do not qualify Germany's action in the least.

THOMAS J. WALSH

Senator from Montana, expert on international law

THE whole problem remains unsolved. Much depends on the practise under the new order of modified submarine warfare. But there is the important paragraph which recognizes the contention of the United States respecting international law. That official admission is a sufficient basis—or ought to be—upon which to plant the hope of continued friendly relations. Time will tell just how far Germany has yielded to American demands—or whether she has yielded not at all.

WARREN G. HARDING

Senator from Ohio and Temporary Chairman of the Republican National Committee

THE new German note leaves ground for much discussion. To my mind the note leaves us just where we were after the "Lusitania" note was forwarded to the German Government eleven months ago. The paragraph about other nations obeying international law neutralizes the paragraph just

preceding about Germany's good intentions. She still leaves herself to act as she pleases.

MILES POINDEXTER

Senator from Washington and Chairman of the Committee on Expenditures in the War Department

GERMANY seems to have yielded substantially what our government asked for.

BENJAMIN IDE WHEELER

President of the University of California

IT is not clear that the note warrants a diplomatic rupture. Some captious sentences are probably meant for home consumption, but the concessions are considerable and the demands not unreasonable. The "Sussex" contention is practically yielded. On the whole, it sounds as if Germany means to keep the peace.

WASHINGTON GLADDEN

Pastor Emeritus of the First Congregational Church, Columbus, Ohio

THE German note is a compliance with the American demand, but contingent upon our obtaining concessions from the Entente Powers. It is discourteously phrased. Whether it is a real concession depends upon (1) the exact terms of the new order to U-boats, (2) the future interpretation of the conditions, (3) German good faith, in government and submarine officers alike.

THEODORE S. WOOLSEY

Recently Professor of International Law at Yale University

THE manner of the German note might have been happier; its matter marks a triumph for our government. A victory has been won without the rattling of sabers. It is due to the unassailable justice of the American stand for law and humanity. President Wilson's leadership may prove to be prophetic of a new method of international adjustment.

STEPHEN S. WISE

Rabbi of the Free Synagogue, New York City

WHILE the German reply to the American note is not a gracious concession, it is nevertheless a concession. In its form it is bad, but in its substance it is for the present at least sufficient and

would not justify a diplomatic break with Germany. If the renewed or reiterated and apparently more emphatic instructions which she has given to the commanders of her undersea boats should be faithfully carried out, that, it seems to me, would meet the main contentions of our government, and no steps toward severing the relations between the two nations should be taken unless or until those instructions should be disregarded.

DAVID HUMMELL GREER

Bishop of New York Protestant Episcopal Church

GERMANY'S concessions have caused general feeling of relief, and the country will rejoice at the President's reported decision to accept them. War to avenge injury to travelers who have no regard for their country would be inconceivable, and I regard its avoidance a dictate of patriotic statesmanship.

RICHARD BARTHOLDT

President of the American Section of the Interparliamentary Union

GERMANY'S reply concedes more than history will hold justice demanded, while her severe arraignment of our course is unfortunately deserved. We may smart under it, but ought to remember what we should have written ourselves if our women were threatened with starvation and we were haunted by the hunger cry of babies.

EDMUND VON MACH

Author and Lecturer

CANADIANS are suffering the pains and losses of actual war, but not the intrigues of Bernstorff and the insolence of Berlin notes. We hope Americans will be spared actual war, but the humiliation and shame of North American civilization are too high a price even for neutrality.

Break diplomatic relations and redeem democracy from the insulting scorn of Prussian despotism. We need your military arm less than your conscience and companionship in the struggle for the world's freedom.

JOHN A. MACDONALD

Lately Editor of the Toronto Globe

THE GERMAN NOTE OF MAY 4, 1916

THE German Government handed over to the proper naval authorities for early investigation the evidence concerning the "Sussex," as communicated by the Government of the United States. Judging by the results that the investigation has hitherto yielded, the German Government is alive to the possibility that the ship mentioned in the note of April 10 as having been torpedoed by a German submarine is actually identical with the "Sussex."

The German Government begs to reserve further communication on the matter until certain points are ascertained which are of decisive importance for establishing the facts of the case. Should it turn out that the commander was wrong in assuming the vessel to be a man-of-war, the German Government will not fail to draw the consequence resulting therefrom.

In connection with the case of the "Sussex" the Government of the United States made a series of statements the gist of which is the assertion that the incident is to be considered but one instance of a deliberate method of indiscriminate destruction of vessels of all sorts, nationalities, and destinations by German submarine commanders.

The German Government must emphatically repudiate the assertion. The German Government, however, thinks it of little avail to enter into details in the present stage of affairs, more particularly as the Government of the United States omitted to substantiate the assertion by reference to concrete facts.

The German Government will only state that it has imposed far-reaching restraints upon the use of the submarine weapon, solely in consideration of neutrals' interests, in spite of the fact that these restrictions are necessarily of advantage to Germany's enemies. No such consideration has ever been shown neutrals by Great Britain and her allies.

The German submarine forces have had, in fact, orders to conduct the submarine warfare in accordance with the general principles of visit and search and the destruction of merchant vessels recognized by international law, the sole exception being the conduct of warfare against enemy trade carried on enemy freight ships encountered in the war zone surrounding Great Britain. With regard to these, no assurances have ever been given to the Government of the United States. No such assurances are contained in the declaration of February 8, 1916.

The German Government cannot admit any doubt that these orders were given or are executed in good faith. Errors actually occurred. They can in no kind of warfare be avoided altogether. Allowances must be made in the conduct of naval warfare against an enemy resorting to all kinds of ruses, whether permissible or illicit.

But apart from the possibility of errors, naval warfare, just like warfare on land, implies unavoidable dangers for neutral persons and goods entering the fighting zone. Even in cases where the naval action is confined to ordinary forms of cruiser warfare, neutral persons and goods repeatedly come to grief.

The German Government has repeatedly and explicitly pointed out the dangers from mines that have led to the loss of numerous ships.

The German Government has made several proposals to the Government of the United States in order to reduce to a minimum for American travelers and goods the inherent dangers of naval warfare. Unfortunately the Government of the United States decided not to accept the proposals. Had it accepted, the Government of the United States would have been instrumental in preventing the greater part of the accidents that American citizens have met with in the meantime.

The German Government still stands by its offer to come to an agreement along these lines.

As the German Government repeatedly declared, it cannot dispense with the use of the submarine weapon in the conduct of warfare against enemy trade. The German Government, however, has now decided to make a further concession, adapt-

ing methods of submarine war to the interests of neutrals. In reaching its decision the German Government is actuated by considerations which are above the level of the disputed question.

The German Government attaches no less importance to the sacred principles of humanity than the Government of the United States. It again fully takes into account that both governments for many years coöperated in developing international law in conformity with these principles, the ultimate object of which has always been to confine warfare on sea and land to armed forces of belligerents and safeguard as far as possible noncombatants against the horrors of war.

But although these considerations are of great weight, they alone would not under present circumstances have determined the attitude of the German Government. For in answer to the appeal by the Government of the United States on behalf of the sacred principles of humanity and international law, the German Government must repeat once more, with all emphasis, that it was not the German, but the British Government which ignored all accepted rules of international law and extended this terrible war to the lives and property of noncombatants, having no regard whatever for the interests and rights of neutrals and noncombatants that thru this method of warfare have been severely injured.

In self-defense against the illegal conduct of British warfare, while fighting a bitter struggle for national existence, Germany had to resort to the hard but effective weapon of submarine warfare.

As matters stand, the German Government cannot but reiterate regret that the sentiments of humanity, which the Government of the United States extends with such fervor to the unhappy victims of submarine warfare, are not extended with the same warmth of feeling to many millions of women and children who, according to the avowed intention of the British Government, shall be starved, and who by sufferings shall force the victorious armies of the Central Powers into ignominious capitulation.

The German Government, in agreement with the German people, fails to understand this discrimination, all the more as it has repeatedly and explicitly declared itself ready to use the submarine weapon in strict conformity with the rules of international law as recognized before the outbreak of the war, if Great Britain likewise was ready to adapt the conduct of warfare to these rules.

Several attempts made by the Government of the United States to prevail upon the British Government to act accordingly failed because of flat refusal on the part of the British Government. Moreover, Great Britain again and again has violated international law, surpassing all bounds in outraging neutral rights. The latest measure adopted by Great Britain, declaring German bunker coal contraband and establishing conditions under which English bunker coal alone is supplied to neutrals, is nothing but an unheard-of attempt by way of exaction to force neutral tonnage into the service of British trade war.

The German people knows that the Government of the United States has the power to confine the war to armed forces of the belligerent countries, in the interest of humanity and maintenance of international law. The Government of the United States would have been certain of attaining this end had it been determined to insist, against Great Britain, on the incontrovertible rights to freedom of the seas. But, as matters stand, the German people is under the impression that the Government of the United States, while demanding that Germany, struggling for existence, shall restrain the use of an effective weapon and while making compliance with these demands a condition for maintenance of relations with Germany, confines itself to protests against illegal methods adopted by Germany's enemies. Moreover, the German people knows to what considerable extent its enemies are

supplied with all kinds of war material from the United States.

It will, therefore, be understood that the appeal made by the Government of the United States to sentiments of humanity and principles of international law cannot, under the circumstances, meet the same hearty response from the German people which such an appeal otherwise always is certain to find here. If the German Government, nevertheless, is resolved to go to the utmost limit of concessions, it has been guided not alone by the friendship connecting the two great nations for over 100 years, but also by the thought of the great doom which threatens the entire civilized world should the cruel and sanguinary war be extended and prolonged.

The German Government, conscious of Germany's strength, twice within the last few months announced before the world its readiness to make peace on a basis safeguarding Germany's vital interests, thus indicating that it is not Germany's fault if peace is still withheld from the nations of Europe. The German Government feels all the more justified in declaring that responsibility could not be borne before the forum of mankind and in history if after twenty-one months of the war's duration the submarine question, under discussion between the German Government and the Government of the United States, were to take a turn seriously threatening maintenance of peace between the two nations.

As far as lies with the German Government, it wishes to prevent things from taking such a course. The German Government, moreover, is prepared to do its utmost to confine operations of the war for the rest of its duration to the fighting forces of the belligerents, thereby also insuring the freedom of the seas, a principle upon which the German Government believes, now as before, that it is in agreement with the Government of the United States.

The German Government, guided by this idea, notifies the Government of the United States that German naval forces have received the following order:

In accordance with the general principles of visit and search and the destruction of merchant vessels, recognized by international law, such vessels, both within and without the area declared a naval war zone, shall not be sunk without warning and without saving human lives unless the ship attempt to escape or offer resistance.

But neutrals cannot expect that Germany, forced to fight for existence, shall, for the sake of neutral interests, restrict the use of an effective weapon, if the enemy is permitted to continue to apply at will methods of warfare violating rules of international law. Such a demand would be incompatible with the character of neutrality, and the German Government is convinced that the Government of the United States does not think of making such a demand, knowing that the Government of the United States repeatedly declares that it is determined to restore the principle of freedom of the seas, from whatever quarter it has been violated.

Accordingly, the German Government is confident that in consequence of the new orders issued to the naval forces the Government of the United States will also now consider all impediments removed which may have been in the way of a mutual coöperation toward restoration of the freedom of the seas during the war, as suggested in the note of July 23, 1915, and it does not doubt that the Government of the United States will now demand and insist that the British Government shall forthwith observe the rules of international law universally recognized before the war, as are laid down in the notes presented by the Government of the United States to the British Government December 28, 1914, and November 5, 1915.

Should steps taken by the Government of the United States not attain the object it desires, to have the laws of humanity followed by all belligerent nations, the German Government would then be facing a new situation in which it must reserve to itself complete liberty of decision.

VON JAGOW

THE STORY OF THE WEEK

Another Mexican Raid

Just as the agreement between the United States Government and the de facto Mexican Government on the future status of the punitive expedition into Mexico was on the point of being consummated, another outrage by Mexicans was committed on American soil. A band of 200 armed Mexicans, rumored to be disaffected Carranza soldiers, crossed the Rio Grande at a point 150 miles southeast of El Paso and attacked a guard of American soldiers. The guard, composed of nine men of the Fourteenth Cavalry, was stationed near Glen Springs in the Big Bend region of Texas. At eleven o'clock on Friday evening they were attacked in their little adobe hut by the Mexican raiders. For three hours they stood off their attackers. It was only when the roof of the hut was set on fire that they had to make a rush for safety. By that time three of the troopers were dead and two badly wounded. In spite of the danger Sergeant Smith and the three other survivors succeeded in carrying away not only their wounded but their dead comrades. The wounded and the bodies were sent off on a motor truck driven by one of the troopers. This left only the sergeant and two privates to continue the fighting against the bandits. They were reinforced, however, by American ranchmen, attracted by the sound of the firing and by four in the morning the Mexicans were driven off.

The bandits rode east to Glen Springs, where they looted a store and killed a ten year old boy. They then sacked two other towns, Boquillas and Deemers, and returned across the Rio Grande, taking with them two American civilians.

A punitive expedition was promptly got under way, and the pursuit will be preste with vigor.

This repetition of the Columbus in-

cident will almost certainly put a quite different aspect on the negotiations between Señor Carranza and the American Government. It makes it clear that our task in Mexico is nowhere near its end. It raises at once the question whether the available troops of our regular army are sufficient in number to complete the task before us.

No "Scuttling" of the Philippines

Congress makes slow progress. Last week the attempt to set a definite time for granting independence to the Philippines was given its deathblow in the house. The Clark amendment, adopted by the Senate, which would have decreed the withdrawal of the United States from the islands before four years had passed, was defeated in the House by a vote of 213 to 165. Thirty Democrats, as foreshadowed in the Democratic caucus the week before, joined the solid Republican minority in voting against the amendment. Two attempts to retain in modified form the provision making a definite promise of independence were also defeated. The first set the time at from two to six years; the second set it at a minimum of four years and a maximum of eight years. The House then voted to substitute for the measure as it came from the Senate the Jones bill, which merely declares in its preamble that it has always been the intention of the United States to grant the Philippines their freedom. The bill was sent to conference and the House conferees were instructed to agree to no declaration in the bill setting a definite time for giving the islands their freedom. There is apparently no reason to believe that the movement for the fixing of the end of the American régime can be revived during the present Congress. This is a defeat for the President, who had recommended to Congress the acceptance of the Senate bill with the amendment.

Slow Progress in Congress

The conferees on the Army Reorganization bill have agreed on two of the disputed points, but are as wide apart as ever on two others. A compromise has been reached on the size of the regular army. One hundred and eighty thousand is the number of men agreed upon in conference, thus splitting the difference, though not at the half-way point, between the House figure of 140,000 and the Senate figure of 250,000. A scheme of elastic organization adopted by the Senate, which would permit the expansion of the army in time of threatened war to 220,000, was also concurred in. The conferees came to an agreement as well on the reorganization plan of the House bill for the National Guard, which would expand this reserve force to 400,000 men and "federalize" it.

The conference could not concur, however, on the provisions of the Senate bill for a federal volunteer reserve army and for a government owned nitrate plant. The conference adjourned pending further instructions from the House.

The next great measure to engage the attention of the House will be the Rural Credits bill, which is now being debated in the Senate. This will be followed by the Administration's Ship Purchase bill. This measure is still under consideration by the House Merchant Marine and Fisheries Committee, and will probably be reported out before the end of the present week. It is considered doubtful whether the ship purchase measure can be pushed thru the House without resort to a Democratic caucus.

Other bills which it is hoped can be disposed of before the national conventions in June are that granting a greater measure of self government to Porto Rico and the Fortifications Appropriation bill.

The annual supply bills are so far behind that it seems probable that the session of Congress will run far into the summer.

If We Want a Greater Navy

The advocates of naval preparedness want the United States to have the second navy in the world. That is the place we occupied until Germany passed us. It is an important question how rapidly we could build up our navy with that end in view, if we decide that that is the policy to adopt.

The Secretary of the Navy has transmitted to Representative Butler of Pennsylvania, ranking Republican member of the House Naval Committee, a report of the General Board of the Navy bearing on this point. The report shows that we cannot tell what would be needed to bring us back to second place, because we cannot tell what European nations have been doing since

Stanley in Arkansas Democrat

"I'LL WATCH YOU DO IT, GENERAL"

the war began. It declares, however, that the country is now equipped to begin building simultaneously within six months five dreadnoughts, five battle cruisers, nine scout cruisers, twenty-two destroyers and an unlimited number of submarines. If Congress should direct that private ship builders abandon all private work, it adds, a great increase in this capacity would be possible.

Also, if the government were willing to pay for the employment of three shifts of labor, the time of construction would be cut in half in all probability at an estimated increased cost of 40 per cent. The report points out, however, that the available supply of skilled labor, now undetermined, would control in a large measure any attempt to speed up a great building program.

Apparently, then, we can have naval preparedness if we want it and are willing to pay for it.

Labor and Capital
Fall Out Here and There

May Day is, by common consent of workingmen, Strike Day. This year was no exception to the rule. The first of the month this year found serious labor troubles under way in the cloak and skirt industry in New York City, among the marine engineers operating tugs and tow-boats in New York Harbor, and in steel and electric manufacturing plants in the Pittsburgh district. There were two bright spots, however, on the industrial horizon. The agreement between the operators and the miners in the hard coal field, arranged at the end of the long conference between their representatives, was ratified by the Miners' Convention at Pottsville, Pennsylvania. There was some opposition to the ratification of the new wage scale because the agreement did not go to the full length of providing for the closed shop. But John P. White, president of the United Mine Workers of America, told the miners that the new contract was the best agreement ever negotiated by the mine workers, and that in obtaining the eight-hour day the dreams of the last forty-eight years in the anthracite regions had been realized. The agreement was finally ratified by a vote of 581 to 206.

A strike was also averted in the men's clothing trade in New York thru the efforts of Charles W. Bernheimer, chairman of the arbitration committee of the New York Chamber of Commerce. The employers and the workers

finally consented to submit their differences to a board of arbitration composed of Mr. Bernheimer, Dr. Henry L. Moskowitz and the Rev. Dr. J. L. Magnes. Both sides in the controversy agreed to accept the decision of the board.

In the cloak and skirt industry efforts at conciliation were not so successful. Mayor Mitchel of New York and Mr. Jacob Schiff each made proposals for bringing the employers and workers together thru arbitration. But the manufacturers were obdurate and not only refused to treat with their employees, but declared a lock-out which involved 30,000 workers. A strike was immediately declared in retaliation and twice as many workers are now idle. Many of the employers belong to the Manufacturers' Protective Association, and it is this association which is chiefly responsible for the troubles reaching an acute stage. Toward the end of last week it was reported that many of the independent manufacturers were coming to terms with their workers.

The difficulties in the Pittsburgh region were in the Westinghouse Electric and Manufacturing Company's works, the Carnegie Steel Company's plant, the mines of the Pittsburgh Coal Company, and about thirty smaller manufacturing plants. They involve 100,000 men. The chief demand is for an eight-hour day. In this region the strikes were marked by violence and the Pennsylvania State Constabulary and numerous deputy sheriffs have been kept busy guarding property and keeping the peace.

The strike in New York Harbor has badly crippled the shipping business at the country's principal port. The de-

Carter in New York Evening Sun

A STRANGE BIRD

mand of the engineers is for higher pay. An effort was being made at the end of last week by representatives of the Federal Department of Labor to bring about a settlement of the strike by means of conciliation, but the progress made was inconsiderable.

All these labor disputes are a not unnatural outcome of the wave of prosperity that the war has caused to sweep over the country. Labor quite logically wants its share of the mounting profits. But capital has its eyes on the time to come after the war when normal conditions will return. It is seldom easy to put wages back which have once gone up, even if the time of prosperity that sent them up comes to an end.

The War in the Air
Raids upon Great Britain by German aircraft have been frequent of late, sometimes every night. The most extensive, tho not the most serious, took place on the night of May 2 when five or six Zeppelins visited the east coast going as far north as Rattray Head, Scotland. About a hundred

Underwood & Underwood

THE MOBILIZED MULES OF THE SIXTH ARTILLERY ADVANCING WITH SUPPLIES IN MEXICO

bombs were dropt, but little damage was done except at one point where twelve explosive and four incendiary bombs were used, causing the death of six men and three women, and the wounding of nineteen men and eight women. Among the victims were five soldiers, which would indicate that this time at least some military buildings were hit. The Germans claim that blast furnaces, factories, warships and batteries were attacked.

On their return one of the Zeppelins, the L-20, ran short of gasoline, so was not able to keep up with the squadron, but was driven by the wind to the Norwegian shore near Stavan-ger. Most of the crew jumped into the water, but three remained on to destroy the machinery so the secret of its construction should not be discovered. The dirigible finally blew up against a mountain on the side of a fjord and was wrecked. All of the crew, sixteen in number, were rescued, altho several had broken limbs. The Zeppelin was burned.

Two British cruisers, the "Galatea" and the "Phaeton," fired upon a Zeppelin scouting in the North Sea and brought her down.

Another Zeppelin passing over the harbor of Salonica was hit by the artillery of the French and fell in flames at the mouth of the Vardar River, killing all the crew.

Reports are received of many aerial combats between the Italians and Austrians. On May 4 an Austro-Hungarian naval air squadron dropt bombs on the barracks and sulfur factory in Ra-

venna and on the following day it bombarded the Italian port of Brindisi and the Albanian port of Avlona on the other side of the Adriatic.

Collapse of the Irish Revolt

The Sinn Fein insurrection which broke out on Easter Monday was practically quelled at the end of a week, altho snipers were still being rounded up during the following week. Several hundred persons were killed and the property loss by shell and fire is estimated at \$9,000,000 in Dublin alone.

The government troops took a thousand prisoners, who are being transferred to London. The leaders were taken to the Tower, where they were tried by court-martial and eight of them shot. Thirty-three others were sentenced to death, but their sentences were commuted to imprisonment. Those executed are Peter H. Pearse, "President of the Irish Republic," dramatist, headmaster of St. Enda's School and editor of *The Morn of Light*; William Pearse, his brother, a sculptor and teacher; Joseph Plunket, the eighth member of his family to be executed for treason; Michael O'Hanrahan, a leader in the movement for the revival of the Gaelic language and literature; Edward Daly, whose father and uncle were prominent in the Fenian movement; Thomas J. Clarke, who served fourteen years in prison for Fenian conspiracies; Major John McBride, a Boer officer, and Thomas MacDonagh, poet and schoolmaster. James Connolly, the socialist

who served as "Commandant General of the Irish Republican Army," is too badly wounded to stand trial. James M. Sullivan, former American Minister to Santo Domingo, has been arrested for participation in the rebellion.

The chief center of insurgency outside of Dublin was at Enniscorthy, sixty miles south in County Wexford. Here the rebels on Thursday, April 27, took possession of the Athenæum and hoisted the flag of the Irish republic. They then cut the telegraph and telephone wires and tore up the railroad tracks. Enniscorthy Castle and most of the important buildings were seized and food and arms commandeered. But the food supply ran short and on Sunday, as the insurgents were leaving the church after

mass, they learned that the Dublin rising had failed. A delegation of Enniscorthy clergy was sent to Dublin to verify the report and on their return with its confirmation Monday the Sinn Feiners surrendered to the regiment sent out to overcome them.

At Galway, on the west coast, the insurrection seemed likely to prove formidable, but the 1200 rebels who were marching on that city were driven back by shell fire from a naval vessel just off the coast.

In County Meath, north of Dublin, the insurgents fired from ambush upon a detachment of the constabulary, killing ten, wounding eighteen and capturing forty. The insurgents, who numbered four hundred, gave up when they heard of the failure at Dublin.

The completeness with which the rebellion had been planned is shown by the discovery of a stock of the postage stamps of the "Irish Republic," printed in green, white and orange with pictures of the three martyrs, Larkin, O'Brien and Allen.

Augustine Birrell, who as Chief Secretary for Ireland is held responsible for this unexpected rebellion, has resigned his position.

The Surrender of Kut

The surrender of the British army on the Tigris River is acknowledged to be a severe blow to British prestige in the East. It is now clear that for a few thousand men to attempt to penetrate four hundred miles into the enemy's country with no support on either flank and with only a shallow and uncertain river to connect with the base of supplies was a very reckless undertaking. Nevertheless it seemed near to success and last November London was rejoicing in anticipation of the speedy capture of Bagdad, for the British expedition was at Ctesiphon, only eighteen miles away. But the battle of Ctesiphon, which in the *London Times'* "Diary of the War" is recorded as a great British victory, was the turning point of the Mesopotamian campaign. General Townshend could not retreat fast enough to rejoin the reinforcements down the river, but was overtaken by the Turks at Kut-el-Amara, a hundred miles below Bagdad.

But as at Balaclava bravery of the action in part redeemed the folly of the undertaking. "Some one had blundered" undoubtedly in sending General Townshend up the Tigris with insufficient forces and supplies, but the story of his twenty months' siege will—whenver it comes to be told—form a thrilling chapter in the British annals of war. The beleaguered garrison on a bluff in the bend of the river soon ran short of provisions and medicine. They were weakened by disease and incessantly beset by superior numbers of Turks and Arabs under German officers. The narrow circumference of their camp afforded no landing place for aeroplanes and when these attempted to soar low enough in passing over to drop bags of flour they were apt to be brought down by the fire of their foes.

When General Townshend found he could no longer hold out he offered to

Harris & Ewing

A PREPAREDNESS PRESIDENT?

General Leonard Wood is attracting increasing attention as a possible nominee of the Republican Convention for President. He is a clean-cut American, with a strong sense of the immediate duty of preparedness, an administrator of very high achievement in Cuba and the Philippines and a popular and effective speaker.

THE GREAT WAR

May 1—Dublin insurgents surrender. French bring down seven German aeroplanes.

May 2—Five Zeppelins raid British coast. Enniscorthy rebels surrender.

May 3—Birrell resigns Irish Secretaryship. French extend positions on Le Mort Homme.

May 4—Conscription bill passes Commons on second reading by 328 to 36. Austrian aeroplanes bombard Ravenna.

May 5—Germans take trenches on Hill 304. Zeppelin brought down at Salonica.

May 6—Heavy German bombardment of Dvina River, east of Riga. Russians nearing Diabekir and Erzincan.

May 7—Germans make further gains at Verdun. Berlin reports Russian transport sunk near Corfu.

surrender his artillery and his money, over \$5,000,000, on condition that his troops be allowed to retire down the river with military honors. The Turkish commander, Halil Pasha, refused, whereupon General Townshend surrendered unconditionally. He was allowed by Halil Pasha to retain his sword. The prisoners, according to Constantinople, included four generals, 240 British officers and 270 Indian officers with some 9000 men. If we may credit the Turkish estimates on this point, the British casualties on the Tigris amounted to 20,000 during March and April. Most of these losses were suffered by the forces under General Gorringer and General Keary in their last desperate attempts to rescue the Townshend expedition, only twenty miles away.

After the surrender a truce was declared for the purpose of burying the dead on both sides and arrangements were made for the exchange of wounded prisoners.

The surrender of Kut releases, in large part at least, the Turkish army which has been defending Bagdad from a British advance up the Tigris. Now it can be turned to the defense of Bagdad from the Russians who are approaching it from the north thru Armenia and Persia. The Russian army moving westward from Erzerum is reported to have reached Erzincan and

that moving south to have reached Diabekir.

Draft Act in England The extraordinary maneuvers of the British Government during the last fortnight are quite inexplicable from what has been disclosed to the public. In the latter part of April it was understood that the Cabinet was divided on the question of compulsory military service; that the Minister of Munitions, David Lloyd George, who has long been convinced of the necessity of conscription, was trying to force the Cabinet to adopt it; that Premier Asquith was unalterably opposed to it; and that the Labor men would fight it to the bitter end.

Later it was announced that the ministers, realizing that the fall of the Coalition Cabinet would be disastrous at this crisis, had agreed upon a compromise by which conscription would be adopted in case volunteers failed to come forward at the rate of 50,000 a month.

Then the Labor members requested the Premier to hold secret sessions of Parliament at which he might frankly explain the situation and its requirements. It is almost unprecedented for Parliament to meet in secret session since the days of Cromwell, altho the public has only been admitted within the last hundred years. This plan was adopted and Parliament met in secret session on April 25 after an Order in Council had been issued making it a criminal offense to disclose any of the proceedings.

The official report of the session states that the Premier explained fully the measures which had been taken to expand the army to its present strength and how many more troops were necessary. He discussed the finances of the war and told how much money had been advanced by Great Britain to her Allies. The recruiting measures so far adopted had proved insufficient, so the government proposed several minor measures. These were that the service of men whose time had expired be prolonged to the end of the war; that the territorials be transferred to any units where they were needed, and that youths arriving at the age of eighteen be brought into service unless they volunteered within one month.

But the bill introduced by the government differed decidedly from these proposals. It provided for the conscription of every unmarried man between the ages of 18 and 45. It was thought that the consent of the Commons had been secured in the secret session, but that proved erroneous, for in the open session the opposition was so strong that the Premier withdrew it. The Labor party, the Nationalists represented by John Redmond and the Ulsterites represented by Sir Edward Carson, threatened to withdraw their support of the government if this bill was insisted upon.

Then came two calamities, the loss of the British army in Mesopotamia and the rebellion in Ireland. This effected a violent change of opinion. Immediately a much more sweeping

bill than any previously proposed was introduced and the opposition to it practically vanished. The new bill will force into the army all males from 18 to 41, whether married or single, except such as are necessary for carrying on the essential industries. Even these will be under military discipline. The bill passed its second reading by a vote of 328 to 36. There is even talk of extending it to Ireland, which has hitherto been excluded from all the recruiting bills.

The Mystery of Verdun When the battle of Verdun began on February 21, we said that it was hard to understand why the Germans chose this point of attack since it was the strongest fortress and the most remote from Paris. Now, more than ten weeks later, the mystery remains. If the German army had captured the city within a week or two it would undoubtedly have given them great prestige and possibly disheartened the French, tho it would not have materially weakened their powers of defense. But as it is German prestige has rather suffered than gained, for if with the employment of half a million troops and enormous expenditures of ammunition they have not made any substantial inroads into the French lines it is decidedly encouraging to the defense. The Germans, of course, may take Verdun yet, but if they do it will not be accounted a great victory, as it would have been earlier.

So far the battle of Verdun might be called a drawn game. The Germans have gained some ground almost every week, but on the other hand the main fortifications of the French are still intact. Which is to be regarded as the winning side up to the present depends

upon which has suffered the greater loss of men and munitions relatively to its total strength, and this is something that cannot be told.

If the Germans expected to carry Verdun by storm it is evident that they vastly overrated their own ability or were grievously deceived as to the natural strength of the fortress and the French power of resistance. But another theory suggests itself, that is, that the French designed to make Verdun their starting point for their spring offensive, and that the Germans, finding this out, forestalled them by attacking first. Verdun lying at the apex of the French salient pointing directly toward Metz would be the natural base for such a movement if the French intended to carry the war into the enemy's country. But whatever may have been the plans of the Allies for a spring offensive the German at-

tack on Verdun evidently spoiled them. So far the Allies have been kept busy on the defensive and there are no signs of any change in this respect. On the contrary, their concern seems to be to determine where the Germans will strike next. The fact that the Germans recently closed the Swiss frontier and refused to allow either mails or passengers to cross the line is taken to indicate that troops are being sent along the border to attack the French line south of Verdun. On the other hand, it is reported that German troops are being massed near the Belgian frontier for an attack upon the British lines.

The fighting about Verdun is of the same monotonous character as it has been of late. The Germans have continued their attacks upon Hill 304 and Le Mort Homme, west of the Meuse,

and upon Pepper Ridge and Douaumont on the east. The French extended their holdings on Le Mort Homme in the first half of the week, but on May 4 the Germans began the assault of Hill 304 with a vigor equal to any of their earlier efforts. The French trenches and underground shelters were completely shattered by their large shells and then carried by the aid of clouds of suffocating gas.

The arrival of further contingents of Russian troops at Marseilles is announced by the French War Office. The rumor from Berlin that a transport bearing Russian troops struck a mine near Corfu and six hundred lives were lost tends to confirm the surmise that the troops sent to Marseilles are in part or in whole Serbian soldiers from Corfu instead of Russians from Archangel.

THE WORLD-WIDE WAR

Gradually the shadow of the war has spread until now it covers the greater part of the habitable globe. The twenty-one American republics are exempt, thanks to the Monroe doctrine. In Europe Spain, Scandinavia, Switzerland, Holland and Rumania are not yet involved. Greece and China, tho ostensibly non-combatants, have been made the battleground of the belligerents. And if a person in pursuit of peace should seek refuge in the apparent oases of Afghanistan, Abyssinia or Borneo he would find that he had exchanged the frying pan for the fire.

THOSE HENRY FORD VOTES

BY ELLIS O. JONES

SUPPOSE you had been asked, before the recent primary vote in Michigan, how many votes Henry Ford would get. Your first impulse would have been to treat the matter as one of those far-famed Ford "jokes."

But suppose some Ford enthusiast had prest you to take it seriously and spend a moment analyzing the probabilities. You could then have pointed out with ease that it was impossible for him to get many votes. First, considering that it was only a primary, you could have shown that only faithful party Republicans would vote and, as the party organization was against him, these faithful party workers would be against him also.

Then you could have shown that Mr. Ford would not appeal to the people because he had never given any evidence of knowing anything about practical politics. He had never made a speech or written an article or even been to college. You could have recalled Mr. Ford's recent confession that he has voted only twice in the last twenty years. What chance would such a man have in a political primary against such a seasoned campaigner as Senator William Alden Smith with the Republican organization solidly behind him? No chance in the world. What! Ford carried Michigan? Rock-ribbed Republican Michigan? Impossible.

Then the impossible happened. Ford did carry Michigan in a most miraculous manner. The Republicans voted for Ford, who was not a candidate, and refused to vote for Senator Smith who was a very active candidate.

Now suppose you had been asked to prognosticate the result of the primary in Nebraska. You would have been nearly as positive as before that Mr. Ford's chances were slim. You would have said, "Oh, well, he might be able to get a big 'complimentary' vote in his own home state, but what chance has he got in a state like Nebraska?"

Again the organization was against him and again he was opposed by a seasoned campaigner, Senator Cummins. But again the impossible happened. Mr. Ford came within such a small margin of defeating Senator

Mr. Jones is a humorist with a serious purpose—an effective social satirist. But he takes Mr. Ford seriously—just as the voters of Michigan and Nebraska did, and as students of present-day political tendencies must do. The Ford vote is to date the most unexpected element in a touch-and-go Presidential campaign, and we are glad to present this analysis of its meaning in the midst of our articles on the many phases of this exciting political year—after Mr. Bryan and the Young Business Man Who Wants Teddy, and before Senator Harding, the Republican keynote man, Fola LaFollette, who speaks for four million women voters, and others to be announced. Mr. Jones was on the Peace Ship and knows Ford at first hand.—THE EDITOR.

Cummins as to leave not a single boast in the victory.

Taken together, these two votes constituted a political event of great interest. It brought the politicians up standing. The burden of explaining the phenomenon was a tremendous one to the wiseacres. Here was an unknown quantity, a dark horse. What about him? How did it happen? The people had never acted so foolishly before. What had got into them? What undiscovered

law of mob psychology caused these voters in great numbers to walk up to the polls and scratch in the name of this man whom they did not know, who had never been discussed and analyzed by the sage and solemn editors and who had not been vouched for by the political leaders?

The explanations came, but they did not explain. As there was a tendency before the vote to minimize his chances, now, strangely enough, there is a tendency to minimize what has happened, to ascribe it to a public whim upon a question of "peace" or "militarism" or perhaps of "wages." But we must remember that others are in favor of peace and against militarism, but the people do not flock to the polls and vote for them for President. Others have instituted profit-sharing systems, but the people do not flock to the polls and vote for them for President. Others have been successful in business to a high degree, but the more successful they are, the less inclination is there usually to flock to the polls and vote for them for President.

The true explanation lies deeper than any one or two of these reasons. It must embrace them all and more. In a word, Henry Ford, thru a series of acts and utterances, has taken a powerful hold of the popular imagination. He imprest his personality and his democratic philosophy upon the public mind in an emphatic manner.

No one who sees Mr. Ford can fail to be drawn to him irresistibly. This stood out clearly on the Ford Peace Ship. On that famous voyage the passengers often disagreed, occasionally to such an extent as to warrant reports of dissension. This was perhaps inevitable with so many strong-minded individuals gathered together so quickly and packed in so closely. But there was one point upon which all were agreed and that was in regard to the magnetic and amiable personality of Mr. Ford himself—at all times quiet, friendly and easily approachable; always clear and positive in his opinions, but with never the slightest effort to force his opinions upon others. He rarely stopped to develop a thought in conversation, but was content to announce a conclusion that he had already pondered over and to announce

Paul Thompson

THE MOST LAUGHED-AT SERIOUS MAN IN AMERICA

Next Week
NORMAN HAPGOOD
 "The Spirit of the Administration"

it in a terse epigrammatic fashion that carried conviction. On the other hand, he was a splendid listener, so that in his talks with the newspaper men he was usually less interviewed than interviewing.

Long before the "Oscar II" reached the bleak shores of Norway, it was the unanimous belief that the personality of Mr. Ford was the expedition's chief asset, that his mere appearance at receptions and public meetings could not fail at once to win the hearts and confidence of the people of the European neutral nations, and consequently there was universal regret when he was forced, on account of illness, to turn back at Christiania.

But what has all this to do with the votes in Michigan and Nebraska? These voters have not had the privilege of meeting Mr. Ford personally and looking him in the eye.

True enough. He has not met them personally. Nevertheless he has met them in spirit. He has made himself known to them by his deeds and they are willing to trust him. They believe that his spirit is essentially democratic, that he always thinks in terms of the people as a whole and not exclusively of any one class.

This will appear more clearly by briefly running over the prominent events in his career. First, he has risen from the ranks. Second, his wonderful success in the automobile business was not due to "trust" methods, to his controlling some great necessity of life at its source. It is due to his taking what was looked upon as a luxury but a few years ago and making it a necessity. He put the "mob" in automobile. This was a great democratic accomplishment.

Furthermore, he built solidly. His was not an ephemeral success. The steadily increasing growth of his business in this highly competitive industry, extending over a number of years, proves that Ford buyers and Ford owners feel they are getting their money's worth and it is natural for them to be grateful to the man who gave it to them. This is a large class, to which

should be added many more who are grateful for the news which has gone abroad of Mr. Ford's low-priced farm tractor, which promises to revolutionize farming.

But notwithstanding Mr. Ford was selling a high grade product at a low price, he paid the very highest wages. While others talked about "profit-sharing," he introduced the most liberal profit-sharing plan that was ever known on a large scale in this or any other country. Without the slightest coercion on the part of labor unions, he fixed his schedules so that no man or boy in his huge factory would receive less than five dollars a day. This was something absolutely unheard of. The news was carried to every nook and cranny of the land and was the sensation of the hour.

His next prominent move in behalf of the people was in favor of peace and against militarism. Many months before the Ford Peace Expedition, he made it clear that he was on the democratic side in this war. It was always uppermost in his mind that it was the common people who had to support with their toil the tremendous tax burdens of militarism in time of peace and who had to do all the dying in time of war. The Peace Ship made the big dramatic moment in this campaign.

What did the Expedition accomplish? It did not stop the war or "take the boys out of the trenches," but it did, to use Mr. Ford's own epigram, "advertise peace" as peace had never before been advertised. Its appeal to the popular imagination was most profound. It did not stop the war, but it was easily the most noteworthy move toward that end and its

In an Early Number
SENATOR HARDING
 "Reënter Republicanism"

influence will long be felt in many subtle and intangible ways.

The peace question has two sides: the European side and the American side. Mr. Ford is not one of those who has fought militarism abroad, while supporting it at home. He has viewed with the greatest alarm the recent encroachments of the military spirit in this country. He has looked upon it as a dangerous reversal of the proud traditions of peace upon which our country has been built. He has lent his time and his money to combat every effort to "Europeanize" the United States.

Those in brief are the outstanding events which have attracted the public to Mr. Ford. On the other hand, there has been nothing in his record to repel them. Altho a dreamer and idealist, nobody can accuse him of being impractical. Altho one of the richest men in the United States, nobody can accuse him of being monopolistic or grasping. He shows an unequivocal desire to take "the greatest good of the greatest number" at all times into consideration, but without upsetting any of our cherished institutions. He attracts employees without repelling employers. He goes ahead simply and sincerely, seeing clearly with a democratic vision, but without relating himself to any particular fads, isms or formulæ which have grown unpopular thru over-emphasis by intolerant devotees. He evinces a marvellous sense of values and a four-track mind which can accommodate all kinds of antagonistic mental traffic without collision.

Suppose someone should ask you how many votes Mr. Ford will get if he runs as a third candidate in the coming campaign. Don't treat the matter too lightly. You might be fooled as you were in Michigan and Nebraska. Think it over. It is dangerous to measure the present chaotic political situation by former standards. There are millions of citizens in this wide country who are tired of threshing over old straw and are eagerly watching for any opening that leads in a more profitable direction.

New York City

Carter in N. Y. Evening Sun
 KEB, SIR? STRAIGHT TO THE WHITE HOUSE!

THE WHIPS OF LIFE

BY HARRY KEMP

Life had me by the throat when I was young:
This way and that her pitiless lashes swung
Striving to strike me calm, yet she beheld
Twenty rebellions rise where one was quelled;
I felt the sky, itself, too closely bent . . .
My days were infinite with discontent.
I often longed for times when peace would pour,
Like sunlight on a solitary moor,
Her quiets over me.

But now *that's* come,
And youth's sweet voice of madness, long struck dumb,
Gives way to measured music learned by rote—
Oh, that life once more had me by the throat!

IRELAND'S HOLY DEAD

BY SEUMAS MACMANUS

GOD rest our holy dead!

For them, Irishmen, dispersed the world round, mourn and rejoice.

Mourn for a moment. Rejoice forever.

Our Masters' lead, seeking to give them miserable death, has given them glorious life. They shall live as long as Ireland lives; as long as Freedom lives.

Thru the endless ages of Ireland's bloody travail England has unceasingly taken toll of our noblest. Always our noblest.

But never at one sweep did she gather to herself a nobler three.

Tom Clark, the undaunted, whose frame had grown frail in English prisons, but the fire of whose eye dungeons could not dim, and the fiber of whose soul shackles could not soften.

Tomás MacDonough, the eager, the ardent, the boy, bubbling with enthusiasms—the playful teacher, the merry piper, the joyous Gael.

Search America, which fosters a multitude of noble men, and you might find many as noble, but few more noble, than these.

And in your great America you would find a few as noble as, but no single soul more noble than, the third who fell to the English executioner's bullet—he the gentle and the earnest—Pádraic Pearse—he, with the heart of a child at its most childlike, and the spirit of a man at its most manlike—he, with the vision of a poet, the brain of a thinker, the hand of a doer, the soul of a patriot.

With such a man as Pádraic Pearse it is rarely God blesses a nation. For him, the rare educationist, the sub-

The author of "Yourself and the Neighbors" and a dozen other books has long been familiar to our readers and the American public as an interpreter of Irish life and Irish thought in both prose and verse. He is one of the prominent ones in the Young Ireland movement, and this threnody written on the execution of Tom Clark, Tomás MacDonough and Pádraic Pearse in the Tower of London expresses the spirit of militant Ireland. — THE EDITOR.

lime idealist, the wonderful achiever, not Ireland alone, but the world, may well mourn. For, the lofty ideals to which he had been giving concrete form in the land of his soul's love would have uplifted mankind.

In other lands the vanquished soldier, revered and respected, but forfeits his liberty for a little while. Thru seven hundred years of unceasing war in Ireland the Irish soldier who has fought the unequal brave fight for his country's freeing has always been branded criminal, and for his crime paid forfeit with his life, or his lifetime's liberty. Till the English prison cell has, to us, become holy as a saint's cloister—and the gibbet, hallowed by the last steps of our bravest, an emblem only less sacred than the Cross.

No Irishman should idly sorrow. No Irishman should raise complaint. They whose bodies were shot thru by the Tyrant's bullets would rather die a thousand deaths than live by the unctuous grace of their country's conqueror.

And sorrow is not now for Ireland—but work. The three who lie in

English earth today, with England's lead in their hearts, did *their* work. They struck one brave, bold blow for Freedom, which, in the valleys of our unconquered and unconquerable land shall reverberate adown the centuries—insistently urging all workmen to the work.

That the crowd will call them foolish visionaries and failures matters not. A rabble that clattered down Calvary's Hill, one morning, prated contemptuously, too, of visionaries and failures. O short-sighted mobs!

And short-sighted was the Executioner, who, that gloomy morn, tying bandages on the eyes of these three men, thought to blind them—whereas he was only blinding the eyes of his own nation—while the bandaged eyes of the three Failures looked far down the future, seeing something that made them smile in their souls.

Short-sighted, too, when, believing that he put out these men's lives, he gave them earthly immortality

Tom Clark, Tomás MacDonough, Pádraic Pearse, for loved Ireland's sake, fearlessly faced their Executioner. And the trickling hearts' blood of these three brave fellows, dying, has done more to hasten Erin's harvest than could the gleaming blades of thirty thousand living.

They ARE thirty thousand—tho they were but three.

And they are not dead, but live.

Whoso dies for Ireland lives forever.

And from the myriad misty valleys of our ancient land I hear the clamant voices of a hundred thousand young men, crying, "Let US live! Let US live!"

War Cartoons from Seven Nations

“WE cartoonists are merely reporters with a drawing pen or brush instead of a pencil,” said W. A. Rogers, one of the foremost of American cartoonists.

Cartoons are the most direct expression of what the people are actually thinking.

In Europe now the cartoons are of course all of war. English cartoons deal chiefly with social conditions at home and with the duty of enlisting. The dangers and the suffering of war are minimized or denied, and even

THE WAR OF LIBERATION FOR ITALY

the Zeppelin raids are turned inside out to show their silver lining.

France, on the other hand, considers more fundamental questions, and strikes a note of pity and of high idealism. The accompanying sketch of "Petits Français" was drawn just after the war began and it represents France as taking care of "another little brother—a little Belgium." The artist is Roulbot, a French cartoonist of recognized ability, whose work has artistic merit as well as popular appeal.

In Italy, where there is less fighting, there is a more vindictive attitude. For the most part Italian cartoons are scathing in their attacks on the enemy—sometimes savagely personal but usually symbolic rather than realistic. A characteristic example is the one entitled "The War of Liberation"—a soldier shooting at the heart of the double-headed eagle, which crushes un-

THE BATTLEFIELD—AS HOLLAND SEES IT

der its feet the Irredenta provinces of Trieste and Trent.

But the fiercest of war cartoons come from Germany, leeringly scornful or grimly suggestive of frightfulness. German war art deals oftenest with the battlefield, as it is depicted in *The People's Sacrifice*, by Walter Klem—an emotional study of what war may mean. Sometimes, however, the German cartoonists go to the other extreme and picture the follies of war with good-humored ridicule.

The spirit of the warring nations, as we see it in their art, is seldom war-glory, but rather pity, horror, and a patriotic sense of duty.

The neutral nations see the horror of war, too, and they frequently express a longing for peace. Spain is warned of the futility of her getting into the war by cartoons such as the one by Rubio on this page, in which Don Quixote tilts against 42 centimeter guns instead of

SPAIN REVISES DON QUIXOTE

windmills. Holland's cartoons have been among the most forceful in their grim realism. Jan Wiegman in his silhouettes of war such as the accompanying cartoon of "The Battlefield" gives a striking presentation of the misery of war.

In this country there is a less unified response in war cartoons. There is the same feeling of horror and of sympathy which is felt by all the neutrals, but considerations of preparedness outweigh the more objective emotions and throw the emphasis on our own application of the lessons of the war, as in the vigorous cartoon from *The Masses* voicing Death's question to the United States, "Did you call?"

THE EFFICIENT HOME

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT EFFICIENCY SERVICE

HOME is the half-way house between earth and heaven. As such it needs the practical, and the ideal, both combined, more than any other human institution. The earth side of a home must be absolutely practical, and the heaven side must be absolutely ideal, if the home is to be a home.

There is more need for science in the home than for science anywhere else. Not because science is the most important thing in the home, but because the most neglected thing is always the most important. The average home is a conglomeration of guess-work, patch-work, and over-work. The guess-work is the fault of the man, the overwork of the woman, the patch-work of them both. A little science in advance would prevent most of the trouble.

As the one place where all human interests gather, center and radiate, the home should be given first consideration in a real efficiency program for a man, a city, or a nation. School efficiency, business efficiency, church efficiency, community efficiency, all depend to a large extent on home efficiency.

Because of lack of space, we must here confine ourselves largely to the home as a house. But we would first emphasize the supreme value of the home as an institution. Many a good woman—good but stupid—thinks so much of her home as a house that she forgets to be anything but a housekeeper. But the house is merely a shell for the home.

If you cannot have your home a model house and a model institution at the same time—never mind about the model house. A little dust in the corner of your parlor is better than a layer of dust on your mind.

Furthermore, a dollar with your best thought and feeling in it can do as much to make your home attractive as ten dollars spent rashly, thoughtlessly, flippantly.

THE HOME AS AN INSTITUTION

THE efficient home, as a modern institution, covers ten cardinal points, namely—*health, economy, beauty, productivity, hospitality, education, devotion, ambition, co-operation, character*. These points are universal in application. They have nothing to do with the size, cost or location of your house. You do not need to have a house, you may live in a \$10-a-month flat, and still observe these ten cardinal points. We will consider them briefly.

1. *Health*. Half the disease in the

United States could be prevented by the universal adoption of a home health system, including health instructions, health foods, baths, exercises, garments, habits of life and methods of work. Many physicians claim that epidemics such as typhoid, grippe and scarlet fever would be impossible in a civilization where the home science of prevention of disease were understood and applied.

2. *Economy*. Every home should have installed a modern scheme of cost-finding, cost-keeping and cost-reducing, personal expenses on a scientific budget basis. Mother doubtless wastes a little, but father is apt to waste more, and the children are sure to waste most. Why reform mother exclusively?

3. *Beauty*. Home discord is largely the result of discordant surroundings. The sensory nerves must be soothed in the home. They are more often irritated.

4. *Productivity*. The home is fundamentally a social unit. The business of it, therefore, is to enable each member of the family to do more and better work in the community. For this purpose, physiological, psychological and industrial principles should be taught and embodied in the household. Are you improving the quantity and quality of your vocational output by at least ten per cent every year? If not, something is wrong with your home.

5. *Hospitality*. By this word I do not mean card parties, pink teas or pay-your-debts functions of any sort. I mean just a handclasp with some heart in it, an open home door. A test for your hospitality is that the fellow you invite never thinks what or how much you are going to give him to eat.

6. *Education*. The despair of conscientious teachers is the lack of and indifference to sound educational methods in the home. Careless thought and speech, unbridled emotions, superficial judgments, artificial standards—these home defects can never be redeemed by any curriculum of high school or college.

7. *Devotion*. This should be mutual, and reciprocal. Too often one member of the family—most often the mother, least often the son—expresses devotion for the entire group. The fires of destiny are kindled in the crucible of devotion. Back of the great man has always been some one's home prayer, faith, sacrifice.

8. *Ambition*. The purpose in our habitation is our evolution. Accordingly, every home must be outgrown,

every blood tie broken, every association of mere kinship finally put off and away, as the locust drops his skin. Can you forget that your brother is your brother, your son is your son, your wife is your wife, and want for each only the highest good of each, whether *you* reap joy or sorrow from it? Do you know what the great ambition of each member of your family really is, and are you helping him or her to achieve it?

9. *Coöperation*. Every home should provide for a systematic study of co-operative method, as shown in the modern factory, mill or department store. The scientific grouping and control of individual tasks and relations in the family is almost unknown. Therefore, a burden of unnatural and unnecessary weight falls on some one member of the family—the most unselfish, and usually the least endowed with physical strength.

10. *Character*. The great need of the American home today is for a Spartan courage. With few exceptions, the backbones of our children are mush. We deny them the supreme strength which grows only from doing the hardest thing. The very multiplicity of conveniences and luxuries robs this generation of self-resource and self-reliance. Clearly and strongly as I urge the use of labor-saving devices in the home, I would beg of you to forget them all unless at the same time you teach the boys and girls how to *work*—hard and long and well, and painfully if need be. Nothing can ever take the place of old-fashioned hardship in the home production of character.

THE HOME AS A HOUSE

NOW for the home as a house. My friend, the architect, says there are five principal reasons why ninety-five per cent of the home owners are dissatisfied with their own work. These reasons may be summarized thus: (a) Failure to plan all details ahead, or even to know what the necessary details are; (b) failure to secure in advance all the available information; (c) failure to employ the best architect, builder and other helpers; (d) failure to sign a comprehensive, minute, iron-clad contract; (e) failure to keep the entire job under personal supervision. The aim of this article is to mark out lines of thought for the prevention of these mistakes.

The first suggestion is to begin home planning early in life. Every young man or woman over eighteen should be regularly saving for a

home. If you can save only \$10 a year, this much will buy books and periodicals that should prevent a waste of hundreds, or even thousands of dollars, when you build later. Whatever your age, if you have not a home of your own, resolve now to have one—then start your plan. Real estate, properly chosen, bought and managed, is the universally good investment.

Build for yourself. Don't buy a second-hand house; it won't fit you any better than a second-hand suit of clothes. Your individual home tastes, needs and preferences must be learned before you build—not after. When they are clear to you, no house on earth but the house you make will satisfy you.

Be your own designer. The business of the architect you hire is to embody your ideas. If you haven't any, his work will fail, no matter how good an architect he is.

Devote a year to learning home science. Take a mail course if possible, in advance of building. Purchase a small library of new and trustworthy books. Answer advertisements in popular and technical magazines; you can obtain a large assortment of booklets on all phases of home building, furnishing and decorating, merely by asking for these publications from various manufacturers, who will mail them without charge or on receipt of postage. Study these booklets. If you have a sweetheart, study them together.

Draw a rough plan of your house, lawn and garden, on a big sheet of bristol board or "art paper," allowing, say, half an inch on the draw-

ing for each foot of ground. This preliminary sketch will have to be altered considerably, first by yourself to grow with your ideas, then by the architect to be made practical. But get the whole thing on paper as early as possible, and exact in every detail.

Choose your architect—don't hire one because he lives near you or a friend of yours knows him. Be sure (1) that he is a specialist in your kind of home—whether a bungalow, a Queen Anne cottage or a Colonial manse; (2) that he can refer you to a number of satisfied clients; (3) that he belongs to national associations of architects, with high professional standing; (4) that he will guarantee the final cost of your home not to exceed the initial appropriation. There are some fifty trades and professions involved in the making of a home, from start to finish. These are mostly uncorrelated; hence delays, mistakes, and numerous "extras" in the bill are very likely, unless a blanket contract fully protects you against loss.

BUYING THE LAND

CONSIDER many things before you buy your land. Regard this purchase as an investment, apart from household features. Weigh its value by the possibility of resale at a good price—what you paid, or more. Ask a number of good business men their opinion of 125 feet front and 150 to 200 feet in depth; a front less than seventy-five feet, in a populous section, crowds one too close to his neighbors, while a front longer than 125 feet means too much lawn

mowing and general upkeep. Location should be high and dry, with house on highest part—a damp cellar breeds disease fast. Air and light must be plentiful on all sides (before you build study plans of the air-light health cottages now so popular in Europe). Neighborhood should be quiet, no street car within five or six blocks, and no garage, theater or other place of pandemonium nearby. Stores, schools and churches should be in reach of comfortable travel, with the place of work of each member of the family kept in view, as to daily loss of time in transit.

Always buy, however, just ahead of the crowd, where new transportation lines are sure to come, but have not yet come. The same rule holds in the country, where the "good roads" movement will increase the value of land. Have your title guaranteed by a title guarantee company or a firm of responsible lawyers. Before signing the contract, go and visit the property some winter day, with a blizzard howling above and a snow-drift rising beneath, and no suave, summery land agent breathing soft nothings in your ear. The time to look at real estate is when the real estate man isn't looking.

Buy your land on instalments if necessary, paying the same as rent, after you negotiate with a building and loan company to advance money for the house. But pay cash for all the *contents* of the house. Furnish one room at a time, or buy one chair or picture—only pay cash. Comforts on credit are discomforts.

Place your house at least fifty feet back from the street if possible, for

EFFICIENT HOME TEST

FOR SELF-APPLICATION BY ANY MAN OR WOMAN DESIRING
TO IMPROVE HOME CONDITIONS AND OPPORTUNITIES

DIRECTIONS. Where answer is Yes, write numeral 5 in blank space opposite. Where answer is No, leave space blank. Where answer is partially affirmative, write numeral between 1 and 5 expressing degree of assurance. Add column of numerals for total grade in per cent. This Test is not complete, merely indicative. Queries on the subject will be gladly answered by Mr. Purinton, so far as practicable; address your letter in care of The Independent Efficiency Service, 119 West Fortieth Street, New York.

1. Is your home free of debt, and insured fully—both house and contents?.....
2. Could you sell the property today for at least 20 per cent more than it cost you?.....
3. Is your outdoor and indoor color scheme artistic, restful, individual?.....
4. Are your pictures, tapestries and other ornaments very few but very good?.....
5. Have you electric light and automatic ventilation for every room?.....
6. Before installing your heating system, did you study at least four other systems?.....
7. Are kitchen, pantry, laundry arranged according to the plans of experts?.....
8. Could you keep house comfortably without a maid?.....
9. Have you a home gymnasium and playroom?.....
10. Has everybody in the family given the sleeping-porch a fair trial?.....
11. Have you plenty of flowers, a prize lawn, and a profitable garden?.....
12. Does the whole family enjoy together at least one evening a week?.....
13. Do you entertain the rich and the poor equally well, and equally often?.....
14. Have the home duties and responsibilities been fairly apportioned among the occupants?.....
15. Is the right home regimen helping you to do more and better work each year?.....
16. Are you saving a little money regularly, for home developments and improvements?.....
17. Does each member follow the budget system of personal finances?.....
18. Do you take at least two home science magazines, have you read at least two home science books?.....
19. Have you joined a civic or domestic improvement association?.....
20. Do you consider moral backbone the finest home product, and are you making it?.....

seclusion and symmetry, and at or near the center of your plot, thus leaving space in front for flower beds, at sides for shrubbery, in rear for vegetable garden and perhaps fruit trees or berries.

BUY THE BEST

PRACTISE real economy by having the best where only the best will serve. Thus, after wide investigation and comparison, choose the best in grass, seed, in flower and vegetable seeds, in building and roofing material, in house paint, in heating, lighting and ventilating systems, in plumbing and fireproofing, in wall finish and interior decoration, in bedroom, bathroom and kitchen furnishings, in hygienic factors thruout. Among building materials are wood, stone, tile, concrete, face brick, tapestry brick, tile-and-brick, tile - and - stucco, frame-and-stucco, patent compounds of different kinds. Among roofing materials are shingle, tin, slate, galvanized iron, tile, asphalt, and special chemical fabrics. Don't build without learning what your best material is for house and roof.

Study with extra care the problems of heat, light and ventilation. Most heating boilers burn only about sixty per cent of their fuel; they become enthusiastic in hot weather and apathetic in cold. Get a *good* boiler, gentle, pliable, and considerate of your purse, time and temper. The heating plant may be steam, hot water or hot air. Each claims advantages over the others. Whichever you order, be sure there is supplied at least thirty cubic feet of fresh air per minute for each occupant of every room. Some plants change the air completely every half hour. National heating companies will often study your house plan, and make specific recommendations, without charge. As for illumination, a modern electric plant may now be installed for less than the price of a good piano. Or, acetylene may be used, or a self-generating gas now on the market.

Ponder long your color scheme. Before you paint your house, get a wide assortment of "color cards" from the leading paint companies, and make your house harmonious, or leave it unpainted.

Fix the size, location and arrangement of your rooms only after reading several books on home building, or consulting a domestic engineer. Otherwise, you are almost sure to neglect some vital point, learned only by experience. A wise procedure would be to visit one of the "practise cottages" in home economics now maintained by the more progres-

sive schools, particularly agricultural colleges and state universities.

Ask your friends and neighbors what mistakes and omissions were found in the construction of their homes, and avoid these. Among things commonly overlooked are these: A cellar for storing fruits and vegetables, made of concrete, and thus rat-proof; a ten or twelve foot porch around two sides of the house—on the least exposed side an arrangement for outdoor sleeping; a laundry extension to the rear of the house, with space for modern machines and equipment; a flight of back stairs, for surreptitious use when "company" is in the parlor and you haven't your company clothes on; a numerous and generous array of closets—closets being to a woman's comfort what pockets are to a man's; a playroom and gymnasium, where all the family can be children together; a lavatory on each floor; a speaking tube or interphone system of communication between floors; a grouping and spacing of kitchen, pantry and dining room according to the principles of scientific management; a sound-proof, detached study or library; a conservatory and solarium, where potted plants and also human flowers may take sun baths for their health.

BE MODERN

PLAN to make your home thoroly modern; in this respect do not take any house of a neighbor for a pattern, since new methods and utilities unknown even a few months ago are now available. Some of the typical modern improvements are these: Patent wall linings, fire-resisting, sound-deadening and moisture-proof; liquid wall finish, artistic, washable and durable, to take the place of wall-paper; colorfast, reversible moth-proof rugs, made to harmonize with color scheme of room; china and porcelain bathroom fixtures; new material, heat, acid and rust proof, for kitchen cabinets, ranges and refrigerators; non-rusting, non-corroding, wrought iron sanitary piping; weather-proof screening for windows and doors; hygienic ventilators, keeping out drafts, dust and storms; combination cellar window and coal-chute, to protect house and lawn from both coalman and burglar; milk bottle and package receiver, weather-proof and burglar-proof; underground garbage receiver, always closed, fly and cat proof; house revolving fan, run by alcohol; smokeless oil heater, for speedy warmth on winter mornings; lawn mower that stays sharp but fails to cut up the lawn, confining itself to the grass; outdoor living

room for lawn or garden use; old-fashioned fireplace and hearth in new dress; bird houses and bird baths; hand fire extinguishers, to quench a blaze quickly and decisively; hammerless safety revolver, for protection against intruders; complete sectional furniture, made in a factory to your order, and shipped ready to frame; complete sectional houses, built and bought in a similar way, at prices from \$300 to \$10,000.

This article must be incomplete; space forbids proper mention of interior decoration; furnishings and equipment; music, books and pictures; games, tool-kit, emergency chest; landscape gardening; flower and vegetable culture; care of birds and other household pets; consideration of personal factors in housing and developing each member of the family. But these things may be learned thru books, magazines, mail courses and special institutions.

An important question, however, must be answered—a question that many of our readers will ask. "How can a dreary, skimpy and faulty house, built in the last generation, be transformed into a model home—comfortable, hygienic and artistic?" We affirm, as always: *Anything can be done that should be done.* At least two-thirds of the suggestions offered here may be adapted to any home, anywhere, by means of sufficient thought, work, ingenuity and persistence. Whoever can remodel his mind can remodel his home. The mind problem is the real one. Cases are on record where an old, ramshackle farmhouse in the last stages of decrepitude was rebuilt, refurnished, made wholesome, attractive and profitable at slight comparative cost.

Furthermore, it does not matter now where you live—whether in city, town or country; as you can order anything by mail, from the nameplate on your door to the house itself. Indeed, the best home is neither a country home nor a city home—it is a country home in the city or a city home in the country. The city home has conveniences, refinements and improvements that the country home needs; the country home has health, quiet and freedom that the city home needs; wherever you live, put them together and enjoy the advantages of both.

Every home, with the right combination of heart, head and hands, may become a storehouse of health, a model of thrift, a palace of comfort, a dream of beauty, and a mount of peace. To make a home like this will be a crucial test, and a supreme triumph of wisdom, affection, skill, devotion, character.

THE FRIENDSHIP OF FOUR NEUTRALS

THE WORK OF THE AMERICAN-SCANDINAVIAN FOUNDATION IN IMPROVING
OUR ACQUAINTANCE WITH THE NORTHERN KINGDOMS

FREDERICK LYNCH

The President of the Trustees of The American-Scandinavian Foundation since its establishment, who was originally consulted by Mr. Poulson in formulating his great international ideals. Dr. Lynch is Secretary of the Church Peace Union and is prominently identified with many other organizations working either for world peace or for internationalism. He is a graduate of Yale and a Congregational minister, but resigned his pastorate in 1910 to devote himself entirely to his work as a writer and lecturer. He is the editor of *Christian Work and Evangelist*.

OSCAR MONTELIUS

The Chairman of the Swedish Committee of eleven named by King Gustav V., in each of the three Scandinavian countries. The monarchs, who are Patrons of the Foundation, appoint advisory committees, who in their turn select two Fellows annually to study in America. Professor Montelius is a member of the Swedish Academy, and the author of several works on archaeology. It is said that he knows Sweden in the stone age better than any living man knows his country today.

WITHOUT ignorance, no war. It has often been maintained that if nations understood each other thoroly, appreciated the alien habits of thought of their neighbors, there would be no incitement to strife. While most of Europe is busily tearing down the civilization constructed with pains thru the centuries, while in America many factors are contributing either directly or indirectly to war, other agencies are quietly and steadily establishing friendship and understanding between nations. Such a force is The American-Scandinavian Foundation, which is building on a solid basis an intellectual bridge between our great neutral democracy and three small democratic kingdoms, neutral likewise, of Northern Europe. This Foundation is not a peace society, but its international propaganda contributes actually to the cause of peace.

The American-Scandinavian Foundation was established in 1911 by the late Niels Poulson, president of the Hecla Iron Works of Brooklyn. Mr. Poulson was a native of Denmark and came a poor mechanic to America. Here he amassed a fortune and, fortunately, put it to the service of a great ideal—the elimination of ignorance, especially concerning the relations past and present of Scandinavia and the United States. To a self-perpetuating board of fifteen trustees, whom he himself named, he entrusted property valued at half a million dollars. The act of incorporation of this board, approved by Mr. Poulson, directed that the interest from his endowment, and other funds which the board might receive, should be expended “for the purpose of maintaining an exchange of students and teachers, and for supporting all other forms of educational intercourse between the United States of America, Denmark, Norway, and Sweden.” The following year the three Scandinavian kings became patrons of the Foundation and appointed committees in each country to coöperate with the trustees.

What form should their endeavor take? The constitution gave the trustees much freedom. They were directed to use the income in any way that might seem to them most likely to promote intellectual relations between the four countries. The easiest process would have been to turn the whole income into stipends for Scandinavian stu-

JOHN ALLYNE GADE

The Vice-President of the Foundation. His father was a Norwegian, for many years honorary Consul of the United States in Christiania. Mr. Gade was graduated from the Harvard School of Architecture and has followed for many years his profession of architect in New York. Largely by his assistance Roald Amundsen was enabled to make his dash for the South Pole. Mr. Gade has been the promoter and benefactor of numerous Scandinavian undertakings in the United States, and performed a notable service in bringing to this country the Scandinavian Art Exhibition, in 1912-13.

HENRY GODDARD LEACH

As Secretary of the Foundation and the executive director of its activities, Dr. Leach has done much to spread a better knowledge of Scandinavian life and institutions. He lived two years in Sweden, Denmark, and Norway, and is the author of “Scandinavia of the Scandinavians.” He was graduated from Princeton in 1903. He was an instructor at Harvard in English and Old Norse until called to New York in 1912 to devote his whole time to The American-Scandinavian Foundation.

dents wishing to study in America. They were unwilling, however, thus to minimize their responsibility. They conceived of the Foundation as a broad international opportunity. They answered the call for public service by creating an educational bureau for information and publicity, and for lending moral support to all forms of intellectual intercourse. Without salary or other compensation, the fifteen trustees have given unstintingly of their time and energy.

They entrust the executive routine of the Foundation to a secretary, formerly instructor in Harvard University, who is aided by a small salaried staff. With an income as yet less than twenty thousand dollars, due to the untiring efficiency of this small staff and the disinterested coöperation of the trustees, a work of public service has developed which probably equals that of some endowments which are many times greater.

The educational program of the Foundation aims to interpret the literature, art, science, and social life of Scandinavia to the American people. One of the first acts of the Foundation was to vote a subvention to the Scandinavian Art Exhibit of 1912-13, organized by Mr. John A. Gade, which in Chicago alone, was visited by 69,094 persons. In 1913 the trustees voted to form an international affiliation of associates, inviting all who were interested in the work of the Foundation to become enrolled.

The number of associates now exceeds four thousand, including teachers, bankers, authors, statesmen, and in large measure, representative Americans of Scandinavian descent. The associate organizations embrace the American Society of Denmark, formed in 1914, among whose members are directors of many business houses having trade relations with the United States.

Over and above the performance of routine duties, the staff of the Foundation have been able to assist in the progress of Scandinavian studies in schools and colleges, to give lectures, to advise women's and social service clubs in arranging their programs, to encourage concerts of Northern music and dramatic performances, to make connections for Scandinavian students and lecturers visiting this country, to advise authors in disposing of their manuscripts, to aid publishers in putting on the market books translated from the Scandinavian languages, to send out bulletins to the press, to answer requests

NIELS POULSON

Who endowed The American-Scandinavian Foundation, was born of poor parents in Horsens, Denmark, in 1843, and died in Brooklyn in 1911. He came to America as a young journeyman builder. Mr. Poulson was one of the first to realize the possibilities of iron construction in a modern city and, with his friend, Michael Eger, started the Hecla Iron Works in Brooklyn, which brought him his fortune.

for expert information; in short, to perform all the functions of a public-spirited bureau of education.

Niels Poulson had much at heart the dissemination of correct information about the Scandinavian countries by means of an illustrated periodical, and in making his first bequest to the cause he specified as one purpose "educating public opinion concerning these nations thru platform and press." Such a periodical, *The American-Scandinavian Review*, was established by the Foundation, beginning in January, 1913, and has since appeared bi-monthly, being sent to all associates of the Foundation and other subscribers. Its literary editor is Miss Hanna Astrup Larsen, an American essay-writer of distinguished Norwegian ancestry.

In 1914 the trustees established two series of books, also published by the Foundation, under the supervision of a Committee on Publications. The chairman of the committee is William Henry Schofield, Professor of Comparative Literature at Harvard University, and the other members, Professor Arthur Hubbell Palmer, of Yale University, and Dr. Leach, Secretary of the Foundation.

In one series, the *Scandinavian Classics*, four translations have already been printed: *Comedies* by Holberg, *Poems* by Tegner, *Poems and Songs* by Björnsterne Björnson, and *Master Olof*, Strindberg's great historical drama. In the other

series, the *Scandinavian Monographs*, two books have appeared: *The Voyages of the Norsemen to America*, by Professor William Hovgaard, of the Massachusetts Institute of Technology, and *Ballad Criticism in Scandinavia and Great Britain During the Eighteenth Century*, by Dr. Sigurd Bernhard Hustvedt, of the University of Illinois.

In spite of the expenses of maintaining an educational bureau and these various publications, so well have the resources of the Foundation been husbanded that about one-third of the annual income can be devoted to scholarships for traveling students. In Sweden, Denmark, and Norway each year the Advisory Committees appointed by the kings select two Fellows of the Foundation who come to American universities and corresponding institutions for research.

About half of their number have been engineers, but practically all branches of study are open for the applicants. At present one Fellow is studying road building at Columbia University, another industrial organization at the College of the City of New York, a third library methods at the New York Public Library School. The fourth is a lawyer investigating our inheritance laws at the Harvard Law School; a fifth is a naval engineer, studying at the naval tank at the University of Michigan; and the sixth is an agricultural specialist investigating animal breeding problems at the University of Illinois. Two years ago one Fellow of the Foundation was a former student of Madame Curie, Miss Ellen Gleditsch, lecturer at the University of Christiania, who carried on important investigations in radium at Yale and was awarded the honorary degree of Doctor of Science at Smith College. Similarly, American students are sent by the Foundation to universities in Denmark, Norway, and Sweden, where they are at present studying literature, languages, history, and bacteriology.

The propaganda conducted by The American-Scandinavian Foundation in the United States is consistent at every point with loyal Americanism. Even when exhorting descendants of Scandinavians to keep alive in English dress their inherited traditions of art and literature, this Foundation is not encouraging the perpetuation of alien groups within our midst, but rather is aiding these children of Northern stock to assimilate and to support with their high idealism the principles of American liberty.

THE CHAUTAUQUA IDEA

THE MOST AMERICAN THING IN AMERICA

LF I were a cartoonist I should symbolize Chautauqua by a tall Greek goddess, a sylvan goddess with leaves in her hair—not vine leaves, oak leaves—tearing open the bars of a cage wherein has been confined a bird, say, an owl, labeled “Learning.” For that is what Chautauqua has done for the world, it has let learning loose.

Once upon a time—and it was not so long ago but what some of us can remember it, tho most of us have forgotten it—education was thought to be a thing which could be imparted to one sex at one place within one particular period of life; it was confined to those young men, more rarely young women, who had been trained in a rigidly prescribed course and who could afford to spend four years studying certain designated subjects in a rigidly prescribed way. No allowance was made for differences of age, creed, sex, race or previous condition of intellectual servitude.

Nowadays all that is changed. All except the most conservative universities now make some provision for the education of those of different sex and ages and take into consideration differences of past training and future plans. Many of them recognize “absent treatment” as a legitimate branch of mental therapeutics, and aim to meet the demand by some sort of correspondence or local center work. Most of them recognize the right of adults and non-professional students to receive instruction by means of lectures and evening classes.

In this revolution Chautauqua has been one of the most efficient factors. It did not start out to supplant the colleges, but to supplement them. It has never diverted from the colleges any who could go to them. On the contrary, it has fed the colleges—and opened their eyes. It has demonstrated the practicability of various new forms of education which previously had been ignored or inadequately provided for, but now are undertaken by all sorts of agencies, public and private. Chief among the innovations for which we are largely indebted to Chautauqua I should name the following four:

Self-Education. This is, after all, the only possible kind of education, tho there is a spurious imitation of education which consists of forcible feeding, like that practised upon geese at Strassburg and elsewhere. But cramming in coops results in nothing more than fatty degeneration of the assimilative organs, for real development of the muscles can only come from their exercise.

An old schoolmate of mine, who was recently called to a professorship of a great eastern university was telling me

of his experiences. He noticed that a young man, obviously a member of the rich and leisure class, who had registered for his course, had not appeared since the opening day. Meeting the student one day as he was hurrying across the campus to some extra-curricular activity, my friend asked why he was not attending class. “Oh, that’s all right, professor,” answered the youth, “I send my secretary instead. He takes down your complete lectures in shorthand every day, while if I was there I could not get half of it.”

Now the person who pegs away by himself, hour after hour, day after day, month after month, on a Chautauqua course of study, or a Five-foot Bookshelf or a correspondence school course or any other scheme of systematic reading is getting a sort of self-education which is worth something, even tho it may not give him the right to wear a square cap with a tassel on it.

Home Education. To gather people together where the books are was the old form of education. To scatter the books among the people is the new way; not equal to the old in many respects, but having certain advantages of its own. Not every student devours his weight of books in the course of a college year and when he does not it is cheaper to move the books than to move the man. The invention of printing and photography, as well as the motion picture and the phonograph, has mobilized information, and so far as mere learning is concerned one can usually find out whatever is to be known without leaving his own home. Nor need he be altogether without the stimulus of personal contact with great thinkers, for Chautauqua has discovered that men are movable as well as books. The number of speakers who are really worth listening to is comparatively small, and even they cannot talk continually to the same audience without running out of things worth saying, so it is better

policy to send them around the country than to keep them in one place. Now it is something of a privilege to be able to talk face to face with a million people, and the men who wished to influence their contemporaries soon found that they could do it most effectively thru the Chautauqua assemblies and various lecture centers which sprang up in imitation of them thruout the country.

Spare-time Education. The utilization of idle minutes in systematic study is another Chautauqua scheme which has spread amazingly. This is due to the discovery that it is possible to learn something worth while even tho one cannot devote his whole time and attention to study. Even boys who are sent to college for the purpose do not, as is well known, devote their whole time and attention to study. We speak about “getting an education” as if it were some single thing to be got at a particular time and place like buying an overcoat. As well might we talk of “getting an exercise” to last thru life by paying a visit to a gymnasium. Education, true education, is a form of mental growth, like developing and maintaining a sound muscular system. It requires time and the gain does not depend altogether upon the number of hours a day which can be devoted to study. The college student who dilutes his learning with play is wise, tho often the dilution is excessive. The non-collegian who dilutes his work with learning is wise, and his progress is often greater than seems possible from the time spent in study.

Lifelong Education. This follows from the former. The educative process is not to be confined within four years any more than within four walls. Adults need it as well as youths, tho of a different kind. “Call no man educated until he is dead” might have been said by Solon. A diploma should not be granted till the death certificate is filed, otherwise the world and the holder of the degree is likely to be deceived into thinking that he has been educated. Chautauqua has done a double service in teaching people who thought they had been educated that they were not, and people who thought they could never be educated that they could be educating themselves. It has set men and women all over the country collectively to listening, singly to thinking, and coöperatively to reading along certain well planned lines of study.

EDWIN E. SLOSSON.

FROM CHAUTAUQUANS

The Independent wants to hear of the novel and progressive things that Chautauqua reading circles and the assemblies on the Chautauqua circuits are doing. We will pay Two Dollars for every brief, bright story of a definite Chautauqua achievement that we consider good enough to publish on the Chautauqua page. Only two conditions: manuscripts must not exceed 300 words, and the contributor's name and address must appear on the manuscript. Don't send postage; no manuscripts will be returned.

Americanization Week at Chautauqua will be July 17-21, when authorities on the problems of the immigrant in America are to discuss various questions—admission tests, naturalization plans and state and national policies of assimilation. Professor Edward A. Steiner, author of “The Immigrant Tide,” will give the principal address.

THE NEW BOOKS

WAR—AND RUMORS OF WAR

Those who go to training camps and may later become citizen soldiers will find Captain Andrews' *Fundamentals of Military Science* useful in leading them to a comprehensive knowledge of the soldier's life in its routine. It is a serious manual on camp work, army organization, guard duty, sanitation, in short, on all the manifold duties of the citizen soldier. It is popular, not over-technical, and ought to be a great aid to true preparedness. It is a real work.

A plea for the recognition of our individual and national responsibilities is made in *Wake Up, America*, a little book by William R. Castle, Jr. He calls for national and patriotic thought and coöperation, which he thinks better than the panaceas of minimum wage, woman suffrage, government control and socialism; his political philosophy is that in return for its protection all should equally serve or be ready to serve the country by undergoing a system of athletic and military drill akin to the Swiss. None of our prominent leaders come to his standard, tho Roosevelt approaches it. The book should have been longer in training camp.

Cleveland Moffett's "Great Romance of the Invasion of the United States in 1921," *The Conquest of America*, is as full of thrills as the most excitable and fearful patriot need ask. His scientific aptitude gives plausibility to the narrative of the German invasion and conquest of America by striking at New York and New England, and then New Jersey and then the office of the *Saturday Evening Post*. The Panama Canal is dynamited. Our available navy, just gone to the Pacific to be looked at by Japan, has to chase around thru the Straits to meet the huge German fleet and finally succumb to it in the Caribbean—a thrilling spectacle as seen from Vincent Astor's aeroboot. Really we have here a sort of elite directory of "the military heart of America," and if all the prominent Americans named in the tale, as hostages or otherwise, get about the business of preparedness, this invasion will never be.

Fundamentals of Military Science, by Capt. L. C. Andrews. Philadelphia: Lippincott. \$1.50.
Wake Up, America, by William R. Castle, Jr. Dodd, Mead. 50 cents. *The Conquest of America*, by Cleveland Moffett, Doran. \$1.50.

THE ROMANY RYE AGAIN

Certain tributes to friends contributed from time to time in *The Athenæum* by Theodore Watts-Dunton have now been collected and published under the title, *Old Familiar Faces*. Tho most of the papers are slight, written shortly after the death of one or another of the old circle that had been wont to gather at "The Pines," the home of Watts-Dunton and Swinburne one finds in the least of them keen character analysis, wide sympathy and apt criticism. In the sketches of Borrow, of Groome and of Hake we come upon

the Romany interests out of which grew years ago "Alwyn" and "The Coming of Love." The papers on the Rossettis and Morris leave singularly lively impressions of these households. The most complete study is that of Tennyson, which includes a review of the life by his son and much worth while reflection on this matter of biography. It is a pity that so acute and thoughtful an observer and so gentle a judge has left us but a novel, a few poems and a handful of essays.

Old Familiar Faces, by Theodore Watts-Dunton. Dutton. \$1.75.

A CARICATURE OF YOUTH

"The real thing—the real thing at last," William Sylvanus Baxter, aged seventeen, nodded solemnly to himself as he meditated on his first momentous discovery of the One and Only Girl.

And thus unintentionally William also achieved the rare distinction of reviewing his own book, *Seventeen*—that delightful "tale of youth and summertime and the Baxter family—especially William," in which Booth Tarkington has gaily vivisected Youth, not as the poets fancy it, but Youth "as is."

The hero—or rather the victim—is of course William. His ludicrous failures to make others see him as he sees himself furnish a whole summer of laughter-provoking situations, ingeniously complicated by a dress-suit, a small sister, a wash-boiler, a picnic, and a host of bewildered and unfeeling relatives and friends—as well as by The Girl, known to the privacy of William's day-dreams as "My baby-talk lady."

In their meeting Mr. Tarkington finds occasion for one of his best bits of analytical description, beginning with William's manly indifference to the whole tribe of girls—"I never saw one in my life I'd care whether she lived or died. They could all die. I wouldn't notice"—and his scornful exit from the enthusiastic discussion of May Parcher's new visitor, "a reg'lar ringdinger."

He walked in his own manner, using his shoulders to emphasize an effect of carelessness which he wished to produce upon observers. For his consciousness of observers was abnormal, . . . and it had reached a crucial stage whenever he perceived persons of his own age, but of opposite sex, approaching.

Soon he saw coming toward him a person of that opposite sex—no other than the recently despised "ringdinger" and his future divinity.

William began to suffer from breathlessness and pressure on the diaphragm, while his complexion altered—he broke out in fiery patches. They would presently meet and she would look at him, a thing for which he endeavored to prepare himself by a strange, weaving motion of his neck against the friction of his collar—for thus instinctively he strove to obtain greater ease and some decent appearance of manly indifference. But he felt his efforts to be such a failure that, depressed and panic-stricken, he seized upon an inspiration that flashed upon him just in time:

He opened his mouth somewhat and

as her eyes met his, full and startlingly, he placed three fingers across the orifice and also offered a slight vocal proof that she had surprised him in the midst of a yawn.

That was William's only attempt to conceal his devotion. For the rest of the entrancing summer—singularly blest with moonlight—he shared the honors of Miss Pratt's fickle favor with Flopit, most fortunate of lap-dogs.

But tho Miss Pratt sometimes smiled on William, fate was unvaryingly cruel—always waiting just around the corner to trip him up and shatter his young dignity. Even the author cannot help feeling a bit sorry for the tragedies he has provided. "Seventeen," he says, "cannot always manage the little boy yet alive under all the coverings." So he promises William better luck next time—that promise, by the way, is one of the jolliest twists of the whole ingenious plot—and leaves the reader still convinced of his discovery of "the real thing at last."

For whether you choose to read *Seventeen* as a clever caricature, a "rat-tling good story," a "gay analysis of calf-love," a remarkable picture of small-town American life, or a serious study in adolescent psychology, you will find what you are looking for—and enjoy yourself hugely into the bargain.

Seventeen, by Booth Tarkington. Harper. \$1.35.

A GREAT EDITOR

In 1908 Arthur I. Dasent compiled what may be described as the authoritative biography of Delane. Now comes *Delane of the Times*, as the first volume in a series of biographies entitled *Makers of the Nineteenth Century*. Full as Mr. Dasent's biography is as regards Delane's part in politics and his social relations, it conveys no adequate impression of the actual working life of the editor of a daily newspaper, or of the methods of work and organization that made the *Times* the greatest newspaper of the Victorian period. The distinctive features of Sir Edward Cook's biography are that it shows Delane at work; it fits him into the political life of England from 1841 to 1877; it describes the position of the *Times* during its best period in English political and social life; and analyzes the great influence which Delane exercised on English politics and on the newspaper world of England.

Sir Edward Cook was active in journalism for thirty-five years. He enjoyed Fleet street, else he could not have written the graphic descriptions of Delane at work, and of the internal and external organization of the *Times* which give this book its distinctive value. There is much in its pages concerning the newer world of London journalism and the conditions that have developed since the position of the *Times* and its contemporaries of the period of Delane were adversely affected by the extension of the parliamentary franchise in 1885

and the incoming of the half-penny morning journals in 1896. There is, for instance, much that is true of English journalism today in the enlightening chapter discussing the influence of Delane, and the exceptionally favorable conditions that made his great influence possible. "Comparatively little of his time and thought," Sir Edward Cook writes, "was occupied in what sometimes imposes a heavy disability upon an editor—namely, dissension with the proprietor of the paper." From all such anxieties, Delane was happily free. *The Times* thruout his editorship was financially prosperous. Sir Edward Cook's volume abundantly makes good his claim that the *Times* of Delane was a national institution, and that Delane of the *Times* deserves a place among the notable Englishmen of the Victorian era.

Delane of the Times, by Sir Edward Cook. Holt. \$1.75.

THREE OXFORD MEN

The lectures by Dr. Cadman on *The Three Religious Leaders of Oxford and Their Movements* may be compared with the historical addresses delivered a generation ago by Dr. Storrs, and with the yet earlier "Beacon Lights of History," by Dr. John Lord. The three religious teachers of Oxford are Wycliffe, the morning star of the Reformation, and Wesley and Newman, diverse prophets of a later great religious movement. While Wesley and Newman possess the same religious fervor, they moved in opposite directions out of the Church of England. Dr. Cadman brings out very clearly the story of the conflict, the growth of the Oxford movement and the reaction in the development of the Broad Church. Newman is a most lovable character, but his spirit is not the spirit which controls the Church to which he went, while John Wesley's influence animates the whole Protestant world.

The Three Religious Leaders of Oxford and Their Movements, by S. Parkes Cadman. Macmillan. \$2.50.

THE CAMPAIGN

According to former representative Fowler of New Jersey, the *National Issues of 1916* will include the tariff, the American banking system and our merchant marine. His book reproduces three addresses which contain mostly truisms and pompous phrases. For example, Lincoln and Nationality—about one hundred pages—contains possibly a score of lines on Lincoln, including a few brief quotations of well known passages, the remainder being a broadside against the Wilson administration. Incidentally it may be noticed that he makes free use of such words as "idiot," "idiotic," etc., in reference to Wilson's policies. The remaining 300 pages of the book are given to a campaign treatment of An American Banking System and An American Merchant Marine. They contain a good, tho diffuse, statement of what has been said on these topics during the past few years. In order to build up a merchant marine the United States should return to the law of 1794, which

Wasted Steps Are Wasted Dollars

Here are little thieves that carry off the profits, yet often go unchecked. There is only one way to arrest them.—install Inter-phones in every part of the plant. These will **SAVE THE MEN'S TIME**, prevent a thousand interruptions of your work, and give you **INSTANT TOUCH** with any man in the works. The increased efficiency and ease of management will be immediate.

Western Electric Inter-phones

are essentials in modern business. A mere push of the button at your elbow makes the connection. Any station can talk with any other station. It is really a complete telephone system within the plant. Any number of stations can be installed, and any reliable electrician can do the work.

This Inter-phone system is of such vital importance to your business, whether large or small, that you should drop us a post card for the booklet, "When Minutes Mean Money." Ask for Booklet No. 44-BK. You'll get it **QUICK**.

GENERAL WOOD

On Preparedness to Prevent War Our Military History

Its Facts and Fallacies

By Leonard Wood
Major General, U. S. A.

The first metropolitan newspaper review said:

"Because of General Wood's long and efficient service in the present diminutive American army, what he has written is probably the most authoritative work on this country's military needs ever so placed before the public."

General Wood points out the defects of our past military policy—costly in money, time, men and results—the perils of its continuation; and presents a practical plan to meet our present and future needs.

imposed a duty of 10 per cent on all goods imported in foreign bottoms. This would bring in a large revenue, which could be spent in part in a preparedness program, it being fit that foreigners should furnish the money to provide for our defense, since it is a defense against their aggression. He replaces the Federal Reserve system by an extended clearing-house system with forty-five or fifty commercial zones, the whole bound together with one central reserve. This would give the United States the simplest and best system in the world.

The National Issues of 1916, by C. N. Fowler. Harper. \$1.50.

ISLAM AND THE TURK

A notable and authoritative work is *Modern Movements Among the Moslems*, by Samuel Graham Wilson. In personal support of an exhaustive treatment of his subject Dr. Wilson brings over thirty years of residence in the Orient. Commencing with the accepted hypothesis of several scholarly writers that Islam is impervious to outside influence and therefore incapable of change, the author demonstrates that the currents of modern thought are breaking thru the barriers of Mohammedan dogmatic absolutism. To that end he reviews the principal advance movements of Suffism, Bahism and the Ahmadiyahs; he proves the slow but certain betterment in social conditions—pointedly that of Mohammedan women—and the persistent demand for political liberty as separate from, if not contrary to the rule of the Koran. But the whole is swept by "cross purposes the resultant of contrary religious and intellectual forces . . . energetic, aggressive, determined and anti-Christian." Apart from his direct objective, in the main successfully accomplished, Dr. Wilson illumines social conditions in various parts of the Mohammedan world. But in passing comment it is perhaps singular that when he was gathering supporting testimony, he did not summon to his aid that philosophic dreamer, just law maker, and broadly tolerant religious reformer Akbar—truly—the Great Mohammedan Mogul Emperor. Unhappily, from the works of many competent judges of the Turkish character, there is no reason to doubt any part of Dr. Gibbons' sweeping indictment of the Turks in their monstrous slaughter of the Armenians, *The Blackest Page of Modern History*. Concealed somewhere both in the apparently benevolent Turkish gentleman and the mild peasant is a ferocity—blind and unreasoning—when kindled by fanaticism. Authorities hold it is not entirely of religious incentive, for the Turk has been equally ruthless toward other races of his own faith. Among Mohammedan peoples he comes nearest to the term barbarian, for in him is neither the saving chivalry of the Arab nor the culture of the Persian. While conceding that Dr. Gibbons makes his case, it may be stated that to the Oriental mind as a whole cruelty is not the crime against humanity it

"THE FASCINATION OF THE NEW HOUSEKEEPING"

THAT is what members say who take the new correspondence course, *Household Engineering, Scientific Management in the Home*. It produces results in house-keeping just as marvelous as scientific management in other industries. It easily saves up to a third of the time spent in housework, smooths out difficulties and reduces expense. It changes indifference to enthusiasm and brings about the splendid efficiency attitude of mind that makes for success, health and happiness.

All who are interested in house-keeping or who would like help in their problems or wish to make progress in their life work are invited to enroll (before May 31) *free of charge*. Simply write a post card or note or clip the following:

stands with us. Whether it be the Oriental's fatalistic spirit, or that he possesses less physical sensitiveness—possibly both combined—it is a fact that neither the perpetrator of cruelty nor his victim regard imposed human suffering with the indignation, pain and horror of the Occidental.

Unquestionably *The Foundation of the Ottoman Empire* by the same author is a work of deep scholarly learning, yet written in such a manner as to be easily grasped by the average reader of history. It follows as an appropriate complement to the previous little volume showing how the Osmanli Turks have come to their present state of decadence from a beginning of considerable culture and tolerance. At this period when the fate of the Turk hangs in the balance—when his existence as an independent nation would seem to be at the eleventh hour—this book by Dr. Gibbons should be given wide and serious attention. It possesses a further value as a reference volume for its excellent chronological tables and copious authoritative notes. Personally Dr. Gibbons writes from the vantage ground of a resident professor of history at Roberts College, Constantinople.

Modern Movements Among the Moslems, by Samuel Graham Wilson. Revell. \$1.50. *The Blackest Page of Modern History*, by Herbert Adams Gibbons. Putnam. 75 cents. *The Foundation of the Ottoman Empire*, by Herbert Adams Gibbons. Century. \$3.

PEBBLES

You may have noticed how "preparedness brings on war" in Holland.—*Philadelphia North American*.

In addition to the German denial, President Wilson has a lot of other evidence that the "Sussex" was torpedoed by a German submarine.—*Chicago Herald*.

She—Which do you like the best, Williams or Colgate?

He—What are you talking about: colleges or shaving soap?—*Cornell Widow*.

The Lady—Didn't I hear you quote Omar Khayyam just now?

The Broker—I think not. In fact, I don't think I ever heard of the stock.—*Boston Transcript*.

Musical Student—That piece you just played is by Mozart, isn't it?

Hurdy-Gurdy Man—No, by Handel.—*Quincy H. S. Golden Rod*.

You have heard perhaps of the Englishman in the South Station, Boston, who read over a door "Inside Baggage," and chuckled with glee: "You Americans are so droll! Now we should say 'Refreshment Room.'"—*The Living Church*.

"How did you contrive to convince your wife you could not afford to own an automobile?"

"Pure luck on my part. She wanted to have an old dress cleaned, and bought a gallon of gasoline."—*Richmond Times-Dispatch*.

Already we see signs of German hatred. At a reception the other night in a neutral city, the guest of honor said to a man who had just been presented to her:

"You are a foreigner, are you not? Where do you come from?"

"From Berlin, ma'am," he answered.

The lady stared at him thru her lorgnette.

"Dear me!" she said. "Couldn't you go back and come from somewhere else?"—*London Opinion*.

WINTER: THE CAROLINA, PINEHURST, N. C.

The Market Place

ALL ABOARD FOR BUENOS AIRES

Secretary McAdoo has returned from Buenos Aires, where he has been attending the meeting of the Pan-American High Commission, of which he is the first president. On his return he made an interesting statement in the course of which he said:

Everywhere I found an earnest desire to strengthen commercial, financial and political relations with the United States, and everywhere we went there was a genuinely friendly attitude and a complete absence of that suspicion and distrust of the United States which has, until recently, existed to a more or less degree in some, at least, of the Central and South American countries.

Every leading statesman in South America with whom I talked emphasized the paramount importance of a merchant marine under the flag of the United States, or under the flags of the different American nations.

Many prominent men told me that the surest foundation of better relations was the establishment of ample means of communication, so that the products of the different countries could be quickly moved in mutually profitable trade.

Another question of great importance is the completion of the intercontinental railway connecting North and South America through the Isthmus of Panama.

The total distance between New York and Buenos Aires by rail is 10,300 miles, of which approximately 7400 miles have been built and are now in operation, leaving approximately 2900 miles to be constructed. The principal gaps in the intercontinental railway are in the countries of Central America and in Colombia, Ecuador and Peru in South America, and the estimated cost of construction is, roughly speaking, \$150,000,000.

With these links completed, it would require only a relatively small amount of additional construction to connect the main trunk line with Santiago, Chile, and Rio de Janeiro, Brazil, and then practically all the principal capitals of Central and South America will be connected with each other and with all the cities of the United States. "All aboard for Buenos Aires," when shouted in the railroad stations of New York City, will be a thrilling announcement some day, and in the not remote future this announcement will be heard.

The net revenues of the railroads of the country, according to the preliminary estimates of the Interstate Commerce Commission, reached high figures in March. The net revenue of the leading ninety-four roads of the country was \$425 per mile of line operated, in comparison with \$301 per mile during March, 1915. The net revenue of the Eastern roads was estimated to be \$623 per mile, an increase of \$227 per mile. The net revenue of the Southern roads was \$386, an increase of \$115 per mile, and the net revenue of the Western roads was \$352, an increase of \$82 per mile. The net revenue of these same ninety-four roads during the nine months ending with March totaled \$3828 per mile of

road operated, an increase of \$1034 in comparison with the same nine months of last year. The net revenue of the Eastern roads during this nine months' period was \$6076, an increase of \$2054 per mile of line operated.

The revenues of the Eastern roads averaged \$2138 per mile of line operated during March, an increase of \$481. The revenues of these same lines during the nine months ended with March totaled \$18,703 per mile, an increase of \$3120.

WHAT THE WAR HAS DONE TO SHIPPING

Twenty-one months of war have destroyed 1216 merchant vessels. They aggregated nearly two and a half million gross tons. The following tables show how the different shipping nations of the world have suffered in this respect:

Allied Shipping Destroyed

Nation—	Gross Tons.
Great Britain	1,571,293
France	190,289
Italy	71,443
Russia	42,258
Belgium	25,858
Japan	16,015

Total gross tons..... 1,917,161

Neutral Shipping Destroyed

Nation—	Gross Tons.
Norway	147,580
Holland	82,629
Denmark	40,653
Sweden	37,896
Greece	15,017
Spain	14,550
United States	10,377

Total gross tons 348,702

Teutonic Shipping Destroyed

Nation—	Gross Tons.
Germany	165,006
Turkey	18,150
Austria-Hungary	13,240

Total gross tons 196,396

England has lost the most ships, 727; Norway the next largest number, 107; France next, 72; Germany next, 68; Denmark, Holland, Italy, Russia and Sweden are not far apart in their losses, which range from 31 to 40. The United States, Japan and Spain stand at the bottom of the list, with six, three and seven respectively.

The British losses are naturally the greatest. For Great Britain has the most ships on the sea; and the German submarine warfare has been directed primarily against England. The German losses are naturally light, for since the first few months of the war German shipping has been tightly locked up in home and neutral harbors.

Last week Earl Curzon announced in the House of Lords that a total of 450 enemy ships had been detained, seized or captured by the Allies in all parts of the world since the war began.

He added that it was an encouraging fact and a curious coincidence that the British merchant ships lost thru war operations were exactly balanced in number and tonnage by the new ships added to the register during the war.

The following dividends are announced:
Pacific Gas and Electric Company, first preferred and original preferred, quarterly, \$1.50 per share, payable May 15.
Liggett & Myers Tobacco Company, common, quarterly, 3 per cent, payable June 1.
International Silver Company, Coupons No. 35 of First Mortgage Bonds, payable on and after June 1.

Insurance

Conducted by

W. E. UNDERWOOD

HOW A LIFE RATE IS MADE

From two correspondents come requests for information which, simple in the asking, are difficult to answer in a limited space. One wants me to demonstrate the accuracy of an assertion I occasionally make to the effect that life insurance is an expense; the other desires an explanation of the manner in which the premium rate on an old line policy is calculated. If I can successfully impart the information called for under the second request, both questions will be answered.

As it is a matter of mathematics, the difficulty lies in making the explanation chiefly in words. But I will try; it being understood, of course, that such mathematical results as I employ are accepted as authoritative, for I have not sufficient room here to include the detailed figures.

Let us suppose that we want the annual premium rate for an Ordinary Life policy of \$1000 at age 43, the assumed interest rate for money being 3 per cent, the highest standard now in use. We must have an authoritative mortality table on which to base our calculations, and we will choose that known as the American Experience Table of Mortality. We will also assume that our calculation includes 20,000 lives. Keep in mind the essential fact that the contract known as the Ordinary Life policy runs for the whole of life and that it cannot be canceled by the company. It must provide \$1000 on the death of the last man as well as on the death of the first. We don't know when any of the 20,000 will die, but we know that all will be dead by the time age 96 is reached.

That being true, we must have an itemized bill of mortality for each of 53 years, charging up, at \$1000 apiece, the deaths occurring each year. According to the Mortality Table we are using, 210 persons will die the first year; 214 the second year; 219 the third year; 276 the tenth year; 452 the twentieth year; 479 the fortieth year, and so on thru the whole period of 53 years, until all are dead. If this money were paid as each man died, the whole sum would amount to \$20,000,000. But premiums are paid in advance, therefore the sums required are discounted at 3 per cent. Instead of collecting \$210,000 for the 210 deaths of the first year, only \$203,883.54 is required, which, at 3 per cent, is worth just \$210,000 at the end of the year. This discounting process continues thruout the entire period, and we find at the end that it amounts to a total of \$9,716,976.72.

It now becomes necessary for us to

H. V. Wilson Co., Box R, White Plains, N. Y.

find each insured person's just proportion of that sum, or rather each survivor's. To do that in the simplest way let us see how much of it would be yielded by a contribution of one dollar from each survivor. In the first year, all being alive, we would get \$20,000. That year 210 will die, leaving 19,790 to contribute a dollar apiece, or \$19,790; that year 214 die, leaving 19,576, yielding \$19,576. This process is also carried year by year thru the 53 years and the total at the end is \$353,050.51. We see, of course, that \$353,050.51, or one dollar apiece, will not pay the mortality bill of \$9,716,976.72; but if we divide the last figure by the first, we will have the exact answer: \$27.52. This is the Net Premium. It represents nothing but death losses. No provision has been made for the company's expenses.

When the net premium has been ascertained in the manner described, another sum, called the Loading, is added for expenses, in this case \$9.18, making the Gross Premium \$36.70 for \$1000 participating Ordinary Life insurance on a 3 per cent basis.

The company's selection of risks will result in an actual mortality experience less than that assumed in the Table; its actual expenses will be less than the loading assumed; and the rate of interest actually earned will be higher than 3 per cent. All the gains from these sources will be returned to policyholders at the end of each year as dividends, so-called.

This is an explanation of an old line legal reserve level premium rate, and yet nothing has been said about an accumulated reserve. All the money yielded by the Net Premiums seems to be used for paying death claims. That is an essential office of the reserve—it is really a fund in liquidation of future mortality. At \$27.52 each, 20,000 persons would pay the first year a total of \$550,400. At 3 per cent, by the end of the year, this sum would be increased \$16,512, interest bringing it up to \$566,912. Deduct the death losses that year, \$1000 to each of 210 persons, or \$210,000, and we have remaining \$356,912, which is called reserve. If we wish to know what share of this reserve belongs to each outstanding policy, we divide it by the number of survivors, 19,790, and we have \$18.03.

The second year we start with a fund of \$356,912 reserve, to which is added the premiums paid by survivors the second year ($19,790 \times \$27.52$), \$544,620.80, or a total of \$901,532.80. Add 3 per cent interest, \$27,046, making the sum \$928,578.80. There are 214 deaths, at \$1000 each, in the second year, \$214,000, which, deducted from the amount on hand, \$928,578.80, leaves \$714,578.80, the reserve at the end of the second year. If we divide this sum by the number of survivors, 19,576, we get \$36.52 each.

At the beginning of the 53d year there will remain but one person alive at age 95. He will pay his premium of \$27.52 which, added to what is left in the reserve fund, and both improved

at 3 per cent interest, will exactly equal \$1000 by the end of that year.

Those who surrender their policies receive such a proportion of the reserve held against them as the policy contracts or the rules of the companies governing withdrawals provide. Now, to demonstrate the claim that life insurance is an expense, let us suppose that one of these insured persons surrenders his policy for its cash value at the end of twenty years. We will not consider the interest increment on the premiums he paid, nor on the dividends he received; but we will assume that the amount of the dividends aggregated 20 per cent of the premiums. In twenty years, at \$36.70 a year, the policyholder paid the company a total of \$734. His dividends amounted to \$146.80. His share of the reserve is \$418. The two last figures, added, total \$554.80. The difference between what he paid and received is \$179.20. These figures only demonstrate the fact. To calculate it exactly, we should add to the premiums and dividends the interest value of the money.

The explanation of the process followed in ascertaining an adequate level premium rate amply proves the fallacy of such systems of assessment life insurance as make no provision for a sufficient reserve.

W. S. H., White Plains, N. Y.—The Bankers Mutual Casualty is an assessment organization, a system which has not proven practicable in any branch of insurance. Security is the prime requisite. The stock accident and casualty companies of repute furnish that.

C. B., Coshocton, Ohio.—The Security Life Insurance Company of America is a corporation organized (1902) under the laws of Virginia, with its principal office at Chicago. On January 1, this year, its assets were \$2,583,479; its liabilities, \$2,146,053; its surplus (including \$220,000 capital), \$437,426. Last year it wrote \$3,823,385 new insurance and had on January 1, \$17,000,000 in force. The company now writes non-participating insurance only. Its methods are sound and its financial condition satisfactory. Comparing it with the best policyholders' companies, it is commonplace.

N. R. W., Wichita, Kan.—A young man of twenty who has arrived at the conclusion that a part of his earnings should be devoted to life insurance possesses exceptional wisdom. He should secure all that he can conveniently pay for, because the premium rate at that age is the lowest offered by any of the companies; and for that reason also, he should not permit that insurance to lapse. Perhaps, in the course of five or ten years there will be dependents to protect; later on, the hardships of one's old age are to be guarded against. Now, what kind of policy, in what sort of company, should be selected? If some ready cash capital is desired at forty or forty-five, a part of the insurance should consist of a twenty or twenty-five year endowment; the remainder of ordinary life. If protection is important, make it an ordinary life; the ultimate cash surrender values are smaller, proportioned to premiums paid, but they are substantial in time, when service rendered is considered. At age twenty, \$2000 of ordinary life will cost about the same as \$1000 twenty-five year endowment; and the cash surrender values would be, in twenty-five years, about \$550 on the \$2000 ordinary life and \$1000 on the endowment. These are participating policies and, of course, the annual dividends will materially reduce the cost. As to the company, the contract is to be a long one, perhaps a lifetime; choose an old, thoroly established, well managed institution.

"Don't tell me you never had a chance!"

"Four years ago you and I worked at the same bench. I realized that to get ahead I needed special training, and decided to let the International Correspondence Schools help me. I wanted you to do the same, but you said, 'Aw, forget it!' You had the same chance I had, but you turned it down. No, Jim, you can't expect more money until you've trained yourself to handle bigger work."

There are lots of "Jims" in the world—in stores, factories, offices, everywhere. Are you one of them? Wake up! Every time you see an I. C. S. coupon your chance is staring you in the face. Don't turn it down.

Right now over one hundred thousand men are preparing themselves for bigger jobs and better pay through I. C. S. courses.

You can join them and get in line for promotion. Mark and mail this coupon, and find out how.

HOMEMAKER OR HOUSEKEEPER?

MRS. BRUÈRE TALKS IT OVER WITH HER INDEPENDENT CRITICS

THE letters received concerning the articles on "The Habits of Women under Domestication," published between March 20 and April 17, contain some very valuable suggestions and give the sense of a great body of both men and women breaking the crust of merely domestic life in all sorts of unexpected places and becoming consciously a part of the larger social group. Some are, however, still making the mistake of thinking that housekeeping and homemaking are necessarily the same thing. From Missouri comes the question:

If housework is obsolescent, who, then, is going to be the homemaker for the future generations? . . . It is the mother, the housekeeper and the homemaker [Pardon me, madam, the *homemaker* undoubtedly but not necessarily the *housekeeper*, who may be quite a different person], who molds the plastic mind, who guides the little feet and, taking the trusting hands in hers, leads them on day by day and year by year, training and fitting them for a useful life.

It is indeed important that the mother should be able to do all this but it is not a part of housekeeping.

One domestic science teacher insists that a housekeeper should "regard her work as a profession requiring her best thought and skill." Another says:

The aim of household economics in the high school is to show girls the dignity of housework, to show them that there are problems here which are worthy of their best mental powers.

Says a woman from the East:

If our girls are made to think that home service is beneath them, we are doing that which is dangerous to the foundation of good citizenship.

An adequate answer to these domestic science teachers comes from a member of their own profession in California:

Homemaking is a profession where a woman may use all her skill and originality. To do her best work she cannot shut herself up with her problems, but must remember that she is a citizen of the world and must save time from her labors to keep in touch with the great outside world.

She does not make this broad claim for *housekeeping* but for *homemaking*, which is in its essence quite a different thing. As a Montana woman says:

To be a housekeeper is infinitely easier than to be a homemaker, for the one deals with inanimate objects and the other with souls. . . . Why can we not make a profession of our housekeeping rather than looking elsewhere for professions? Why can we not put into it our educational advantages and the added time which the easier running of the household routine permits? Why can we not put the stamp of individuality into the training of our children instead of turning them over to professional caretakers?

But this is not the solution of the problem either! The beautiful and poetic idea that women, being freed from housework, are at liberty to concentrate on homemaking is—fortunately for the race—not true. Even a near-democracy like ours is beginning to demand as a service, at the same time that it grants as a privilege, a life time of productive industry from every adult human being, male or fe-

male. See what a little Western girl in the eleventh grade writes:

I do not think any woman or mother would give up a happy home, her regular line of cooking and sewing, the comfort and pleasure of working for her children and seeing that they are brought up with the right kind of training, and the framing of a household, merely to factorize her household duties.

Bless the child—as tho cooking food and bringing up a child were the same thing! And what a good bluff mother must put up when she sits down with the darning bag after the day's work is over, when she coaxes the dried egg off the edges of the plates, when she turns the twenty-pound mattresses, when she "does up" little daughter's best white dress, when she performs the hundred other pleasant and comforting things we all know so well! Not that one does not appreciate the mitigating circumstances and honor the sacrifice whenever it is necessary—but it is ceasing to be necessary.

But to go back to the suggestion of the Montana woman that the time saved from drudgery be devoted to the training of children—what better profession can men or women take up if they happen to have that exceptionally high order of ability, than that of training their own children—and other people's, too?

A gentleman from Connecticut explains the type of people who are engaged in domestic service by asking:

May it not be that because the more esthetic and enlightened modern woman is shirking her duties [in housework] that the profession has fallen into the hands of the pauper and criminal classes?

Possibly it is. Certainly it is because the more enlightened and esthetic modern men have devoted themselves to other work than digging ditches, passing coal, being justices of the peace, dog-catchers and grave diggers, that these necessary and meritorious occupations have fallen into the hands of ignorant and unskilled men. It is, however, when we come to some heirloom of the sentiment which man wraps around woman, that we find the greatest confusion of values. A physician from the State of Washington writes:

Come with me to the "mountain cabin" or the Jewish homes on Sixth and Seventh Avenues and we will see women to whom we can bare our heads in reverence—real women who are "doing things," not merely "keeping busy"—women that we would feel proud to call "Mother"—women who achieve—not parasites, living an artificial life.

Such women are to be found increasingly everywhere. Many of them do housework, but it is not housework that makes them noble. As an Ohio woman says:

I believe that most of us will admit that when we advocate more and better housekeepers we have in mind that type of "uncrowned queen" of the home who "looketh well to the ways of her household," not alone because it is her job, but because it is her joy. . . . But is it not true that we have estimated the services of the uncrowned queen from an almost entirely sentimental point of view?

Her worth and her services to her household cannot be estimated in dollars and cents—and they very seldom are. . . . Yet, suppose the need should arise in the life of the homemaker for commercializing some ability which she possesses. In this exigency the woman who can do nothing but housework is in hard lines. . . . the girl who has a knowledge of chemistry and physics can very soon learn to cook. Or even if a girl is a *good* office woman, saleswoman, or what not, she can make herself a capable houseworker a thousand times more surely than can the houseworker train herself for other lines of activity.

There seems also to be a general feeling that the only thing that can be done with housework if the housewife does not do it is to shift it to a servant. An Illinois physician declares:

We will not develop the home in a democracy by depending on a scientific servant class. . . . It [the family] is the basis of a democracy in which every one does his necessary part. A paid servant class is no part of it.

If more of our citizens believed that a class of personal servants whether paid or unpaid has no place in a democracy and took stringent measures to eliminate it, we might be much nearer a nation of happy homes than we are now. But we all have—and all of us ought to be—community servants; and that not in any sentimental sense, but as our every day way of earning a living. The girl who irons collars in a laundry is a community servant as the woman who stands over your private and particular wash tub is not.

But no one takes very kindly to the statement that we need more and better community servants instead of more and better housekeepers. An Ohio woman sums it up forcefully:

Who said we did not need more and better housekeepers?

Not the army of consumptives whose wasted bodies testify to poorly cooked food and worse sanitation.

Not the thousands of epileptics who must be housed and fed by the state.

Not the school children whose nerves break down before the grades are complete.

Not the rows of baby graves.

Not the number of bankruptcy cases among small business men.

Not the divorce courts.

And how would any of these things be changed—did all the women of all the spheres housekeep unceasingly? It is not housekeeping, but the readjustment of industry, the broadening of education and the enforcement of law that can help us to stay tuberculosis. Wherever the infant mortality rate is going down, it is being reduced thru such social measures as control of the milk supply, the education of mothers before and after childbirth, the enforcement of sanitary regulations and the extension of district nursing—not by any increase in housekeeping. It is in order that women should have time to be better homemakers, better wives when they choose to marry, better mothers when they are fortunate enough to have children, and above all better citizens, that the time and strength now wasted in needless housework ought to be saved.

IF YOU HAVE A CAMERA

Harper's Weekly, when it sent Thomas Nast into the field to draw Civil War sketches that appeared later as huge woodcuts, was obeying the journalistic law that telling and hearing some new thing is not enough: folks want to see it, too. And The Independent, in adding to its already liberal picture service the News-Pictorial that begins this week, is carrying on the same tradition in a new way and with tremendously increased mechanical advantages.

For years The Independent has been drawing on those wonderfully organized agencies that photograph the new things at the end of the earth and do everything short of actually telegraphing them (even that has been done in Europe) to place them in the hands of American readers in minimum time.

But no agency can cover all the square miles of this country alone, nor the infinite range of interests of Independent readers, and to supplement this service we shall adopt a coöperative plan. We want news-pictures from our readers. For the best in any single issue of the News-Pictorial (not counting those we receive from the commercial agencies) we shall pay Ten Dollars. For all others so submitted that we find good enough to print we shall pay Two Dollars each.

When a nose for news and an eye for the picturesque are associated in the same physiognomy the owner thereof has the essential qualifications for making news-pictures. The camera is secondary, but, in order to give it and us a fair chance, use black-and-white glossy paper. In order to give yourself a fair chance, put your name and address and a full caption on the back of every print. "t. f."

J U S T A W O R D

When Winter lingers in the lap of Spring as persistently and nonchalantly as he has done this year, we worry lest we may be unable to keep winter sports out of the Vacation Number, which long-established Independent custom fixes in the first week in June. But we have a valiantly summery cover—a splendid piece of color work, and a breezy article on canoeing, in which we promise to say nothing about ice-boating, no matter what the thermometer may do. As usual, we will have a group of "Little Travels"—brief, usable itineraries of summer holiday trips to eight different American pleasure-points, which will be of material help in making vacation plans. As to pictures—wait and see!

A little later comes the annual Chautauqua Number, dated June 26. This will not lack that larger interest in popular education that appeals to readers both inside and outside the immediate circle of Chautauqua. The leading feature will be an article by President Vincent of the University of Minnesota, Chancellor of Chautauqua Institution, on "The Future of National Educa-

tion." This will carry the series of prophecies of the next generation in American life one step farther. There will also be brief articles by other Chautauqua authorities on the new developments of the Chautauqua plan and of Chautauqua itself, with perhaps a bit of antiquarian information about the richly historic territory which the parent of all the Chautauquas occupies. Pictures, of course.

REMARKABLE REMARKS

MARY PICKFORD—I cry real tears.
LILLIAN RUSSELL—Use your mirror.
GENERAL PETAIN—We will get them.
WILLIAM BARNES, JR.—Stop hero worship.
W. H. TAFT—I claim to be a progressive.
"BUGS" BAER—Very few piano drummers carry samples.
EMPEROR WILLIAM—The present war must end at Verdun.
IRVING S. COBB—I just naturally hate to say "No" to anybody.
GEORGE W. PERKINS—Colonel Roosevelt will be the next President.
GEN. EMILIO ZAPATA—Mexico can produce everything she needs.
REV. J. H. JOWETT—Everything is being read today but the Bible.
REPUBLICAN LEADER MANN—The President never has been neutral.
FORMER NATIONAL CHAIRMAN MCCOOMBS—Wilson is invincible.
"NICK" LONGWORTH—When the call for volunteers comes I will be there.
GEORGE BERNARD SHAW—It was perfectly correct to shoot Miss Cavell.
BILLY SUNDAY—Come on, you ball players; try stealing home to God.
DAVID LLOYD GEORGE—We have means. The Central Powers have methods.
WOODROW WILSON—There are some humbugs that have been at large a long time.
LUKE MCLUKE—Save your old champagne corks; they are worth \$3 a thousand.
REV. F. N. McMULLAN—I want to see more church people going to the baseball games.
JOHN B. WALKER—Of all words of human invention the most frightful is "conscription."
NORMAN HAPGOOD—It is not the wicked who are most cruel. It is the good who "crucify."
SENATOR HARDING—If I were in authority I would tell Carranza to go jump off the mountain top.
GOV. FERGUSON of Texas—It is now the solemn duty of the United States to enter Mexico and assume control of that unfortunate country.
EVANGELIST HALL—I had rather believe in God than go into a dark room and get a message from my grandmother thru some Indian squaw.
PROF. THOMAS J. MCCORMACK—The public school should be primarily the temple of Minerva, and not of Vulcan, or of his wife, Venus.
PROF. ALBERT BUSHNELL HART—Within five years the so called Republic of Mexico will be under the benevolent superintendence of the U. S.
JOSEPH PENNELL—If Broadway were a street in a European city, centuries old, Americans would flock there by hundreds of thousands to visit it.
DR. SALMON—At Ellis Island, where I spent three years as a physician, doctors spent as much time in examining the mental condition of an immigrant as is spent by the gateman at a railroad station in examining your ticket.

GE Electric Fans

"The Guarantee of Excellence"

on Goods Electrical"

*The Cooling Breezes of Outdoors
brought Inside*

A G-E Electric Fan dispenses its refreshing breezes and comfortable coolness two to three hours for a cent. Built upon over twenty years of experience, the high quality of the G-E Electric Fan makes for a long and economical service. Fifty styles of finish give a choice to harmonize with any scheme of decoration. Go to your lighting company or your nearest electrical dealer; look for the G-E monogram on the face of the fan: It stands for the "Guarantee of Excellence on Goods Electrical."

The Independent

WITH WHICH IS INCORPORATED
HARPER'S WEEKLY
A Journal of Civilization

TO HARPER'S WEEKLY READERS

IT is not forms that matter, so much as tendencies. If Harper's Weekly had been incorporated with a publication representing the opposite side in the great strife between privilege and liberty, it would have been a disaster. When, however, two circulations are combined that stand for the same political, economic and moral tendencies, it is easily conceivable that more may be accomplished than when they were separate. In stepping out of journalism myself, whether it be temporarily or permanently, I can recommend to those who have been reading Harper's Weekly, more enthusiastically than I could have done had it been merged in any other publication whatsoever, that they follow it in its new embodiment.

The management of The Independent, as I understand it, mean to preserve to a considerable degree

the identity of Harper's Weekly in those special features that seem to have had most to do with its individuality. What interests me most, however, in any publication is its soul—the thing it is undertaking to accomplish in the far-reaching struggles of the day. How few the magazines are today that have been able to remain anything except reflections of money standards. That deplorable tendency is now plain to everybody. It has become a by-word. The Independent stands out as representing moral freedom, disinterested thought, genuine enthusiasm for progress and for principles. All luck to it! May those who have read Harper's Weekly under my editorship find themselves permanent and loyal readers of that admirable publication into which the Weekly has been absorbed.

NORMAN HAPGOOD

TO OUR NEW READERS

THE INDEPENDENT welcomes its new readers. It desires their approval and continued support. It has known and valued Harper's Weekly under its successive line of distinguished and brilliant editors. Shoulder to shoulder for three generations the two weeklies have fought the good fight for national progress and human rights.

For the benefit of our new readers as well as the old we may say that the merged magazine will continue to support the great issues that each has always championed. In general, our editorial policy will be liberal rather than radical or conservative. The country and the world are moving forward, knowing more, doing better, and The Independent has never been content to be dragged along behind, but has persisted in pulling from the front. The Independent will continue to look forward, not backward.

Among our contributed articles, however, will be found many that go to the extreme of radicalism or conservatism. We have always taken pride in printing both sides of the great controverted questions of the day. All we ask is that our contributors keep within the

bounds of sanity, decency and fair play. It is our aim to provide instruction more than entertainment. The purpose of The Independent is serious; the tone not always so. In our various departments and in our special features, whether text or pictures, The Independent purposes to be in full advance of new thought and knowledge. It avoids no question that interests the people. It gathers articles from all sources. It has been said that "The Independent prints more articles from distinguished writers than any other periodical in America." But The Independent has ever been quick to recognize young and unknown writers. Many of the first articles and poems of our most famous authors were published in The Independent.

Thus we give our warmest welcome to our new readers, assuring them that we will do what we can for their pleasure and profit and trusting that whatever they miss will be more than made up. We thank Mr. Hapgood, late Editor of Harper's Weekly, for his kind introduction of The Independent to his readers, and we accept with confidence our new responsibility to our new friends.

HAMILTON HOLT

THREE PRESIDENTS ON THE LEAGUE TO ENFORCE PEACE

A NATION which by the standards of other nations, however mistaken those standards may be, is regarded as helpless, is apt in general counsel to be regarded as negligible; and when you go into a conference to establish foundations for the peace of the world, you must go in on a basis intelligible to the people you are conferring with. . . . In the last analysis the peace of society is obtained by force, and when action comes,—it comes by opinion, but back of the opinion is the ultimate application of force. The greater body of opinion says to the lesser body of opinion, "We may be wrong, but you have to live under our direction for the time being, until you are more numerous than we are."

Now, let us suppose that we have formed a family of nations and that family of nations says, "The world is not going to have any more wars of this sort without at least first going through certain processes to show whether there is anything in its case or not." If you say, "We shall not have any war," you have got to have the force to make that "shall" bite. And the rest of the world, if America takes part in this thing, will have the right to expect from her that she contribute her element of force to the general understanding. Surely, that is not a militaristic ideal. That is a very practical ideal. . . . I believe that if the world ever comes to combine its force for the purpose of maintaining peace, the individual contributions of each nation will be much less, necessarily, than they would be in other circumstances; and that all they will have to do will be to contribute moderately and not indefinitely.

—PRESIDENT WILSON INTERVIEWED
AT THE WHITE HOUSE, MAY 8, 1916

WHAT should be the fundamental plan of the League?

It seems to me that it ought to contain four provisions. In the first place, it ought to provide for the formation of a court, which would be given jurisdiction by the consent of all the members of the League to consider and decide justiciable questions between them.

Second: A Commission of Conciliation for the consideration and recommendation of a solution of all non-justiciable questions that may arise between the members of the League should be created, and this commission should have power to hear evidence, investigate the causes of differences, and mediate between the parties and then make its recommendation for a settlement.

Third: Conferences should be held from time to time to agree upon principles of international law, not already established, as their necessity shall suggest themselves. When the conclusions of the commission shall have been submitted to the various parties to the League for a reasonable time, say a year, without calling forth objection, it shall be deemed that they acquiesce in the principles thus declared.

Fourth: The members of the League shall agree that if any member of the League shall begin war against any other member of the League, without first having submitted the question if found justiciable to the arbitral court provided in the fundamental compact, or without having submitted the question if found non-justiciable to the Commission of Conciliation for its examination, consideration and recommendation, then the remaining members . . . agree to join in the forcible defense of the member thus prematurely attacked.

—WILLIAM HOWARD TAFT, IN THE
INDEPENDENT, JUNE 14, 1915

ALL the civilized powers which are able and willing to furnish and to use force, when force is required to back up righteousness . . . should join to create an international tribunal and to provide rules in accordance with which that tribunal should act. These rules would have to accept the status quo at some given period; for the endeavor to redress all historical wrongs would throw us back into chaos. They would lay down the rule that the territorial integrity of each nation was inviolate; that it was to be guaranteed absolutely its sovereign rights . . . in matters affecting its honor and vital interest. . . . All other matters that could arise between these nations should be settled by the international court. . . . Then, and most important, the nations should severally guarantee to use their entire military force, if necessary, against any nation which defied the decrees of the tribunal or which violated any of the rights which in the rules it was expressly stipulated should be reserved to the several nations, the rights to their territorial integrity and the like. . . .

In addition to the contracting powers, a certain number of outside nations should be named as entitled to the benefits of the court. These nations should be chosen from those which were as civilized and well behaved as the great contracting nations, but which, for some reason or other, were unwilling or unable to guarantee to help execute the decrees of the court by force. . . .

No power should be admitted into the first circle, that of the contracting powers, unless it was civilized, well behaved and able to do its part in enforcing the decrees of the court.

—THEODORE ROOSEVELT, IN THE IN-
DEPENDENT, JANUARY 4, 1915

THE TIME HAS COME

PRESIDENT WILSON, in his response to a delegation from the American Union Against Militarism which interviewed him at the White House last week, made a statement of his hopes for the permanent establishment of peace which shows that he is in accordance with ex-President Taft and ex-President Roosevelt on the fundamental principle of the League to Enforce Peace. A comparison of the three declarations printed above will show the unanimity in aim and method of the three men now living who have stood at the head of the American Government.

The two paramount questions now before the world are: first, how can the Great War be stopped, and, second, how can all future war be prevented.

The second of these questions may prove to be more easily solved than the first. The League to Enforce Peace has already drawn up a program which seems to offer a practical and constructive plan for the establishment of a durable peace.

It is quite within the bounds of possibility, however, that the League to Enforce Peace may prove to be the solution not only of the second, but also of the first question. For if the nations can be brought to an agree-

ment as to the basis of a durable peace, then all immediate issues become relatively insignificant and peace terms ought readily to be arranged. The declaration of Sir Edward Grey, cabled here last week, suggests that at least one of the great combatants is ready to consider the principle of such a League as the basis for the peace that is to come.

Long before this war Sir Edward suggested a League of Nations that would say to the nations that came forward with grievances and claims:

Put them before an impartial tribunal; subject your claims to the test of law or the judgment of impartial men. If you can win at this bar you will get what you want; if you cannot you shall not have what you want; and if you start war we shall all adjudge you the common enemy of humanity and treat you accordingly. As footpads, burglars and incendiaries are suppressed in a community, so those who would commit these crimes and incalculably more than these crimes will be suppressed among the nations.

The Editor of The Independent has just received the following cablegram from The Hague:

's GRAVENHAGE, THE NETHERLANDS, MAY 10, 1916.

The "Dutch Anti-War Council" Committee considers the fact that the German Government says in its recent note to America that it has twice publicly declared its willingness

to make peace, a new cause for mediative action on the part of neutral nations. The Swedish Second Chamber has officially expressed the wish to coöperate with neutrals in such mediation. The Anti-War Council urged the same upon the Dutch Government. Switzerland is also strong for similar action. The recent speeches between the German Chancellor, Dr. von Bethmann-Hollweg, and the English Premier, Mr. Asquith, have opened the possibility of conciliation. The Dutch Committee hopes that you will deem it possible to secure the coöperation of the American peace organizations and eventually the Mohonk Conference in urging President Wilson to promote a Conference of Neutrals to offer mediation for a durable peace, and the arrangement of an international system which will secure the principle of equal rights for all civilized states in the future which Premier Asquith described as the purpose of the Allies.

H. C. DRESSELHUIJS, LL.D.,

President

B. DE JONG VAN BEEN EN DONK, LL.D.,

Honorary Secretary

This cablegram comes from the president and secretary of the Dutch Anti-War Council, under whose auspices was formed over a year ago "The Central Organization for a Durable Peace," the most influential and representative peace body now actively working in Europe. It has branches in the belligerent as well as the neutral countries, and its various national committees are now engaged in the study of its "minimum program" for a permanent peace after the war ends and in bringing the idea before their respective nations. The editor of The Independent is chairman of the American branch.

This is a highly important message, and indicates that the time may at last have come for President Wilson to renew his offer of mediation. He has waited long and patiently. He may fail now. But he is the only man on earth who has a chance to succeed.

It is intimated from Washington that the President will not offer mediation again until he receives assurances from both sides that his good offices will be welcome. In other words, the initiative must come from the belligerents.

That is not the best statesmanship. The Hague Conferences expressly stipulated that

It is expedient and desirable that one or more powers strangers to the dispute should on their own initiative and as far as circumstances may allow, offer their good offices in mediation to the states at variance.

Powers strangers to the dispute have the right to offer good offices of mediation even during the course of hostilities. The exercise of this right can never be regarded by either of the parties in dispute as an unfriendly act.

It is therefore evident that Woodrow Wilson has everything to gain and nothing to lose by renewing his offer of mediation.

AN UNAMERICAN INNOVATION

THE war has accustomed us to censorship as an institution, but it has not made it any less abhorrent to the American mind. It may be a military necessity, but it always involves a dangerous infringement of personal liberty. We have purer plays and purer periodicals than European countries which have a censorship of the theater and the press.

The imposition of a censorship upon an infant art like that of the motion picture is especially objectionable. What would have been the effect if a censorship had been established over still photography fifty years ago? Instead of photography being, as it now is, one of the commonest and most profitable of pastimes, it would mean that the art would be confined to a few rich and powerful organizations, for every one who took a picture

would have to have it inspected and stamped at the cost, say, of a dollar, by his local censor; then, before it could be sent into another state or published in a periodical, it would have to be passed upon by the national censors at Washington.

Now the motion picture camera will soon be made cheap enough so that almost any one can afford one. If not interfered with by censorial laws it will in a few years be the common custom to take motion pictures of home and street scenes, to exhibit these in school, church and theater within a few hours after taking, and to mail them cheaply to any part of the country for exhibition in the family circle or in public. But this very desirable democratizing of the art will be impossible under a national or state censorship where one has to pay a fee of some ten dollars for every new film or two dollars for every duplicate, and have them shown to the censors before being exhibited in public.

But the motion picture is more than a means of amusement and more than a method of education. It is one of the most powerful forms of propaganda yet discovered. Some day there will, we hope, be films attacking the entrenched wrongs of modern society, as "Uncle Tom's Cabin" attacked slavery, for which it was not allowed to circulate in the South, or as "The Servant in the House" attacked phariseism, for which it was prohibited by the censor in England, or as Tolstoy's "Resurrection" attacked autocracy, for which it was prohibited by the censor in Russia. Does any one suppose that our political appointees would in like emergencies stand for the freedom of the film against the pressure of vested interests and popular prejudice? No, we should have again what Shakespeare calls "art made tongue-tied by authority," and the old battle which has been won by the press would have to be fought over again for the screen.

COMPULSORY VOLUNTEERING

THE British Parliament has passed a law to the effect that youths reaching the age of eighteen would be allowed one month's grace in which to enlist voluntarily. If they do not volunteer then they will be conscripted. We now for the first time believe the old story of the Mexican governor who wrote his chief: "In accordance with your request, I am sending you twenty volunteers. Please return the rope."

THE BRANDEIS HERESY TRIAL

FOR nearly four months now the Senate has had under consideration the Brandeis case. And a most discreditable proceeding it has been! Here was a man appointed by the President of the United States to perhaps the most august political office on earth. According to the United States Constitution, the appointment has to be confirmed by the Senate. Two proper courses were open. The Senate could have investigated his fitness quietly, as a committee on admissions of a club would have done, or else they could have called him before them and publicly let him meet his accusers face to face. The Senate adopted neither course. It has instead held open hearings in which various and sundry individuals have appeared before it, bringing all sorts of charges founded in large measure on hearsay and innuendo. If Mr. Brandeis is now rejected his reputation will be smirched, if

not ruined, for life, and yet he has had no opportunity to confute his calumniators. The man has been charged with serious violations of the ethics of his profession without the legal safeguard of an ordinary trial.

We especially deplore the methods of the attorney retained to handle the case for the opposition. This attorney, Mr. Austen G. Fox, of New York, besides examining and cross-examining witnesses, prepared a brief against the confirmation of Mr. Brandeis, which was submitted, we believe, not only to the Senate committee and the whole Senate, but was allowed to become public. The sub-committee rendered its report on May 5, after Mr. Fox's brief had been in their hands. The majority of the sub-committee found all the charges in the brief groundless; the minority agreed that a number of them were groundless. The charges in which the minority reports did not find against Mr. Brandeis included the Warren, Gillette, Kirby, Illinois Central, New Haven Merger, Old Dominion and Consolidated Gas cases. And yet as late as April 20 letters were sent out signed by Mr. Fox, requesting communications, based on his brief, to be sent to senators to influence their final vote on Mr. Brandeis' nomination. In other words, Mr. Fox asked individuals throughout the country to write to their senators, basing their letters on a brief which was repudiated in whole or in part by every member of the Senate sub-committee.

The whole affair has simmered down to a heresy trial. Mr. Brandeis holds views unacceptable to great and powerful interests, and they are determined to "break" him. But we venture to predict that, if they succeed, they will have done more to injure the Supreme Court than Mr. Brandeis' election to it could have done if the charges made against him were true. When the American people once come to believe that the Supreme Court is the last refuge of stand-patism and political obscurantism, and that privilege at all costs will endeavor to keep men who espouse popular rights off the bench, then the popular distrust of the Supreme Court will become intensified and serious. Mr. Brandeis is needed on the Supreme bench.

A SOCIAL DANGER

A LEADING Berlin daily paper, described as semi-official, has introduced the proposition to revolutionize the institution of marriage. "Sister M." calls attention to the alarming decrease in the birth rate, which is natural enough because of the war, and she suggests, as a relief, that all births shall be made equally legitimate, and that no special advantage in law or sentiment should be given to children born in honorable wedlock. The editor says that the correspondence he has received from Prussia overwhelmingly approves the proposition. In France the situation is equally serious.

We have been anticipating something of this sort. It has been reported that during the Thirty Years' War a social license prevailed, but the present movement, we believe, does not mean free love or promiscuity. It means rather that the community would take radical measures for its own advantage controlling prospective motherhood and fatherhood, for what is thought to be the advantage of the race. Germany is not going to leave things to accident, but if she acts will act intelligently and purposively.

War has in many generations and in many countries

killed off the men, and the result has sometimes been polygamy and concubinage. But we have passed that stage. In this country the abolition of slavery made concubinage no longer legal. An attempt now in Germany or in any other country devastated by war to overthrow the institution of monogamous marriage might be very disastrous while it lasted, but it would be temporary. In nature the births of males and females are about equal, and civilized nature requires monogamy. We have had in this country one extraordinary example in the Oneida Community of doing what it is proposed to do in Germany. There the leaders of this Socialist community organized what they called plural marriage, and they decided who should have children, and when. The experiment continued for a generation, but after a while the victims of it would have none of it. It would not be at all surprising if in the uprush and confusion of wild revolutionary theories following the war the sanctities of marriage should be attacked, and it would seem as if the foundations of society were being overthrown, but the basis of public order stands firm in the constitution of human nature.

GASOLINE FOUNTAINS

THE trouble with our sculptors and architects is that they are always behind the times. They persist in making grand staircases when we are using elevators. They construct elegant fireplaces for our steam-heated flats. They carve candlesticks for our electric lights. But, what is most annoying of all, they insist upon encumbering our streets and parks with monumental fountains while leaving our hydrants and taps in naked ugliness.

What is more absurd than to see beside the Speedway a gigantic confection in marble and bronze professing to supply water to man and beast? Neptune and the nymphs are dry and dusty now. The turtles and dolphins are gasping instead of spouting. Their usefulness has departed and of course their beauty has vanished with it. The pedestrians no longer dare to drink at the public fountain, but hasten on to where they can get water or other beverages bottled, boiled or filtered. Horses are few and far between. The vehicles that stream past are run by motors that take water but rarely, tho often athirst for liquid of another sort.

Now, what our artists should do, if they were alive to their opportunities as were the artists of old Greece and Italy, is to erect fountains to supply gasoline. Doubtless it could not be furnished free. None of our philanthropic millionaires could afford this except Mr. Rockefeller. But some sort of a quarter-in-a-slot machine could be constructed whereby the exhausted engine could quench its thirst.

And think of the opportunities a gasoline fountain would afford to the sculptor. Instead of Neptunes and nixies, sea-horses prancing and dryads with invert vases, of which the artists must be almost as tired as the public, we should see gnomes and kobolds, the elves of the mines and all the fairies of the fire, with statues of the dancing Loki, of Prometheus stealing fire from heaven for the service of mankind, a ring of Vestals guarding the sacred flame, or the stately figure of Zoroaster, the high priest of petroleum.

Of course, the artists will make us such fountains in time—but that time will be when the oil wells are emptied and the carriages are run by electricity.

THE BIGGEST PARADE SINCE '65

LAST SATURDAY, MAY 12, 125,000 MEN AND WOMEN, MORE AMERICANS THAN HAVE MARCHED BEHIND ONE LEADER
SINCE THE GRAND REVIEW OF THE G. A. R., MARCHED UP BROADWAY AND FIFTH AVENUE
IN NEW YORK TO ADVERTISE THEIR BELIEF IN NATIONAL PREPAREDNESS

THE STORY OF THE WEEK

No Progress in Mexico

The conference between General Scott and General Funston, representing the United State Government, and General Obregon, representing the de facto President of Mexico, has come to nothing. A tentative agreement had been drawn up and had received the approval of President Wilson. But General Carranza, after apparently trustworthy reports had been forthcoming that he was satisfied with the agreement, suddenly rejected it. General Scott has returned to Washington. The status of the American troops in Mexico is still unfixed by any agreement between the two governments.

The one point of disagreement between the American Government and Señor Carranza appears to be one that is hard to get over. Carranza wants the American soldiers brought back from Mexico. If that were to be done, there would be no need of any agreement at all. Fortunately, the Administration has shown no inclination to give up the purpose which led it to send the troops across the border in the first instance. It must be admitted, however, that that purpose is not being pursued with appreciable vigor.

Almost all the available soldiers in the United States are now in Mexico or on the border. It has even been judged necessary to withdraw a number of coast artillery companies from their posts and send them to Texas. General Funston now has 50,000 men at his command. The President has also called out the militia of three border states, Texas, Arizona and New Mexico. They will presumably take the place of some of the regular troops along the border and release them for duty nearer the front.

Meanwhile Villa, the bandit, is as mysteriously invisible as ever. He has not been captured; he is not even being pursued.

At Polaris, a border mining camp

near Lochiel, Arizona, and at Glen Springs, Bouquillas, and Deemers, Texas, there have been minor repetitions of the raid on Columbus that precipitated the punitive expedition.

Doubling the Regular Army

Out of the deadlock between the House of Representatives and the Senate on the size of the army to be provided by the Army Reorganization bill has come sudden agreement. The conference reports the bill to the two houses this week and prompt ratification should be the outcome.

Under the present law a maximum size is provided for the army, but no minimum. Under the Army bill, as now amended, there will be a minimum of 160,000 men, and it will be the duty of the War Department to see that the forces do not fall below that number. The maximum size of the army in time of peace may be 175,000, if the President so decides, and in event of a national emergency the President may increase the number to 218,750 men, without further action by Congress.

In addition to these numbers, which include only the fighting regulars, there will be in time of peace in round numbers 5000 Philippine scouts, 6000 of the Quartermaster corps, 7000 of the Medical corps, 3000 of the Signal corps, and nearly 9000 unassigned enlisted men. So that in case of threatened war the President could create, without Congressional action, an army of 254,000 men. This is more than double the size of the present regular army.

There will be added to the existing organization 35 regiments of infantry, 10 regiments of cavalry, 15 regiments

of field artillery, 30,000 men in the coast artillery, five regiments of engineers. The largest increases come in the field artillery and engineering branches, where the need for technical skill and special training makes sudden increases most difficult.

Other Provisions of the Army Bill

The enlistment term is fixed in the Army bill at seven years, three years with the colors and four years in the reserve. There is a further provision that men whose rating is "excellent" may be transferred to the reserves at the end of one year. This system, when it has come into complete operation, will provide a maximum peace army of 175,000, and a trained reserve with from one to three years' experience with the colors behind it of 233,000. The distance which the House conferrees have come in the direction of a larger army is shown by the fact that the maximum figure set in the Hay bill originally passed by the House was 140,000.

The Senate conferrees, on their side, have given up the provision for a volunteer reserve army, and accepted the House provision for a "federalized" state militia of 425,000 men. The size of the National Guard in each state is determined by the ratio of 800 men to each Senator and Congressman. It is decreed that members of the National Guard shall take a double oath of allegiance, to the state and to the nation.

Further provision is made for carrying out the idea set forth by the President of a "citizenry trained to arms," by encouraging the establishment all over the country of training camps on the Plattsburg plan. While it is decided not to provide pay for the men training under this system, all the necessary expenses of transportation, uniforms, subsistence and medical attendance are to be borne by the Government.

The House proposal for the government ownership and operation of nitrate

plants for providing materials for the making of explosives is retained in the bill. These plants in time of peace are to produce nitrates which may be sold for fertilizing purposes. The selection of the sites for nitrate plants is left to the President, and \$20,000,000 is set as the limit of cost for the establishments.

Authority is given to the President to seize and operate in time of threatened war private plants for manufacturing munitions of war. He is empowered to create a board of five, composed of three civilians and two army officers, to study the advisability of the government's entering upon such manufacture of munitions.

The probable passage of the Army bill in the form worked out by the conferees indicates what increase there has been in the country in the past year in sentiment for military preparedness. Two elements have done much to establish this conviction that we need to be better prepared than we have been: the fact that practically the entire available forces of the regular army are in service in Mexico and along the border, and that it has been found necessary to call upon militia as well, while the end is not yet in sight; and the continuing tension over the submarine activities of the German navy, only partially relaxed by the repeated assurances of the German Government.

The Great Preparedness Demonstration

A most impressive demonstration of the strength of the preparedness sentiment, at least in the East, was afforded by the gigantic parade in New York City last Saturday. For eleven hours a body of citizens larger than the United States army moved steadily over a route along Broadway and Fifth Avenue from the City Hall to Central Park. They were followed by several thousand women marchers and by 8000 of the New York National Guard. The count made by the New York Times set the number of march-

ers at 125,683. Other estimates put the figure from ten to twenty thousand higher, but the lowest figure is quite impressive enough.

No parade of equal size has been seen in this country since the Grand Review of the Federal Army in Washington at the close of the Civil War. It was probably the greatest procession of civilians that the world has ever seen.

The marchers were reviewed at Twenty-fourth Street by Major General Leonard Wood, Commander of the Department of the East; Rear Admiral Usher, Commandant of the Brooklyn Navy Yard, and Mayor John Purroy Mitchel, of New York City. The list of professions, trades, businesses, organizations and groups represented in the line suggests the universality of the preparedness sentiment in the country's greatest city:

The marching thruout the parade was done in admirable style and good order. Never less than 13,000 marchers passed the reviewing stand in an hour, and at times the number rose to 20,000. General Wood described it as the best citizen marching he had ever seen, and Joseph H. Choate said of the parade as a whole, "I am deeply im-

prest with the splendid physical appearance, and apparent intelligence of the men. They would make good soldiers. They have an earnest and brave bearing and show that they do not take their marching as play. They are in deadly earnest. The parade is bound to have a great influence on the country."

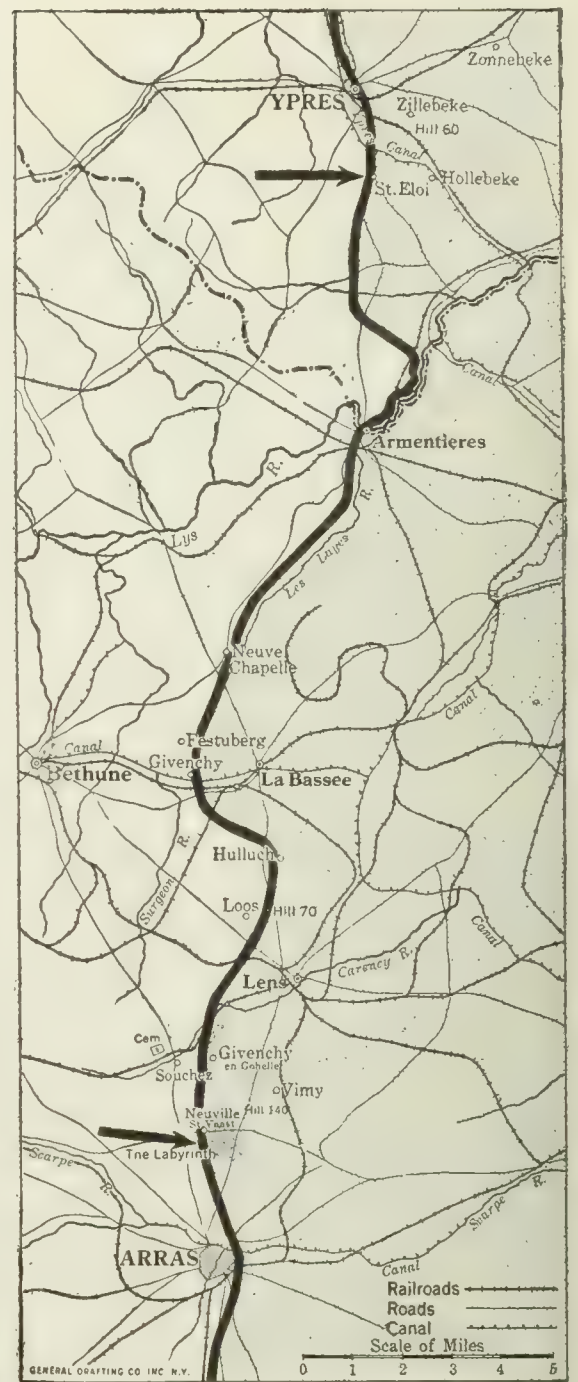

It was estimated that a million people watched the parade as it passed.

The British Front

The French troops on the western part of the line have been withdrawn, doubtless for the defense of Verdun, and the British have taken their places. The British lines now extend from the sea—except for the short distance held by the Belgians—to Frise, beyond Peronne. The "Anzac" troops, that is the Australian and New Zealand Army Corps, who were employed at Gallipoli, have been in part transferred to France. As soon as they took their places at the front the Germans in the opposing trenches hoisted a banner inscribed "Welcome, Australians."

The Germans seem to be determined here as elsewhere to keep the offensive in their own hands, so without waiting for Kitchener's army to begin its overdue "spring drive" they have begun with attacks at various points in Flanders and France. At the old Hohenzollern redoubt near Hulluch they succeeded in capturing some of the British trenches. In Ploegsteert wood, north of Armentières, the Germans sapped and blew up the front trenches.

It is rumored that the Germans are

THE BRITISH LINE OF BATTLE

The Germans are reported to be massing great bodies of troops, including Turkish and Bulgarian contingents, on the western front in France and Flanders. The line here has scarcely been shifted at all for more than a year and is now held by British, Canadian and Australasian troops. The shaded side represents territory held by the Germans. The arrows show the points where the British have recently made counter-thrusts. The Germans last week delivered heavy blows at St. Eloi, Armentières, Hulluch and Giverny, but it is not yet apparent where they intend to direct their main offensive

making great preparations for a desperate attempt to break thru the British lines and reach Calais, and that among the troops collected for this purpose are Turks and Bulgars. This report, whether true or not, may be intended to offset the effect of the announcement by the French that they have been receiving reinforcements of Russians from Port Arthur on the Pacific. Nothing is said on either side about the numbers of the Russians or Turks who have gone to France.

On the Meuse Hills The efforts of the Germans to gain a substantial success at Verdun have been renewed with more energy than ever. Their attack was directed as before against the sector between Forts Vaux and Douaumont, east of the Meuse, and against Le Mort Homme and the adjacent hills, Nos. 304 and 287, west of the Meuse. Their only success

MOBILIZING MUSIC

This collection of real musical instruments—and harmonicas—is to be sent to the soldiers in the trenches who have proved their eagerness for concerts by banging "Tipperary" on tin-pans

was achieved in the western field. Here after a terrific bombardment four infantry charges were made in two days which gave the Germans possession of the French entrenchments at several points, notably those on the crest of Hill 304. The Germans claim the capture in these operations of fifty-three officers and 1515 men. The French regained some of their lost positions in counter attacks later in the week.

General Petain, who has had charge of the defense of Verdun from the beginning of the battle, has been appointed to the chief command of the entire right wing of the French army. He is succeeded at Verdun by General Robert G. Nivelle, who was at the beginning of the war merely a colonel in the Fifth Artillery. He is sixty years old.

The Seven Who Were Shot All seven of the men who constituted the provisional government of the short-lived "Irish Republic" and signed its manifesto have been shot by order of the court-martial. Besides these seven more have suffered the same penalty. Others who had also been condemned to death have had the sentence reduced to imprisonment for life or a limited period. Among these is the Countess Georgina Markiewicz, who has been condemned to penal servitude for life. Joseph Plunkett, just before his death, was married to Grace Gifford, daughter of a prominent solicitor of Dublin. When she heard that he was to be shot she bought an expensive wedding ring, put on widow's weeds, and went to the barracks, where the ceremony was performed. Her sister, Muriel, was the wife of Thomas MacDonagh, who was shot the day before.

These summary executions have aroused considerable resentment even in England, and among those who had

no sympathy with the rebellion. In one case at least it seems that a comparatively innocent man was unwarrantably put to death. This was F. Sheehy Skeffington, editor of the *Irish Citizen*, who was a pacifist and had taken no part in the rebellion, tho he had previously been active in the anti-enlistment movement.

In the House of Commons John Redmond urged clemency and John Dillon denounced the government in furious terms such as these:

If Ireland were governed by men out of Bedlam, they could not pursue a more insane policy. You are letting loose a river of blood between two races, which, after 300 years of hatred, we had nearly succeeded in bringing together. You are washing out our whole life work in a sea of blood.

If your program is to be enforced in Ireland you had better get ready 100,000 men to garrison the country. And then what sort of appearance will you make as the champions of small nationalities?

It would be a good thing if your soldiers were able to put up as good a fight—3000 against 20,000 with machine guns and artillery.

I am proud of their courage, and if the English people were not so dense they would have these people fighting for them.

Premier Asquith, in replying, said Mr. Dillon had forgotten the elementary rules of justice. Since he had spoken of a "sea of blood," it would be well to recall the actual facts. The total casualties of the military were 124 killed and 397 wounded, and of civilians 180 killed and 614 wounded.

Mr. Asquith later went to Dublin to investigate the situation in person.

Germany Sank the "Sussex" In the note of May 4 the German Government professes doubt that the French steamer "Sussex," which was sunk in the Channel on March 24, was the victim of a German submarine. The commander of the submarine reported sinking a vessel at about that time and place, but he be-

lieved it to be a troop transport and his sketch of the vessel had two masts, while the photograph of the "Sussex" published in the London *Graphic* showed only one. But a photograph of the "Sussex" taken after the explosion shows two masts. Besides this a fragment of bronze found in the wreck and sent to Washington by the British Government was found by our naval officers to be identical with the metal used in the German torpedoes. Consequently, the German Government frankly acknowledges its mistake and in accordance with its previous promise assumes full responsibility. In the note of May 8 Foreign Minister von Jagow says:

In view of the general impression of all the facts at hand the German Government considers it beyond doubt that the commander of the submarine acted in the *bona fide* belief that he was facing an enemy warship. On the other hand, it cannot be denied that, misled by the appearance of the vessel, under the pressure of the circumstances, he formed his judgment too hurriedly in establishing her character and did not, therefore, act fully in accordance with the strict instruction which called upon him to exercise particular care.

In view of these circumstances the German Government frankly admits that the assurance given to the American Government, in accordance with which passenger vessels were not to be attacked without warning, has not been adhered to in the present case. As was intimated by the undersigned in the note of the 4th instant, the German Government does not hesitate to draw from this resultant consequences. It therefore expresses to the American Government its sincere regret regarding the deplorable incident and declares its readiness to pay an adequate indemnity to the injured American citizens. It also disapproves of the conduct of the commander, who has been appropriately punished.

The Capture of Kut From details which have been disclosed since the surrender it is evident that General Townshend held out to the last extremity. It was November 21 when he encountered a force of 13,000 Turks entrenched at Ctesiphon with

thirty-eight cannon. He penetrated the first and second lines and took eight of the guns, but the Turks received reinforcements on the following day and he was driven down the Tigris to Kut-el-Amara. This town he held until April 29, when he sent out his last wireless to the relief expedition down the river announcing that he was out of food and had hoisted the white flag. For the last two weeks the troops had nothing to eat but four ounces of flour a day and the flesh of the horses that they had slaughtered. Their only source of supply was the food brought by aeroplanes, which dropt the bags as they flew over the town, since there was no place for them to land. In this way 18,800 pounds of food had been brought from the supply stations down the river.

But the British had also to provide not only for their troops but for the native population of Kut as well, and these numbered six thousand. They tried to expel the civilians, but the Turks threatened to shoot any who were sent out. Besides these dependents there were over a thousand sick and wounded in the garrison. These have been sent down the river to General Suke in exchange for disabled Turks.

According to the official Ottoman report, the force captured at Kut consisted of one-fourth English and three-fourths Hindus. The number of officers taken was 550, half of them Hindus. On the day of the surrender, General Townshend ordered the arms and munitions to be destroyed or thrown into the Tigris, but the Turks claim to have recovered forty cannon, twenty machine guns and five thousand rifles in a condition so they can be repaired.

The Russians approaching from the northwest have now got within a hundred miles of Bagdad, that is as near as the British were at Kut. They recently defeated a Turkish force at Kasr-i-Shirin, near the Persian frontier, capturing a camel supply train

and three guns. From the north the Russians have reached Rowanduz, only two miles from Mosul on the Tigris above Bagdad.

The Turco-Russian War

Kut-el-Amara has eliminated the British from the Asiatic field, at least for the time, and left the Russians and the Turks to fight it out between them. Two famous commanders who last year met in the swamps of Poland are now confronting one another in the mountains of Armenia. The Grand Duke Nicholas, who vainly attempted to defend the Russian frontier against the Germans in the first part of the war was, after having lost Poland, Courland and Galicia, sent to the Caucasus. There was much speculation at the time as to whether this transfer was to be interpreted as punishment for his failure in Europe or as an opportunity for a new campaign in Asia. Perhaps it was both. The Czar, who nominally superseded the Grand Duke

The surrender of General Townshend's army at

as commander-in-chief of the Russian armies in Europe, has done nothing except to hold the line of defense. But the offensive of Grand Duke Nicholas has cleared the Turks from a great semicircular belt, over a hundred miles wide to the south and west of the Caucasus. Within this zone of conquered territory are the two great lakes of Van and Urumia, and such important cities as Trebizond, Erzerum, Mush and Bitlis. If the Grand Duke can hold these gains he will have the honor of being the only one of the Allied generals to effect an important conquest.

But now comes the tug of war. General von Mackensen, who drove the Russian armies back from the German frontier and then conquered Serbia, has been sent to take command of the Turkish army in Armenia and to check the Russian advance from the Caucasus. So far he seems to be doing it. The Russians who were advancing from Erzerum to Erzincan and from Mush to Diarbekr have met with stout resistance and some setbacks. In the mountains west of Mush an all day battle was fought in a snowstorm which, according to the Constantinople report, resulted in the rout of the Russians and the capture by the Turks of six officers, three hundred men and four machine guns.

The Turkish armies defending Erzerum and Trebizond were not captured with these towns but mostly retreated to the west where they have now presumably been reorganized under the direction of General von Mackensen and other German officers. Nothing, however, is known to the public about the size and condition of these Turkish troops or how they compare with their Russian opponents in these respects. With the clearing away of the snow from these Armenian highlands the campaign, which has been dragging along here for a year and a half, is likely to be brought to a speedy and decisive issue.

THE GREAT WAR

May 8—Russians defeated by Turks west of Mush, Armenia. Germans gain crest of Hill 304 west of Verdun.

May 9—Russians reach Persian frontier, 100 miles from Bagdad. Four more Irish rebels executed.

May 10—Official British estimate of German casualty lists makes the total for the war to the end of April 2,822,078, of whom 664,552 are dead.

May 11—Germans take British trenches at Hulluch. Germans attack British in East Africa.

May 12—Food riots in Germany. Premier Asquith goes to Dublin.

May 13—Heavy artillery firing on Trentino and Isonzo fronts.

May 14—Belgians invade German East Africa.

NO PIGTAIL FOR UNCLE SAM

BY THEODORE ROOSEVELT

THE editors and publishers of The Independent have asked me for a word of greeting on the occasion of its acquisition of Harper's Weekly and for an expression of my views on the present critical situation in our national life.

I am heartily glad to congratulate them upon what they have just accomplished. I have been intimately associated with the president of the Independent Corporation, the publisher and the associate editor of The Independent in journalistic work in recent years, and they and their associates have my very best wishes for their continued success.

Harper's Weekly is a historic American publication. At one time it was as strong a force in American weekly journalism as our country contained. Under George William Curtis and Thomas Nast it played a commanding part as a "Journal of Civilization," in the decade succeeding the Civil War.

MY views upon the vital questions of this crucial time in the history of the United States have been repeatedly set forth during the last twenty-one months. I am glad to give again to the readers of The Independent and of Harper's Weekly, now a single group, my conception of the primary duty of America at this crisis, in the words I recently used at Chicago:

"A year and three-quarters have passed since the opening of the great war. War has been waged on a more colossal scale than ever before in the world's history; and cynical indifference to international morality and willingness to trample on inoffensive, peace-loving peoples who are also helpless or timid have been shown on a greater scale than since the close of the Napoleonic wars over a century ago. Alone of the great powers, we have not been drawn into this struggle. A twofold duty was imposed upon us by the fact of our prosperity and by the fact of our momentary immunity from danger.

"This duty was, first, to make our voice felt for the weak who had been wronged by the strong and for international humanity and honor and for peace on terms of justice for all concerned; and, second, immediately and in thoroughgoing fashion, to pre-

pare ourselves so that there might not befall us on an even greater scale such a disaster as befell Belgium.

"We have failed in both duties. Incredible to relate, we are not in any substantial respect stronger at this moment in soldiers or rifles, in seamen or ships, because of any governmental action taken in consequence of this war; and, moreover, we have seen every device and provision designed by humanitarians to protect international right against international wrongdoing torn into shreds and have not so much as ventured to speak effectively one word of protest. The result is that every nation in the world now realizes our weakness and that no nation in the world believes in either our disinterestedness or our manliness.

"There are persons in this country who openly advocate our taking the position that China holds, the position from which the best and wisest Chinamen are now painfully trying to raise their land. Nothing that I can say will influence the men and women who take this view. The holding of such a view is entirely incompatible with the right to exercise the privileges of self-government in a democracy, for self-government can-

not exist amongst people incapable of self-defense.

"But I believe that the great majority of my fellow countrymen, when they finally take the trouble to think on the problem at all, will refuse to consent to or acquiesce in the Chinafication of this country. I believe that they will refuse to follow those who would make right helpless before might, who would put a pigtail on Uncle Sam and turn the Goddess of Liberty into a pacifist female huckster, clutching a bag of dollars which she has not the courage to guard against aggression.

"I SPEAK of the United States as a whole. Surely it ought to be unnecessary to say that it spells as absolute ruin to permit divisions among our people along the lines of creed or of national origin as it does to permit division by geographical section. We must not stand merely for America first. We must stand for America first and last; and for no other nation second—except as we stand for fair play for all nations. There can be no divided loyalty in America. There is no room in this country for German-Americans or English-Americans, Irish-Americans,

or French-Americans; just as there is no room in this country for a political party based on fealty or opposition to any particular creed, whether Protestant, Catholic or Jew. There is just one way to be a good citizen of the United States, and that is to be an American and nothing else. This is not a question of birthplace or national origin or creed. Any big group of loyal and patriotic Americans will include men of many creeds and many different race strains and birthplaces. But they will not be loyal and patriotic Americans at all unless they are Americans and nothing else. The first step in preparedness is dependent upon our common and exclusive American nationality.

"Preparedness must be both of the soul and of the body. It must be not only military, but industrial and social. There can be no efficient preparedness against war unless there is in time of peace economic and spiritual preparedness in the things of peace. Well-meaning men continually forget this interdependence. Well-meaning men continually

Bigelow, Plattsburg

COLONEL ROOSEVELT AND GENERAL WOOD

Two preachers of Preparedness at the Plattsburgh Camp, encouraging the practice of Preparedness. "I speak for military preparedness. I speak for the performance of international duty"

speak as if efficient military preparedness could be achieved out of industrial and social chaos, whereas such military preparedness would represent merely a muscular arm on a withered body. Other well-meaning people speak as if industrial preparedness, social preparedness, would by itself solve the problem. This is worse folly than the first. Let these men look at Belgium and compare her fate with that of Switzerland. Belgium was one of the countries in Europe in which the greatest advance had been made in industrial efficiency, and as regards social justice she was at least well ahead of us. But there had been no corresponding military preparedness. The result is that both materialist and the humanitarian have been ground into the dust together, simply because the men so successful in peace had not in peace trained themselves so as to be able

to defend themselves in war, and to make other nations realize in advance that they were able to do so.

"I SPEAK for military preparedness. I speak for industrial preparedness. I speak for the performance of international duty, which can only come when we fit ourselves to do our duty to ourselves, and when we have made up our minds never to make a promise to any other nation which cannot be kept, which ought not to be kept and which will not be kept. I speak of all this in the interests of national unity and manhood, of international peace, and of the service of our country and of the world at large.

"I appeal to Americans everywhere to stand against the crass materialism which can show itself just as much in peace as in war. I appeal to our people to prepare in advance so

that there shall be no hideous emergency which renders it necessary to submit to inordinate profit-making by the few simply because, when the emergency comes, we must improvise at whatever cost the things that for our sins we have failed to provide beforehand. We cannot afford to leave this democracy of ours inefficient.

"Our national character is in the balance. Americanism is on trial. If we produce merely the self-seeking, ease-loving, duty-shirking man, whether he be a mere materialist or a mere silly sentimentalist; if we produce only the Americanism of the grafter and the mollicoddle and the safety-first, get-rich-quick, peace-at-any-price man, we will have produced an America faithful only to the spirit of the Tories of 1776 and the Copperheads of 1861, and fit only to vanish from the earth."

Oyster Bay, Long Island

THE PORT OF THE MIDNIGHT SUN

RUSSIA, foiled in her efforts to acquire an ice-free port to the south, has turned toward the north instead, and there, upon the Arctic Ocean, has opened a new harbor for Petrograd. The war, by closing the Baltic, has forced Russian trade to seek its ancient outlet thru Archangel. Before the time of Peter the Great, England used to receive from Archangel exports amounting to more than a million dollars a year. But when Peter opened his "window upon Europe," named after himself or his patron saint, he ruthlessly closed the north window opening upon the Arctic. In recent years it has been regaining something of its former importance, and since the war began it has been the sole channel thru which England and France could supply their needy ally unless they sent arms around the world and into Russia by way of Vladivostok. Consequently the single track narrow gage four-hundred-mile railroad running to Archangel has been congested with traffic and thousands of tons of munitions and supplies needed at the front have been piled up on the shores of the White Sea.

What is worse, the channel leading to Archangel is blocked with ice for six months of the year. So the Russian determined to open the port still further to the north, but on the open sea, and kept ice-free by the expiring efforts of the Gulf Stream. A naval base had been started in 1895 at Kola Bay or Alexandrovsk, but the

new port of Ekaterina is established beyond this on the Murman or Norman coast and only sixty-six miles east of the Norwegian boundary.

It is not probable that Ekaterina or Catherine Bay will ever become a popular place of residence, since it is mostly dark for half the year and the region round about consists chiefly of barren rocks, fir forests and dismal swamps. But it is some six hundred miles nearer the Atlantic and it is always accessible.

To construct a double track railroad 700 miles long thru this almost

uninhabited and very inaccessible country was no easy task in wartime, yet we are told it has been accomplished at the rate of a hundred miles a month and is now open to traffic. It seems, however, that the stretch along the shore of the White Sea is not yet finished, so goods have to be transported by boat from Kandelax to Kem. The rolling stock of the new railroad is mostly American-made. A large part of the roadbed had to be built upon piles over the marshes and lakes.

Where the new railroad from Petrograd first strikes the White Sea, just below Kem, a new commercial port of Soroka has been opened for traffic, or will be as soon as the Sea is free from ice. Soroka is much nearer to Petrograd than the old port of Archangel or the new port of Ekaterina, so it will probably be used by merchantmen during the open season of summer. At the present time there are nearly a hundred vessels waiting in the White Sea for the ice to melt so they can discharge their cargoes.

The port and railroad of Archangel are henceforth to be reserved by the government for military purposes exclusively. It is possibly from Archangel that the Russian troops are being dispatched to Marseilles for service in France.

The opening of these new ports is of considerable importance to America because all signs point to a great increase of commerce between Russia and the United States, part of which will find an entrance thru the Arctic Ocean.

RUSSIA'S NEW SEAPORT

WHEN ANOTHER REPUBLICAN NOMINATION WAS IN DOUBT

Among these "prominent candidates for the Republican nomination" pictured in Harper's Weekly for May 12, 1860, the man who was to dominate half a century of American history has as inconspicuous a place as, perhaps, the next President holds now in the public thought. These three illustrations reproduced by courtesy of Harper and Brothers

PEOPLE AND THE PARK

BY HELEN HOYT.

ON THE CAR TO WORK

*Doors and doors and doors go past:
Hardly a tree: only bricks to be seen. . . .
Three more blocks,—two more—one—at last
The park! Filling all the view with green.*

*Now quickly I look, quickly take,
Thru branches low, branches high,
Blue snatches of the far lake;
Quick, far snatches of the blue in the sky.*

*Whirling, twinkling jets of spray
Drench the lawns from the thirst of the sun;
They spread out their silver and shift and sway,
And the wetness sparkles where they run.*

*I can feel thru the peopled car
How fresh and pleasant is that air;
Thru the clangor and jar
The delicacy of the shadows there;*

*And feel the cool paths under my feet. . . .
But now, good-bye, park! Until to-night!
I am a prisoner here in my seat. . . .
O, my prison is hurrying me out of sight.*

THE JEALOUS PARK

*I went into the park to think,
To ponder over difficult things;
But the park would not let me think.
The grass would always be saying
"Lay your fingers in my softness,"
And the water was saying
"Listen, listen, listen,"
And "Follow" said the paths,
Leading away before me
With invitations.
But most of all the trees called to my thoughts,
Reaching out their branches to me;
Drowning my thoughts in a green flood.*

BEAUTY

*How strange it is to remember
That the turning red of the leaves in autumn
Is chemistry
As much as when litmus changes its color
Over the acid fumes of the test-tube:

Is chemistry, and physics and botany
As much as any that professors teach
Out of books in classrooms;
Follows the same ancient laws as litmus;
Follows them as blindly as litmus;
And knows nothing at all
Of that which we have named "beauty"!*

FROM A HIGH WINDOW

*Roof after roof,
Gables and turrets and chimneys,—
Dingy,
Angular,—
Yet softened now by the twilight
These lofty places
Quiet and unencumbered and apart,
Are full of shadows
And shadowy restfulness.

O darkening sky,
Is it like this our city looks to you
Uncrowded and dim?
And you never guess the turmoil
Under this calm of roofs.*

FLIRTATION

*He whistled soft whistlings I knew were for me,
Teasing, endearing.
Won't you look? was what they said,
But I did not turn my head.
(Only a little I turned my hearing.)

My feet took me by;
Straight and evenly they went:
As if they had not dreamed what he meant:
As if such a curiosity
Never were known since the world began
As woman wanting man!

My heart led me past and took me away;
And yet it was my heart that wanted to stay.*

THE SPIRIT OF THE ADMINISTRATION

BY NORMAN HAPGOOD

DURING the thirteen years that I have been more or less connected with public affairs, I have been occasionally accused of enthusiasm. It was so when Roosevelt was President, when Hughes was Governor, as it is now that Wilson is President, that Mitchel is mayor. The charge is not disturbing. Critical faculty is not shown by an evenly distributed censoriousness. It is shown by choice of standards and perception of whether they are being attained. In my opinion, the world is better because Wilson has been President and will be further benefited by his continued leadership.

He is a statesman, not merely a crusader. In the head of Mr. Bryan or Mr. Ford, a mere idea may take lodgment and remain there regardless of the facts at present existing in the universe. Such men are useful, but we do not make executives of them. For a national executive we seek a man who is in politics what Mr. Ford is in his own business, progressive but also exact. The usual defect of the tory is that he lacks spir-

Those who read The Independent this week know Mr. Hapgood well, some thru the pages of Harper's Weekly, the others thru his wide reputation as a constructive liberal. We are glad to have him set forth here, for both groups in the enlarged family of Independent readers, his reasons for believing that President Wilson's Administration has made good.—THE EDITOR.

itual inspiration; that of the radical that he lacks proportion. An American Tolstoy would make a troublesome President. If John D. Rockefeller, on the other hand, were President, he would lack the apostolic element. Woodrow Wilson's mind dwells on upward principles, and at the same time he connects them successfully with the facts of 1916. Lincoln said he ran the machine as he found it. He had fanatics to combat, and Wilson likewise has pacifists, militarists, socialists, prohibitionists and single-taxers who think him blind. But Lincoln, while balanced, was in-

tellectually and morally progressive, and so is Wilson.

Roosevelt had a valuable message. He brilliantly pounded it into the heads of the masses, and when Taft tried to recede he found himself in trouble. Wilson, taking political liberty where Roosevelt dropt it, carried it further, to the great disgust of the former President, among whose many virtues the habit of admiring rivals is not discernible. Wilson could not have done the simple pioneering as audibly as Roosevelt did, for more than twenty years, but on the other hand Roosevelt's work ended itself. He could not have passed the Currency Act, removed privilege from the tariff, and completely destroyed the lobby. It is to be doubted whether he would have secured a rural credits bill and an income tax. In foreign affairs he would have continued successful, but his success would have been different. It would not have been so profound in principle. It would have been, altho with American breeze, *Welt Politik*, in the established sense. The success

would have been external. It would be taking an isthmus if he desired it; or stopping a war before one of the belligerents was ready; or, if we can believe his own fulminations, the forcing on Mexico of order at the cost of evolution.

All these things are the opposite of Mr. Wilson's foreign policy. In the Colombian treaty, the Panama tolls repeal, the disapproval of the six power loan, the Pan-American doctrine, the sympathetic leniency toward the Mexican revolution, he has proceeded on the theory that he is not a lawyer retained by the United States to wrest from others every point, right or wrong, but an official whose vast power is lodged there to be used with complete fairness. Entire fairness is extraordinarily hard to put in practise in domestic affairs, and still more in foreign, and it is the practical success of ideal principles that gives to Mr. Wilson his distinction. The public, when it put him in office, talked as if that was what it desired. The next election may show whether it really had such a desire, or merely dreamed it had.

I say "may," for of course a dozen things may obscure the true and underlying issue. But those of us who are interested in the development, power and originality of American life will do what is possible to keep this question to the front.

THIS is not an administration gifted in advertising. Seldom is so much accomplishment accompanied by so little celebration. The work of the departments is a notable illustration. Mr. Houston's work, combined with the rural credits act, has done so much for the farmer that it might well have been the talk of the nation. It has also included the first great steps toward decrease in the waste of agricultural distribution—a monumental contribution—toward lessening the cost of living; yet of that record not one man in a thousand has ever heard. Mr. McAdoo's resourcefulness carried the country easily thru dangerous financial crises, but he reaped little for it save abuse.

The one member of the cabinet whose every move was applauded was one whose methods made his continuance impossible, and Mr. Garrison's popularity with newspapers, society and business was due to qualities the very opposite of those which mark the nature of this administration. Whether in water-power legislation, in relation to powerful individuals, or in the general nature of his thought, he is an attractive expression of the status quo. There is in him nothing to disturb the man of satisfied commonplace. It is interest-

ing and even significant that praise should have been almost unmixed for him, with so little praise and so much censure for those who truly lead. If the President is reelected, as I think he will be, it will be because of what he has done, not because of any of the arts of dramatization or conciliation. I like to think often of a conversation he had on the morning of March 5, his first day in office. He was speaking of Jefferson, specifically of his finished work as architect and builder at the University of Virginia, but generally of the number of big ways in which he had found expression. The President declared that it was much harder to be true to the best in one's self in these complex days; harder to disentangle one's self from manifold detail and do the large things well; but that he was for his part determined so to do; determined to give to the public not a frittered attention, but a concentration on essentials. Those who complain that he shakes fewer hands, holds fewer conversations than most Presidents, should at least read the fact in the light of its meaning to the President himself. He likes to be alone with his thought, which is what we used to call being alone with God. And it might be well to reread Jefferson's epitaph, written by himself, and see what to that philosopher were the essentials of a lifetime. He did not mention, you remember, that he had been Secretary of State, Vice-President, or twice President of the United States. Those positions might be accidental. He mentioned only that he had written the Declaration of Independence and the Virginia Bill of Rights, and that he had founded the University of Virginia. It was not externals, in other words, that he thought worthy of recording, but contributions to liberty and to human thought.

In foreign affairs, the President has had to steer an untried course in a mighty storm. The nerves of the passengers have frequently been shaky. They have mistaken their brain-storms for firmness. If the ship has changed its direction to fit current, wind and coastline, some of the more vocal among them have been convinced that the captain has changed his mind. In truth, the captain's mind is peculiarly steadfast. It watches developments; it admits new information; but it knows always its direction, the principles of its conduct. I do not mean that it never slips. That would be absurd. But I do mean that the slips are slight, unimportant, and temporary, and that they affect the general portrait not at all. They come usually when he tries for a moment to com-

ply, instead of thinking for himself. If partizanship ever stops at the water's edge, it certainly hasn't done so in the nearly two years of ordeal since August, 1914. Rocking the boat and screaming has been a popular pastime. Mr. Hearst and Mr. Roosevelt must be recognized as the leaders in the attempt to turn foreign policy to partizan advantage, but Mr. Root and other notable Americans have joined in. Some German-Americans have been obstreperous, and a society of allied sympathizers was formed to bring us into the war against Germany on general principles. The small extent to which a President in this country can count on fair play from the opposition was shown in Mr. Roosevelt's extraordinary about-face in the Belgium matter, in which he found it expedient to excoriate Mr. Wilson for a procedure that was exactly what he himself had recommended. His proved mis-statements about his own course in Mexico form another illustration, and his attempt to stir up the Catholics forms another.

AGAINST all types of opposition, the President has maintained a policy in the war that has been humane and sound, patient but firm. He has held that peace was what we are to seek, confidence in reason and in love, and that in upholding principle no nervous tantrums by others should stampede his judgment. But he has held also that, in the world we actually live in, certain ultimate duties do fall on the most powerful neutral, notably the duty to prevent murder on the world's highway. Again, he has stood half way between those who rely on an anti-force theory to the extent of unlimited pacifism, on the one hand, and, on the other, those who think they are brave or elevated because they are hostile, impatient, or rash.

To sum up: The Administration has done a good job. It has been done under difficulties, with power, unconventionality, and understanding of a complex situation. It has been done at the same time with purity and with practical sagacity. There is little real point of view in American politics. The Wilson administration has had point of view. The list of accomplishments, unequaled since the Civil War, are visible as parts of a single, undivided whole. They represent enlightened liberalism, which is the desire to extend moral ideas and to equalize the opportunities for living well. The President has been able to make himself the master-liberal of his country, holding the forces together; keeping them headed toward the sun, and making them work.

ROBERT FROST, A POET OF SPEECH

BY GEORGE H. BROWNE

A YEAR ago, Robert Frost was an unfamiliar name in this country. Within a year, however, seven editions of "North of Boston" have been printed! Why? Not because he was "discovered in England" [as a matter of fact, he was "discovered" by The Independent in 1894] but because American readers have discovered that they can understand and enjoy poetry which deals veraciously with the life and the people they know—poetry which is written in a language they can understand and enjoy, because it is the language they speak, vibrant with the feeling and force and form of the familiar spoken sentence. In Frost's poetry, as in all effective writing and in any animated conversation, the sentence does double duty: not only conveys the necessary information, but also records, in an unmistakable tho unwritten notation, the natural tones and inflections which alone give emotional and imaginative vitality to the expression of live thought.

Most people misconceive the real reason why verse of this kind gets its message over so quickly and so effectively. In language, most of us are not used to observing closely (either physically or imaginatively) the really most significant technical elements, namely, the audible tones in which the thought of the sentence-unit is conceived and is to be uttered. The domination of the newspaper, the magazine, and the expository essay—of reading by eye without hearing anything, so that, as a result, our untrained ears cannot even understand most oral reading without seeing the text—has made us content, in poetry as well as in prose, with the dead level of a flat, emotionless, mere algebraic informatory tone. Too much of our so-called poetry is only words fitted to metres—no true tone values, no emotional realities—plenty of melodious rhythm, perhaps, but none of the live tones that infuse with expressiveness even our most ordinary and uninspired conversation. Now, the spoken language is alive with characterizing tones, as nature and the human face are alive with characterizing colors. These tones may be, but seldom caught by ear, reimagined, and fixed on the page, so that the reader will hear and reproduce them exactly.

Verse like Robert Frost's gets its message over, therefore, because in form as well as in substance it is true to life; and no popular verse "gets over" to stay except when it is thus true. Frost is as simple in his diction and imagination as Wordsworth and

even more sympathetic with his subjects, whether people or nature. He gets more music and pathos and force out of homely Saxon monosyllables than any other writer, not excepting Lincoln; and he acquired his mastery in quite the same way that Lincoln did: never letting pass any but the best attainable expression of his thought. Frost has more than once brought a letter back from the country post-office and rewritten it, because one sentence in it was not as good as he thought he could make it.

"I recall distinctly the joy with

which I had the first satisfaction of getting an adequate expression for my thought," he has said; "it was the second stanza of the little poem on the 'Butterfly,' written in my eighteenth year." That was twenty-five years ago! Thus, tho Frost is a recent candidate for popular American favor, and to that extent is new, he is no novice; few American poets have had a longer or more fruitful training, either in technique or in experience.

Born in San Francisco (1874), he came back in his twelfth year with his widowed Scotch mother to live in Salem, New Hampshire, not far from his father's people in Lawrence, Massachusetts. Up to the time of graduation from the Lawrence High School, young Robert was a docile pupil; but then he declared his intellectual independence, and never again took much interest in tasks not self imposed. He spent a few months at Dartmouth (1892), "acting like an Indian in a college founded for Indians." He left abruptly (but voluntarily), took his mother's school, worked in the mill, engaged in newspaper work, married at twenty-one; and after another futile attempt to conform to the "academics," this time at Harvard, retired again to school-teaching and farming in Derry, New Hampshire (1899). For the next seven years he farmed, thought, and wrote—among shorter lyrics the first of his longer poems in the newer characteristic style: "The Death of the Hired Man," "The Housekeeper," and "The Black Cottage," subsequently incorporated into "North of Boston." In 1906 he began to teach English in the Pinkerton Academy at Derry. His success was so marked that he was invited to the Plymouth Normal School (1911) to teach psychology; but the restrictions of even freer teaching there again became irksome; and only two weeks before he sailed (August, 1912), with wife and four children, he decided upon England as a freer field for poetical composition and the realization of his literary ideals.

The Frosts had neither friends nor letters of introduction. Like migratory birds they flitted into solitary independence at Beaconsfield, about twenty miles from London—almost by accident. The publication in London (1913) of his first book of poems, which he carried over with him, was almost accidental; his first meeting with literary friends was most accidental; but the success of his book and the intensity of concentration in the composition of his second book,

MY BUTTERFLY

BY ROBERT LEE FROST

Thine emulous, fond flowers are dead,
too,

And the daft sun-assaulter, he
That frightened thee so oft, is fled or
dead;

Save only me
(Nor is it sad to thee),

Save only me
There is none left to mourn thee in
the fields.

The gray grass is scarce dappled
with the snow;

Its two banks have not shut upon the
river;

But it is long ago,
It seems forever,

Since first I saw thee glance,
With all the dazzling other ones,

In airy dalliance,
Precipitate in love,
Tossed, tangled, whirled and whirled
above,

Like a limp rose-wreath in a fairy
dance.

When that was, the soft mist
Of my two tears hung not on all the
fields,

And I was glad for thee,
And glad for me, I wist.

And didst thou think, who tottered
wandering on high,

Fate had not made thee for the pleasure
of the wind,

With those great, careless wings?
'Twas happier to die

And let the days blow by.
These were the unlearned things.

It seemed God let thee flutter from his
gentle clasp,

Then, fearful he had let thee win
Too far beyond him to be gathered
in,

Snatched thee, o'er-eager, with un-
gentle grasp,

Jealous of immortality.

Ah, I remember me
How once conspiracy was rife

Against my life
(The languor of it!) and

Surging, the grasses dizzied me of
thought,

The breeze three odors brought,
And a gem flower waved in a wand.

Then, when I was distraught
And could not speak,

Sidelong, full on my cheek,
What should that reckless zephyr fling

But the wild touch of your dye-dusty
wing!

I found that wing withered today;
For you are dead, I said.

And the strange birds say.
I found it with the withered leaves

Under the eaves.

"North of Boston" (1914), were far from accidental. It was fortunate for him (and perhaps for us) that his work received immediate and hearty recognition in England; but it is a pity that the force and originality of the New England idylls, written in home-sickness over there, should have diverted attention at home from the merits of the first book, written in rustic isolation over here; for the more traditional in form, it is hardly less original and forcible. As its name implies, "A Boy's Will" is the lyrical record of a young man's thoughts—"and the thoughts of youth are long, long thoughts." This, on his art, from "Pan with Us":

Pan came out of the woods one day—
His skin and his hair and his eyes were
gray; . . .

He tossed his pipes, too hard to teach
A new-world song, far out of reach; . . .

Times were changed from what they
were;

Such pipes kept less of power to stir; . . .

They were pipes of pagan mirth,
And the world had found new terms of
worth.

He laid him down on the sun-burned
earth,

And ravelled a flower and looked
away—

Play? Play?—What should he play?

No longer, was the answer, only
beautiful lyrics, in a variety of tra-
ditional meters, lyrics which will
maintain an enviable position in any
anthology of American verse; but, in
a new and original rapid measure,

gripping, dramatic pictures of the
places and the people he was brought
up among—interpretations of New
England life and character, display-
ing a psychological insight, spiritual
veracity, and artistic simplicity,
power and originality, such as no
other contributor to American litera-
ture has displayed since Emerson
and Whitman.

Frost finds his metrical freedom,
not in *vers libre* like Whitman, but in
decasyllabic, unrimed verses, no two
of which are alike, because of the
tones of living speech in them—the
stressed pauses, the little hurries of
extra-syllabled feet, the preponder-
ance of light and weak endings to the
run-on lines, and fresh metrical in-
flections, which reproduce in verse
the actual shape of the colloquial
sentence. It is a new kind of blank
verse, strange at first sight, from its
very colloquialism; but its strange-
ness disappears if it is read out loud.

"When I began to teach, and long
after I began to write," he told the
boys in our school, "I didn't know
what the matter was with me and my
writing, and with other people's
writing. . . . I found the basis of
all effective linguistic expression to
be the sound in the mouths of men—
not merely words or phrases, but
sentences—living expressions flying
around—the only vital 'parts of
speech.'" And his poems are to be
read most appreciatively, out loud, in

the natural tones of this live speech.
The first poem, "Mending Wall,"
the author likes best in "North of
Boston," because the verses best
catch the sentence sounds. Can't you
see and hear the old farmer shaking
his head, challenging, threatening,
playing and mistrusting his neigh-
bor across the old wall in the spring?

Mr. Frost is not a vers librist, or
imagist, or even realist, except that
he agrees with Carlyle that a poet
has not far to seek for his subject.
"It all depends upon what you call
'beauty,'" says Frost. "Terror is
beautiful. A mob raging down the
street may be made beautiful if you
catch the right tones and rouse the
right emotional reaction by the po-
etic expression of it. You can catch
the tones only with the imagination."
Mr. Frost, if he is a realist, is an
imaginative realist.

Mr. Frost is not a Socialist nor a
profound moralist, but he is sane and
simple and moral. He is a philoso-
pher, even if he doesn't preach and
interpret. He is above all a dramatist,
for all poetry is to him dramatic.
Fortunately for us he is still in the
prime of his creative activity. Much
of his recently written work, which
he has been reading in public this
winter, surpasses the best of his pub-
lished verse; and he will soon be giv-
ing us still better.

THE POET OF NEW ENGLAND AT WORK IN HIS NEW HAMPSHIRE HOME

THE SAGE OF POTATO HILL

Ed. Howe's Thoughts on Men, Women & the World

WHEN I see a disagreeable person approaching, I walk away; I don't wait until he gets started. The most disagreeable people, when they approach, say a few agreeable things to begin with; then is the time for disappearing. It's no use to argue with disagreeable people: if they could help it, no doubt they would. Possibly they regard the annoying things they say as Criticism; every one likes to think of himself as a Critic. The only complete answer to a disagreeable person is flight, or a fight; and no one cares to be mussed up constantly by fighting.

The Jews are not always agreeable people, but they are certainly a great people. And their greatness consists mainly in looking out for themselves; in having the simple financial sense every one should have. A favorite story "on" the Jews represents a Jew as saying: "I'd like to, but can't afford it." There is an important Moral in that joke; you can use that moral to advantage a hundred times a day.

In olden times much was said, and justly, of social injustice. But in course of time public wrongs have been righted: in the United States today we suffer none of the wrongs formerly complained of by our forefathers across the sea, and who still have some cause for unrest. But we of the United States have every right that can be given us by law; we enjoy the fruits of every revolution of the past: we have as much as the old reformers claimed we should have. We have as many rights as can be accomplished by revolution or legislation. The people are in control; we must now remedy the faults of the family, the neighborhood, the individual. The wrongs we have now are the fault of the majority; of what we know as the People, and we have no higher court of resort. We have much impoliteness, idleness and intemperance, but both the rulers and the laws beg us to improve in all these respects.

Formerly Arthur Brisbane attracted wide attention because of the size of his salary. Newspapers and public speakers took delight in referring to the big figures attached to Mr. Brisbane's name; his salary was an inspiration to young men, they said, and we all loved to hear about it. But suddenly Charley Chaplin appeared with a salary of \$650,000 per annum. And now we never hear of the Brisbane figures. Will the Brisbane press agent get busy, or will he submit to ignominious defeat?

If you are pursuing a wrong course, you can't afford it, since you are being damaged. But your competitor can af-

ford it: he is being benefited by your folly. When you talk wrong, or act wrong, remember that you are not only damaging yourself, but helping the person you think least of: the Opposition.

Keep out of Court; you may have justice on your side, but at any time you are liable to run into a judge like that one in Chicago who decided lately that Bacon wrote the plays attributed to Shakespeare.

It is an affront for an agent to call on me. He has decided that he is smarter than I am, and can argue me into giving up some of my hard-earned money for his benefit. There is some question about the desirability of my giving up the dollar he covets; if there were not a question about it, the agent would not call on me, in an attempt to out-talk me, or deceive me in some way. . . . I need certain things, and know it; I am willing to give a dollar for them. It is not necessary for an agent to call on me: I voluntarily go after the supplies, and cheerfully pay my money, and carry the supplies home. But certain other things I do not need, and it is an agent's business to fool me into thinking I do. Therefore I do not like an agent. Possibly the reason I dislike him is that he is so clever that he nearly always sells me when I do not actually want to buy.

I wish more things were like the English sparrow. How it thrives, altho every man's hand is against it! But we must spray fruit, and use a serum on meat animals, and doctor the soil which produces the cereals. It always pleases me to visit a patch of wild plums; they get along without bothering any one. What a fight man is compelled to make for the apple, and what a free gift the wild plum is! I lately rode thru the country in an automobile, and the road was lined with wild crab apple trees. The crab apple trees were in full bloom, and very beautiful; but no one had sprayed them, or trimmed them: they were a free gift of nature. Are the English sparrows, the wild plums and the wild crab apples so healthy because they have never been reformed?

I have never been afraid of the Devil; but it frightens me to think of having a tooth pulled.

The greatest inequality of the sexes I know anything about is that many of the best women are unknown outside of their immediate neighborhoods, whereas a man who is fair, capable, polite and industrious rarely fails to come to the top in some sort of fashion. One of the most useful and capa-

ble women I ever knew is not known a half dozen miles from home, whereas her husband, who doesn't equal her, is a member of the legislature, and quite a prominent man. No really capable, modest and useful man can be buried alive, but most women of that description are.

I know a very bright man, and one day complimented him to his sister. "I suppose he is smart enough," she said, "but I become very tired hearing him repeat. . . ." We all do that; next time you are talking around the family fireside, ask yourself if you are not repeating.

I sometimes suspect that there is no such wise and beneficent legislation as the shiftless of all countries have talked about for centuries.

When we get all we are entitled to, more results in harm somewhere. Liberty can accomplish so much, and no more. Food is a human necessity, but too much of it results in harm. The Germans are an affront to shiftless Americans; they have less liberty and a poorer government than we have, but in time of peace they have more prosperity, better institutions, better scholars, better philosophers, better musicians, better mechanics, and better farmers. In the United States sentimental nonsense has become a crime; we talk of White Man Slavery when we actually have more liberty than we should have.

The world is so crowded with amiable hypocrites that it can not get a fair start toward simple common sense and truth.

If we have injustice that the best human society cannot get rid of, then we should go over the argument again. Possibly what we call injustice is really justice asserting itself, and taking its terrible toll.

"My wife don't go much," a Potato Hill man said lately. "When I ask her to go anywhere with me, she begins to remember the great number of things she has to do, and I can't budge her."

If the people of this country do not pay more attention to little problems, and less to the big ones, they'll finally get into serious trouble; in the opinion of a little man combating some of the opinions of the big ones.

Women have as great a variety of notions in serving company meals as they have in selecting the hats they wear.

What wonderful things you hear of! And how few you see!

WOMAN IN THE MARKET PLACE

BY MARGARET DELAND

THAT Woman is in the Market Place will probably be admitted without discussion. That some of us don't like to see her there does not alter the fact: *She is there!*

And she is going to stay there.

The voices that say that her "place is in the home" are growing a little less assured, because it is dawning—even upon those most anxious to "put her in her place"—that frequently she has no home to which to go. Or that if she has, it is because she has gone into the Market Place to get it.

Another thing is being reluctantly conceded by those who object to Woman in the Market Place—namely, that she is not there necessarily because she likes to be. It has been hard for the advocates of the home to admit this; some still refuse to admit it! To such persons the girl out in the world of industry, jostling up against men, competing with them, fending for herself, getting the bloom rubbed off her mind, and her eyes opened to certain facts in our civilization which men (for her innocence and their own comfort) have found it convenient to hide from her—that sort of girl is, to this almost obsolete type of mind, wilful and conceited and undutiful. But this type of mind is so rapidly becoming extinct that it need not be considered. Most people grant that the girl who has gone out of the Home into the Market Place has done so under the pressure of economic necessity. She has to earn—or die.

THE PASSING OF THE HOME

FOR the startling thing that has happened is that the Home, as a center of self-support, has practically ceased to exist. . . . It was built up as a physical fact, when humanity lived in caves, and the women hung skins on the damp walls, shaped clay pots in which to cook, and sewed what clothing they had with a bone needle and deer sinews. Humanity went on making the Home still as a physical fact, but little by little as a spiritual idea, when the men began to build shelters, and thatch roofs. When they did this, the women still hung things on the walls according to their ideas of "decoration"; still cooked, still sewed;—but by and by the pots grew into spits, or what not

The author of "Old Tales," "The Iron Woman," and "The Awakening of Helena Richie" has studied the woman question for many years, and she writes of it from wide observation and with kindly insight.—THE EDITOR.

(they are timbale irons today!); the bone needles became steel—and what those needles accomplish now we had better not try to state! But in the beginning, both needles and spits were used inside the four walls of the shelter. It was there that women spun and wove, cured meats, cared for their sick, literally "earned their living." So, naturally enough, the phrase "Woman's place is in the Home," became, as we got further away from the cave, a shibboleth for women. "Home" meant duty and decency and dignity; it meant love and service and self-sacrifice. Yet as far back as when men discovered the principles of mechanics—the lever, the inclined plane, the wheel—there was preparing a movement of women away from the Home.

WOMAN IS IN THE MARKET PLACE

THEN, suddenly, with a rush, mechanics captured civilization, and domestic industries ended. Now, practically everything needed by the household is made outside of it—in the Market Place. Woman, instead of spinning and weaving her own cloth, buys it, spun and woven in factories—largely by women. Instead of molding candles, she touches a button and gets her light from metal filaments (manufactured by the hands of women). Instead of kneading bread, she speaks into a telephone transmitter, and the operator—a woman—connects her with the baker, and bread is left at her door. Woman, stopping short in the ages-old routine of toil in the Home, is toiling now outside of it!

This change has come with a suddenness which has jarred the whole fabric of society, and as a result we are today in the midst of an adjustment of Nature to environment, of which, at present, we cannot see the outcome. We can only admit that it is woman, almost as much as man, who sustains the family by labor in the Market Place. If she should say, "*My place is in the Home*," and flock back from the factories and shops and offices, to sit down in the old Shelter and let her men support her, the peo-

ple who are so sure about her "place" would have some very uncomfortable moments! They would be more uncomfortable than some of the Market Place women themselves, in whom, indeed, the instincts of the cave woman decorating her walls, the spinning woman listening to the whirr of her wheel, the housekeeper standing, red-faced, over her revolving spit, still linger. I remember hearing one very efficient, very weary business woman say, wistfully, "I wish I had time to hem pillow cases!" Which only goes to show, as I said in the beginning, that the woman in the Market Place is not there necessarily because she likes it. She is there because she has to be.

HOW SHE ADJUSTS HERSELF THERE

BUT what is going to be the effect of the Market Place upon her? The effect of any pressure of necessity is either adjustment to conditions or extinction. That is a biological fact. It is that which makes—not the narrow people, vociferating about "woman's place"—but thoughtful human beings, look on this extraordinary change in civilization with apprehension as well as with hope. The hope inherent in the economic independence of women is so obvious that it scarcely needs comment. Indeed, the dignity and self-reliance and intelligence of the Woman in the Market Place bring into somewhat dismaying contrast the foolishness and selfishness of some of the women who, because their men toil for them, are deprived of the old wholesome obligations of duties and services. Happily, this parasitic class is small. Many of the women who are served by the brains of their living men (or of their dead men!) have wakened to a sense of civic and social responsibility, and *are* working—not in the Market Place, to be sure, but in human existence!

As for the toiling Woman, machinery has given her respite from certain personal services of love and duty, but the spirit of service—without which a Home is nothing but a House!—is just as consecrated in the Market Place where she supports a home in which she herself dwells only when her working hours are over, as it ever was in the days when Adam delved and Eve span. So no one can deny the hope in the new state of things. Indeed, it is so splendid that the dazzle of it blinds some of us to the dangers that have come with

OF HELENA RICHIE," "THE IRON WOMAN,"
"AROUND OLD CHESTER"

it. Yet, for the fulfilment of the hope, it is well to recognize the dangers.

What are they? Not those to which the fearful folk who talk about the "Home" direct our attention. Not neglected children, nor unfaithful wives, nor ill-kept houses, nor "unwomanly women." These fears are too foolish for discussion! Look at the wise and tender mothers—in the Market Place when, no doubt, they would prefer to be in their nurseries. Look at the working women who are their husbands' good comrades. Look at their well-kept houses, or flats, or single rooms—their "Homes," in fact! The right kind of a wife can carry "Home" about in a suit case, if, for any reason, she and her husband are wanderers! No; the dangers of the Market Place are too real to spend our time in vamping over the threat to the Home because Woman works *for* it and not *in* it. The real dangers fall into two classes:

The danger—physical;

The danger—spiritual.

The physical menace of the Market Place is perfectly apparent:

Fatigue, leading to bodily deterioration.

We have but to consider the conditions under which many women work and their bodily limitations. That Industry gives no thought to those limitations goes without saying. The girl who stands on her feet all day behind a counter; the pregnant woman who works up to the last moment; the mother who goes back to the factory when the baby is hardly ten days old;—such women must suffer structural and emotional changes which may ultimately tell upon the race.

The spiritual danger is more subtle:

Arrogance, leading to sex isolation.

With our first excited consciousness that we are economically independent of men, that we can buy and sell and get gain quite as successfully as they can, there has come to some women the idea that we are biologically independent of men. They even—some of these economically independent women—dare to speak of human passion with contempt! With this has come a suspicion of men as men. Such women fear masculine comradeship, lest the comrade may have ulterior purposes—he has had them ever since the world began! The arrogance of such self-sufficiency is very foolish, but no one can read feminist literature and deny many women are arrogant. We see feminine conceit, like a spot of decay, in the very flower of efficiency! We see it, with real alarm,

This is the fifth article in The Independent's series on THE NEXT GENERATION IN AMERICAN LIFE, in which William Allen White has written on Government, Liberty H. Bailey on Country Living, Elbert H. Gary on Business, and Shailer Matthews on Religion. In the Chautauqua Number, which will be the issue of June 26, President George E. Vincent of the University of Minnesota will forecast THE EXPANSION OF POPULAR EDUCATION.—THE EDITOR.

in that new and noble sense of social responsibility which has been developed in women in the last two decades. Woman is going to reform the world over night! She is going to solve the old puzzles of humanity, cure the old sores that men have allowed to fester in the body politic—run the universe! Sometimes it seems as if she was leaving God out, for "male and female created He them."

Of course, the occasionally violent talk of the new woman is no more an arraignment of economic independence than a single case of measles is an arraignment of the public health. But suppose it is only the poisonous blossom of a rooted belief that women are "better" than men? That there is such a belief is not to be denied. It is one of the reasons some women give for a universal and unqualified suffrage for their sex: "Yes," they say; "universal man suffrage is still in the experimental stage, and it is a pity men vote so foolishly—and wickedly. But it will be different when women have the vote; *because women are wiser than men, and better!*" "Woman," said another advocate of unlimited suffrage, "will save civilization, because Women have consciences!" The inference that men have not would be irritating if it were not so silly.

HOW WOMEN WILL SAVE THEMSELVES

BUT here, it seems to me, are the two dangers of the Market Place—the menace to the body, *Fatigue*; and the menace to the soul, *Arrogance*. How are we going to meet them? Not by sending Woman back to the Home. We couldn't do that if we wanted to—and *we don't want to!* So the first thing for us to do is to teach women to recognize their physical limitations and disabilities; and educate them in matters of health. A slow process, and relatively uninteresting, but of lasting importance. In doing this we shall gradually create a public opinion which shall demand that conditions of the Market Place

shall improve. The Consumers' League is demanding this; and various state legislatures have been quietly and steadily pushed into improving by Law the conditions under which women work. We may even, by an aroused public conscience, reach the point of having, as Germany has, a maternity insurance. But legislation alone can't accomplish much. Laws, to be enforced, must be recognized as reasonable—so we come back to the only thing that can demand and enforce improvement in physical conditions—*Education*.

And for the arrogance? How shall we meet that? Economic independence is so new to women—what wonder that some of us have lost our sense of proportion? What wonder that some of us dare to say that the mother who is supported by her husband is (of all things in the world!) a *parasite!* If there is one human being who is not parasitical, one human being who "earns her living," it is the woman who bears and rears children! What wonder, intoxicated with self-sufficiency, that some of us say to the men, "We can do without you—and good riddance!" Men have never said that of women. Men know they can't do without women.

SHOULDER TO SHOULDER WITH MAN

MY own opinion is that this conceit, which just now is expressing itself in so many foolish and dangerous and unlovely ways, is a phase of growth. We have got to be patient with it. Of course, it is ridiculous and rather irritating;—but it is pitiful, too, just as a child's effort to walk is somehow a little pitiful. But one of these days the child will run! It will stop stumbling and tumbling, and making itself ridiculous, and perhaps injuring itself. Even now the tide of feminine self-sufficiency seems to be ebbing a little. The excitement of the new sense of ability, which we have treated rather like a new toy, is sobering into the realization that economic independence brings great spiritual responsibility, and that it involves the acceptance of the two master words of human nature: Love and Service.

Once let Woman in the Market Place or out of it, accept these two words, and she will march—not ahead of man, still less behind him—but shoulder to shoulder, in the home, in business, and in the world of ideals! And those of us who are a little fearful, a little discouraged, who are (we might as well admit it!) rather on the shelf—we shall look at this Woman in the Market Place with love, and admiration, and confidence, and envy!

Boston

Teach children to get a receipt

IT is often necessary to send children to the store. It is irritating when they bring back the wrong change. Usually it means a trip to the store for father or mother to straighten it out.

Have you had this experience only to find that the clerk couldn't remember the transaction? Or that he insisted it was not his error? Either you got the missing change with an apology, or the proprietor gave it back reluctantly, or he wouldn't give it back at all.

If the clerk feels he is right, he may suspect the child.

If the proprietor is convinced you are right, the clerk is open to censure.

In either case an unpleasant impression is left, and confidence destroyed.

Merchants who equip their stores with the up-to-date National Cash Register render their customers a more than ordinary service.

They protect the buyer, child or grown-up, against disputes. They pro-

tect their clerks against errors. They protect themselves against loss.

This machine furnishes every customer with a receipt or sales slip.

It prints on this the amount paid or charged.

On this is also printed the date of sale and who made it.

It forces a duplicate, printed record for the merchant.

It pays to trade in stores equipped with the up-to-date National Cash Register.

CAT'S PAW

CUSHION

RUBBER HEELS

The Foster Friction Plug prevents slipping.

Cat's Paw Rubber Heels take you through the day's work easily. They prevent that tired feeling.

No holes to track mud and dirt.

They're better, more up-to-date than the ordinary kind. Cost no more—All dealers sell them. 50 cents attached—Black or Tan. Make it your business to put them on your shoes today.

THE FOSTER RUBBER CO.
105 Federal St., Boston, Mass.

Originators and Patentees of the Foster Friction Plug, which prevents slipping.

Do you have weak arches? Then you need the Foster Orthopedic Heel which gives that extra support where needed. Especially valuable to policemen, motormen, conductors, floor walkers and all who are on their feet a great deal. 75c attached at your dealer's—or sent postpaid upon receipt of 50c. and outline of your heel.

Independent Opinions

On January 24, in congratulating the *Congregationalist and Christian World* on its one hundredth birthday, we casually alluded to it as "the first religious weekly in this or any other country." This got us into a peck of trouble, for it seems that to say one religious paper is younger than another is as offensive as to say that one lady is older than another. First, we hear from the *Christian Observer*, which was started as early as September 4, 1813, under the name of *The Religious Remembrancer*. Then comes a fac-simile copy of the *Herald of Gospel Liberty*, Vol. I, No. 1, bearing date of September 1, 1808, and we are informed that *The Independent* "thrashed out this question a good many years ago and declared that the evidence was beyond all question in favor of the *Herald of Gospel Liberty*." Since an appeal to such an authority is unimpeachable—by us—we must revert to our prior opinion and hereby declare—not that the *Herald of Gospel Liberty* is the oldest religious weekly, no, that would be rash again,—but that it is the oldest we have seen.

Another instance of the danger of superlatives is our remark of March 20 that "The oldest Bible Society in the world apart from the Christian Church is the British and Foreign Bible Society, organized in 1804." But the Rev. Frank C. Oberly, of the Lutheran Church of Butler, Pennsylvania, calls our attention to the statement of the Schaff-Herzog Encyclopedia that "The first society formed for the exclusive purpose of publishing the Bible at a low price seems to have been the Canstein Bible Institute, established in 1710, at Halle, in Germany, by Baron Canstein."

We are prepared now to second the motion of the famous litterateur and logician who declared that all superlatives should be banished from the language as never necessary and often incorrect.

On page 22 of your issue of April 3, reference is made to the University of Michigan as the "oldest of our state universities." May I ask your authority for so classifying it? Undoubtedly, Michigan is one of the foremost, and has long been one of the leading state universities.

But in point of age, she is quite young, compared to some others. Georgia, established in 1785, is the oldest in that sense, tho it was not originally called the state university, but Franklin College. Vermont, dating from 1791; North Carolina, 1793; Tennessee, 1794, all precede Michigan, which was established, so far as my knowledge goes, in 1837. The University of Virginia, founded by Jefferson in 1819 and opened in 1825, was the one to establish the principle of a state university as the apex of the public school system. This was eighteen years before Michigan's foundation, so I am puzzled to know in what respect she is called the oldest. The report of the Commissioner of Education for 1913, 11,220, gives 1841 as the "date of open-

HERE IS THE CAMP FOR YOUR BOY

where he can spend his summer in real boy fashion; where he has every facility and the right men to teach him how to manage a canoe, play ball, swing a tennis racket and make things with tools. When your boy returns from a summer or part of a summer at **CAMP YUKON**, you will be astonished and pleased to see how he has improved in health, physique, stamina, and all-round manhood. No more beautiful location for a camp could be imagined than on Lake Cobbosseecontee in the magnificent hard wood grove, sixty miles from Portland, Maine. A readable booklet, full of pictures, will tell you all about **CAMP YUKON**. Write personally to Frank D. Smith, Director, 200 West 96th Street, New York, and you will receive by return mail something that will be to your advantage and that of your boy.

New York Life Insurance Company

Darwin P. Kingsley, President

The New York Life is a Purely Mutual Company, now in its seventy-second business year.

On January 1, 1916, its outstanding business was 1,175,321 Policies, insuring the sum of \$2,403,800,878.

The number of policyholders insured is over one million, eighty per cent. of whom reside in the United States and Canada.

The other 200,000 are scattered over the civilized world, chiefly in Europe, including both the belligerent and the neutral countries.

The Company's program being one of International Peace and Prosperity, it has been able to observe a strict neutrality, and to relieve suffering humanity to a degree scarcely equaled by any other human institution.

The New York Life is a Republic of Man in which the "war-drum throbs no longer and the battle-flags are furled," because its program is founded upon equal and exact justice to all, and there is no room for international hatred or greed.

It holds in trust over Eight Hundred and Fifty Millions of Dollars: the largest amount of funds ever gathered by a single corporation for beneficent purposes.

Its income for 1915 was over One Hundred and Thirty-one Millions; its disbursements to beneficiaries and additions to book value of assets were over One Hundred and Fourteen Millions.

The Company's death-losses in 1915 were only 73 per cent. of the amount provided in the premiums for the mortality of the year, including what may be called war losses.

No security issued by or in any country engaged in the present war and held by the New York Life is in default of either principal or interest.

The policies now offered by the New York Life receive annual dividends at the end of the second year, and those written since 1906 have received extra dividends at the end of the fifth and tenth years.

The Company's Policies contain guarantees of valuable benefits not required by the laws of any State or country, including insurance against total and permanent disability. The disability benefits include a waiver of premium payments and the annual payment of one-tenth of the face of the Policy until the disability ceases or the full amount of the Policy has been paid. The annual cost of this additional safeguard at age 35 is 54 cents per \$1,000 insured.

Policies are payable either in one sum, in annual instalments during a selected period, or during the life of the beneficiary. Or, the proceeds of the policy may be left with the Company at interest, and drawn out as needed in sums of \$100 or more at any one time. This \$100 will be furnished in five checks of \$20 each. You may insure not only against the contingency of premature death, but also against the danger of loss to the beneficiary through bad investments. A Monthly Income Policy furnishes ideal protection to a growing family.

The Annual Report showing business of 1915 and the condition of the Company at the close of that year will be sent on request to any Branch Office or to

NEW YORK LIFE INSURANCE COMPANY

The Craving for Excitement

That Same Healthful Instinct Inspires the Love for Oats

What has placed the oat—think you?—in the king place among foods.

Was it flavor? That has helped, no doubt.

But was it not, above all else, that desire to "feel one's oats"?

Oat-fed animals, like horses, first proved their spirit-giving power. And the ages have confirmed it in mankind.

The oat is the vim-food supreme.

The joy of living suggests it—the universal love for vigor and vivacity.

This is not a mere luxury dish. Everyone knows it is surcharged with life-force.

The desire for snap and sparkle—for stamina, reserve force—is back of the love for oats.

Quaker Oats

The Fascinating Vim-Flakes

But we argue that oat-food should also be made delightful to the taste.

To that end, we make Quaker Oats out of queen grains only. We get but ten pounds from a bushel.

Flavor and aroma abound in those big, plump grains, while small grains are insipid.

Asking for Quaker Oats will bring you this doubly-delicious grade. And without any extra price. It will pay to remember that.

10c and 25c per package

Except in Far West and South

A \$2.50 ALUMINUM COOKER

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us five trademarks—the picture of the Quaker—cut from the fronts of five Quaker Oats packages. Send \$1 with them, and this double cooker will be sent by parcel post. This offer applies to the United States and Canada.

The Quaker Oats Company, Chicago

ing" of Michigan. The same volume, page 210, *et seq.*, gives the following additional dates of opening earlier than Michigan, all of state universities, please note: Alabama, 1831; Delaware, 1834; Indiana, 1824; South Carolina, 1805.

MILLEDGE L. BONHAM, JR.,
*Professor of History and Political Science,
Louisiana State University*

This, like other questions of priority, is mostly a matter of definition. Michigan is commonly called "the mother of state universities" because it was the first to assume the form of that peculiar educational institution now known as the state university. The earlier state universities and the many Eastern colleges have been more or less remodeled to conform to its type. Georgia received its charter in 1784 and the University of the State of New York the same year. Both these institutions, however, are quite different in constitution from the ordinary state university. If we define a state institution as one in part supported by the state or in part governed by state officials, then Harvard and Yale would in their early days be so classed. If we regard the connection with the public school system as the deciding factor, then the University of Virginia is entitled to priority.

While the hills are still reverberating with the echo of your sarcastic comment on "the brave Los Angeles Chamber of Commerce," that body of hysterical men who had the temerity to say the West coast should have one-tenth of the total military strength suggested, let your memory get busy.

Who was it that became hysterical when the Spanish fleet was lost and our fleet hunting it? . . . Have you forgotten the chills that rattled New York's shuddering bones when she feared Cervera was steering for Hell Gate? If you have, I have not. . . .

And now we have a camp of soldiers, backed by artillery and three battleships, just below the line at Turtle Bay. Suppose you had a hostile camp of like character at Cape Fear? Would you think of it with some foreboding or would you laugh it off?

I am one of 1000 reserve fighters in this city, backers of the local police, and my rifle stands beside my desk. I am not a minute man, I am a ten second man, with my rifle and shells, my revolver and its shells, all ready for *instant* use, and my start will require only what time it takes to buckle my belt, pick up my rifle and hat. And don't you believe I can't use my weapons. That is one thing I can do well. Twenty-two years in the woods taught me.

When the training camp opens at Monterey on July 10, there will be a gray head there that is ready to go against any enemy of our land, and I am hoping my appeal of two years ago to Secretary Garrison will find its answer in the organization of the Gray Headed Brigade.

E. E. HARRISON

Los Angeles, California.

No, we have not forgotten that foolish fear of the Spanish fleet which excited Boston and New York as much as the equally fictitious rumor of a Japanese invasion alarms the Pacific coast. The Independent at that time used much the same language about the Spanish war scare as it is now using about the Japanese war scare. But so long as California has "Ten Seconds Men" of the type of our veteran correspondent we believe that the West coast can be held safe until some of us from the East—not so handy with the rifle doubtless but not altogether unprepared—can come to their aid.

PHONE 192 REGENT

*J. E. Jewell**163^A & 164, Piccadilly**London,* 6th January 1916
W.

To the Managing Director,
CADILLAC MOTOR CAR MANUFACTURING CO.
Detroit. Mich. U. S. A.

Dear Sir:

Having in May last decided to purchase a new car, I was in the usual position of uncertainty that most would-be purchasers are in as to the car one can get as the best value for money.

I happened to see in the "Saturday Evening Post" one of your very clearly - and to my mind - very fairly worded advertisements, and immediately went to see your polite and courteous Manager, Mr. Bennett, with the idea of looking over the chassis of one of your new 7 seater 8 cylinder cars - I think you call it type 51.

I took my engineer with me (in whose ability I place very great confidence) and we had a thorough examination of the chassis and loose parts, and both came to the conclusion that apparently a better constructed and more carefully thought out engine, etc. would be practically impossible to find. As a matter of fact I placed an order with Messrs. Bennett for one of your cars.

I may add that I have been a very keen motorist since the year 1903, and have possessed several cars of British and French make, and have at the present time two other English-made cars as well as your 8 cylinder.

It may interest you to know that we took delivery of your car early in August last, and at time of writing she has done between 5 and 6 thousand miles, and up to the present we have never had occasion to lift up the bonnet, unless it has been to show an interested motorist the details of your engine. What I wish to say more particularly is, that in the whole of my motoring experience I have never struck a car that has given such complete and general satisfaction as the "Cadillac" has done, and I feel quite entitled by my experience to give an opinion. I do not know whether it is your firm, or another firm in America that makes use of the phrase: "One has not enjoyed the pleasures of motoring until he has ridden in a"... but if it is your firm, I have the greatest pleasure in thoroughly endorsing your statement: if it is not your firm that makes use of the above phrase in its advertisements, you are, in my opinion, thoroughly entitled to do so. Comparisons are always odious, but my experience of the "Cadillac" is that it is value for money in every sense of the word, which, I regret to say, I have never yet found in the purchase of any other car. It gives one a certain amount of pleasure to be able to write about an article that one finds all right: my previous experience of motor-cars was like taking a dip in the lucky tub - you paid your money and you either got a decent or a bad car; but from what I know of several people this side who are the happy possessors of a "Cadillac" I may say in all fairness to yourself, that I have never heard one that had anything detrimental to say about your car.

You may possibly think it strange that I take the trouble to dictate this letter to you: you do not know me, and I do not know you; but I think it only fair to yourself to let you know that you have at least got one very ardent admirer and happy owner of a "Cadillac".

I hope to be in New York the first week in February on my way to Pasadena, Calif. and if possible would like to have an opportunity of looking over your works in Detroit. Am not sure yet whether I shall have time enough to go to Detroit to do so, neither do I know whether you allow strangers to go over your works, but if you do, I should be very pleased indeed to do so if possible. A letter will find me if addressed to the Waldorf Hotel, 5th Avenue, New York.

Faithfully yours,

J. E. Jewell

The Doors Swing Open

to the Most Beautiful Pictures in America

Now, for the first time, the great public has a chance to see the world-famous paintings which have been brought from Europe by American millionaires, and hung in their private galleries. You can now not only see magnificent full-color reproductions of these wonderful masterpieces, but can have copies for your own home.

THE LADIES' HOME JOURNAL will reproduce, each month, the finest pictures from:

The J. Pierpont Morgan Collection
in New York

The Joseph E. Widener Collection
in Philadelphia

The Benjamin Altman Collection
in New York

The Henry C. Frick Collection
in New York

The George W. Elkins Collection
in Philadelphia

The Charles L. Freer Collection
in Detroit

The Charles P. Taft Collection
in Cincinnati

The John G. Johnson Collection
in Philadelphia

Each picture will be reproduced in a full page in the Home Journal in its full original colors exactly as it hangs on the wall of the gallery

The four best pictures in each collection will be shown in their exact original colors; each on a full page by itself, printed on heavy paper.

You can cut them out and frame them.

These pictures will not be sold separately. The only way to get them is in THE HOME JOURNAL. The editions will be sold out. No back numbers will be available.

Of Special Importance

Under our arrangements with the owners of these pictures, separate copies cannot be sold. Nor will you be able to buy back numbers, as we print only what are actually required.

There are only two ways you can get these pictures. One is to buy a copy of the magazine each month from your newsdealer or boy agent. The other is to subscribe.

To have it come to you direct and regularly by mail, changing your address as often as required,

INCLOSE \$1.50 IN AN ENVELOPE NOW

You will then receive the HOME JOURNAL for a year, beginning with the June issue. This will include the entire series of these wonderful masterpieces, as here announced. Inclose a dollar and a half now (in Canada the price is \$1.75) to

Box 2814, CURTIS PUBLISHING COMPANY, INDEPENDENCE SQUARE, PHILADELPHIA

the series begins in the present-the June

THE LADIES' HOME JOURNAL

15 cents everywhere

Splitting Headaches— For No Reason At All

THESE puzzling headaches are due frequently to intestinal absorption of toxic substances (auto-intoxication) without apparent constipation.

Nujol is particularly valuable in such cases because it has the property of absorbing and removing intestinal toxins, besides giving safe and effective relief in most cases of periodic and chronic constipation.

Nujol is not a purge nor a laxative. It acts in effect as a mechanical lubricant. It prevents the intestinal contents from becoming hard and so facilitates the normal process of evacuation.

Most druggists carry Nujol, which is sold only in pint bottles packed in cartons bearing the Nujol trademark. If your druggist does not carry Nujol, accept no substitute. We will send a pint bottle prepaid to any point in the United States on receipt of 75c.—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation." Address Dept. 12.

AMERICAN WRITING MACHINE Co., Inc., 345 Broadway, N. Y.

A Number of Things by Edwin E. Slosson

When a couple become engaged it is the custom—or anyhow it used to be—for them to look over the family album together. Seated side by side so that the leaves lie on both their laps, they proceed to get acquainted with each other's relatives and former selves. What delights them most at such times is to strike a baby picture—"So that's the way you looked when you were a kid! What a sweet thing you were then." (Here should follow the "archly" punctuation mark, only the printers haven't provided one.)

Led by the same natural impulse, as soon as I heard that *Harper's Weekly* was engaged to be married to The Independent, I went at once to the periodical room of the School of Journalism and dug out Vol. 1, No. 1, of our fiancée. It was not the first time I had seen it, for more than one home I used to haunt as a boy boasted the possession of "Harper complete, with all the war numbers intact, sir," and naturally I reveled in them. Not a bad way of learning American history. "I've learned the little that I know by this."

Yes, the heading was familiar, the torch—enlightening, not incendiary—passing from hand to hand, and beneath the arts and sciences quite clearly indicated by a palette, a bust, a harp and an inkwell on the left, and a telescope, a book, a pair of compasses and a globe on the other.

The first lines announce the result of the Presidential election:

Buchanan	1,850,766
Fremont	1,336,815
Fillmore	870,146

I have an ancestral memory of that campaign, for my father used to tell me of how he had cast his first vote for "Free Soil, Free Speech, Free Labor, Free Men and Fremont." He was twenty-one the day before and on the day after he left for Kansas with a "Beecher Bible" on his shoulder to make that territory "Free Soil."

The figures are significant, for if there had not been a third party in the field—Fillmore ran on the "Know-Nothing," or as we should say the "Anti-Hyphenate" party—Fremont might have been elected and the Civil War averted.

Harper's interpreted the election as meaning "Compromise and Union," but was doubtful about the possibility of preserving the Union by Compromise or any other way.

It is already threatened by that intense love of gain, which is the peculiar vice of our age—

(It is the peculiar privilege of every age to boast of this vice.)

which has sapped the source of our public virtue, and has lowered the character of our public men; it is threatened by the local jealousies of communities, by the local ambitions of individuals, by the violent and reckless exponents of extreme opinions in all parts of the country. . . .

This sounds much like Roosevelt, or Cato, or Demosthenes, or Jeremiah, or whoever preceded them in Egypt and Assyria.

When we turn to an old periodical like this we expect to find something new. I skip over to the foreign events page and what do I find there? That the King of Prussia complains that his patience has been abused by his enemies. That the rebels in China are making progress in the south, but that the Peking government is soon going to send an army to crush them. That Russia is concentrating troops on the Persian and Bessarabian frontiers. That Mexico is in turmoil and the insurgent bands are gaining strength. That England and the United States have just concluded a treaty that disposes of the Nicaragua question. That Colombia [only it is called New Granada] is protesting against American interference in Panama. That Washington has decided that the shipment of arms to a belligerent is not a violation of neutrality. I rub my eyes and look back at the date. Am I reading the *first* number of Harper's Weekly or the last? But there it is, "January 3, 1859," not May 13, 1916. History repeats itself. What's the use?

I turn to the editorials. The leader is devoted to the denunciation of feminine extravagance. It appears that the women of those days spent more on their clothes than their menfolks thought they should. The author reaches the novel conclusion that it is because women dress to suit other women instead of following the chaster taste of men.

If women dress to please their male admirers, they might lessen their ambitious rivalry and diminish their bills at Stewart's and Dieder's, for it is the universal sentiment of mankind that "beauty unadorned is adorned the most," and that even homeliness gains nothing by being richly set.

There is nothing so charming to a cultivated man as the exhibition on a woman's dress of a refined taste, exercised in the simplest materials. A plain calico neatly made and cunningly trimmed, with nice proprieties of a pure white collar, a hand well gloved and a foot *bien chaussée*, is the drapery the most provocative of admiration the male observer is conscious of.

I infer from the wording of the last sentence that George William Curtis had not yet taken charge of Harper's. For, as the grammarians say: "One should never use a preposition to end a sentence with."

But it seems that the editor had reason for complaint if as he says the women of his day were in the habit of paying \$1000 for a Cashmere shawl when a \$20 French shawl would do as well. He figures out that a fashionable lady's toilet costs no less than \$17,850.

Summer Dress Cottons and Dress Linens at McCutcheon's

Generous assortments of desirable Summer Dress Fabrics are now in stock, embracing the latest European Novelties as well as the choicest product of American Manufacturers. We mention below some of the materials most in vogue.

The Book of Forestry

By FREDERICK F. MOON. A book for the amateur who wants to know something about forestry. Many illustrations. \$1.75 net.

Lace, furs and shawls are the most expensive items in the list. Furs have come back. So has lace. Shawls are said to be on their way and due to arrive soon. Is there no way of heading them off? I could write an editorial commending calico and pure white collars, but somehow it seems to do little.

But perhaps all prices were higher then. I turn to the market report. "Eggs, 28 cents a dozen." I am paying 50. "Fowls, 8½ cents a pound." My grocer charges four times that. "Butter, 20 cents"; now twice that. "Bear meat, 17½ cents a pound." Bear meat is out of sight. It is twenty-five years since I have eaten a bear steak.

The Literary Editor complains that too many books are published nowadays. Funny how Literary Editors are always making a fuss about this. You never hear a doctor complaining that there are too many sick people or a lawyer that people are too litigious. "Thousands of people are now writing books in this country." They are at it still. Among the books reviewed are Robertson's "Charles V" with the addenda by Prescott, "The Thucydides of Modern History," a book of poems by Stoddard, and a volume of essays by Mrs. Sigourney.

Martin F. Tupper, whom no modern poet can equal for popularity, contributes to this number "A Rhyme for the Atlantic Telegraph" which I forbear to quote. Let the Paradoxical Philosopher rest on his laurels.

A literary letter from Florence signed "Cicerone" is filled with personal gossip of Macaulay, Gladstone, Ruskin, Thackeray, Bulwer-Lytton, the Brownings and the Trollopes. Think of it! A Florentine tea party in 1857 must have seemed like living in an encyclopedia of literary biography. Ah, there were giants on the earth in those days.

The Brownings, it seems, exprest to our correspondent their gratification at the liberal check sent them for their advance sheets by Tichnor, Fields & Co. [I hope that the advertising department did not fail to send a clipping to T. F. & Co.] Mr. Browning was engaged in expanding and simplifying his "Sordello." [Where is this simplified version to be found?] As for Mrs. Browning, "an English clergyman of note says of her recent poem, 'Aurora Leigh,' it is quite unfit for lady readers." Whereupon our Cicerone comments, "To the nasty all things are nasty." Which strikes me as quite a nasty thing to say about an English clergyman of note. I have heard critics say that "Aurora Leigh" was quite unfit for any readers, but not for the same reason.

Mrs. Trollope, then in her seventy-ninth year, was just finishing her 120th volume. The reason why her output was so scanty was because she did not begin to write until she was forty-five and wouldn't then except she needed the money badly. She had cleared \$100,000 on her books, but spent it all on her large and extravagant family, so says the all-wise Cicerone. But it is no use

Spreading Advertising News Nationally, in Record Time

THE news of the world is brought to readers of The Independent from one to five weeks earlier than by other periodicals.

The news one really needs to know is here condensed, verified, clarified and interpreted for the benefit of the alert reader who wants his information clear, compact and exact, and who wants it on the minute.

This news record and editorial presentment is illuminated by timely photographs of events and new things, by cartoons, views, maps and portraits.

It is supplemented by striking articles and vivid messages from the field, written for The Independent while the events are white hot, by those who speak with authority and exact knowledge, by those actively engaged in the events described, by those who are living close to great events, by those who themselves are making history.

The Independent's list of contributors from the day it was founded is an unmatched roll call of famous names in literature and public life.

From the first shot of the Great War, The Independent has marched squarely abreast with its stupendous events, every number throbbing with live news, flashing out the swift changing drama of current history and ringing with messages of the hour.

At least a week in advance of other periodicals with its account, discussion and picture treatment of outstanding events of the European conflict, The Independent is recognized as having fair claim to the now familiar appellation, "the most satisfactory war journal in America."

Just as The Independent supplies the swiftest periodical news and picture service in America, so also does it provide the swiftest national Advertising Service.

Within two short days the last news forms close, presses start, mailing begins, and first copies begin to reach the readers.

Consider what this means to the fast grow-

ing group of merchants and manufacturers who perceive the value of the *news* element in advertising and the stimulus of news interest on the reader.

When Barney Oldfield makes his wonderful no-stop record with a Maxwell, when the New York Central wins the Harriman medal, when the Cadillac makes its world's record from Los Angeles to San Francisco, when Borden's Milk wins the Grand Prize, when any advertiser achieves new marks of distinction which the public ought to know about *quickly*, it pays to remember the speed of The Independent, which handles current events, business news, war news, advertising news, everything live people must know about to be well posted, from one to five weeks ahead of other periodicals.

Almost the speed of the daily newspaper, and yet with the fine printing, national distribution, influence and prestige which only such a weekly journal can give.

Note this contrast. Some months ago a leading weekly published the advertisement of a prominent motor car company which began thus:

"This advertisement is written five weeks before its appearance, so we cannot quote the latest sales figures."

As it happened, the latest sales figures showed that

the model advertised was oversold more than a week before the company's advertisement saw the light of day!

What if the copy for this advertisement could have been written five *days* (instead of five weeks) before its appearance—as it *can* be for The Independent?

Is there any question as to its comparative effectiveness and value? Is there any question as to the value of *Speed*, as well as character and prestige, in national publicity?

News published five weeks late is *not* news. Remember that The Independent, a high-power vehicle to people's minds, carries the advertiser's news message to the cream of the public, nationally, in *record time*.

The incorporation with The Independent this week of Harper's Weekly, America's distinguished pictorial review for more than half a century, is a logical and important step in The Independent's broad editorial plan for perfecting and expanding its weekly news and picture service, already the swiftest among American periodicals.

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

Some of Little, Brown & Company's Spring Books

FICTION

HELD TO ANSWER

(Fifth printing)

By PETER CLARK MACFARLANE. A big, emotional American novel which has already become the text of scores of sermons. Now in its thirtieth thousand. Illustrated. \$1.35 net.

ADDRESS _____

talking about Mrs. Trollope to Americans. She queered herself when she criticized our *Domestic Manners*.

Humor is not lacking in the old *Harper*. There is a column headed "Things Wise and Otherwise," corresponding somewhat to our "Remarkable Remarks." I quote two, leaving it to the reader to decide whether they are wise or otherwise. The first is a conundrum:

"What did Adam and Eve do when they were turned out of Paradise?"

They raised Cain!

The second is a supposititious advertisement:

A young gentleman on the point of getting married is desirous of meeting a man of experience who will dissuade him from such a step.

Harper's Weekly in later years was distinguished by its numerous illustrations, but in this first number there are only two small woodcuts, apparently imported, with the attached jokes:

Lady of the House—We are sadly short of Gentlemen, Captain Fitzdrawle. Pray, let me introduce you for the next Galop."

Able-Bodied Swell—Aw, tha-a-a-anks, no—aw—fact is—aw—I've given up Gymnastics—they—aw—disawange one's Dwess so!

Police Constable (to Boy playing Hoop)—Now, then, off with that Hoop, or I'll precious soon Help you!

Lady (who imagines the observation is addressed to her)—What a Monster!

If fashions continue in the direction they are now tending perhaps we can use these old jokes again, as well as the news items.

But I must not leave the impression that there is nothing new in this old paper. I see that "the celebrated African traveler," Dr. Livingston, has just returned to England after seventeen years in the Dark Continent and that he had almost forgotten how to talk English. The good doctor could hardly have imagined that Germans, Belgians and British, with the aid of their native converts on opposing sides, would sixty years later be fighting for the country he explored.

A big meeting, it appears, was held at the Broadway Tabernacle, not to protest against preparedness, such as we should now expect, but quite the contrary, to express sympathy and give aid to an illegal invasion of one of our southern neighbors, Walker's filibustering expedition. Three American generals and the Nicaraguan minister addressed the meeting in behalf of Walker and a collection of \$1307 was raised to support the movement. A few days later a ship was sent to Walker loaded with munitions and provisions and carrying 300 volunteers. Uncle Sam shut his eyes.

Walker's rebellion is now almost forgotten, but an epoch-making event is recorded in an inconspicuous item on the same page, that an American frigate has landed Consul General Harris in Japan against the strenuous opposition of the Japanese Government. From this dates the real "opening of Japan" to American influences and today both countries revere the memory of the man who was left in the deserted Buddhist temple of a Japanese fishing village.

SOME SCRIBNER BOOKS

J. J. Jusserand French Ambassador to the United States, and Dean of the Diplomatic Corps at Washington, has written a new book: **WITH AMERICANS OF PAST AND PRESENT DAYS**, a most important account of the close affiliation of the two republics, and of such men as Washington, Lincoln, Rochambeau, etc.; and a high tribute to America. \$1.50 net.

Richard Harding Davis has recorded his second visit to the front in his new book **WITH THE FRENCH**, the final proofs of which he revised just before his death. The sub-title **IN FRANCE AND SALONIKA** gives an idea of the scope of the book. In his most vivid manner he describes the fighting in all parts of France, the retreat of the Allies in Serbia and countless other aspects. Illustrated. \$1.00 net.

Mrs. Humphry Ward in **ENGLAND'S EFFORT** writes of the intense activity of the English people at home in their part of the war:—the vast munitions industries into which women are pouring by the tens of thousands to take the place of men; the transformed England. Mrs. Ward has followed too the munitions to the front in France, of which she gives a picture unsurpassed in vividness. The Hon. Joseph Choate writes a preface to the book. \$1.00 net.

John Reed with BOARDMAN ROBINSON for an illustrator has produced an important book on the Russian and Balkan states of the war in **THE WAR IN EASTERN EUROPE**, in which he gives the color of the life of the different peoples and armies under all the conditions of war. There is much of humor and much that is intensely human. \$2.00 net.

William Howard Taft in **THE PRESIDENCY** writes of the duties, the powers, the opportunities and the limitations of the executive office in the United States. He presents, simply and clearly, a fund of information which would be quite beyond the reach of anyone who had himself not occupied the office. \$1.00 net.

Arthur Ruhl has just written **ANTWERP TO GALLIPOLI**, which the New York Tribune says: "Covers more ground than any other single volume of its kind." The New Republic says of Mr. Ruhl: "In every situation that he encountered he showed himself sober, sensitive, and open minded. \$1.50 net.

Theodore Roosevelt in **A BOOKLOVER'S HOLIDAYS IN THE OPEN**, writes of such things as cougar hunting in Arizona, of primitive man in three continents, of bird preservation in Louisiana—and of books. A splendid expression of Col. Roosevelt as a naturalist, an adventurer, and a man of letters, infused with his marvelous appreciation of the best books. Illustrated. \$2.00 net.

Frederic C. Howe in **WHY WAR** says: "Wars are not made by peoples. Wars are made by irresponsible monarchs, by ruling aristocracies, by foreign ministers and by diplomats. Wars are made by privileged interests, by financiers, by commercial groups seeking private profit in foreign lands. *Wars are made behind closed doors.*" \$1.50 net.

Shane Leslie writes of England—mid-Victorian and contemporary; of Ireland and the Irish; of politics, education and religion, and a fund of reminiscences in **THE END OF A CHAPTER**. The Chicago Tribune says: "Charming anecdotes, interesting reminiscences of noted men and women and caustic comments on society." \$1.25 net.

Joseph B. Bishop in **PRESIDENTIAL NOMINATIONS AND ELECTIONS** has written a history of American conventions, national campaigns, inaugurations, and campaign caricature. This book has an immediate importance in view of the coming campaign. Illustrated with contemporary cartoons. \$1.50 net.

Robert Herrick author of "The Master of the Inn," has written, in **THE CONSCRIPT MOTHER**, perhaps the most perfect bit of short fiction the War has produced. It is of the Italian side of the War, and of the devotion of an Italian mother to her soldier son in the days just before and after Italy's entrance into the War. 50 cents net.

Jesse Lynch Williams in **REMATING TIME** writes an inimitably funny story of the happy divorce by which four utterly mismated and miserable persons were rearranged to everyone's satisfaction. Perfect satire of divorce and remarriage. Better than **AND SO THEY WERE MARRIED**. 50 cents net.

New York

The New Books

A DOUBLE LENS ON FEMINISM

Mr. and Mrs. John Martin have written a book on the Woman's Movement which is a curious compound of sane judgment and willful misapprehension of their subject. With many of the authors' contentions every fair-minded feminist must agree. That motherhood is the supreme duty and delight of a normal woman; that the home is the best place in which to rear the children; that the education of girls should heedfully concern itself with their preparation for home-making and trained motherhood; that it is better to pay a father enough to support his family in modest comfort than to half-pay him and his wife for sharing outside work—with these and a few other postulates, equally sensible, most people will agree. But that any of these desirable things will be jeopardized by granting political equality to women and men is manifestly absurd. So simple a partnership in the affairs of the Larger Home of the city or state cannot and does not, when tried, militate against the well-being of the household.

"Feminism" is cleverly contrasted by Mr. Martin with "Humanism," altho it is surely one-half of Humanism, not necessarily the better half, but worthy respect. We have no criticism to offer upon many of these incisive and suggestive pages. There is much hard sense in them. The reader may be trusted to sift the wheat from the chaff, and, so bright and witty and self-possessed are Mr. and Mrs. Martin even at their absurdest moments, he will find it a most enjoyable task. Indeed, the irrational chapters of the book seem to have wandered in by accident and to have little to do with the main thread of the argument. The chapter which Mrs. Martin devotes to woman suffrage, for example, does not contend that voting would ruin women or that women would injure government, but rather that politics are so dull, trifling and sordid that any one, man or woman, who can escape it is to be congratulated on his or her good luck. "Somebody has got to vote because, unfortunately, we have to have a government, just as, in our climate, we have to burn fires and, therefore, have to order fuel. But there is nothing joyous, nothing exhilarating, nothing elevating about either act, nothing that confers an atom of weight or a spark of glory upon those who perform it." The reader will probably agree with us that this is a most morbid and unwholesome attitude to take in regard to the great tasks of statesmanship which confront the citizens of the world; that it is just this contemptuous indifference to public affairs which has led on the

one hand to boss rule and on the other to labor riots, lynchings and other outbreaks of lawlessness. But, right or wrong, this lack of civic idealism has obviously nothing to do with Feminism.

Feminism, by Mr. and Mrs. John Martin. Dodd, Mead. \$1.50.

GENERAL JACKSON

The Life of Andrew Jackson, by J. S. Bassett, first published in 1910, has already secured a permanent place. The new edition, tho practically the same as the first, is, in a few points, a revision, and it is likely to remain the most popular work on the subject for some time, being briefer and much more judicious than Parton's work and more ambitious than Sumner's. It is sympathetic, but also critical. Particularly clear and illuminating is the picture of conditions on the Western frontier during the early part of the last century and of the campaigns against the Indians of Florida and Alabama during and immediately following the Anglo-American War. The book contains the best brief account of Jackson's struggle for the Presidency and its significance in our history, as well as the fight for the re-charter of the Second National Bank.

Life of Andrew Jackson, by J. S. Bassett. Macmillan. \$2.50.

DR. GLADDEN ON THE WAR

The thousand-dollar prize offered by the Church Peace Union for the best essay on Peace and War was won by Dr. Washington Gladden. *The Forks of the Road* is a wise and noble essay which will arrest the thought of those who, from their comfortable 1913 belief that war is practically of the past, have swung to the more intelligent but more dangerous 1916 opinion that war is an inevitable fact in human life. The failure of the church in this matter has been its complete lack of understanding or of admission that universal brotherhood is the center of all Christ's teaching and that this is a practical, and the only practical law of life. The law of love, he writes,

is sentimental in just the same sense as the law of hydrostatics . . . it is an induction from the facts of life; and its sanctions no more depend on any positive injunction than does the law of dietetics. If you eat poisonous or indigestible food, the retribution is not deferred until after death and the judgment, nor is there any scheme of substitution by which you may evade the penalty; it follows the transgression instantly and inevitably. Not less swift and certain are the consequences of every violation of the moral law. . . . Every violation of the law of love sets up irritations, resentments, suspicions, jealousies, which disturb all human relationships, which tend to break out in quarrels and collusions of will, and to make helpful relationships difficult or impossible. The enmities and fightings which keep human society in turmoil are therefore thus perfectly explicable; there is nothing occult or mysterious about them; if they should cease we should know exactly how to go to work to reproduce them; if we should decide that they are undesirable, we should know how to get rid of them.

It is the scandal of the centuries that this has not been learned, and now the price is being paid today in Europe. This is the past. Now for the future. It is inconceivable that after this unspeakable retribution the nations shall

FOR THE SHAKSPERE TERCENTENARY

FIFTY SHAKSPERE SONGS

Edited by CHARLES VINCENT, Mus. Doc.

ISSUED IN TWO EDITIONS FOR HIGH VOICE. FOR LOW VOICE

The editor has arranged the material selected in a logical and interesting manner, dividing it into four parts, as follows:

Part I.—Songs mentioned by Shakspeare in his plays.

Part II.—Songs possibly sung in the original performances.

Part III.—Settings composed since Shakspeare's time to the middle of the nineteenth century.

Part IV.—Recent settings.

The examples chosen will be found not only historically interesting and illustrative of the various periods, but gems of song composition as well—songs which may be sung with delight.

The prefatory and descriptive matter is full and complete, embracing a review of Shakspeare's England, musically considered and a separate descriptive and historical note to each song in the volume. A fine portrait of the poet serves as frontispiece.

NOTE.—The Musicians Library is a series of 75 matchless volumes containing the masterpieces of Song and Piano Music, edited with authority, and engraved, printed and bound with surpassing excellence.

Bound in paper, cloth back, each, \$1.50 post-paid; in full cloth, gilt, each, \$2.50 post-paid

WHO IS JESUS?

By Rev. Walter B. Murray

IS HE GOD?
OR
GOD IN MAN?
OR
MAN ONLY?

203 Pages. On fine paper. Cloth binding. Gilt tops. Artistic cover design in gold.

PRICE 75c POSTPAID

It will help you to answer the question on the basis of the facts

The first edition of one thousand exhausted in three months, and its readers are enthusiastic in its praise, as follows:

"A great book—clear cut, deep and strong."

"Of surpassing excellence. A masterful work."

"The most effective presentation of the arguments for the deity of Jesus I have ever read."

THE NUNC LICET PRESS 920 Nicollet Ave., Room 330
MINNEAPOLIS, MINN.

consent to go on as before. With the close of the war comes the great opportunity for an alliance to safeguard peace. Our influence will be great in bringing about "what seems our only hope of deliverance from a hell on earth, a League of Peace with an international police force." That we may not be hampered in this task soon before us Dr. Gladden argues earnestly against any present increase of our naval and military forces, since such a movement now cannot but cause propositions from us to be regarded with distrust by the other powers.

The Forks of the Road, by Washington Gladden. Macmillan. 50 cents.

OUR NEXT-DOOR NEIGHBORS

JAPAN AND THE WEST

A handbook on the recent causes for disagreement between this country and Japan is a fair description of *The Japanese Crisis*, by James A. B. Sherer. After a discussion of the Japanese character and desires and aims, the appendix gives the text of the last treaty, the California land law and other data needful to a clear understanding of this grave problem.

Stokes. \$1.

SCHOOLS IN JAPAN

In the midst of the crowd of volumes that explain and do not explain Japan, it is pleasant to open so serene an essay as that on *Pre-Meiji Education in Japan*, by F. A. Lombard, of Doshisha University. Here teachers, feminists and lovers of Japan will all find matter of interest, and in a book, moreover, that is a delight to hand and eye.

Methodist Publishing House, Tokio, Japan.

JAPAN WITH CLOVEN HOOF

Carl Crow in his new book on the East, *Japan and America*, interprets Japanese action, almost from the beginning of our intercourse, as unfriendly to the United States. Three chapters deal with the recent moves in China and give the Japanese ultimatum as presented to China and as published abroad, two quite different papers. The book will set the western reader on guard before news from Japan, but would be more convincing if it allowed one least virtue to the Japanese.

McBride. \$1.50.

AN ORIENTAL MONROE DOCTRINE

James Francis Abbott, sometime instructor in the Imperial Japanese Naval Academy, has written a careful, dispassionate study of *Japanese Expansion and American Policies*. While regarding seriously the causes of discord that may one day bring about a contest between the two nations, he looks on this as suicidal for Japan and as avoidable by regard on our part to the ambitions of Japan in the Orient. He does not discuss the theoretic right or morality of Japan's plans and methods, but their practicability and their effects.

Macmillan. \$1.50.

FIVE SORTS OF STORIES

THE ASHES OF SUCCESS

The Least Resistance, by Kate L. McLaurin, an actress of experience, is said to be a true transcript of the life of the stage, ranging from vaudeville to legitimate drama—a life so hard, so exacting and exhausting, so uncertain, and so treacherous, in spite of its tinsel attraction, that we wonder any one could choose it. None but adventurous spirits could endure its precarious shifts. The heroine takes "the

easiest way," which, of course, is the hardest way in the end.

Doran. \$1.25.

GOOD DETECTIVE STORIES

If you like mystery stories you will enjoy Percy James Brebner's *The Master Detective, Being Some Further Investigations of Christopher Quarles*. An old professor of philosophy, in conjunction with a young detective, who is engaged to this professor's granddaughter, solves numerous complex riddles of crime and brings to justice a vast number of clever thieves, gangsters and murderers.

Dutton. \$1.35.

A POET-SOLDIER

Beulah Marie Dix has written a book which, tho marred by certain affections of diction, is vastly superior to her usual pleasant, sentimental tales. *The Battle Months of George Daurella* is the story of a young lieutenant in the early part of the war. He has a poetic temperament and a military training. His reaction to battle, captivity, horror, kindness and love, is described with sympathy and insight.

Duffield. \$1.25.

A SOCIETY NOVEL

Justus Miles Forman went down with the "Lusitania." This, his last story, *The Twin Sisters*, is a cosmopolitan romance built round the fact that kinship does not necessarily mean likeness. He sets off the character of his strong-minded and attractive heroine against that of her weak and shifty sister in their dealings with each other, society and the other sex. The simple story, with its somewhat obvious dénouement is told in an attractive way that is sure to appeal to many.

Harper. \$1.35.

JACK LONDON AT HIS WORST

In *The Little Lady of the Big House* there is the eternal triangle composed of two supermen and a superwoman. They are so thoroly incredible that they are interesting, but they solve their problem in a manner not to be recommended for general use. Much space is occupied by a detailed account of a colossal stock farm, described with such relish that one wonders if this book be not an embodiment of Mr. London's pet daydream.

Macmillan. \$1.50.

PULPIT AND PEW

THE MORMON SIDE

We doubt if *The Real Mormonism*, by Robert C. Webb, will make any converts to that cult, but it is well to read it in order to see what the Mormons have to say for their creed and customs. To form one's opinion of any institution exclusively from enemies and outsiders is not a safe thing, and this bulky volume presents the Mormon case in good temper, if not convincingly or very interestingly.

Sturgis & Walton. \$2.

TALKING WITH THE UNSEEN

A little volume of unusual power and insight has been written by Dr. Charles L. Slattery, rector of Grace Church in New York, in answer to the question, *Why Men Pray*. The meaning of prayer, its value and results in life and character are very practically and helpfully explained. It is written especially for lay readers, but may properly be recommended to the clergy.

Macmillan. 75 cents.

A METHODIST ST. FRANCIS

A century has passed since the death of Francis Asbury, the Prophet of the Road. Dr. Tipple's book is rather a study in the great leader's personality than another life or an account of the beginnings of Methodism in America. The extracts from the journal recall the notes of that other unworldly wandering preacher, John Woolman.

Methodist Book Concern. \$1.50.

"WASTED"

WASTED light and flaking paint! Do you realize how much *wasted money* it means? Three thousand of the biggest plants in the country realize it, and they now treat their ceilings and walls with a finish that increases daylight 19% to 36% and is permanent. By using this finish, they help their workmen do more and better work; they decrease accidents; they save as much as three-quarters of an hour electric lighting every day; and they all save scaling and recoating of cold water mixtures, and flaking of paint into the machinery. In addition, they have ceilings and walls that can be washed like a dinner-plate, and are thus kept wonderfully clean and sanitary. The finish they use is Rice's Gloss Mill White, an oil paint, made by a special process, discovered and owned exclusively by the makers. Repeated tests have shown, without a single exception, that Rice's remains white longer than any other gloss paint. By the Rice Method, it can be applied over old cold-water paint. It does not flake or

scale with the jar of machinery, it does not yellow like ordinary oil paints, and saves big money on painting, because it does not need renewing for years.

Write for our interesting book "More Light"—and sample board.

ON CONCRETE SURFACES. On inside concrete Rice's Granolith makes the best possible primer for a second coat of Rice's Gloss Mill White—giving a glossy tile-like finish at no more expense than lead and oil paint. Rice's Granolith.

WHAT A FEW USERS SAY

Sanitary conditions in our plant have improved wonderfully. We should judge we are getting 50% more light than before.—Kellogg's Toasted Corn Flakes Co., Battle Creek, Mich.

We are indeed astonished to note the vast amount of daylight created by this paint—especially where we were formerly forced to use electric lights all day. Now find it entirely unnecessary. Agreeably surprised to observe how easy it is to keep clean.—Kno-tair Hosiery Co., Philadelphia, Pa.

Out of six comparative tests, Rice's Mill White leads.—Killingly Mfg. Co., Killingly, Conn.

U. S. Gutta Percha Paint Co.

PEBBLES

Never throw away an old sink strainer. It can be used as a frame for a chiffon hat.—*Cincinnati Post*.

Urban—What do you miss most since moving to the country?
Rural—Trains.—*Princeton Tiger*.

"My voice is for war."
"But are you willing to offer the rest of yourself?"—*Boston Transcript*.

Ford's selection in the Michigan Presidential preference primary will doubtless be regarded as a victory for the Ford machine.—*Chicago Herald*.

"Money doesn't always bring happiness."
"That may be true enough; but it's one of the things we all prefer to learn by personal experience."—*Boston Transcript*.

I doff my hat
To my friend Brewster,
Whose auto killed
My neighbor's rooster.
—*Cincinnati Enquirer*.

"Yes," said the old grad, "I guess that the thing that surprizes the college man most when he gets out in the world is to find out how much uneducated people know."—*The Cornell Widow*.

"That's the Goddess of Liberty," explained the New Yorker. "Fine attitude, eh?"
"Yes, and typically American," replied the Western visitor. "Hanging to a strap."—*Everybody's*.

"Where did you find this wonderful follow-up system? It would get money out of anybody?"
"I simply compiled and adapted the letters my son sent me from college."—*Kansas City Journal*.

"Give us our place in the sun!" they cried;
"A place that matches our worth."
"Take all the sun," mankind replied,
"But please get off the earth."
—*Life*.

The *New Haven Evening Register*, like the rest of us, printed the German Note. But the linotyper had his own ideas about not following copy and he made the Note speak to "the scared principles of humanity."—*New York Tribune*.

A Jersey boy came home the other day to communicate unusual news.
"And so your teacher is dead?" asked the mother, horrified at the lad's announcement.

"Yes," said the boy. But, after a moment's reflection, he added, "After all, what's the good of that while the school is still there?"—*Harper's*.

LET US EXCUSE POOR VILLA

Perhaps he had been studying the European war and thought it was the only really proper way to treat a neutral nation—or perhaps he had been reading our newspaper editorials and decided that if we were in the condition we said we were he could easily lick us—or perhaps he thought the United States would warn all Americans to keep out of New Mexico, Arizona and Texas—or perhaps he thought we would write him a note.—*Life*.

"Now, children," said the teacher, "I have been talking to you about the duty of cultivating a kindly disposition, and I will tell you a little story of two dogs. Henry had a nice dog, gentle as a lamb. He would not bark at the passers-by or at strange dogs, and would never bite. William's dog, on the contrary, was always fighting other dogs or flying at the hens and cats in the neighborhood; and several times he seized a cow by the nostrils and threw her. He barked at strangers, and was always making trouble. Now, boys, which dog would you like to own—Henry's or William's?"

The answer came instantly, in one eager shout:
"William's!"—*Everybody's*.

May we not ask all our readers to judge the truth of our exact statements, no more and no less, and to be on their guard against premature conclusions and illogical inferences? We desire honest criticism. But honest criticism must be honest mentally as well as morally. And the first essential of honest criticism is to be sure you know the *meaning* of the man you criticize.

254. Mr. A. F., New York. "I am a lad of eighteen, weighing 180 pounds, with a deep bass voice. What would you advise me to speak in a high school prize contest—a sad or humorous piece? What pieces would you recommend?"

Avoid "sad" pieces as you would the plague. And hesitate long before attempting a "humorous" piece—your audience will be more likely to laugh at you than with you. A selection of a martial, heroic or energetic tone would probably suit you best. You are physically big—choose a theme mentally or morally big, and you have a good chance to win the prize. Get something new if possible. If you prefer a standard piece, you might select one of the stirring poems of Kipling, or some classic patriotic oration.

255. Mr. H. K. P., District of Columbia. "I recently purchased your set of Five Efficiency Booklets. These partially answer a number of questions in my mind, but I desire more extended knowledge. (a) What books would you recommend dealing with health, diet, baths, clothing, exercise, etc.? (b) Kindly suggest some reliable organization or institution engaged in efficiency promotion. (c) Can you name a few good magazines on self-improvement in general? (d) What are some of the tests of vocational guidance mentioned in your fifth article in The Independent? (e) Can you recommend some good books on mind-culture, dealing with memory, concentration, will-power, energy, economy, faith, optimism?"

We would recommend no book, magazine, person or institution. We merely put you in touch—then leave you to form your own judgments.

(a) Get book catalogs from the respective publishers of the following magazines: *Good Health*, Battle Creek, Michigan; *Health Culture*, Passaic, New Jersey; *Physical Culture*, Flatiron Building, New York; *Herald of Health*, 110 East Forty-first street, New York; *Nautilus*, Holyoke, Massachusetts.

(b) Efficiency Society, 41 Park Row; National Association of Corporation Schools, Irving Place and Fifteenth street; Emerson Institute, 30 Irving Place; all of New York City.

(c) Obtain copies of magazines listed under (a).

(d) This has been answered repeatedly, as in January 31, 1916, No. 197; April 3, 1916, No. 230 (b); and elsewhere.

(e) Apply to Efficiency Press Syndicate, Woolworth Building, New York City.

256. Mr. R. S. D., New York. "Am very much interested in your Personal Efficiency Test. Will you kindly explain how a man may find his supreme talent—and thus determine the answer to Question 5 of the test?"

Since the receipt of your letter, names of vocational experts and character analysts have been cited repeatedly in these columns; doubtless you have made investigations. Watch The Independent for a full discussion later in the year—a forthcoming article entitled "Choosing a Life Work."

257. Miss H. H., Montana. "I desire information concerning schools for stuttering and stammering children, also information as to any authoritative literature on the matter of defective speech."

This trouble is usually of psychic and nervous origin, but an examination by a good throat specialist might well be required. Often a home course in physical culture, aided by suggestive therapeutics, brings relief or cure. A device to prevent stammering is offered by Peate & Beattie, Box 83, Spencerport, New York.

A school for nervous children, such as the Florence Nightingale Sanatorium School, 238th Street and Riverdale Avenue,

ILLINOIS

"HOME-MAKING, THE NEW PROFESSION"

Is a 100-page illustrated hand-book; it's FREE. Cookery, diet, health, children; home-study *Domestic Science* courses. For home-making and well-paid positions.

American School of Home Economics, 529 West 69th St., Chicago, Ill.

LAW BOOK FREE

Read our 50-page book before enrolling for any law course. Tells how to judge claims of correspondence schools, and explains the American School's simple method of law instruction. Prepared by 56 legal authorities—28 more subjects and 30 more authors than any other correspondence law course. 13 volume Law Library, 60 Text Books, and 36 Case Books furnished every student. THE

1916

UNITED STATES LIFE INSURANCE CO.

In the City of New York Issues Guaranteed Contracts

JOHN P. MUNN, M.D., President

FINANCE COMMITTEE

CLARENCE H. KELSEY

Pres. Title Guarantee and Trust Co.

WILLIAM H. PORTER, Banker

EDWARD TOWNSEND

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

New York City, might be effectual; or a school of elocution, such as the Emerson College of Oratory, Huntington Chambers, Boston, might afford helpful suggestions. The Boston Stammerers' Institute, Boston, would be worth investigating.

We do not know of any "authoritative" literature—all the books we have seen exploit some special theory, system or device.

258. Mr. D. W. M., Ohio. "We contemplate installing a machine which will manufacture ozone in the office room of our bank. The claim of the maker is that ozone will purify the air and so make our ventilation better. We have wondered if the ozone could be in any way harmful if used all the time. Would the benefit justify buying the machine?"

No. If Nature had meant us to breathe more ozone than the air contains, she would have put the ozone in the air—not waited 50,000,000 years for a patent machine to help her out. You don't need it. What you need is a modern automatic system of perfect ventilation, that gives you more pure air.

259. Mr. W. M. D., Rhode Island. "I am a high school student of seventeen. It takes me from 50 to 75 per cent longer to learn a lesson than it takes the average pupil—and then I seldom learn it well. My mind is quick and receptive; but I jump at conclusions, and seem unable to think slowly and clearly, or to concentrate. How may I learn concentration?"

Study my article entitled "Concentrate!" in April 17, 1916, Independent. Get Had-dock's book, "Power of Will." Investigate systems of memory training—Loisette, Berol, Dickson, Atkinson. Learn to like your studies more, and put them to some practical use—a theory is seldom worth studying, and you may be more scientific than the young folks whose minds are only automatic memory-machines.

260. A Reader from Pennsylvania. "I am an employee of a large company, whose chief plans to publish a bulletin describing and advertising certain products of our business. This new publication may be turned over to me, and I want to be prepared to handle it. How can I obtain knowledge of the best ways to do this?"

Get George Frederick Wilson's book, "The House Organ," from Washington Park Publishing Company, Thirty-fourth Street, Milwaukee, Wisconsin; also the book, "Type Data," from A. R. Arkin & Co., Federal Street, Chicago. Study the advertisements for ideas, in *System Magazine*, Wabash and Madison, Chicago; *Advertising and Selling Magazine*, 95 Madison Avenue, New York. Answer advertisements of all concerns like yours in your trade journal, and analyze their literature. Buy a few standard books on salesmanship and the mail-order business. Take a mail course in advertising from International Correspondence Schools or some other good institutions.

261. Miss E. G., California. "I am a girl of fourteen, a freshman in high school. I have just won a debate from the Juniors, and now I am challenged by the whole school on the question: *Resolved, That the republics of North and South America should be united under a system similar to that of the United States.* I do not know where to get material on this question, and other topics of the day, and shall feel very grateful for your advice on debating in general."

You may obtain material for debates and other literary productions from one of these concerns: Bureau of Research, 318 East Fifth Street, New Albany, Indiana; Research Bureau, 500 Fifth Avenue, New York City; Wilson Package Library, Box R, White Plains, New York. Items of current news and opinion may be had from one of the clipping bureaus mentioned in previous Question Box.

Prepare first an outline of your speech by headings and numerals for logical sequence. Base all argument on facts—not feelings or supposings. Avoid flowery language. Quote authorities. Use local analogies and illustration. Bring in maps, charts or blackboard diagrams if possible. Open your speech with a few short, crisp statements that will challenge attention; close with a straight heart appeal, blended, of course, with good, sound sense.

Am sorry we have no space here to answer other question.

I Want to Send You this New Book FREE!

"The New Way in Typewriting"

Send the coupon below or just a postal card for my new 48-page book. It's FREE. It will open your eyes to the money you are losing through slow typewriting—the money you can GAIN through FAST typewriting. It is a splendid book of facts, figures and testimony—not theory. It tells the secret principles of a wonderful new method of acquiring exceptional skill on the typewriter—a new method that has completely revolutionized typewriting and through which hundreds of stenographers and other typewriter users are enabled to

Earn \$25 to \$40 Weekly

This new book shows how you can easily and quickly learn, at home, how to double or treble your speed in typewriting—how to turn "copy" or shorthand notes into typewritten form in one-half or one-third the time—how to write without errors and *with half the effort*. It tells how thousands who never exceeded 30 or 40 words a minute are now typewriting 80 to 100 words a minute—and as a result have increased their salaries of \$8 to \$15 weekly to \$25, \$35, even \$40, weekly.

80 to 100 Words a Minute Guaranteed Only 10 Lessons—Easy for Anyone

And the wonderful thing about the New Way in Typewriting is that you learn it at home in spare time in only 10 lessons, and it is *amazingly easy for anyone*. What's more, you begin to increase your speed from the very first lesson and without interfering with your present work. Thousands of typewriter users are earning vastly increased incomes simply because they have acquired *high speed and accuracy* on the machine by this surprisingly resultful New Way. If you want to do as these others have done, our free book will show you how.

Nothing Else Like It Don't confuse the New Way in Typewriting with any "touch" typewriting system. Special Gymnastic Finger Training Exercises bring results in *days* that ordinary methods will not produce in *months*. It is the greatest step in typewriting since the typewriter itself was invented—already its success has become nation-wide. Among the thousands of operators who have taken up this system are hundreds who were so-called touch writers—yet there has hardly been a single one who hasn't *doubled or trebled* his or her speed and accuracy, and their salaries have been increased in proportion. So overwhelming has been the success of this New Way in Typewriting that we will send you the entire course on trial.

48-Page Book FREE Our free book tells all about the New Way in Typewriting and the wonderful results it is bringing to typewriter users everywhere. It is a big 48-page book, brimful of eye-opening ideas and valuable information. It explains how in a few short weeks you can transform your typewriting and make it *easy, accurate and amazingly speedy*—how this will *inevitably* increase your income. By all means mail the coupon, or just a postal or letter NOW. What so many others are doing YOU TOO can do. With the book we will send our Special reduced price offer. Write TODAY before the opportunity is past.

You Know at Least Ten People

who would be very glad to receive a copy of The Independent with your compliments. If you will send their names and addresses by an early mail, we shall send the copies promptly.

THE INDEPENDENT

119 West 40th Street, New York

What They Say

\$40 Per Month Increase

"The New Way has given me a speed of 100 words per minute, and I have doubled the time I was able to make in the office. As a direct result, I have already had a salary increase of \$40 per month."—R. H. Heller, 2411 Millard Ave., Chicago.

Gets Cost Back Every Month

"Although I had taken a course in stenography and typewriting, I had never considered one of the best business courses in Memphis, my speed was very poor, and I was constantly in a hurry. The value of your course to me is best shown by the fact that the difference between my salary now, and what it was when I began the study, would each month more than pay the cost of the whole course."—S. C. Humes, Memphis, Tenn., Carr Southern Coal Co.

100 Words a Minute

"Beginning the study of the New Way Course as a method of increasing my speed, I was within a few months enabled to use all my fingers with perfect ease, and now an average of almost 100 words per minute in the regular work."—Miss Tillie Lalime, St. Hyacinthe, Que., Canada.

We have hundreds of similar letters on file in our office.

Hyacinths,
Tulips, Narcissi.
Crocus, give, for a
small outlay of time and
money, an abundance of
flowers in the house from De-
cember until Easter, and in the
garden, from earliest spring until
the middle of May. Bulbs are
grown almost exclusively in Holland, in enormous
quantities, and sold at very low prices. Usually
they cost double before reaching you.

By ordering from us now instead of waiting until Fall, you make a large saving, get a superior quality of Bulbs not usually to be obtained at any price in this country, and have a much larger list of varieties to select from.

Our orders are selected and packed in Holland, and are shipped to our customers immediately upon their arrival in the best possible condition.

DARWINTULIPS—We can now supply the magnificent and high priced Darwin Tulips at a great reduction. They are sensational in their beauty and should be included in every garden. They last for many years.

If you wish to take advantage of our very low prices, we must have your order not later than July 1st, as we import Bulbs to order only. They need not be paid for until after delivery, nor taken if not satisfactory. (References required from new customers.) For prices on smaller quantities see our import price list, the most comprehensive catalog of Bulbs published, which may be had for the asking.

ELLIOTT NURSERY, 360 Fourth Ave., Pittsburgh, Pa.

A CRATER OF DEATH

Mined areas played an important part in breaking the great German offensive against Verdun, and they cost many thousand lives. In one such battle the German dead lay on the battlefield so thickly that in the faint light of early morning the French took them for a new army advancing, and opened artillery fire on them. The shells made wide gaps in the enemy lines, but the Germans stood firm and not until daylight did the French realize that they were firing on a pile of dead bodies.

A French sapper, who has been fighting since 1914, tells of the last German attempt against the Cote du Poivre:

We were in the first line, on the flank of the Cote du Poivre, and expected an attack in the evening. The intensity of the German cannonade showed that they intended something extraordinary, but our trenches, our barbed wire, mines, mitrailleuse and our spirit gave us confidence.

The debauch of shells became fantastic, and our aviators reported the Germans massing behind the village of Louvemont, where their numbers were so great it was impossible for them to conceal themselves, and they seemed to spread over the field like a huge drove of cattle on one of those fabulous ranches of western America.

Soon after midday the captain said to me: "You are designated for the post that controls the mine field. It is delicate work. Good luck!"

I had to go to a little shelter hidden in the open field, where there was a button to which came wires from all the mines laid under the ground for a hundred yards yet further on, and there wait the charge of the Germans. My route was by a tunnel so small that in some places I wriggled thru on my belly. The shelter, when reached, was like a tomb of wood and earth and mud. A narrow slit in the front was the sole contact with the living world.

The sun settled to the horizon and the heavens flew a yellow flag, warning of death at hand, but the Germans gave no heed. I could see them swarming on the road from Beaumont to Vacherauville, like a wide gray band which polluted the snow.

Shells fell unceasingly on their pointed helmets and the smoke from the bursting shrapnel was like a low hanging cloud over their heads. Day changed to night, and the Germans advanced with the advancing darkness. They believed our trenches had failed under the storm of shell and that they could seize the Cote du Poivre.

Our trenches and our shelters were in ruins, it is true, but our soldiers held firm. We were all at our posts with rifles loaded and ready. The enemy were within 200 yards of my post and the German cannon stopped.

At the same time an immense roar came from behind me. It was the mighty chorus of rifles and mitrailleuse of my comrades. The surprised Germans of the first line, cursing, threw themselves on the ground. My breath came quick.

Would they stop there? I had my hand on the electric button, waiting patiently for them to reach the mine field. Hoarse shouts came to me, and then the deep roll of the "Watch on the Rhine," and the German horde again sprang forward furiously to the assault, running, gesticulating, singing, but mostly falling in a bloody heap on the white snow.

And now they reached the mine field. My heart leaped, My hand trembled. I waited until they crowded by hundreds on the fatal strip of earth, and then—a slight pressure of my index finger.

In that majestic tempest of smoke and steel and fire, was it really human being that I saw? Yes, I assure you I have seen it. I saw a sneering face hurtling aloft. I saw men entire spewed up from that diabolical crater. The wave of the enemy was broken. Only dead bodies remained in the smoking hole, and, scattered around it, twisted corpses half buried in the snow.—*New York Tribune.*

Dirty, Grimy Hoods

can be made just like new—you can easily do it yourself and save the cost of revarnishing.

JOHNSON'S CLEANER

will remove stains, scum, road-oil, tar, grease, mud freckles and surface scratches which you thought were permanent.

JOHNSON'S PREPARED WAX

is the proper polish to use on your car. It preserves the varnish and protects it from the weather, adding years to its life. It covers up mars and scratches—prevents checking and cracking—and "sheds water like a duck's back."

Makes a "Wash" Last for Weeks

Mud and dust do not stick to Johnson's Prepared Wax. After a dirty, dusty trip just wipe off your car—it isn't necessary to wash it. Many people even wax the *under side* of their fenders because the mud comes off so easily.

Going to Sell Your Car?

If so, clean and polish it first with Johnson's Cleaner and Prepared Wax—it will sell quicker and you can get \$50.00 to \$100.00 more for it.

Johnson's Cleaner and Prepared Wax are invaluable for use around the house—for cleaning and polishing furniture, woodwork, floors—and in fact all wood, metal and enamel surfaces. Johnson's Cleaner will remove spots and stains that other cleaners won't touch. For 10c we will send you trial cans of Johnson's Cleaner and Prepared Wax—enough for a good test.

S. C. JOHNSON & SON, Dept. IN, Racine, Wis.

The Market Place

SILVER GOES UP

Silver has reached the highest price the commodity has commanded in over twenty years. The price has gone over 77 cents an ounce.

The present advance is unusual in its causes. Silver generally goes up because of increased demand from the East; but neither China nor India has increased its purchases to any appreciable extent.

An important factor in the rise is the unprecedented demand for silver by European mints. The English mint has been a heavy buyer, and large quantities have been taken by France and Russia. The silver coinage now being put out in Europe is on an unprecedented scale. The exigencies of the war have practically eliminated gold from circulation abroad. Some coin was needed to meet the requirements of the people largely accustomed to a metallic currency, and in addition to this a great amount has been used in paying the soldiers of the different nations. A further potent cause of the recent strength of the market is the fact that the Egyptian Government has given the silver rupee a legal tender status, with the result that large amounts of coin have been taken to Egypt from India. This has necessitated considerable purchases of silver in London for account of the Indian Government. The practical elimination of the large output of silver that would come from Mexico if normal conditions prevailed there constitutes another factor in the situation.

WAR BUSINESS AND PREPAREDNESS FOR PEACE

The Secretary of Commerce does not believe that we need to be unduly worried over what will happen when war is suddenly followed by peace. Mr. William F. Malburn, Assistant Secretary of the Treasury, had written Mr. Redfield suggesting that the American people are in danger of overlooking preparedness for peace. To this Mr. Redfield replied declaring that while the necessary readjustments after the war will be important and perhaps serious, the relative importance of war business generally is overestimated. The Secretary said further:

So far as we can learn, it does not exceed one-quarter of our exports, and possibly is not quite that much. Even without them our exports would be much larger than before the war. Our shipments to South America, for example, have doubled or more.

It does not seem to be quite proportional

Stocks and Bonds ON THE PARTIAL PAYMENT PLAN

Write Today for Free Booklet C-2

It is interesting and explains thoroughly our method by which you may purchase Stocks and Bonds in any amount—from one share or bond up, by making a small first payment and the balance in convenient monthly installments. You receive all dividends while completing payments. You may sell your securities at any time to take advantage of rise in market.

Free Booklet C-2, "The Partial Payment Plan." Gives full information of this method, which appeals to thrifty men and women in all parts of the country.

CANADA STEAMSHIP LINES

to the facts to suggest that we may "find ourselves at the close of the war with a vast organization suitable to the production of goods needed in war times, which organization will be useless." In the first place, the extent of the new organization of this kind is not great compared to all our industries. There are a few cases of large additions of the kind, but in their comparative bulk they are not great. Neither is it, I venture to think, quite the fact that they would be useless in time of peace. Plants of this kind are not limited to one particular product, or even one group of products, but are available for many forms of manufacture, and the new organization and equipment will be a great asset in maintaining our export trade when the war is over.

I doubt if there is any such extent of war business as to involve such consequences as having many plants lying idle and railroads suffering from lack of goods to carry. Of the total industrial and commercial business of the country, I think it is probably safe to say that the so-called war business does not exceed five per cent.

THE MOUNTING BALANCE OF TRADE

March was the greatest month for foreign trade that the United States has ever seen. Not only the value of our exports, but the value of our imports as well, was the largest in the country's history.

The imports for March amounted to \$214,000,000; in the same month last year they were \$158,040,216. The exports for March were \$410,000,000; in the same month last year they were \$299,009,563.

For the nine months of the fiscal year ending April 1, the imports amounted to \$1,505,000,000; for the same period of the last fiscal year they were \$1,213,671,843. This is an increase of twenty-four per cent. The exports for the nine months, however, jumped fifty per cent over last year's figures. Last year they were \$1,933,475,580; this year they are \$2,996,000,000. Because of the greater pace at which the exports have climbed, the favorable balance of trade—the excess of exports over imports—has gone up like a rocket. In the first nine months of the last fiscal year it was \$719,803,737; in the corresponding period this year it is \$1,491,000,000. This shows the phenomenal increase of 107 per cent. The favorable balance is not only twice that of last year, but over three times that of the next preceding year.

Are there to be any limits to our prosperity?

BRITAIN PAYS FOR COTTON

During March and April of last year the British Government seized the cargoes of about thirty steamers carrying cotton from the United States to neutral European ports. By the terms of the so-called Cotton Arrangement, entered into between representatives of the British Government in this country and leading cotton exporters, the seized cotton was to be paid for at the contract price which the shipper would have received if the cotton had been allowed to proceed to destination in ordinary course.

Over 200,000 bales were seized, valued at something like \$12,000,000. Practi-

cally all of this cotton has now been paid for by the British Government, at the full price with interest at 5 per cent from the date of seizure added.

There was no difficulty in arranging the rate of payment in the case of cotton definitely sold on contract. In that case the contract price plus the 5 per cent made up the amount paid. But much of the seized cotton had been sent forward by American shippers on consignment. The question in these cases was as to the price basis on which the payment should be computed.

The British authorities acted in the matter in a thoroly fair and reasonable spirit and found no serious difficulty in meeting the shippers half way. It was finally agreed to pay on the consigned cotton the market price at the port of shipment on the date of seizure, such market price to be ascertained by reference to all the usual sources, particularly official quotations at American exchanges; and also to pay all charges incurred by the shippers, including freight, marine and war risk insurance premiums and interest at the rate of 5 per cent per annum from the date of maturity of the draft drawn against the cotton or from date of shipment where no drafts were drawn, plus also a profit of 50 cents per bale.

Practically all of the American shippers of consigned cotton have accepted payment on this basis and the matter has been satisfactorily adjusted.

AFTER THE WAR

In a recent address before the American Cotton Manufacturers' Association, Beverly D. Harris, vice-president of the National City Bank, of New York, made some interesting comments on the question, What will happen to us in our foreign trade relations after the war:

By reason of its wealth and strong position, the United States has been projected into the position of the world's banker for the time being. Altho not entirely out of debt to Europe, the indebtedness is fast being wiped out and is negligible compared to the present resources of the country. When the war is over and normal conditions return, there will not be the burden of interest on American securities to be paid to Europe in exports, as heretofore. This will have a tendency to curtail European imports from this country, for the crippled nations of Europe cannot afford to import more goods from us than are absolutely necessary for their rehabilitation and actual needs. The necessity will be forced on them to build up and protect their gold supplies, and as those nations are creditor nations, and other countries—principally the Latin-American republics—are heavily indebted to Europe, very strong considerations will obtain for making their purchases of raw materials and supplies, as far as possible from South America and other debtor countries—owing them—the more so as those countries produce and export similar raw materials to ourselves. The needs of Europe normally are essentially for raw materials, and her exports essentially manufactured products. South America's exports of raw materials are to a considerable extent of the same character as ours. It is to be expected that as normal conditions are restored, Europe will put forth every ounce of available energy to create a balance of trade against this country, to drain our gold supply, to restore her manufacturing industries, reestablish her foreign trade, and give us the hardest possible competition in all respects.

Stained with Cabot's Creosote Stains. For Sale by M. G. Smith & Son, Architects, N. Y.

Stain Your Bungalows

Don't paint them. Stain them all over, roofs, siding and trimmings, with

Cabot's Creosote Stains

The glossy "painty" effect does not harmonize with the bungalow idea, but the soft, cozy, warm effect of Cabot's Stains is perfect. They are made of pure creosote, being free of the green of the wood, and the staining is permanent. They cost only half as much as paint, and they last much longer to apply. If you have a bungalow in the woods, where the sun and the breeze play on your walls, where the soft light of the moon and stars is reflected in the strongest and finest colors, green, blue, red, and specially refined creosote, "the best stain in service known."

Cabot's Stains are sold in all the country. Send for literature and price list to the nearest agent.

Insurance

Conducted by

W. E. UNDERWOOD

TEACHERS' CASUALTY UNDERWRITERS

Lately there have come to this department from various sections of the Middle West requests for information respecting the financial condition and management of the Teachers' Casualty Underwriters of Lincoln, Nebraska, an organization which, on its literature, proclaims itself "The National Organization of Teachers." Search thru all the available handbooks of insurance failed to reveal the existence of an Insurance company or association of this name located anywhere in the United States. Finally aid was sought of the Insurance Commissioner of Nebraska, whose information is that the Teachers' Casualty Underwriters is operated by the Pioneer Insurance Company of Lincoln.

From this I presume that the Teachers' Casualty Underwriters may be regarded as an agency for the procurement and management of casualty risks for the Pioneer Insurance Company. Such advertising literature as I have seen prompts the conclusion that the Teachers' Casualty Underwriters is offering two restricted accident and health policies: one at a premium of \$15, the other at \$19.80 a year. The premiums seem adequate to the benefits granted, by which I mean that the company is not offering something for nothing. To put it in another way, it seems to be safe undertaking.

The figures of the Pioneer Insurance Company for the year ending December 31, 1915, are not available; but I find that at the end of the previous year the assets were \$33,104; total liabilities, including \$10,000 capital stock, \$32,890; net surplus, \$214. During 1915 the total premium receipts were \$99,642 and the total losses \$30,358.

Such reports as are accessible indicate that the Pioneer Insurance Company is owned and operated by reputable and capable men. One report is to the effect that the company operates only in Nebraska. My correspondents are in other states, from which I conclude that the company is endeavoring to transact business outside Nebraska, probably without complying with the insurance regulations and laws of such outside states. If so, that is a point against it. Nor is it easy to understand why it should canvass for business under any title other than its own. We are not to conclude, either, that there is anything in the claim that it is "The National Organization of Teachers."

This information is furnished for the benefit of a number of persons who

MUTUALIZING THE HOME LIFE

Policyholders of the Home Life Insurance Company of New York have before them for consideration a proposition made by the directors to retire the capital stock and transform the organization into a mutual institution.

The Home was incorporated and began business in 1860 with a paid-up capital of \$125,000, dividends to stockholders being authorized at the rate of six per cent semi-annually. As compared with a few other companies of its age and possibilities, its progress may be described as moderate, due undoubtedly to the conservatism of its management. It has never striven for volume of insurance written or premium income. But its affairs have been very carefully administered and the treatment accorded policyholders has been exemplary.

On January 1 last the company's total admitted assets were \$32,029,440; its surplus, \$2,263,455; and the whole amount of insurance in force aggregated \$125,660,173.

It now proposes to sell its stock interests to the policyholders at \$450 per \$100 share, plus accrued dividends at date of closing the transaction, the funds for the purchase to be appropriated out of the surplus. A meeting of the stockholders has been held and the proposal approved by them. The policyholders are to vote on the question May 25.

According to my way of thinking, they should regard it as an opportunity to improve their interests and the interests of all other persons who in the long future are to become policyholders in that company. The price to be paid for the stock is a substantial one, but not high in view of the manifold future advantages to be derived by the change.

But, in my judgment, that is not the feature which causes me to regard the price as a reasonable one. The value of the purchase to the policyholder lies in the passing of the control of a \$30,000,000 company from the possession of the owners of \$125,000 capital to the owners of the \$30,000,000. The control is everything. The policyholders will make a mistake if they do not approve the proposition and forever insure themselves against any attempt by future holders of the stock to exploit the assets in their own interests.

A. M. S., Meadville, Pa.—The Reliance Life is thoroly sound financially and is well managed. It commenced writing annual dividend policies in 1913 and has not had time to make a dividend record. However, I do not think it will soon succeed in excelling or equalling the Connecticut Mutual in that respect, one of the best dividend payers in the country. I regard a premium of \$2 a year for \$2000 accident insurance with \$10 a week indemnity as very low; \$11 annual premium for \$10 a week unlimited sickness benefits is reasonable. Nearly all the life companies now include the disability clause in their policies. I am not sure, but I think the Metropolitan, Equitable of New York, Postal Union, Central and Germania provide for periodical examinations of policyholders. There may be a few others which do.

"Standard" PLUMBING FIXTURES

You who build or remodel this year will want "Standard" equipment for bathroom, kitchen and laundry. You will want a "Standard" Built-in Bath—with its graceful lines, its solidity, its whiteness.

Ask your architect or plumber about "Standard" Plumbing Fixtures, or see them at any "Standard" showroom. Identify them by the "Standard" Green and Gold Guarantee label.

Write for copy of "Modern Bath Rooms."

NATIONAL INSTITUTE OF
EFFICIENCY

The second meeting of the Board of Governors of the National Institute of Efficiency was held on Friday, May 12, at the Lawyers' Club, 115 Broadway, New York, when the publication of the first four issues of the series of Monographs of Efficiency was authorized. Number 1 embraces Edward Earle Purinton's "The Triumph of the Man Who Acts" and "Efficiency and Life," with the widely-known chart which Mr. Purinton devised for calculating individual efficiency, and a brief introduction by Mr. Melvil Dewey, president of the Efficiency Society. Not less than four of the series are to be issued to Institute members each year, three additional forthcoming monographs being announced, as follows: "Personal Efficiency and National Defense," by Major-General Leonard Wood, one of the governors of the Institute; "The Efficiency Factor in the Expansion of American Industry," by Dr. Edwin E. Slosson, and "Personal Efficiency as Applied to Home Economy," by Mrs. Flora McDonald Thompson, president of the Housekeepers' Alliance.

The Hon. Theodore Roosevelt has accepted election as an honorary patron of the Institute, which, during the first month of its existence, has added members from the states of Pennsylvania, New York, New Jersey, Rhode Island, Connecticut, Massachusetts, Utah, South Carolina, Washington, Florida, Missouri, Alabama and the District of Columbia.

Hon. J. C. Pritchard, of Asheville, North Carolina, who has accepted appointment as State Counselor for North Carolina, has made a number of nominations for membership in the Institute. Readers of *The Independent*—the official organ of the Institute—desirous of recommending candidates for membership are offered an opportunity of doing so on page 304 in this issue.

IN TOUCH WITH HEAD-
QUARTERS

There was something almost dramatic in the demonstration of preparedness which the recent mobilization of the telephone and telegraph services afforded. Most people are vaguely aware that, in the event of war, national claims would be made upon all facilities of national significance, from automobiles and highways to wireless stations and railroads. Few were prepared, however, for the suddenness with which Washington was linked, at a given signal, with every point of importance affecting the whole country: with the Great Lakes and the Gulf of Mexico, with the Naval Stations on either coast, and so on, in thousand mile spans, until Uncle Sam's sentinels at their farthest outposts were in touch with headquarters. A secret process or method is said to be at the command of the navy in this connection. Be that as

it may, the results are themselves sufficient proof of the efficiency that exists in one of the nation's most vital services.

EFFICIENCY WEEK AT
CHAUTAUQUA

The Board of Governors of the National Institute of Efficiency has accepted an invitation of Chautauqua Institution to hold an Efficiency Week at Chautauqua, beginning Monday, June 26, and it has also been decided to have the first annual summer conference and semi-annual dinner of the National Institute during the Efficiency Week. Addressès on various aspects of Efficiency, by men of distinction who are identified with the National Institute of Efficiency, have already been provisionally arranged, among these speakers being General Leonard Wood, Mr. Henry A. Wise Wood, Mr. Gutzon Borglum, Mr. Melvil Dewey, Mr. Edward Earle Purinton, Dr. Henry S. Drinker, Mr. John A. Stewart, Hon. William R. Willcox, Mr. Raymond B. Price, and Rev. Percy S. Grant, while steps are being taken to secure equally representative men and women as speakers upon other phases of the subject in which they have specialized. A program of remarkable interest is assured, and the Efficiency Week promises to be a unique contribution to the development of the movement.

THE SMOKE NUISANCE

Indianapolis would like to be a cleaner city, and Smoke Inspector Silva P. Leach is organizing a conference under the auspices of the Chamber of Commerce in which many civic bodies and women's clubs will assist in finding a remedy for the too heavy soot fall. The proposals which the conference will discuss are eminently practical, and include a scheme for financial aid to operators of power plants, thru the municipality, in any attempts they make to reduce their smoke output by improved methods or better fuel. The idea is also to arrange lectures and supply instructive booklets to engineers, firemen and others concerned with the operation of power plants.

MOSQUITOES AND THE MOVIES

Official Spring, beside opening the golf season, saw the recommencement of the Interstate Anti-Mosquito Committee's campaign against the pest whose existence is proof of widespread carelessness and inefficiency. In part, the mosquito comes from neglected marshy areas and salt meadows, and adequate draining—a matter to be undertaken by the community thru legislation—is the accepted solution of this side of the problem. The cleanliness and fore-

thought that will prevent the breeding of the house variety is a personal factor, however, and in connection with the Interstate Committee two of the best known motion picture companies are preparing a film that will offer to the general public, in striking form, the facts as to the domestic mosquito's origin and instructions as to how to swat him before he has a chance, so to speak, to take wing. This is but one medium thru which the committee, which was organized by Health Commissioner Emerson, of New York, and represents also New Jersey, Long Island and Connecticut, will popularize anti-mosquito hygiene. Live mosquito larvæ are being supplied to school teachers for demonstration purposes, for experience has shown that children are enthusiastic workers in the No Mosquitoes Campaign, once they are put in possession of the facts.

A STEP TO PREPAREDNESS

An invention of extraordinary potentialities is shortly to be tried out at Fort Hancock. Described as an entirely new type of gun, it has already answered stringent tests under the supervision of Government officials at the Sandy Hook proving grounds, and the discoverer—reported to be an American citizen, but as yet not publicly named—is confident that his gun will do everything expected of it. Among the remarkable features of the gun are that no explosive is used; that it has no barrel; that it can be constructed in any machine-shop at comparatively trifling cost, and that its accuracy is demonstrably greater than that of present types of artillery. A model so small that it could be contained in a three-foot cubic box threw missiles in recent tests with record-breaking accuracy at a range of seven miles. The best non-technical explanation of the principle of the new weapon is that it "harnesses centrifugal force"; motor power takes the place of the usual propulsive agent, and the missile obtains its maximum velocity before leaving the machine. The invention is being sponsored by a woman—Mrs. Kathryn M. Stanton, of Whitestone, Long Island—who personally superintended every detail connected with the setting up of the models.

ROOM FOR THE BIG IDEA

Efficiency experts are troubled, says *Collier's Weekly*, in the issue of April 22, because in all the Bible they find no mention of efficiency nor scientific management. They object to the description of Creation as given in the first chapter of Genesis, maintaining that if Frederick Winslow Taylor and St. Elmo Lewis and Edward Earle Purinton had been consulted, the job that took six days could have been done in three. But probably these efficiency fellows would have objected to the job in the first place on the ground that the overhead would prove prohibitive.

HELP THE WAR SUFFERERS

America, getting rich in spite of the war and in some cases because of the war, has not done as much proportionally for the relief of the innocent victims of the war as have the belligerent nations themselves. In every country there are thousands of destitute women and children and helpless men who need your help. Do not wait for an accidental appeal. Decide where the need is greatest and send your money without delay to the American committee representing that country. The Relief Committees recommended by the Federal Council of Churches are given below with the names of the treasurers. The address is New York City in all cases except the Red Cross.

WAR RELIEF COMMITTEES

- Commission for Relief in Belgium.—Alexander J. Hemphill, 120 Broadway.
- American Committee for Armenian and Syrian Relief.—Charles R. Crane, 70 Fifth avenue.
- Serbian Relief Committee.—Murray H. Coggeshall, 70 Fifth avenue.
- War Relief Clearing House for France and Her Allies.—Thomas W. Lamont, 40 Wall street.
- East Prussian Relief Fund.—Hubert Cillis, 17 Battery place.
- Relief Committee for War Sufferers (German).—Charles Froeb, 531 Broadway.
- Polish Victims' Relief Fund.—Frank A. Vanderlip, Aeolian Building.
- American National Red Cross.—John Skelton Williams, 1624 H street, Washington, D. C.
- British-American War Relief Fund.—Henry J. Whitehouse, 681 Fifth avenue.
- American Jewish Relief Committee for Sufferers from the War.—Felix M. Warburg, 174 Second avenue.
- American Relief Committee in Berlin for Widows and Orphans.—John D. Crimmins, 30 East Forty-second street.
- Union Nationale des Eglises Reformées Evangeliques de France, Emergency Relief Fund.—Alfred R. Kimball, 105 East Twenty-second street.
- American Huguenot Committee.—Edmond E. Robert, 105 East Twenty-second street.
- Fund for Starving Children.—Frederick Lynch, 70 Fifth avenue.

A PREPAREDNESS PLAN

From Arthur Sherburne Hardy, the novelist, comes this succinct statement of a plan for military training to which we are glad to give publicity. Mr. Hardy was graduated from West Point in '69 and as American Minister to Switzerland had special opportunities to study the Swiss military system. He has also been accredited to the governments of Spain, Persia, Greece, Rumania and Serbia.

To the Editor of The Independent:

In the May number of the *Review of Reviews* Admiral Caspar F. Goodrich has an article, entitled "What Can We Do for Our Boys?" It is really a plan for national preparedness. Admirable as are many of the projects and efforts in this direction, they are spasmodic, local and temporary in character. Admiral Goodrich's plan is radical, general and goes to the root of the matter.

Briefly, he would call to the colors every American boy reaching the age of eighteen for one year's military training.

At the age of eighteen because, generally speaking, he has at that time finished his high school course, has not entered college, nor begun a professional or business career and therefore can at that age be spared with the least personal loss and with the least disturbance to the economic life of the country; for one year, because this is the minimum time adequate for an effective military training, and because at that age he is passing out of the stage when habits and ideals are formed.

The advantages of this system gained by the boy would be these:

He would learn how to take care of himself and his kit.

He would be taught respect for law and authority, obedience to his superiors, and, if an elementary course in American history were added, a knowledge of the great men and events of his country.

In short, it would be for him a school of patriotism as well as of military training and discipline—a school of character.

The gain to the country would be approximately a body of 600,000 men passing back every year into civil life with one year of military training, improved manhood and conceptions of duty, liable for service in an emergency, and at a minimum expense to the Treasury. The instruction to be furnished by the regular army and the navy in camps and on naval vessels selected and administered by the Army and Navy Departments.

As purely defensive and educational in its character, no patriotic pacifist could take alarm at this plan. The Swiss system, admirable for a small republic, is not practical for one of 100 millions. Preparedness in camps, school drills and other efforts in the direction of military training are inadequate. Preparedness in the German sense is neither possible nor desirable in a democracy. Has any better plan than the above been proposed?

Admiral Goodrich asks whether the average American boy is well set up, has he respect for law, authority, his elders? No one will give an enthusiastic affirmative answer. What would be the effect of infusing into the national life every year 600,000 who had acquired these indispensable elements of good citizenship, acquired under the leveling influences of such a national school?

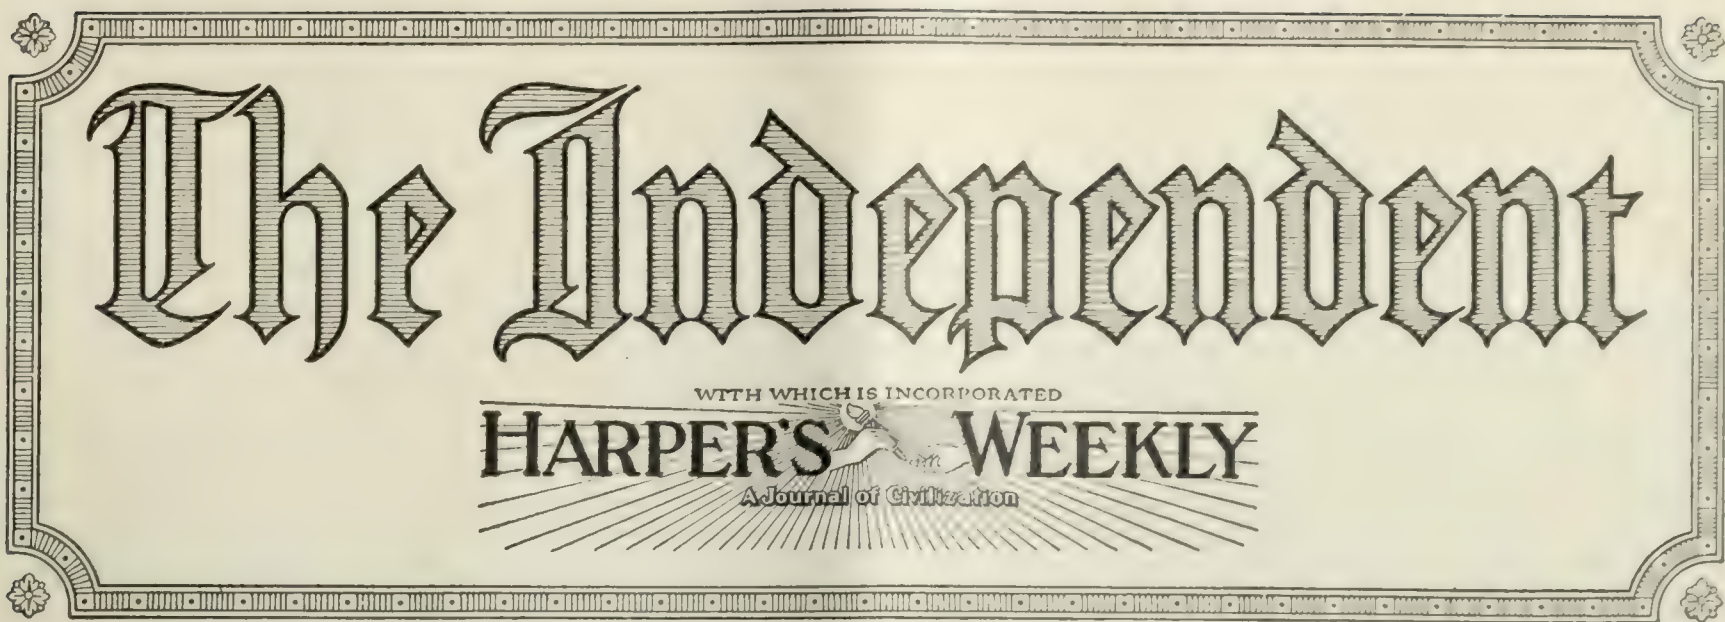

To the objection that there would be a year's loss in vocational preparation, the answer is: there is no service without some sacrifice. Could a year be better spent, on the whole, for the individual and collective good?

Because of some verbal suggestions, Admiral Goodrich asked me to sign with him his article. Not every one reads the *Review of Reviews*. I bespeak for his plan the widest possible publicity and discussion. ARTHUR S. HARDY

THE PRESIDENTIAL SPHINX

CONTEMPTIBLE COURTESY

SENATORIAL courtesy" sounds like a fine old phrase. It suggests the picture of a dignified band of courtly elder statesmen debating in a fine spirit of mutual consideration the weighty problems of a nation's governance. It is an inspiring picture—but it has nothing to do with the facts.

What is the reality?

Months ago President Wilson sent to the Senate for confirmation the appointment of George Rublee, of New Hampshire, as a member of the newly created Federal Trade Commission.

It is conceivable that there may be in the United States a man better fitted for this post than Mr. Rublee—but we do not know who he is. He had made an elaborate and painstaking study of the functions that the Trade Commission would be called upon to perform. He is precisely the man that any executive called upon to select the members of such a body ought to be overjoyed to find.

President Wilson appointed him, and the Senate, after

months of delay, refused to confirm the appointment. On what conceivable ground?

Because, forsooth, he is "personally obnoxious" to Senator Gallinger, of New Hampshire. No one contends that he is an unfit person for such an important position; no one suggests that he would not make an admirable trade commissioner.

Simply and brutally, Senator Gallinger does not like Mr. Rublee because he opposed the Senator's reelection to the Senate. "Senatorial courtesy" does the rest. A majority of the Senate have upheld Senator Gallinger's right to punish thus a political opponent. The President of the United States must have an appointment flung back in his face, the people of the United States must be deprived of the services of the best qualified man for the place, in order to feed fat a single Senator's ancient grudge.

This is mere puny spitefulness on the part of the senior Senator from New Hampshire. It displays "senatorial courtesy" as a contemptible system.

THE MOHONK CONFERENCE AND THE ENFORCEMENT OF PEACE

THE purpose of the Lake Mohonk Conference on International Arbitration—which held its twenty-second annual meeting last week under the characteristically delightful auspices of Mr. and Mrs. Daniel Smiley at the picturesque resort from which the Conference takes its name—is not pacifist in any extreme sense. For two decades the Conference has been held consistently to the single object of attempting to find a better way than war for securing international justice. It is not a peace conference; it is an arbitration conference.

It was not inappropriate, therefore, that the Conference this year should display more interest in the League to Enforce Peace than in any other subject. It was also intensely gratifying to those who, like *The Independent*, find in the plan of the League the sanest proposals yet made for the elimination of war.

The central idea of the League and its specific proposals were discussed from many points of view. It was evident that the thought of bringing the sanction of force to the support of the quest for international justice and peace appeals strongly to many different minds and diverging temperaments.

The most notable advocate of the League at Mohonk was ex-President Taft, the League's chief officer. Its most prominent critic was William Jennings Bryan.

Mr. Bryan drew an indictment against the League on four counts:

1. It would mean a departure from the national American policy enunciated by George Washington in the famous adjuration to "avoid entangling alliances."

2. It would commit the United States to the necessity of making war—not on the decision of the American Congress, as the Constitution provides—but at the dictation of a council of European powers.

3. It would imply the abandonment of the Monroe Doctrine, since, if we are to intrude into the quarrels of Europe, we cannot object longer to European intervention in affairs in this hemisphere.

4. It would mean a step downward, and not upward. "I would have the United States a moral force, not a policeman."

Mr. Bryan's criticisms resolve themselves into two: Peace should not be sought by force; and the business of the United States is with the United States, let the rest of the world manage its own affairs.

From both of these dicta—considered as absolute dicta—we cordially dissent.

The quest of the world should be for international justice and international peace. We must look forward to the day when justice and peace will rule thruout the

world thru the power of man's moral nature—or we must despair of the world.

But the day has not yet come when justice and peace prevail between individual man and individual man without the overshadowing sanction of the force of the community. It is idle to expect that in the community of nations—a community of vastly more complex organisms than the community of men and women—the day of peace and justice unsanctioned by the potentiality of force will come more quickly. The state has always needed police to keep the peace between man and man; the world state will need police to keep the peace between nation and nation for indefinite years to come.

On the question of foreign entanglements it should be remembered, as Mr. Bryan seems not to remember, that the world is a very different place from what it was in Washington's time. The world is becoming, not a group of unrelated and isolated communities, but more and more a single vast community. The brotherhood of man connotes a brotherhood of nations. The brotherhood of man will never be realized so long as each individual feels free to shut himself up within the walls of his own selfish interests and to let his neighbors severely alone. The brotherhood of the world will never be realized so long as each people on the earth feels free to circumscribe its duties and its responsibilities within its own national confines and to let the world go hang.

Justice and peace, like charity, begin at home; but if they stop there they are very poor sticks of virtues indeed.

THE GREAT FORUM

IF the citizen and loyal population of the United States becomes of one mind upon our foreign relations it will be a more momentous thing than the amount of our preparedness in the ways and means of defense. Unity of mind will be the power and substance of defense.

We say of one mind, not merely one emotion or one sentiment. We mean one intellectual conclusion, one judgment, one understanding. Throwing out of consideration the foreign-born residents whose allegiance is to other governments, the disloyal men who profess to be Americans but are not, and the contingent of eccentric folk, numerous in all great modern nations and mischievous in times of crisis, there remains the great majority of citizen Americans who may be of many opinions or may be of one thought upon the questions of public policy. It is certain that these citizens were not like-minded upon the duty of Americans to observe a neutrality of thought and speech toward the European conflict when President Wilson admonished them to do so. It is certain that they have not been like-minded upon preparedness. Not less certain it is that today they are more nearly of one mind upon these matters than they were a year ago, or even six months ago.

The process by which unity of mind is reached in America is complicated, and, by comparison with the rapidity with which emotional unity may be created, it is slow. The press has a part in it, but not the important part. Man to man discussion is essential, and the Forum contributes more than the deliberative assembly.

In the Roman Senate fateful decisions were made with an eye to the behavior of the Roman people. It was in the Forum that patrician senators and tribunes of the

people clashed, and that the intellectual reaction of the people was determined. The English House of Commons has been and is yet a great deliberative body; but it is necessary to remember that it became great with the rise of the platform, when free public meeting became a popular right and opportunity. The public opinion of England is shaped by the House of Commons and the hustings, reacting upon each other.

In the United States the mechanism and the methods of molding the collective mind are in various important details unlike those found elsewhere. For a brief period in our history debate in the House of Representatives, and still more in the Senate, influenced popular thinking. There was a time before and after the Civil War when a relation of action and reaction existed between Congress and the popular lyceum or debating club that was not unlike that between the House of Commons and the hustings. There is no such relation now. Instead of it we have developed the American "convention," the relatively new Forums, so called, especially the labor Forums, and such programs of discussion as those which are from year to year brilliantly carried out under the auspices of the Academies of Political and Social Science that meet in New York City and at Philadelphia.

The essential quality of discussion in these bodies is sincerity. Parliamentary deliberations, whether in a board of education, a board of aldermen, a state legislature, or the Congress of the United States, are never entirely frank, never quite genuine. Every speaker has his own reservations, and, as a member of a faction or a party, he is observing the rules of a game. In the conventions of societies and trade organizations, and in the discussions of such bodies as the American Academy of Political and Social Science, men commonly say what they think. It is therefore of no little significance that these discussions bring together the intellectuals, the politicians, and the leaders of business enterprise. More often than not they strike fire, as they did the other day at Philadelphia, when the questions of militarism, pacifism, and preparedness were being threshed out.

We doubt if a better mechanism has ever existed than these characteristically American inventions are for the creation of a true intellectual unification of the public mind. It is our opinion that today the American mind is being pulled together upon supremely important matters on a scale and with a strength of cohesion that will prove to be one of the most fateful facts in history.

IF NOT OUT OF ORDER

THERE is much talk in the English papers of a reorganization of the British Cabinet so as to get new blood in the Government. If they are in earnest about this we beg leave to suggest the following nominations:

For Prime Minister,
WILLIAM MORRIS HUGHES, OF AUSTRALIA
For Foreign Secretary,
SIR ROBERT BORDEN, OF CANADA
For Secretary of State for War,
LOUIS BOTHA, OF AFRICA

Premier Hughes in his recent speeches in England has shown a grasp of Imperial problems quite beyond the capacity of the untraveled Asquith. Premier Borden living outside London fogs would view the war with

other eyes than Sir Edward Grey. Premier Botha as the only British general who has a conquest to his credit might well replace his ancient adversary, Earl Kitchener of Khartum.

But perhaps the English do not really want new blood in the government.

UNIVERSITY OF COLORADO VINDICATED

IN discussing "University Management" in our issue of April 24 we called attention to the fair-minded attitude taken by the American Association of University Professors in regard to the question of academic freedom. Another evidence of their intent to be judicial in their investigation of alleged cases of administrative tyranny is afforded by their report on the cases of Colorado and Wesleyan.

In the former case Professor Brewster charged the authorities of the University of Colorado with having dropped him from the law faculty because he had acted as counsel for the Miners' Union before a congressional committee and had testified before the Industrial Relations Commission on the Colorado strike. The evidence in the case is conflicting. There is direct contradiction of testimony as to certain conversations. But the investigating committee of five professors from different universities came to the conclusion that Professor Brewster was dropped not because of his action in the labor troubles but because of a reorganization of the department. It appears that Governor Ammons urged his dismissal on the ground of his public activities in the labor cause, but that President Farrand resisted this official pressure and asserted "the principle that the conscientious utterances of a university professor in the performance of duties imposed on him as a citizen" should not be called in question.

The other case was the forced resignation of Professor Fisher after twenty years of service in Wesleyan University, on the ostensible ground of some rash remarks on church-going and Sunday observance which he made before a men's club. The Association does not go into details on this case, but it condemns the action of the authorities.

A NATIONAL PARK SERVICE

THE United States has fourteen national parks. They have an area of five million acres. They include some of the finest tracts of wild scenery on the earth's surface.

The Yosemite and the Yellowstone are too well known to need description. Glacier National Park, in Montana, contains in its 900,000 acres two hundred and fifty lakes and eighty glaciers. Sequoia National Park, in California, includes within its boundaries a wonderful forest of the giant redwood trees. Casa Grande Reservation and Mesa Verde National Park enclose prehistoric ruins of great picturesqueness and high educational value.

The nation has also thirty-one national monuments, including the Grand Canyon of the Colorado, the Petrified Forest in Arizona, the Muir Woods in California, the Natural Bridges in Arizona, the Devil's Tower in Wyoming, and the Lewis and Clark Cavern in Montana.

These national possessions afford unexampled opportunities for the enjoyment of outdoor life, exploration and popular recreation. Their preservation from

abuse and reckless exploitation is guaranteed by national laws. But the provisions for their enjoyment by the people are inadequate and ineffective. In only a single case—that of the Yellowstone Park—has anything like satisfactory preparation been made for their public use.

One of the bills now before Congress, which is likely to attract little interest because it is non-political and uncontroversial, provides for the establishment of a National Park Service. The bill has been prepared by the American Civic Association, which has done splendid work in the preservation from destructive exploitation of Niagara Falls. To this Service, to be created in the Department of the Interior, would be entrusted the task of administering these splendid national possessions. It is an admirable measure, for it would unify administrative functions which are now scattered, unrelated and utterly lacking in coördination. It would insure a uniform and far-sighted policy of administration for the national parks and monuments, and make possible the increasing use by the people of these great national playgrounds. Canada, thru its national park bureau, has so thoroly and wisely exploited its several park areas that during the season of 1915, when the war conditions in Europe naturally turned a large volume of travel toward the interior of our own country, the Canadian parks attracted more visitors than the corresponding parks of the United States.

We have done well to set aside these areas of natural beauty and recreative opportunities for popular use. What remains to be done is so to coördinate and develop their administration that their use by the people may be facilitated and encouraged.

HERESY HUNTERS

IT is a most gratifying sign that some journals and presbyteries of the Presbyterian Church are protesting strongly against the heresy charges bandied about by some mischief makers of that denomination and their followers. It is high time that those who seem determined to put our growing, expanding Christianity into an intellectual strait jacket should be called to account before the bar of enlightened Christian opinion. The attempt to force upon men of vision and conviction prescribed religious views has always been attended by grave disaster to the Christian Church and to the progress of the Gospel. It is really suicidal to pursue such a course at this juncture, when all the resources of every denomination and section of the Christian world are needed, as never before, to stay the war-making forces of the world, and bring about peace, established on the basis of brotherhood and internationalism. So long as the Church itself resorts to outward compulsion, fear, force and suspicion in order to maintain its own strength and integrity, it is difficult to see how its leaders can achieve success in counseling international good will and the replacing of force by law and reason. The Christian conscience is deeply concerned over this inner antagonism of traditional method and the present high call to sacrificial service for the good of humanity.

The solution of the difficulty is bound to come. There are indeed many indications that this destructive crisis in Western civilization is bringing into clearer view the essence of the Christian religion, and focusing the minds of Christian leaders upon the common aid and

tasks before them rather than on their differences of creed and historical organization. It will be fortunate if, in the great upheaval and realignment that are in progress, the Church should be able to free itself forever from the divisive spirit of heresy hunting and become imbued with the unifying spirit of coöperation with all who serve the interests of the ideal kingdom.

GOD SAVE THE UNITED STATES

JAPAN has a population of 60,000,000 souls. The United States has over 100,000,000.

Japan is about the size of California. Her arable land is a trifle larger than Maryland.

Japan is still an agricultural country. Her manufacturers are a generation behind ours.

The annual value of Japan's farm products is one-twelfth that of the United States, her mineral products one-fortieth, her forestry products one-twentieth and her exports of raw materials and manufactures one-eighth.

The value of Japan's farm lands is one-twentieth that of the United States, and the value of her bank deposits is one-one-hundred-and-fortieth.

Tho the Japanese army is somewhat larger than ours, our navy is a third larger than Japan's.

Before the war broke out Japan was the most heavily taxed nation on earth. As a result of the Russo-Japanese War out of every hundred dollars of wealth produced thirty dollars is said to have gone to the government directly or indirectly in the form of taxes. The general poverty of Japan is very great.

It will be evident, therefore, to our preparedness-at-any-cost friends that Japan is amply able to embark on a great war of aggression against us with every expectation of success. To arms, Americans! To arms!

ANOTHER POETICAL PERIODICAL

THAT the long foretold revival of verse is upon us seems to be evidenced by the number of new magazines devoted to it. The latest is *The Poetry Review of America*, published at Cambridge, Massachusetts. The first number is true to its name; half poetry and half review. It leads off with a two-page contribution, "No. 3 on the Docket," by Miss Amy Lowell, high priestess of *vers libre*, but the editors admit rimed verse without prejudice.

MARRIAGE VOWS

THE Methodist General Conference, in eliminating the words "With all my worldly goods I thee endow" from the wedding ritual, has taken an advance step, tho a timid one, in the direction of verbal honesty. But this action, because it is obviously merely a verbal change, shows how meaningless the ceremony has become. What a commotion would have been created if a clause of equal prominence had been dropt out of a deed, a contract or a legislative act! We frequently hear references to "the sanctity of the marriage vows," but as a matter of fact they are not expected to be kept and have no standing before the courts. Jove laughs at lovers' vows, they say, and the law laughs at marriage vows.

"With all my worldly goods I thee endow" means too often that when a wife wants a dollar for a matinee or

a missionary she has to wheedle it out of her husband with smiles or tears. If the wife appeals to the court for the endowment promised her, the judge shakes his head and tells her, possibly, that she may get the income on a third of her husband's property after he is dead. If a husband appeals to the court to compel the wife to obey him as she promised to, the judge shakes his head and smiles. English law allows, or did until recently allow, the husband to use "a stick no thicker than his thumb" in the enforcement of wifely obedience, but American law or custom has snatched even this inadequate weapon from the husband's hand and left him powerless. In certain churches brides may still promise to obey, but they don't mean to and they don't.

Altho it makes no difference what the man and woman say when they stand before the minister or the magistrate, yet on the other hand the law holds them strictly to a lot of marital obligations to which they have never pledged themselves. The simplified service of the embarrassed justice of the peace, "Have her? Have him? Hitched!" commits the contracting parties to just the same duties and responsibilities as the most elaborate ritual and the most impressive promises. We do not advocate reducing the wedding ceremony to this simple form, but it does seem to us that a little more truthfulness would be in order on such an occasion.

INVOLUNTARY ARCHEOLOGISTS

MANY people have deplored the labor wasted in the war and wished that the millions of men who have spent the last year and a half digging trenches for shelter had dug them for drainage and irrigation instead. There seems no prospect for diverting their labors in this direction, but incidentally some benefit of an unexpected sort has come from the activity of the human gophers. Archeologists have long realized that the neighborhood of Salonica offered a rich field for excavation, but they never could get their governments to pay for the excavation. Suddenly and without the urging of archeologists, the British and French Governments have sent some three hundred thousand men to Greece and set them to digging over the whole territory from the Aegean to the Serbian frontier regardless of expense. They have turned up enough objects of art and inscriptions to establish a museum and now the antiquarians flock after the soldiers like crows after the plowmen. As a result of this unprecedented excavation the world is likely to learn a great deal of the life of the ancient Greek city of Thessalonica, which was named by the founder after his wife, the sister of Alexander the Great, and which was a thriving city when Paul was called into Macedonia.

Such archeological by-products of war are no new thing. When Napoleon took a party of savants and incidentally some soldiers into Egypt one of them—one of the soldiers, not one of the savants—discovered in the Rosetta mouth of the Nile the stone which gave the clue to the interpretation of the hieroglyphics.

The morning paper tells us that the Russians are soon to attack the Turks at Mosul on the Tigris River. If this field is dug over like Verdun it ought to turn out some rich finds, for Mosul is near the site of Nineveh, that great city which Jonah once converted, probably for the only time in the five thousand years of its wicked history.

THE STORY OF THE WEEK

Preparedness in Congress

The Army Reorganization bill, as agreed to by the conference committee of the two houses of Congress, is ready for the President's signature. The conference report was adopted in the Senate without a roll-call. In the House the vote adopting it was 349 to 25.

The bill as it goes to the President provides for a regular army whose maximum peace strength is variously estimated, depending upon the interpretation put by the War Department upon certain provisions, at from 206,000 to 211,000; and for a Federalized National Guard of 457,000. It further provides for a government nitrate manufacturing plant to cost not more than \$20,000,000; for the establishment of a system of military training camps for civilians paid for out of the Federal Treasury; for a board to investigate the advisability of establishing a government munitions plant; and for vocational education in the army. Federalization of the National Guard would be accomplished thru Federal pay and thru a requirement making the militiamen subject to the orders of the President.

The next step in the preparedness activities of Congress has to do with the Naval bill. The majority of the House Committee on Naval Affairs has prepared a report which ignores the recommendation of the Secretary of the Navy for the adoption of a five year building program, and cuts down as well his proposals for the coming year. The Daniels program for 1917 called for two dreadnoughts, two battle cruisers, three scout cruisers, fifteen destroyers, five fleet submarines, twenty-five coast submarines, two gunboats and one hospital ship. The Naval Committee's proposals are for five battle cruisers, four scout cruisers, ten destroyers, three fleet submarines, seventeen coast submarines, one hospital ship, one fuel ship and one ammunition ship. The Daniels program for the next five years would provide for ten dreadnoughts, six battle cruisers, ten scout cruisers, fifty destroyers, fifteen fleet submarines, eighty-five coast submarines, four gunboats, two fuel ships, one ammunition ship and one repair ship. This aspect of the naval situation, involving the element of planning for a period of years to come, is ignored by the Democratic majority of the Naval Committee.

The Republican minority is to recommend a program for building six battle cruisers, two dreadnoughts, six scout cruisers, twenty-eight destroyers, fifty submarines and several auxiliary ships.

The calm disregard by the majority of the committee of the Navy Department's recommendations, approved by the President in his annual message to Congress, and its revolutionary proposal to build no dreadnoughts what-

ever next year, is sure to cause a pretty fight in Congress. The final program will doubtless be quite different from anything now suggested.

The House Does Some Legislating

The Rural Credits bill, which was adopted in the Senate with but five dissenting votes, passed the House last week with only ten voting in the negative. Two hundred and ninety-five Representatives voted for the bill. The two bills passed by the Senate and the House are not identical, tho the differences between them are ones of detail rather than of principle. In conference the measure will be worked out into more practical shape, and the ultimate passage of the composite bill will, of course, be merely a matter of time.

The House has also passed the Administration's shipping bill by almost a purely party vote. The 211 affirmative votes included those of a dozen minority members and the 161 negative votes those of two Democrats. The purpose of the bill is twofold: to permit the Federal Government to create a merchant marine by building, purchasing, leasing or chartering vessels to be used for commercial purposes, as naval auxiliaries and army transports, such vessels to be operated by a corporation organized by the government in case private capital would not avail itself of the opportunity to lease government-owned vessels and operate them; and

to create a shipping board with power to regulate the rates and practises of ocean carriers.

Before the bill could be passed it was found necessary to adopt an amendment limiting the government operation of steamship lines to a period of five years after the close of the Great War. The bill provides that Panama Canal bonds shall be sold to finance the proposed shipping corporation.

A bill providing appropriations of \$45,000,000 to be expended for the general improvement of the Mississippi and Sacramento rivers for the purpose of controlling floods was passed last week in the House and now goes to the Senate.

The status of the American expeditionary forces in Mexico is no more definite than it has been from the start. A new note from General Carranza on the situation is expected in Washington at any time. It is hoped, and indeed expected, that it will be friendly in tone and will not insist upon the request for the withdrawal of the American troops.

Meanwhile a little flying squadron of the Eighth Cavalry has come up with some of the raiders upon Glen Springs and rescued the two Americans who were captured in that raid. Five of the bandits were killed by the pursuing cavalry and two captured.

General Funston is going steadily ahead with the work of organizing the border patrol for the purpose of policing the danger zone across the line.

There is no news of Villa.

The Roosevelt Platform

It is characteristic of Mr. Roosevelt, when he wants to attack a policy, to go to the place where that policy is, so to speak, at home. So last week he went to Detroit and set forth at length his views on those issues before the country, the opposition to which has been personified by Henry Ford. In his speech Mr. Roosevelt made no personal attack upon Mr. Ford or anyone else, for that matter, but contented himself with a long, elaborate and particularly temperate statement of his beliefs. He prefaced his discussion of the issues with a brief appreciation of the man whose views he was to combat, in which he said:

For Mr. Ford personally, I feel not merely friendliness, but in many respects a very genuine admiration. There is much in the methods and very much in the purposes with which he has conducted his business, notably in his relations to his working people, that commands my hearty sympathy and respect. Moreover, there is always something attractive to an American in the career of a man who has raised himself from the industrial ranks until he is one of the captains of industry.

As Mr. Roosevelt sees it, and there is a great deal of evidence that many other Americans see eye to eye with

BRANDEIS OR ———?

The portrait of Mr. Brandeis on a recent cover of *The Independent* was altered by a student at the College of Wooster to bring out the striking resemblance between the "People's Attorney" and Abraham Lincoln.

Paul Thompson

THE LADY OR THE JINGO—BOTH SIDES OF THE PREPAREDNESS QUESTION

The Committee on Industrial Preparedness recently mobilized a number of illustrators and cartoonists at a dinner in New York to enlist them in the campaign for adequate national defenses. James Montgomery Flagg brought the drawing, "Armless," which thus heads the preparedness poster parade. In New York the Woman's Peace Party is holding an exhibition designed to drive home the anti-preparation case, and Uncle Sam, prepared, is a leading exhibit

him in this matter, "there are at this time two great issues before us, both inseparably bound together. They are the issues of Americanism and preparedness." In facing these issues he declares that there can be no compromise.

If there is to be no compromise, then we must have real and not sham preparedness. The issue is, says Mr. Roosevelt,

Are we prepared with a sane and lofty idealism to fit ourselves to render great service to mankind by rendering ourselves fit for our own service, or are we content to avoid effort and labor in the present by preparing to tread the path that China has trodden? . . . There is no use in saying that we will fit ourselves to defend ourselves a little, but not much. Such a position is equivalent to announcing that, if necessary, we shall hit, but that we shall only hit soft. The only right principle is to prepare thoroly or not at all. The only right principle is to avoid hitting if it is possible to do so, but never under any circumstances to hit soft. To go to war a little, but not much, is the one absolutely certain way to insure disaster. To prepare a little, but not much, stands on a par with a city developing a fire department which, after a fire occurs, can put it out a little, but not much.

The object of preparedness, in the view of Mr. Roosevelt, is not war but the prevention of war. As he put it, "I am advocating preparedness so as to avoid war, and I am advocating preparedness in the work of peace as in military matters."

The measure of the preparedness which he desires in military and naval matters is this:

I believe in a thoroly efficient navy, the second in size in the world. I believe in a small but thoroly efficient regular army, an army of 250,000 men, with a proper reserve. This would give us a mobile army of 125,000 men. But back of the regular army and navy must stand the strength of the people themselves, and this strength must be prepared in advance or it will be utterly useless in time of trial.

To the end that the people may be themselves prepared to stand behind the army and the navy in the time of

national danger, Mr. Roosevelt believes in "universal service based on universal training."

I think it would be not only of incalculable benefit to the nation in the event of war, but of incalculable benefit to the individuals undergoing it, and, therefore, to the nation, as regards the work of peace. I believe that the dog-tent would prove a most effective agent for democratizing and nationalizing our life; quite as much so as the public school, and far more so than the American factory and the American city as they are today.

But Mr. Roosevelt does not believe "that preparedness for national power lies wholly in guns and ships and armed men." In order that we may have the other essentials of preparedness, he declares:

There must be a deliberate purpose to see that health and well-being of the workers, their standard of wages and of living and of the education of their children are held up to the level that will insure the greatest national efficiency, not only for the present, but for the future. . . .

We must abolish pork-barrel methods in the army—as regards army posts, navy yards, as regards everything else. . . .

Pork-barrel graft is a crime against the nation when the army and navy are involved. But honesty and efficiency in managing the army and navy only represent the beginning of military preparedness.

We can have no effective army unless business is mobilized and especially unless our transportation system is nationalized. The railroads, whose business is directly or indirectly interstate, must, in all their relations, be regulated by the national government and not by forty-eight conflicting state governments. . . .

The merchant marine must be developed not only for our own purposes of peace, but as a basis for the navy. It must be proportionate to the transportation needs and to the navy of this country. Our merchant fleet must build up a naval reserve. We must safeguard the rights of our sailors, but we can only do so if we upbuild the lines of ships on which they are to serve.

It was a forceful and effective speech. No better statement could be made of the position of those who hold the view that preparedness in full measure is the one great national duty that confronts us at this time.

The President's Problems In an address before the Press Club in Washington last week President Wilson set forth some of the most perplexing difficulties under which the Chief Executive labors in critical times like these. In the course of his address he said:

You can imagine the strain upon the feeling of any man who is trying to interpret the spirit of his country when he feels that that spirit cannot have its own way beyond a certain point. And one of the greatest points of strain upon me, if I may be permitted to point it out, was this:

There are two reasons why the chief wish of America is for peace. One is that they love peace and have nothing to do with the present quarrel, and the other is that they believe the present quarrel has carried those engaged in it so far that they cannot be held to ordinary standards of responsibility, and that, therefore, as some men have expressed it to me, since the rest of the world is mad, why should we not simply refuse to have anything to do with the rest of the world in the ordinary channels of action? Why not let the storm pass, and then, when it is all over, have the reckonings?

Knowing that from both these two points of view the passion of America was for peace, I was, nevertheless, aware that America is one of the nations of the world not only, but one of the chief nations of the world—a nation that grows more and more powerful almost in spite of herself; that grows morally more and more influential even when she is not aware of it, and that if she is to play the part which she most covets it is necessary that she should act more or less from the point of view of the rest of the world.

If I cannot retain my moral influence over a man except by occasionally knocking him down; if that is the only basis upon which he will respect me, then for the sake of his soul I have got occasionally to knock him down.

So I say that I have been aware that, to do the very thing that we are proudest of the ability to do, there might come a time when we would have to do it in a way that we would prefer not to do it; and the great burden on my spirits, gentlemen, has been that it has been up to me to choose when that time came.

Can you imagine a thing more calculated to keep a man awake at nights than that?

Because, just because, I did not feel that I was the whole thing and was aware that my duty was a duty of interpretation, how could I be sure that I had the right elements of information by which to interpret truly?

What we are now talking about is largely spiritual. You say, "All the people out my way think so and so." Now, I know perfectly well that you have not talked with all the people out your way. I find that out again and again, and so you are taken by surprise. The people of the United States are not asking anybody's leave to do their own thinking, and are not asking anybody to tip them off what they ought to think. They are thinking for themselves, every man for himself; and you do not know, and the worst of it is, since the responsibility is mine, I do not know what they are thinking about.

I have the most imperfect means of finding out, and yet I have got to act as if I knew. That is the burden of it, and I tell you, gentlemen, it is a pretty serious burden, particularly if you look upon the office as I do—that I am not put here to do what I please. If I were, it would have been very much more interesting than it has been. I am put here to interpret, to register, to suggest, and, more than that, and much greater than that, to be suggested to.

Truly, there is no bigger job, no harder task than being President, and it does not take the man who has the fortune to be selected for the job very long to find it out.

The End of Sing Sing in Sight

The session of the New York Legislature which came to a close a month ago left some trying problems for Governor Whitman to solve. For instance, in the matter of a new prison to take the place of Sing Sing, the legislators avoided responsibility by the clumsy expedient of passing two bills with different provisions. It was obvious that both bills could not become law; the Governor must veto one or both of them. Fortunately Mr. Whitman rose to the opportunity presented by the cowardice of the legislators, and vetoed the bad bill of the pair, and signed the good one.

Sing Sing Prison has long been a pestilential disgrace to civilization. Not only is it old, unsanitary and inadequate, but the plan upon which it is built—the Bastille cell block plan—is a relic of the Dark Ages.

The need for radical improvement in the State's chief prison, long voiced by advocates of prison reform, was brought vividly into public notice by the appointment as warden of Thomas Mott Osborne. Mr. Osborne is still suffering under the persecution waged against him under the guise of law for ulterior motives. The criminal case brought against him is being smashed just as fast as the deliberate machinery of the law can move its ponderous wheels; but it may be several months yet before the process is complete.

Meanwhile Mr. Osborne has the satisfaction of knowing that the medieval cell block of Sing Sing is to give way to a new institution built in accordance with the ideas of modern enlightenment as to the treatment of those who have broken the State's laws. The house of horrors that is Sing Sing, the propagating and distributing station for disease and vice, is to go. A farm and industrial prison on a better site is to take its place.

Other Vetoes by Governor Whitman

Another courageous veto by Governor Whitman of a vicious legacy of the departed legislature dealt with the conditions of labor of women and minors in the canning industry. Each year an attack is made in the New York Legislature upon the laws which protect these workers from exploitation. Each year legislators are found ready to serve the selfish ends of greedy manufacturers at the expense of humanity. The bill passed this year by the Legislature would have made it possible for women to be worked twelve hours a day, seven days a week, during the rush season from June 15 to October 15.

Governor Whitman also refused his approval to the bill establishing a board of censorship over moving picture films and imposing a tax upon each film presented. The tax provision, it was estimated, would return an annual income to the state of more than a million dollars. It would, said Mr. Whitman, impose an unnecessary hardship upon the motion picture industry. "The moving picture theater," said the Governor, "because of the nominal

admission fee of from five to ten cents, has become the principal form of entertainment which can generally be enjoyed by persons of limited means. . . . I believe it to be a fact that the burden imposed by this bill in respect to the tax on the producers and lessors of these films would be so great as to close many of these places of exhibition." He further declared that he had found such fundamental objections to the procedure under the censorship provision of the bill that it was not necessary or possible to consider the fundamental question of the desirability of such censorship.

The Independent recently expressed editorially its views on the unsoundness of any governmental censorship whatever over dramatic productions, even when the screen takes the place of the stage. Governor Whitman's veto is in the line of sound public policy.

A Terrible Crime in Texas

In the town of Waco, Texas, last week a crowd of 15,000 persons watched a human being burned to death. It was no accident, but deliberate intent. A negro boy of eighteen had criminally assaulted and killed a white woman seven days before. He had been arrested, indicted, tried, convicted, and sentenced to death in astonishingly brief space of time.

Then the mob seized him and burned him to death in the public square, while men, women and children looked on. It was a peculiarly atrocious case of lynch law. It had none of the usual circumstances that are offered in palliation. The offender had been convicted and would have been put to death legally in due course. There could be no contention that justice might be cheated. His lynching was simply an orgy of mob brutality and savage lust.

The young negro's crime was a horrible one. The crime of the people of

Waco was more horrible and a deeper stain upon the fair name of Texas.

Beyond the Alps Lies Italy

On Monday, May 15, almost exactly a year from the date when Italy declared war upon Austria, the Austrian troops in the Trentino began an advance movement which in a few days carried them over the Italian frontier. During all this time the Austrians have kept to the defensive and been content to hold the lines that had been fortified a few miles within the boundary. The Italian troops, outnumbering their opponents some four to one, have been unable to break thru these lines at any point or to capture any important stronghold. The Italian soldiers appear to have fought bravely and they seem to have been abundantly supplied with munitions, but the utmost they have been able to accomplish is to push their lines from three to five miles into Austrian territory in several sectors and at one point near the coast about ten miles.

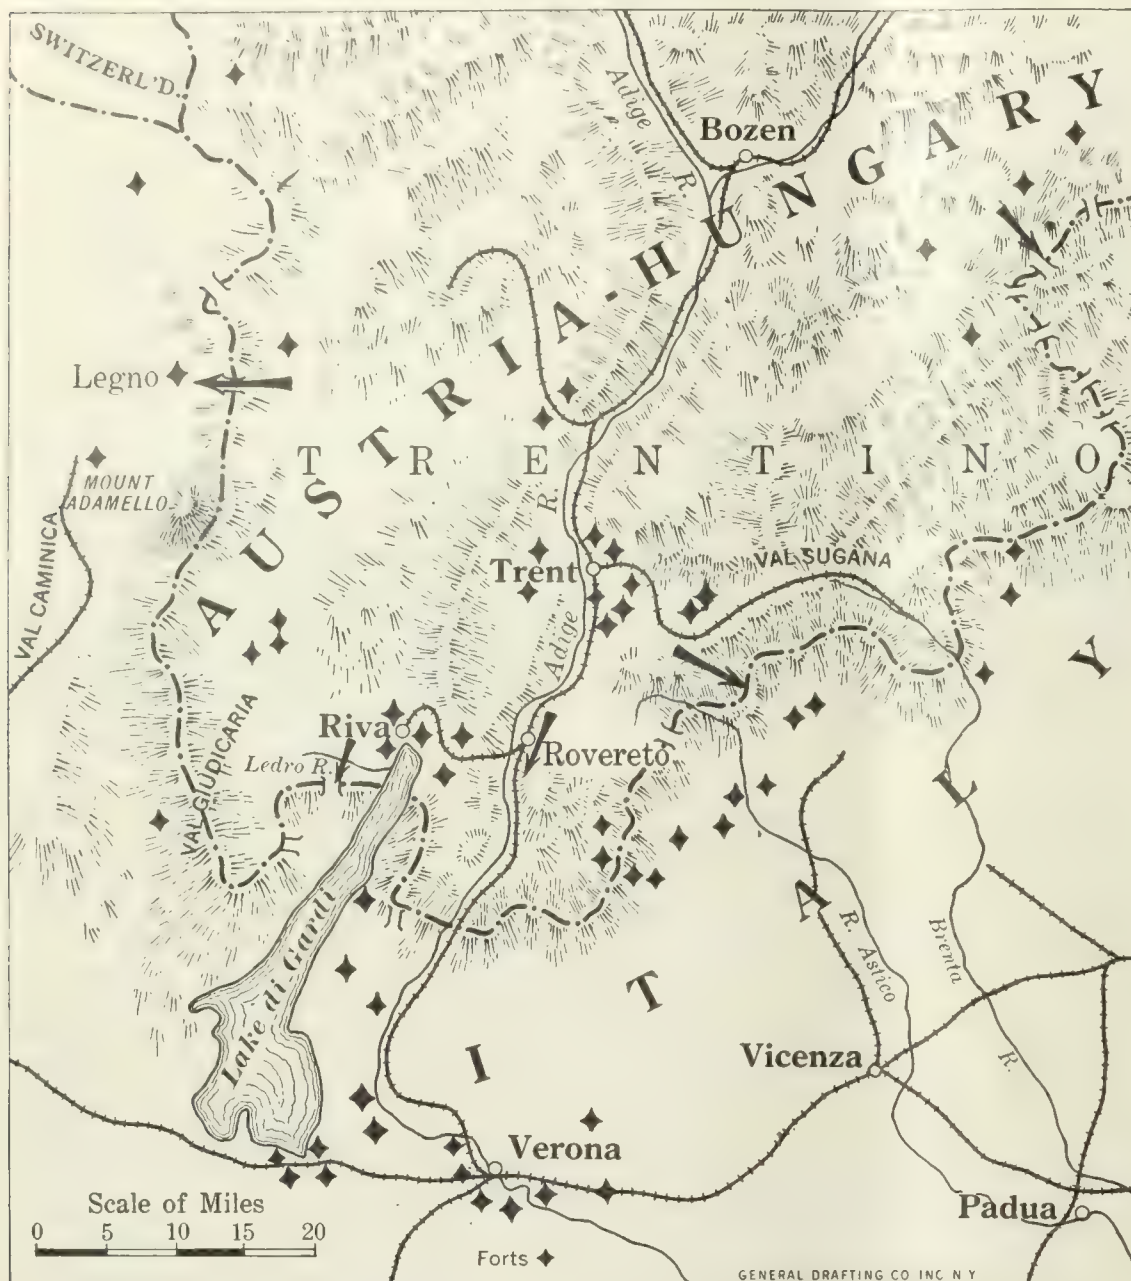

Even more humiliating to Italian pride was the course of events on the other side of the Adriatic. Here Italy has long claimed special interests, for the King of Montenegro is the father of the Queen of Italy, and the Albanian coast has been regarded as eventually coming within the domain of Greater Italy. Yet the Italian troops that had been shipped across the Adriatic offered no resistance when the Austrians swept over Montenegro and Albania. Only one point on the eastern shore of the Adriatic, the city of Avlona, has been held by the Italians and this is now threatened by Austrian attack from sea and land. A hundred and fifty vessels are said to have been assembled at Fiume, the Hungarian port on the Adriatic, in order to convey an Austrian army to Durazzo, the capital of Albania. From this point they can march down the coast to Avlona.

WHERE OUR OWN WAR NEWS COMES FROM

General Pershing giving an interview to the newspaper correspondents at Field Headquarters near Namiquipa, Mexico

THE AUSTRIAN INVASION OF ITALY

The Austrians have taken the offensive by massing troops in the Trentino tongue and attacking the frontier at various points in the direction of Verona and Vicenza

Italy's Part in the War The Allies naturally expected that the accession of Italy with some three million potential troops would make a great difference in the course of the war, and they have not been able wholly to conceal their disappointment at the failure of the Italians to deliver any effective blows or even to divert any considerable proportion of the Austrian army from the Russian and Serbian fields to the Italian frontier. None of the Allied armies, with the exception of the British, has made so little progress as the Italian. Since Italy did not enter the war until nine months after its outbreak she had ample opportunity for preparation, and she was supplied with all the necessary funds for this purpose by Great Britain and France.

But by bringing Italy into the war the Allies alienated Greece, and as it has turned out Greece might have been more use to them, for it was thru the inactivity of Greece and the accession of Bulgaria that the Central Powers were enabled to conquer Serbia and connect with Constantinople. From this followed the defeat of the British on the Dardanelles and the Tigris. Meanwhile Greece has seized the opportunity to occupy the Epirote provinces of southern Albania, back of Avlona,

which Italy has coveted. The representatives of this district are now admitted to the Greek Parliament.

Italy has never declared war upon Germany, so the old treaty which binds these nations in a defensive alliance is still nominally in force. Nor have the German ships in Italian ports yet been seized by the Italian Government, altho, curiously enough, the German ships seized by the Portuguese Government have been sent to Italy to aid in the campaign against the Austrians.

A year ago, when Italy was hesitating whether to engage in the war, Austria offered her the Trentino and a strip along the Isonzo frontier if she would maintain her neutrality, but this was rejected as insufficient to satisfy the aspirations of the Italian Irredentists. The territory gained by the Italians during the past year at a cost of several hundred thousand men is not nearly so large as that offered Italy to remain at peace.

But the entrance of Italy in the war has been of great advantage to the Allies in many ways, especially in closing the ring around the Central Powers and shutting the last door thru which they could get supplies from the outside world. The lack of success of the Italian troops in the field does not appear so surprising when we consider

that the Austrian frontier fortifications, which they were attacking, were not improvised entrenchments in the open plain like those held by the French, British and Germans in France and Belgium, but a carefully constructed system of defenses located upon the heights overlooking the Italian plains. When Austria surrendered the province of Venetia to Italy in 1866 she insisted upon drawing the boundary line upon the edge of the mountains, so as to give her the strategic advantage that she is now utilizing.

The Trentino Campaign

The southern point of Austrian Tyrol, known from its chief city as the Trentino, juts down into Italy like an Alpine peninsula. At its tip it is split by the Lago di Garda, most of which is Italian waters, but dominated by the hills on either side which were held and fortified by the Austrians. Verona and Vicenza are both within twenty-five miles of the Austrian frontier and an advance of another twenty-five miles beyond Vicenza would bring the Austrians to Venice and cut off the province of Venetia from the rest of Italy. Venetia was gained by Italy fifty years ago thru Prussian prowess rather than her own efforts, for the Italian generals and admirals made a muddle of the 1866 campaign against Austria. Austria has never ceased to look with longing upon her lost Venetia, altho the province is altogether Italian in population and sympathies.

But the reconquest of Venetia seems too ambitious a project for the Austrians to undertake at this stage of the war—and it may be that the invasion of Italy from the Trentino is intended, like the German attack upon Verdun, to forestall an offensive on the part of the Italians in another quarter. We may surmise that the recent visit of Premier Asquith to Rome for the purpose of stimulating the Italians to greater activity and it was rumored that they were massing troops for a vigorous attack upon the eastern front along the Isonzo River.

At any rate General Cadorna has been forced to transfer his headquarters

THE GREAT WAR

May 15—Austrians advance in Trentino. Trial of Sir Roger Casement for high treason begins.

May 16—Austrians gain on Adige and Astico. Russians cross Persian border toward Mosul.

May 17—Three German ships sunk by British submarines in the Baltic. French and German aviators fight 33 battles in the air.

May 18—Germans take trenches on Hill 304. El Arish, near Egyptian frontier, bombarded by British warships and aeroplanes.

May 19—Austrians take Col Santo, south of Rovereto. Dunkirk bombarded by German aeroplanes.

May 20—Italians take Col di Lana, in Venetian Alps. Germans repulsed on Dead Man Hill.

May 21—Cossacks join British on Tigris. French regain Haudromont quarries, east of Meuse.

from the Isonzo frontier to the Trentino, where the Austrians are pouring down the valleys leading into Italy. Three of these leading southeast from Trent seem to be the avenues chosen for the Austrian invasion. The first is the Lagarina valley thru which flows the Adige River, a gorge so wild that it was taken by Dante for one of the scenes of his "Inferno." The Adige runs down just east of Lake Garda to Verona. Further to the east is the Astico River, which flows thru Vicenza to Venice. Beyond this is the Brenta River, which forms the Sugana valley.

The Italian troops during the past year have been trying to push their way up these three valleys to the cities of Rovereto and Trent, but had not succeeded in penetrating more than five miles at the most, and much of this ground was recovered by the Austrians within four days after their advance movement began. The Italians who held the passes and peaks seem to have been taken by surprise and lost heavily. According to the Vienna report, the Austrians took in four days 257 officers, 12,900 men, 107 guns, 12 28-centimeter howitzers and 68 machine guns. On the other hand, the Italians claim that the Austrians lost 35,000 men in the four days' offensive.

Dead Man Hill The Germans have by no means given up hope of capturing Verdun. On the contrary they have, during the week, renewed their efforts to take the hills west of the Meuse River, and their latest attack was pushed with as much vigor as their first two months ago. A night assault gave them possession of part, at least, of the top of Hill 304, and later they gained some of the outer trenches on Dead Man Hill, which stands next to it. But at the second line of entrenchments the French curtain of fire was so fierce that the German wave was stopped and turned back. The Germans have during the week straightened their line in this sector and are now able to attack Dead Man Hill from the west, south and north simultaneously.

At other points along the line in France and Belgium the Germans have been active. In the Argonne forest, west of Verdun, and in the Champagne

Copyright Medem

THE RUSSIANS IN FRANCE MUST LEARN TO FIGHT A LA FRANCAIS

region beyond, they attacked the French lines and near Loos and Armentières the British. A squadron of German aeroplanes flying over Dunkirk and Bergues killed a dozen persons including women and children.

Russians Advance on Mosul Mosul on the Tigris is likely soon to see a bigger fight than in the days when its name was Nineveh and it was the leading city of the world. Now its importance is derived from the fact that the overland caravan route from Aleppo along which the German Bagdad railroad was to come here reaches the Tigris River. The capture of this junction by the

Russians from the Caucasus would cut Turkey in two and leave Persia to be divided between the British and Russians.

The news from this field is too fragmentary and unreliable to enable us to place the armies with exactitude or even to tell which way the tide is going. But it appears that since Field Marshal von Mackensen has taken charge of the Turkish forces in Armenia the westward advance of the Russians from Erzerum upon Erzingan has been checked and that the Russians who are moving south toward Mosul are meeting with increasing resistance as they approach the Tigris River. Besides this army from the north there are said to be two other armies approaching from the Persian frontier to the northeast, one headed toward Mosul and the other toward Bagdad, 220 miles down stream. But the Turkish troops which have been engaged against the British on the Tigris are now released, thru the capture of General Townshend's army, and may be turned against the advancing Russians.

General Sir Percy Lake, who now has charge of the British forces in Mesopotamia, reports that "a force of Russian cavalry has joined General Gorringe after a bold and adventurous ride." These Cossacks probably came down thru the mountains from the Russian army which has marched from the Caspian Sea thru Hamadan and Kermanshah and crossed the border into Turkey.

Paul Thompson

TRAINING CIVILIANS FOR WAR DUTY IN THE SHOPS

England not only calls women and some men into her munition plants, but she gives them special training for effective work there. This is a class conducted by the London County Council and, as the blackboard shows, the teaching gives the workers an intelligent appreciation of their tasks

FROM STATE TO STATE

CONNECTICUT: According to the latest report of State Labor Commissioner Hyde, the employment agencies conducted by his department in Hartford, New Haven, Bridgeport, Waterbury and Norwich procured employment for 1623 persons out of 2750 who applied to them in March of this year. Of these applicants 1956 were men and 794 women. About fifty-five per cent of the men and seventy per cent of the women were placed in employment. On the other hand, there were more than 2000 applications for help in the month, and about eighty per cent of these demands were supplied. This was the largest volume of business ever done in a month by these agencies.

DISTRICT OF COLUMBIA: Congress finally has passed the bill, so many times rejected, incorporating the American Academy of Arts and Letters in the District of Columbia. Among the incorporators are some of the best known authors and artists of the East and one, James Whitcomb Riley, from west of the Alleghenies. The bill limits the membership of the academy to fifty. The stated purpose of incorporation is "to enable the organization to receive and expend any fund which, for the purpose of advancing literature and the arts, may be entrusted to its good faith, its experience and its knowledge of the best use to which such fund may be put." As vacancies occur members of the academy are to be chosen from the membership of the National Institute of Arts and Letters, by which the academy was established in 1905.

ILLINOIS: The formal opening of Chicago's municipal pier will be celebrated on Memorial Day. It is said to be the largest and best equipped city pier in the world. Located at the mouth of the Chicago River, it extends 3000 feet into the lake and is 300 feet wide, with large recreation facilities at its end. It is intended to relieve congestion in the river by taking care of most of the freight and passenger service outside. It has cost about \$4,600,000, but engineers say its rentals and concessions will cover the cost of maintenance of all its buildings, amortize the original cost and pay four per cent on the investment.

KENTUCKY: The passage of the so-called Hutchcraft bill by the Legislature is said to have been followed by the "driest" Sundays Kentucky has ever known. One provision of this bill requires the revocation of a liquor license as soon as a violation of the law has been proved, and a year must elapse before another license can be issued to the same person or to any other person at the same location. The Sunday closing law has long been a dead letter in most of the cities and towns of the state, but it is said that this new provision has changed the situation. In Louisville on the Sunday following the passage of the law not a drunken man was seen and not an arrest was

made for any cause at the central police station between 7 a. m. and 11 p. m.

MARYLAND: A new law, said to be unlike any other ever enacted by a legislature in this country, has been signed by Governor Harrington and is to go into effect on June 1. It is one of the results of that condition exposed last year by the Goldsborough Vice Commission, which learned that thousands of new-born infants had been disposed of to private institutions, in which a large percentage of them had died. The new law provides that no illegitimate child under six months of age may be separated from its mother to be placed in any foster home, except under duly attested necessity for the physical good of the mother or child. Opponents of the measure fear it will lead to many cases of deliberate infanticide.

MICHIGAN: The tuberculosis survey of this state, begun last October by the Michigan Board of Health, has proved surprisingly popular, and the board has found it impossible to keep up with the demands made by people who wish to be examined. In the six months thirteen of the eighty-three counties in the state have been visited and more than 5000 persons examined. 2242 cases with either positive evidences or suspicious indications of tuberculosis were found. Nurses visit the homes of these persons and give instructions for the improvement of living conditions and information on how to prevent contagion.

MISSOURI: The United States Supreme Court has dismissed the appeal of the St. Louis street railway lines from the decision of the Missouri courts, which upheld the ordinance by which the City of St. Louis places a tax of one mill on each street railway passenger. As a result of this dismissal the city will receive about \$3,000,000 in back taxes.

MONTANA: Yellowstone County, of which Billings is the chief city, has voted \$175,000 in bonds for the construction of the first extensive permanent roads in the state to be built in this way. These roads are to extend for a distance of thirty-five miles along the line of the Yellowstone trail, a popular automobile route for tourists to the Yellowstone and Glacier national parks. The Billings Chamber of Commerce prepared the plans and conducted the campaign for the bond issue.

NEBRASKA: After long negotiation the Missouri River navigation committee of the Omaha Commercial Club has secured a steamboat of 150 tons cargo capacity to run regularly between Omaha and Kansas City. This last link in the chain makes possible river traffic from St. Louis to Sioux City. A line is already established between St. Louis and Kansas City and another between Omaha and Sioux City.

NEVADA: The discovery of rich deposits of tungsten in Humboldt County has created

as much excitement thruout the state as that incidental to the free-gold strike in the Willard district a few years ago. The hills, valleys and gulches in the vicinity of Lovelock are alive with prospectors, and the towns are doing a booming business in outfits and supplies. As a result of the furious search many deposits have been found, and money and properties are changing hands in rapid succession. One mill is said to be turning out more than \$100,000 worth of concentrates a month.

NEW HAMPSHIRE: Among the many new fields into which the New Hampshire state college at Durham has sent its influence and assistance is that of community development. The college has just called its first community conference, the announced purpose being "to offer men and women interested in the social problems of community life in this state an opportunity to consider and discuss common problems and opportunities." An extensive three-day program has been arranged, with addresses by well-known men and women on a wide range of pertinent subjects.

OKLAHOMA: Last year, under a new law, the collection of the Oklahoma income tax was taken out of the hands of the county assessors and turned over to the State Auditor. Under the old law the assessors had found only 157 persons subject to the tax and had collected only \$2900. In the first year under the new law State Auditor Howard succeeded in collecting more than \$200,000. Believing he had not yet found more than half of what was due, he recently went to Washington to get the names of 2300 Oklahomans who are understood to have paid income tax to the Federal Government. Access to the records there was denied him, and he took the matter to Senator Gore and the Oklahoma congressmen, with the result that they are seeking to change the federal law so as to provide for the interchange of such information between the federal tax authorities and those of states having income tax laws.

TENNESSEE: This state has what is called an "ouster" law. The Chattanooga Times describes it as "a law to enforce a law that was passed to enforce another law for which the people apparently had no respect." Under this three-ply law Squire Barrett was ousted from the Bradley County Court, whereupon he went to the people of his district upon the proposition that the ouster law was an instrument of persecution of the "ins" by the "outs," and not wanted on the statute books; and the people stood by him. Now the whole state is taking sides, and it looks as if nothing short of a referendum could settle the matter.

WASHINGTON: By a vote of six judges to three, the Supreme Court of this state has decided that the \$1,500,000 capitol bond issue is unconstitutional. This issue was authorized by the Legislature last year for the purpose of paying

back into the general fund moneys borrowed by the Capitol Commission and of completing the Temple of Justice. The Legislature guaranteed interest payments on the bonds by providing a tax levy to tide over until the sale of capitol grant lands would cover this expense and repay to the general fund the amounts paid by direct taxation on the capitol bonds. The court holds this to be contrary to the constitutional provision which restricts the imposition of taxes without authorization by vote of the people.

WEST VIRGINIA: For two years Philip J. Walsh, general superintendent of road construction in Kanawha County, has been in charge of camps of prisoners furnished by the state to that county at 75 cents for a day of nine hours of road work. The state feeds, clothes and guards the prisoners, who work entirely under the honor system and are treated as paid laborers, the guards being unarmed. In a recent report, Mr. Walsh said: "I would rather work with a crew of prisoners from the state penitentiary, because I can secure better results than with any gang of free labor I ever saw. This is the way to build your highways. It gives the poor unfortunates a leg up in life; it's a man-to-a-man's job, and it gives you a dollar's worth of road for every dollar spent."

WISCONSIN: In 1893 the state Legislature authorized Milwaukee to establish a municipal lighting plant. Five times since then the people of the city have voted strongly in favor of issuing bonds for this purpose, the amount to be spent increasing each time. Four times nothing came of it. At the recent city election they voted three to one for a bond issue of \$750,000 to establish a distribution system, the city to provide the entire equipment, but to buy current from a private company. Now the Council has passed the necessary ordinance and the new mayor has signed it. But it has cost the people five elections and twenty-three years of waiting.

WYOMING: An article on "Resources of the Arid Land States," by I. S. Bartlett, of Cheyenne, was recently read into the United States Senate journal by Senator Shafroth of Colorado as an argument in favor of the proposed 640-acre homestead law. Among other things, it contained a statement of the value of just a few of Wyoming's undeveloped resources as tabulated from United States geological surveys, state geological reports and official investigations. Included in a total of \$61,305,000,000 are such items as 424,000,000,000 tons of coal at ten cents a ton, and 20,000,000 acres of oil deposits at \$500 an acre. Yet Wyoming has a population of only 150,000, tho its area equals that of Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut and Pennsylvania combined, where there are 15,000,000 inhabitants.

HUGHES—WHY?

BY JACOB GOULD SCHURMAN

PERHAPS the most remarkable thing in the life of Charles E. Hughes is that in whatever position he has been placed he fixed his eyes upon the need of the situation, used all his energy and devotion in meeting it, and accomplished his task with extraordinary success.

There was no better student at Madison or Brown, no better young lawyer at the New York bar, no better professor at Cornell University, no better public investigator in all the body of insurance experts. When he was summoned to the office of Chief Executive of the State of New York he gave us an administration and a leadership which ranked him among the greatest Governors we have had in the entire history of the state. And, tho a layman may hesitate to pronounce any verdict upon judges, I am confident that public opinion does not rate Mr. Justice Hughes second to any judge who today sits upon the bench of the Supreme Court of the United States.

But whether sitting in the high and sheltered places of justice, or administering in the full blaze of party criticism the multifarious and weighty affairs of the Empire State, or engaged in the private practise of a stirring and keenly competitive profession, the thing that arouses wonder and admiration is the adequacy, the ample and apparently easy adequacy, which Mr. Hughes brings to every task. His whole public life has been a succession of great and surprising achievements. If any man is equal to the Presidency he is, for he has been equal to every other great office. And there is no better training school for the Presidency, and no better testing-place for a Presidential candidate, than the Governorship of the State of New York.

WHAT a leader Hughes would make for the Republican party! His personality, character and public record would reinspire and intensify popular confidence in "the party of moral ideals." For, strong and capacious as his intellect is, it was not primarily by his intellect, but by his honesty, sincerity, courage, independence, inflexible principle, and resolute devotion to the public good, uncolored by the shadow of personal or party advantage, that he rallied to his standard the voters of New York State and established thruout the Republic the reputation of a great statesman and high-minded party leader.

And what a campaigner he would

The man whom we have asked to interpret the Hughes "boom" for us is a staunch Republican. As President of Cornell University he was associated with Justice Hughes when he taught there, and he has seen service in the diplomatic corps and as a Philippine commissioner.—THE EDITOR.

be! In the presidential campaign of 1908 he so far surpassed every other Republican speaker that he had scarcely a second. His great speech at Youngstown was like a broadside from a whole battalion of orators. His luminous exposition and fiery eloquence pierced even to the dividing asunder of the joints and marrow of all the progeny of Mr. Bryan's rhetoric. And not only Mr. Bryan, but President Wilson, at once the most finished and the most effective speaker of the Democratic party, will be in the campaign of 1916. It will be no easy thing to overcome him, for the President besides being an able man and a trained orator, is also a shrewd politician with a thoro knowledge of recent politics. What other Republican is so well qualified to be our protagonist in this combat as Charles E. Hughes?

The instinct of the people, as is always the case, is wiser than the plans and devices of the political managers. The people have made up their minds that Hughes is to be the next President of the United States. They are demanding in no uncertain tones his nomination by the Republican Convention in Chicago. A man must be blind indeed who does not recognize the strength, the pervasiveness, the insistency, and the constant growth of the "Hughes sentiment." And the amazing thing is that it is absolutely and entirely spontaneous. There are no Hughes agents, no Hughes organization, no Hughes money, no Hughes press—nothing, as Colonel Harvey has so well said, *but the people*. The time, however, has arrived in America when the people have their way, and no political Canute dare attempt in Chicago to sweep back this irresistible tide of popular Hughes sentiment.

Who else is there that the Republicans can assuredly elect? With any other nominee the prospect of election is at best a hope; with Hughes it is a certainty. President Wilson is going to be a much stronger candidate than our Republican managers and spokesmen imagine. We need an opposing candidate who can unite the

Republican party, inspire it with heroic leadership, and evoke all its latent strength. Hughes, who was on the Supreme Court bench two years before the party disruption of 1912, is the man capable of accomplishing these results. Conservatives and progressives, organization men and independents, will alike support the man they came to know, admire, and trust while Governor of New York. It would almost seem as if, in the interval, he had been specially set apart and preserved for the present emergency in the life of our nation and of mankind.

But may not some "dark horse" emerge at Chicago? The day of "dark horses" is gone. A "dark horse" presupposes a party organization capable of delivering the party vote. But the people are today too independent to suffer this delivery of their votes.

THE strength of Hughes is the people's desire for him. He himself has not been and will not be a candidate for the presidential nomination. There is, in my opinion, only one way in which the Republican party can secure him. If they want him they must draft him for the service. Such a call he could not decline. Read the words he address to the New York Republican Club on October 18, 1907:

"To me public office means a burden of responsibility—a burden of incessant toil at times almost intolerable—which under honorable conditions and at the command of the people it may be a duty and even a pleasure to assume, but is far from being an object of ambition."

Mr. Justice Hughes is today stopped from saying a word on politics. But fortunately his acts and speeches while Governor of New York give ample information as to his attitude, not only on state, but on national policies.

President Wilson has been successful in establishing himself as leader of his party, but the price paid has been especially marked in the impairment of the nation's administrative service. Now Governor Hughes held that "the administration of office is at least three-fourths of political life," and he devoted his supreme energies to the maintenance of the highest administrative standards. He held that a perfect administration of every office would dispel almost all the problems which now perplex us.

This conception determined the kind of men he appointed to office.

FROM STATE TO STATE

CONNECTICUT: According to the latest report of State Labor Commissioner Hyde, the employment agencies conducted by his department in Hartford, New Haven, Bridgeport, Waterbury and Norwich procured employment for 1623 persons out of 2750 who applied to them in March of this year. Of these applicants 1956 were men and 794 women. About fifty-five per cent of the men and seventy per cent of the women were placed in employment. On the other hand, there were more than 2000 applications for help in the month, and about eighty per cent of these demands were supplied. This was the largest volume of business ever done in a month by these agencies.

DISTRICT OF COLUMBIA: Congress finally has passed the bill, so many times rejected, incorporating the American Academy of Arts and Letters in the District of Columbia. THE strength of Hughes is the people's desire for him. He himself has not been and will not be a candidate for the presidential nomination. There is, in my opinion, only one way in which the Republican party can secure him. If they want him they must draft him for the service. Such a call he could not decline. Read the words he address to the New York Republican Club on October 18, 1907:

"To me public office means a burden of responsibility—a burden of incessant toil at times almost intolerable—which under honorable conditions and at the command of the people it may be a duty and even a pleasure to assume, but is far from being an object of ambition."

Mr. Justice Hughes is today stopped from saying a word on politics. But fortunately his acts and speeches while Governor of New York give ample information as to his attitude, not only on state, but on national policies.

President Wilson has been successful in establishing himself as leader of his party, but the price paid has been especially marked in the impairment of the nation's administrative service. Now Governor Hughes held that "the administration of office is at least three-fourths of political life," and he devoted his supreme energies to the maintenance of the highest administrative standards. He held that a perfect administration of every office would dispel almost all the problems which now perplex us.

This conception determined the kind of men he appointed to office.

Appreciating political activity and party service, he would nevertheless not use public office to reward party workers. An honorable political experience might indeed be a supplementary advantage in an official, but what Governor Hughes demanded primarily and fundamentally was "men adapted to the office with the character and the capacity which will enable them to discharge its duties."

THE issue of the hour is preparedness. But as far back as January 31, 1908, Governor Hughes, while asserting that American ideals were those of peace and opposition to aggression, which he regarded as "our surest protection," made also this memorable declaration:

"It is entirely consistent with these aims, and it is our duty, to make adequate provision for our defense and to maintain the efficiency of our Army and Navy. And this I favor."

In the same speech Governor Hughes declared that he believed in a protective tariff. It was essential, he said, to the maintenance of the American scale of wages and the American standard of living. But he was opposed to a tariff which authorized exorbitant rates or special privileges, and he recommended the appointment of an expert tariff commission to ascertain just and reasonable rates in harmony with the protective principle.

As to the Philippines Governor

Hughes held that "in the meantime" we must omit no effort to prepare the Filipinos for self-government. And looking to the future, he added:

"When they are able to govern themselves and are in a position to maintain their independence, the American people will not deny them the boon which we ourselves have so highly prized."

Governor Hughes's attitude toward property on the one hand and to special privilege on the other was finely illustrated in his campaign for the regulation of our public service corporations which finally issued in the enactment of a memorable statute establishing the New York Public Service Commissions. He insisted that the Legislature should no longer harry the railways with adverse legislation, but leave it to those Commissions after patient investigation of the facts to do justice in each individual case.

Governor Hughes was always deeply interested in every effort to improve the conditions of the wage-earners. He favored employers' liability legislation and approved the laws with regard to safety appliances and hours of labor in railroad service; and he laid down the principle that

"wherever the Government comes into direct relation to labor, proper conditions with regard to hours, wages, safety, and compensation for accidents should be provided."

The extension of the functions of the National Government in consequence of the operation of powerful forces in the world of business which ignore state lines was as obvious to Governor Hughes as to other thoughtful men who had given attention to the matter. The recognition of this potent factor in the economic life of the nation will involve legislation in the future. And when the world-war is over, and international relations readjusted, perhaps there will be no graver or more difficult question to come before the American people. Governor Hughes summarized his views on the subject in 1908 in the following sentences:

"It cannot be regarded as a policy of unwise centralization that, wherever there is a serious evil demanding governmental correction which afflicts interstate commerce and hence is beyond the control of the states, the power of Congress should unhesitatingly be exercised."

At any rate the questions of today will not be the questions of the next four years, which, of course, no one can foretell. The American people are called on this year to elect to the Presidency a man brave, wise, honest, independent, and strong enough to grapple successfully with whatever issues may arise. For this office both his own public record and the general voice of the people have designated Charles Evans Hughes.

Ithaca, New York

WILL THE MOUNTAIN COME TO MAHOMET?

IN THE TRENCHES

FROM THE GERMAN OF BRUNO FRANK

TRANSLATED BY MUNROE SMITH

Dort, wo der Tod am nächsten droht,
Dort ist nicht Hohn und ist nicht Hass,
Bereitschaft herrscht ohn' Unterlass
Und Schweigen vor dem Tod.

Ein Schicksal tötet, nicht der Feind;
Und einmal muss die Sense ruhn;
Und die sich schuldlos Arges tun,
Sie werden doch vereint.

Where men stand closest to their fate,
Prepared for every sudden chance,
And fronting death with level glance,
There is no scorn nor hate.

Not hate but destiny demands
The death-toll; and the men who slay
Each other blamelessly today
Tomorrow may clasp hands.

KILLING THE WOUNDED

BY WILLIAM J. ROBINSON

I WAS with the troops who were acting as supports to the Canadians in a certain engagement in the spring of 1915. The French Algerian troops who were holding a part of the line on our left were surprised by a heavy gas attack, and with their eyes streaming, their lungs torn by the knife-like stabs which accompanied every effort to breathe, they retired. They left the British flank unprotected, for the Germans advanced two miles before they stopped. The men on the staff, about 1500 in all, were rushed up to try and hold the Germans until more troops arrived.

The troops sent for were the Canadians, who were just out from England, never having been in action as yet. Dawn was beginning to break when they arrived. Their advance was not preceded by a bombardment. They did not even stop for breath. They fixed bayonets and went straight over us at the Germans.

The suddenness of their advance surprised the Germans, and they gave ground with very little resistance at first. Trench after trench the Canadians took, and we acted as their supports all the way. It was not until we had advanced nearly half a mile that the enemy got their machine guns into action. After that it was harder, and our losses were heavy. The men were carried away with their enthusiasm, however, and nothing could stop them. Trench after trench, trench after trench they took. If there were any Germans left in them they died quickly, for Canada was showing her fighting spirit, and it was a case of hack, stab, shoot, club, anyway to get the "Huns" back where they belonged.

When we had regained about half the ground the Algerians had lost,

Mr. Robinson is a young Bostonian who enlisted in the British army in August, 1914, for a term of one year, or until the war should end. He was in active service in Belgium and in France, was made a Sergeant-Major and voluntarily resumed the rank of private because the unpromoted Tommies under him "made things so mighty unpleasant." He was wounded once. After "Fourteen Months at the Front," graphically described in his book of that title, he came back to America convinced that "the worst imaginings of war are totally inadequate before its reality." His story is neither theory nor generalities, but the straightforward record of actual experience. — THE EDITOR.

the enemy brought up reinforcements and made a final attempt to break up our counter attack. Swarms of them appeared as if from the bowels of the earth, and they rolled upon us like a great tidal wave. They forced us back and back until it looked as tho we would soon be back where we started from. But the cost to the Germans was tremendous.

Soon our boys rallied and again we went at them. Their fearful losses seemed to have taken the heart out of them, for this time it was even easier than before. On and on we went, and soon some of our men were cheering, because we had recovered the four pieces of artillery which had been lost.

Bear in mind the fact that the Germans had driven us back after our counter attack was well started. When we retreated we left many killed and wounded on the ground we gave over. When we advanced again we found the wounded we had left had all been killed. They had either been finished with the bayonet or had

had their skulls crushed in by a blow from the butt of a rifle. This, of course, drove the men mad, but there was yet worse to be found.

A sergeant was found crucified to a barn door.

There were several bayonets thru his body, and when he was found by his comrades *he was still alive!* Picture, if you can, the horror of it!

The men had been under a terrible strain anyway. It was their first time in action, and is it any wonder that this ghastly deed should turn them into raving savages? Under circumstances such as these are there any of the pacifists who can truthfully say that they should have "turned the other cheek"? God forbid!

I saw this poor man about two hours after he had been taken down. He was dead then, but I saw the holes in his body; the jagged blood-soaked rents in his uniform, and the sight of it drove me as near mad as anything ever has done.

If there was a German left alive on the ground recovered from the "Huns" it was truly because the devil cares for his own.

There is, to my knowledge, no official report of the incident to corroborate what I say, but any soldier who was in the vicinity of Ypres during the spring of 1915 will vouch for the truth of this statement.

This was the beginning of the awful practise, rumors of which have even reached the neutral countries. It has been, and still is carried on even to the present time, and so bad has it become that I am safe in saying that a very large per cent of the soldiers of the allied armies shoot themselves rather than be taken prisoner when wounded. Reports have been circulated that neither side is taking prisoners, and that they are

BELASCO: STAGE REALIST

BY MONTROSE J. MOSES

AUTHOR OF "THE AMERICAN DRAMATIST," "FAMOUS ACTOR FAMILIES OF AMERICA"

DAVID BELASCO'S chief claim to distinction lies, not in the particular emphasis which can be placed on his position as a dramatist, but in his value as an all-round force in the theater, as a maker of actors, and as a creator of productions. The theater of ideas is a secondary consideration to him, inasmuch as his problem is always how to "get it across," to use his own words, into the hearts of his audience.

The fact of the matter is that Mr. Belasco is much more interested in the organic response of the heart than he is in the quickening of the spirit. In his acting methods he usually asks, "What is the quickest way I can, by external means, produce a given emotional mood in my audience? How may I best grip the heart?" And instead of going to the fundamental value of his play, he superimposes upon his dialog those small details which are so persistently criticized by the critics, but which, in general, satisfy his need and the public's curiosity.

Note that his question is, "What are the small details I can make use of?" rather than, "What are the most typical details suggestive of the mood I have in hand?" His process is one of an accumulation in the choice of stage accessories, rather than of elimination, and that is probably his greatest limitation as a producer. His chief claim to distinction is his genius for small stage business—a genius which would rather risk much on the scenic possibilities of a poor play, like Roland Molineaux's "The Man Inside," than on the austere scenic possibilities of a great play, like Galsworthy's "Justice."

Whatever Mr. Belasco has touched since the days of his apprenticeship in San Francisco, he has succeeded in imposing upon it what is now popularly known as "the Belasco atmosphere." He has resorted to all the tricks of his trade; and it is legitimate in the theater to have tricks. The present-day theater-goer probably first heard of Mr. Belasco when Mrs. Leslie Carter made a sensational swing across stage, holding to the clapper of a bell in "The Heart of Maryland." They next began to identify Mr. Belasco with stage effect

when, as a producer of "The Darling of the Gods" and "Du Barry," he literally threw away the possibilities of commercial profit by his exuberant use of detail for atmospheric effects.

DAVID BELASCO

Out of that period of spectacular drama, which further imprest upon the public mind the fact that a Belasco play meant a play in which Belasco atmosphere was uppermost, there came two distinctive pieces, which still hold the stage today, one the exquisitely poignant "Madame Butterfly" and the other "The Girl of the Golden West"—both of which were selected by Puccini as librettos for his now two famous operas. In Belasco Signor Puccini discovered the only American playwright who could furnish that stage color which opera demands.

For some time after the production of these large pieces—which afforded him likewise the opportunity of training some of his "stars" in a particularly picturesque and over-emotional style of acting—Mr. Belasco looked here and there for new material of the same character. He was satisfying his love for experiment.

All his career has been spent in converting the fortune made on one play in his new production for the next season. He came from an age when most of his stage illusive effects

were obtained thru the use of a locomotive headlight. He advanced into the age of "Edisonian incandescence," and with the effective eye of the alert manager, he has since that time made use of the switchboard in his theater as a performer would make use of some mechanical invention attached to the piano. In Mr. Belasco's hands a switchboard is nothing more than a measure of emotional effect.

Within recent years he has dropt from the ways of the spectacular. He has entered the realm of realism. He is impatient whenever a manager tries to answer reality thru the medium of the imagination, "What do they expect?" I have often heard him say. "How on earth could one suggest a broken pitcher without showing it?" This was apropos of the new symbolism, examples of which had recently been brought to this country by Reinhardt and Mr. Granville Barker.

For some time Mr. Belasco has been interested in two topics—spiritism and dual personality. Like all progressive managers, he is a man of intense energy. He has attacked these psychological problems with the same energy that he attacked the over-colored emotionalism in the days of "Du Barry" and "Adria." In "Peter Grimm," however, one detected a conflict between Mr. Belasco's taste as a realist and his interest in psychological drama. It seems inconsistent that spiritism should knock against reality so persistently as it sometimes does on Mr. Belasco's stage. After Peter died and returned, one was speculating quite as much over whether he would hit against the Belasco furniture as whether one would feel that he was a spirit rather than of the flesh. Yet, curiously, thru legitimate trickery, Mr. Belasco produced in us the effect he most desired.

Talk with Mr. Belasco on his method, and in his quiet, enigmatic manner he will look at you and smile. He has given plays without footlights, he has produced dramas with apron stages, he has, as a creator of actors, done much to bring to the theater a special method of acting. He has contributed more to the actual working stage in New York than anyone since the time of Augustin

Daly and Wallack. But one has to consider Mr. Belasco from the point of view he has chosen to take. A play of intellect *per se* has no appeal for him. A play whose mysticism is misty and unconvertible into tangible effect does not interest him. It is the play of the large emotion, the play

of the large canvas, the play of the brilliant color, the play of the fine "property" detail, and the small trick, that instantly catches his fancy; and when it catches his fancy he is restless until he gains the picture value conjured up in his mind.

Is there room for an external

drama, which gains its emotional ends thru physical effects, as well as for an internal drama which gains its effects thru suggestion and repression? I think there is, and that is Mr. Belasco's rightful claim to value in the theater today.

New York City

THE FARM HORSE DOESN'T PAY

BY JULIAN A. DIMOCK

MORE than one-fifth of the cultivated land of this country is required to feed the horses on the farm. These horses work on the average only three hours a day.

It costs \$250 a year to keep a team of horses. One-third of the farmers in Tompkins County, New York, made less than \$200 for their time during 1907, while the average labor income in 1911 in three typical counties in Indiana, Illinois and Iowa, prosperous communities with a capital investment of \$30,000 per farm, was only \$408. A team of horses costs more to keep than the average farmer of the country makes for his year of labor.

In order to get from him one hour of work, the farm horse is fed for seven hours of idleness.

Furthermore, the horse is not a satisfactory worker for the conditions existing on the farm. He cannot adequately respond to the pressure of work at certain seasons. His hours of work are limited, however urgent the demand. The farmer does not plough properly because he has not enough power on the place to do it. His harrowing and cultivating are skimped because he lacks the labor to do a better job. He does not do as much farming as he might because the chores, including the care of the horses, use up so much of his time.

The farmer is not efficiently employed unless he is directing the power of many horses. It takes the time of one man to cultivate cotton with a mule; it requires a man's work to direct the team of horses which ploughs a New England hillside, but one man can hold the reins over the backs of six powerful animals hitched

to a gang plough, or one man can sit at the wheel of a tractor which draws sixteen ten-inch ploughs, three six-foot harrows and a seeder. Such an outfit will plough, harrow and seed

to full capacity for as long a period as necessary.

With headlights, the tractor could plough day and night, for any necessary part of a season. It could plough thru the day and haul on the road at night, or with the end of the season of work, it could be put away and kept until springtime with only the cost of idle money.

After the day's work, the farm family can be taken to town for the grange meeting, to a neighbor's for a social

time, or thirty miles away to attend a dance. The motor, having worked in the field all day, does not need to stand idle in a stall resting for the morrow's work.

Quick transportation widens the farmer's market. He can reach out for local consumers by ensuring prompt delivery and can take advantage of special conditions creating temporary prices by getting his goods on the spot without delay.

It is interesting to note that already a system by which a small tractor will plough and cultivate a field of several acres without human supervision has been evolved. A guiding line runs from the steering device to a small drum on a pole planted in the center of a circular field. As the tractor moves around the circumference of the circle the line wraps around the drum and each revolution is a little nearer the center.

The horse crosses off from the list of states that might provide food for man Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma and Arkansas!

How long can we pay his price?

Boston

HOW LONG WILL HE STAND FOR IT?

seventy-five acres in a day; and, furthermore, a tractor does not consume when it is not at work. It consumes in proportion to the work done. A thirty horse-power motor does not use fuel for the development of thirty horse-power when it is only producing fifteen horse-power. The cost of the unused power is simply that of interest on the investment and the depreciation. The tractor is thus adapted to the needs of the farm. It does not eat its head off when not in use and it can be used

W. H. Ballou

THE TRACTOR WORKS IN GERMANY

This "Big 4" engine can plow, harrow and level a field, or haul three machines at once. It is a highly developed type of the tractor which in one form or another is likely to drive out the farm-horse

*Frederic C. Howe Tells How We Are to Get Them
Independent Readers Tell How We Are Getting Them*

WE might as well face the fact that more and more people are going to live in the cities, and that fewer and fewer people will live on the farm. The "Back to the Land" movement receives little encouragement even in those countries that do the most for agriculture. The city is the center of civilization today; of comfort, convenience, and a larger happiness than is possible in the country districts. That is the reason people want to live in the city.

That being true, our efforts should be directed to making the town a better place to live in. We should recognize the city as a permanent thing, and build it, plan it and control it much as we would a private house, our homes, for that is what the city is. It is the home in which we live.

If we think of the town in these terms, what are the things that should be done to make it better; better not for a few, but for every one. Some of the things to be done are outlined here.

The machinery for governing the town ought to be as simple as possible, so that every one can understand it and every one can participate in it. The commission form of government or manager plan seems to be the best device yet suggested for the honest, efficient and democratic administration of the town. The commission plan is like the board of directors of a corporation; the mayor or manager is like the president or executive official. He carries out the orders of the commission, or the people behind the commission direct. And with the initiative, referendum and recall, we have a means by which public opinion can express itself at all times in improving the town, just as the stockholders of a corporation meet together annually for expressing their will.

The town should be planned so that it will grow in an orderly and beautiful way. The suburbs should be laid out with broad streets; with playgrounds, parks and lots of open space. The height of the buildings should be regulated; business should be excluded from the residence districts; the streets should be lined with trees; and provision made for the growth of the town for a genera-

Among the leaders of the new city movement that has done so much to strengthen American democracy at its weakest point stands Frederic C. Howe, now Commissioner of Education at the Port of New York. "The City, the Hope of Democracy" and "European Cities at Work" are especially familiar titles among his numerous contributions to the literature of city and community progress.—THE EDITOR.

tion in advance of its present size. That is the way the German, French and English cities are now being planned. They all improve the health, comfort and happiness of the people by building their towns like a private estate, or as a rich individual plans his home.

The town should own its plumbing. When we build a home we put in the plumbing. And we own it ourselves. The street railroads, gas, electric light and telephones are the plumbing of the city. They are its circulating system. They control the health, size of the town, industry and the comfort of the people in hundreds of ways. And just as the owner of the house owns his own plumbing, so the owners of the town should own and operate their own circulating system for the benefit of everybody. These industries should be operated at cost, and any one who will take the trouble to compare the publicly owned water system of the city with the privately owned street railroads or electric lighting system will see how much easier it is to own and operate than it is to regulate; will see how much cheaper the water is than the services rendered by private companies; how much less corruption there is when the city operates a thing directly than when it leaves these valuable monopoly rights in private hands. European cities are a unit in their agreement that it is not possible to build a city properly or to care for the people unless these agencies are owned by the city and are made a part of its life.

The city should provide generously for recreation and leisure. One-third of our life is given to work, one-third to sleep, and one-third to leisure. We make provision for work and for sleep; but we make little pro-

vision for leisure. And this is the time when the life of the people is most influenced for good or bad. Experience has shown that the community itself must provide for its leisure, if it is to be wholesome, clean and adequate.

The two great agencies for a wholesome leisure life are parks and playgrounds adequate for everyone. The second and more important new device is the building of schools and the use of schools for a great variety of purposes. The public school should be the temple of democracy; it should be big, spacious and generous. It should have provision for a great auditorium with a stage for musicals, dramas and other community gatherings. There should be playrooms, gymnasiums, public baths. Provision should be made for all kinds of meetings in this temple of democracy, for political meetings, for conferences with the mayor and aldermen, and for the discussion of public and even private affairs. The Gary system of Gary, Indiana, indicates the use that may be made of the public school and the possibility of uniting education with recreation for all ages and all classes.

Women should participate in the housekeeping of the city as well as men. They should have the right to vote. For the city is their home just as it is the home of men; and in many ways it affects them more vitally than it affects men. Health, food, recreation, the schools, the places the boys and girls go in the evening, these are matters of vital concern to the women of the community; and they can only control the community's life and make it what they will by the ballot.

The town must spend money. We are coming to realize in America that we get more out of taxes than we do out of any other money that we spend. And we will have to spend generously for a better city, a more wholesome city, a city that serves us. The great cities of America and of the world are those that spend generously; that have a big debt; that own things and do things; and care for the people rather than leave them to private exploitation. The German cities have the largest indebtedness of any cities in the world, and in

many ways they spend more generously than do even our own cities. We cannot have a city unless we are willing to pay for it, and we get bigger dividends from this expenditure than from any other.

Who will pay the bills for this city of tomorrow? From what sources will we get our revenues? Providentially nature has provided a treasure house that we need only to tap to secure all the revenues needed for every public use. That treasure house is the increasing land values of the city; values that are created by the growth of population. Every person that comes to a city adds from \$600 to \$1000 to the value of its land. They create an unearned increment which is appropriated by the land owner. This land value yields a ground rent which in the city of New York is es-

timated at nearly \$250,000,000 a year. It is from \$40 to \$50 per capita. And this value was created by all the people, not by any individual. It is a speculative value, due to the growth of the city, which we permit private individuals to appropriate. German cities, Australian cities, Canadian cities are taking the taxes off houses, buildings, improvements, and placing them all on the land alone. They are appropriating the wealth which was created by the community and which belongs to the community, for running the city. They are doing just what a private individual would do with anything belonging to him. They are doing this by taxing the increasing value of the land which the city itself creates. And this revenue is adequate for all possible uses. It increases from year to year with the growth of the

population. It is never exhausted. It is more than sufficient for all of the needs of the city of tomorrow, and by taxing it we compel those who own land to either use it or sell their land to someone who will. That is the great advantage of taxing land, of the single tax. It prevents land speculation and compels those who own land to build houses or otherwise to improve their property, rather than sit idle while the community goes on enriching them by its growth.

These are some of the things that should be done if we would have better towns to live in; these are the things that progressive cities all over the world are doing in their recognition of the fact that the city is a permanent thing and must be regulated and controlled for the benefit of all.

New York City

THE BEST THING IN OUR TOWN

WHEN in our issue of October 4 last we asked our readers to write us what they regarded as the most interesting feature of the place in which they lived, we had no idea that we should get so many responses, so many readable responses, that it would be five months before we printed the last of them. But the display of civic pride that we had solicited took such a variety of forms and proved so interesting as a revelation of the ideals of the American people that we have from week to week published more of them and even now cannot discard the rest without picking out a few paragraphs from some of those that we are not able to print entire. For those we have still upon our desk are many of them as well worth reading as those that have already appeared.

Viewing the contributions as a whole what strikes one most is their diversity. We had no idea that people could find so many different reasons for liking their home town. The first prize of \$100 went to D. R. Piper, of La Grange, Missouri, for a eulogy of his home paper, the La Grange Indicator, which we published February 28. Other prize winners for which we paid \$25 each were "Hopedale's Glorified Mill-Pond," by James Church Alvord (April 3); "A Suffrage Oasis," by William O. Stevens (April 24); "Reforming the Grocer's Boy," by E. W. Beimefohr (May 8).

In order to give some idea of the civic attractions specified we have attempted a rough classification of some nine hundred of the letters.

As we should expect the schools are the chief pride of American towns. Next to these we are glad to see made prominent something that cannot be photographed, or, indeed, described, but which is, after all, the most important thing for a town to possess, for when it has this all other things may be added unto it, that is what may be called "the community spirit," the esprit de corps:

If we can judge by number of contributions received, Ohio and Pennsylvania have the best towns in the country, or, at least, those who live in them think so, for these two states tied on 70 competitors each. Iowa came next with 63; then follow New York (52), Colorado (44), California (44), Michigan (43), Illinois (42), Kansas (33), and Wisconsin (31). We are surprised at Wisconsin. We thought she thought better of herself than that. Almost all the states are represented, and besides these Porto Rico sends five contributions and Hawaii, Panama, Canada and Brazil come to be counted in.

Kenmare has a park with a plum tree. Nothing to brag about, you think? But that is because you do not know what a rare delight it is to see grass and trees and spouting water in the bleak prairie plain.

The Park occupies the central block in town and is surrounded by a beautiful hedge. It has been set out to trees and shrubbery and seeded to lawn grasses which grow luxuriantly. In the center is a large fountain which sends up its sparkling waters continuously.

Not an employer or employee but every day must see for a few minutes this thing of beauty. Many times I have

SILVERTON, COLORADO, A MODEL TOWN IN THE MOUNTAINS
Its civic spirit is comparable only to its altitude, says L. M. Grimes

seen people pause on the steps of a business house and exclaim, "How beautiful the park is!"; then, with an unconscious straightening of weary shoulders, go on their way. Many weary farmers' wives rest for a few minutes on the park benches and I am sure they carried with them to their bare prairie homes, perhaps to a half discouraged husband, renewed enthusiasm and fresh courage; and also, a firmer belief that these prairies can be made to blossom like the rose. We have boys in our town—no better, no worse, than boys everywhere—yet in the heart of our little village, in this park, a plum tree blossomed and bore fruit to maturity and was not molested.

ADA B. CLEMONS
Kenmare, North Dakota

Another of the time honored home industries has taken flight to the factory. Coöperative effort in Chatfield has transferred the burden of Blue Monday from the back of the farmer's wife to the broader shoulders of a gasoline engine.

One day, some years ago, the buttermaker in the coöperative creamery attached a washing machine to his machinery to use in washing his towels, and that is where he found his idea. Why not have a coöperative laundry in connection with this coöperative creamery, let the farmers carry their clothes when they do their cream, and charge their laundry bills to their cream accounts? The creamery company built an addition to its building to house the new institution, stock was sold to the amount of about \$3000 to use in purchasing the machinery, and a practical laundryman was put in charge.

From the start the patronage was large. At least twice a week every farmer takes his turn "going to town" with the cream. One day he takes in a basket of soiled clothes, another day he brings them back clean. The prices are low, five cents a pound for washing and what ironing the mangle can do. The cost of collection is nothing. GEORGE A. HAVEN
Chatfield, Minnesota

Many towns tell of community centers, but that of Grandview, Alabama, is aquatic and the splash party is the center of civic solidarity:

Splash!

"It's fine!"

"Look out! I'm coming in!"

"Come on!"

No, this isn't "th' old swimmin' hole." It is the big concrete swimming pool owned by the community at Grandview, Alabama, with a "splash party" going on inside.

For about a hundred dollars the pool was constructed forty feet or more long, ten or fifteen wide and four deep. When the water was allowed to run in—10,000 gallons of it, pure and sparkling—everything was ready for the first plunge.

It became necessary before long to prevent the boys from going in more than twice a day, tho the privilege of three times was earnestly besought. The girls and women learned to be expert swimmers. The business men, on returning from the city in the afternoon, stopped for a swim before going home. But it was perhaps the younger children who got most pleasure from the new institution. The swimming pool quickly became a place to romp and play. If there ever was an effective community center, it is that Grandview swimming pool. WYATT RUSHTON

The following comes from an R. F. D. subscriber who nevertheless

has been given a place in town life thru that admirable institution the Rest Room:

Suppose you were a country woman with a family of young children and no auto nor street car, and that you and the little ones rode to town on a load of potatoes which the man of the family had for sale. The potatoes were not engaged. And suppose the load failed to sell and they had to be peddled over town while, after shopping was done, mother and children waited all day in a store till sunset before she could return home. Would you not be tired? This is a real true story of real true people in our town before the P. E. O. society found a way to establish a Woman's Free Rest Room.

Out-of-town shoppers, both from the nearby country and those who come by rail from nearby towns, find this a desirable place to eat lunches, leave packages, put babies to sleep or procure a free cab to wheel them over town, wash up, brush up, rest up and be comfortable while waiting, instead of hanging around a store a wearisome time. EMILY BIRD McDUFF
Atchison, Kansas

The jitney which New York is not allowed to have lest it interfere with the profits of the taxis is reported as the "best thing" in many Western towns:

There are about ten jitneys to one trolley car. They come along frequently. The drivers are anxious to pick up passengers because they own their own cars, and are not indifferent, like the motormen. They make every effort to accommodate people who wish to ride. The busses run easily, safely, almost noiselessly, and are much more comfortable generally than are the street cars. There is no jarring, or grinding of brakes, or dust, and everybody gets a seat—which is quite an item, from a woman's standpoint.

These jitney busses which run thru our town have installed and carry two signs to which we attach great importance. One reads: "Any where; any time." The jitney is working a revolution in passenger street traffic, and it is a great convenience to thousands of our townspeople, many of whom believe that the jitney is but the forerunner of a universal bus service without rails or trolley wires and poles, and that it will be but a few years before there will be no cars running through our streets with their attendant noise, dust and general discomfort.

IRENE M. MASON
Santa Monica,
California

The following from Florida was written—you would know it anyway—by a real estate man. No other profession commands so poetic a pen:

A city to dream of is this, as it lies on its hills by the sea, its winter roses and violets a-bloom, the palms and camphor trees of its parked streets stirred by the soft southern winds. The oleander, the jessamine, the azalea, the crape myrtle, the scarlet hibiscus, the kum-

quat bushes laden with their little golden fruit, and the red dahlias glowing against the green and gold of the orange trees, all help to make the varying seasons one round of beauty, fragrance and delight.

Surrounding are forests of long-leaf pine, thru which wind roads carpeted brown with the fallen pine needles. There are gray ghosts of trees, festooned with Spanish moss. There are yopon trees, vivid with their emerald evergreen leaves and scarlet berries. There is hill and hollow, limpid creek and placid river.

C. E. DOBSON

Pensacola, Florida

Many towns boast of their water-works, but the capital of Idaho is the only one to claim credit for keeping its people in hot water all the time:

Boise is the only city in the whole world that uses artesian water for the heating of homes, business blocks and public buildings. All that is necessary in these buildings is to turn a button and permit the natural hot water to run thru the pipes. No chimneys are needed. There is no smoke, no ashes, no dust, no work.

M. F. CUNNINGHAM

Boise, Idaho

Ogden is a city where the women vote, and as a natural consequence, where the saloons close at 9 o'clock and do not open Sunday, where there is no red light district, where there is a day nursery for working mothers, where—but just go there and see for yourself:

Can you imagine a jitney bus driver reading Laura Jean Libbey while he waits for passengers? An old man in peg-top trousers, sport shirt and top hat? A young man playing checkers while his wife holds a clinic? Can you imagine that? That, then, is Ogden, Utah. C. S. WALLACE

Ogden, Utah

From Romulus, Michigan, comes a story of Harmony Grange and a photograph of its new hall on the site of a former saloon. We do not publish the picture because the hall is not beautiful, but the work done there is:

Harmony Grange has done more than keep the peace among its members; it has well-nigh transformed life both in the village and the countryside.

It was organized ten years ago, and now enrolls between two and three hundred members—farmer folk and business folk and teacher folk, with a doctor and a minister thrown in for Scripture measure, all playing and planning and working together for the uplift of the community. It is a kind of high tension power-house, with some two hundred sixty odd wires radiating to every corner of the surrounding country. Think of a society which allows

no segregation either of sex or age, and which brings together more than twenty-five times each year children, parents and grandparents in one close-knit social group!

ESTELLE DOWNING
Romulus, Michigan

Plain City must be a pleasant place to live in, which is more than you can say of many cities of more than its 1500 inhabitants. Mrs. Robinson finds 1500 words too scant to tell of all the things they do together and for each other.

THE TOTEM POLE
R. Hamilton says
Seattle, Washington,
is proud of it

IN THE FOREST OF ARDEN

From Edwin S. Potter, of Arden, Delaware, we have an account of the craft gilds of that interesting community. It is too long to print and too good to cut; so we simply steal a picture from it showing the pageant of the free performances which the Actors' Gild gives every Saturday night in an outdoor theater

THE PARK WHICH MAKES KENMARE, NORTH DAKOTA, A PLEASANTER PLACE TO LIVE IN IN SPITE OF THE PRAIRIE

Plain City is a simple, friendly place where folks like to do things together. This spirit of comradeship is her greatest charm. We have no rich folk to spoil our simplicity, nor very many poor folk to make us uncomfortable. About the only hard feelings we ever have is when the Presbyterians try to steal some of the Methodist poor, to give presents to, at Christmas-time.

Years ago we built a plant that furnishes electric light and water to the town so reasonably that practically every man uses both in his home. . . . Of course, our school is the best, the very best for a town of our size, in Ohio . . . Didn't we raise the first grade teacher? Isn't she wonderful? . . . In August we take up the serious matter of cultivating our minds; and for ten days work hard at a Chautauqua. Not a circuit Chautauqua, oh, mercy, no. We run it ourselves; and we have a better "program," with less cost, than the "talent" our neighbors who are in a circuit have sent to them. About 200 of us go out and live in the woods. We get a lot of sociability out of it, and make up our minds, incidentally, about a few national affairs. ELIZABETH LANE ROBINSON

Plain City, Ohio

Our modesty forbids us to give the prize to Mr. Campton, whatever may be our private opinion of his suggestion:

Permit me to say that the most interesting feature that I know of in our town is The Independent. If you think there is anything more interesting, you will not send me a prize. W. J. CAMPTON

New York City

Calgary, Canada, was hard hit by the war, for the city had overgrown itself—from 12,000 to 75,000 in ten years—and was convalescing from its real estate boom. But with true Western energy it turned its unsold lots to account:

The Vacant Lots Garden Club is one of the big factors which is helping to bring about a more prosperous and equable condition, as well as to beautify the city. A membership fee of \$1 entitles the holder to receive one or more twenty-five-foot lots. An extra charge of the same amount for plowing each lot may be overcome by the gardener's digging the land himself. He receives "seeds, plants and garden tools at special discount, the produce of his lots, free expert supervision, and bulletins on gardening." In return, he is expected to clear his land for plowing, cultivate it, and keep it weeded. The report of the committee for the first year far exceeded expectations, 254 lots being taken up by 170 members. The second year the amount of ground was almost quadrupled, for 1000 lots were cultivated by 450 members. Those who have held a lot one season have first claim on it the following year. The vacant lots movement has tried to encourage the growth of excellent vegetables and flowers

by prize competitions for potatoes and other vegetables grown on club lots only.

JULIA C. STOCKETT

Calgary, Alberta

The city of Madison several times a year ropes off one of its streets for half a block and gives a community ball on its waxed pavement:

Municipal Dance.

Thursday, September 30, 1915

8:30 p. m.

Liberty Street, between Jefferson and Madison Avenues.

Music by Spencer's Band.

HARRIETTE M. WHEATON

Madison, Wisconsin

When we opened the envelope from Miss Kysor and a picture of a police van fell out we thought "what a queer thing to take pride in." But on reading we found that it was as creditable as it was queer:

The finest thing in our town is the police patrol. "Carrying 'drunks'?" you ask? No, carrying crippled children to school and home. I stood on the corner this morning. They went by, the lucky two on the driver's seat looking as happy as if they had good legs and straight backs instead of pitiful crooked substitutes. They backed up to a curb. Standing on the porch was a boy on crutches, and the big officer who sits by the steps of the "wagon" gathered him up, crutches and all, into his strong arms, carried him gently down, and put him in with the rest of this group with such old-young faces. They have milk and wafers at ten o'clock, a warm meal at noon, lunch at three, then ride home. Blankets and wind-proof curtains keep them warm on the way. The quarters for the school for crippled children are especially adapted and furnished for their needs.

DANIA KYSOR

Detroit, Michigan

Emporia, regardless of grammar, has two best things and who can deny it?

The two best things that Emporia, Kansas, has are William Allen White and Walt Mason. Where is there a town the size of Emporia (12,000 population) that can beat this combination? The former being the editor of our local paper, the *Emporia Gazette*, one of the most quoted papers in America, and dear old "Uncle Walt" Mason, whose wholesome homely philosophy is now read every day wherever an English-printed metropolitan daily newspaper is published. We all love them.

J. E. E.

Emporia, Kansas

We have no space for further quotations, but we must mention a few more of the distinctive features to which our correspondents call attention. Oshkosh, according to Miss Lucia B. Clow,

a student of the Normal School, finds distinction in its name, which is known all over the country and keeps the place from being confused with the common run of American towns. "Oshkosh," she concludes, "could never be an Athens, but on the other hand Athens could never have been an Oshkosh." Both cities are to be congratulated on the fact.

Albion, Michigan, has a "Boosters and Knockers Club," which lunches every Tuesday in the interests of a "better Albion."

The civic center and index of prosperity in Lisbon, Ohio, is "The Hitching Rail," of which Willis R. Hale sends us a graphic description.

Grandma Lincoln, of East Lake Shore, Canandaigua, who has read The Independent for more than fifty years, writes of a rural Sunday School.

Salt Lake City, says Mrs. Guy Montgomery, has a monthly magazine, *The Utah Survey*, devoted to community interests.

The Young Men's Booster Club, of Guthrie, Oklahoma, 200 strong, sends us the article on "Our Mineral Waters," by E. C. Ralston, that took first prize in their local contest.

Towns used to boast of the number of churches they possess, but Miss Lee McCrae, of Claremont, California, writes: "In the twenty years of its existence this town has had but one church and the people fervently hope that it will never have any other." This sounds wicked, but when we read of all the things this church does we agree that Claremont is better off than if it had six.

Edward R. Fickenschier, of the Land Office, thinks that the ingenious system of numbering streets so that the stranger can find his way by looking at the signs imprinted in the cement walks is the best thing about Great Falls, Montana.

Our Brazilian contributor, George T. Coleman, writes of the excellent sanitary service of Sao Paulo, and as a contrast encloses a photograph of one of the "pest-ships" on which crews having yellow fever were formerly left to die.

Little things, you say? Yes, but every one is a symptom of American progress toward better towns.

THE NEW BOOKS

TALES OF THE PAST

There was a beautiful simplicity in life a thousand years ago. If you hated a man you cut his head off; daily papers did not exist, and women had no desire for economic independence. It is refreshing to read of such uncomplicated days in Maurice Hewlett's *Frey and His Wife* and Francis o'Sullivan tighe's *The Portion of a Champion*. The first is a tale of Norway. It is a good story, told with vividness, an exhilarating freshness and a touch of sweetness. The great god Frey is a most interesting person, so is Frey's wife, and so is the hero, Gunnar.

The scene of the other book is fifth century Ireland and Gaul. It lacks the directness and vigor of *Frey and His Wife*, but is filled with exciting adventures and interesting pictures of the ancient manners and customs of Eirinn. There is plenty of hard fighting, with a little love making to flavor it.

Frey and His Wife, by Maurice Hewlett. McBride. \$1. *The Portion of a Champion*, by Francis o'Sullivan tighe. Scribner. \$1.35.

HEREDITY

In recent years the chemist and the physicist and the mathematician have contributed quite as much to the advance in biology, thru their stains and microscopes and statistics, as have the taxonomist, field explorer and breeder. A critical examination of the philosophical assumptions, underlying the methods used in the study of the most aggressive and the most interesting department of biological research—the field of genetics—suggests the interdependence of our sciences in a striking way. Mr. Raymond Pearl, who has himself made important studies in the heredity of egg-production in poultry, leaves the "practical" animal breeders' convention long enough to ask some pertinent questions about methods and value of research. In his little book there is a careful analysis of the problems of heredity, and of the various methods used in the attempt to solve them. Mr. Pearl looks forward to the development of biochemistry as furnishing a promising field for the study of genetic problems. The notes on the nature of statistical knowledge are of general interest and significance. We are all exposed to the arguments from statistics but we are not all forearmed as to the limitations inherent in the statistical method of proof. There is a rather technical chapter on the mathematical aspects of genetics in relation to practical breeding. The advantages he considers real and measurable, if not altogether revolutionary.

The best account of the principles of heredity and of their practical application to human problems is, from the point of view of the general reader, Professor Guyer's *Being Well Born*. When it is added that the book is quite authoritative and reliable as well as

interesting and readable, and that its price puts it within the reach of all who really care, it is intended to intimate that there should hereafter be no excuse whatever for the "superficiality and the superstition" that surrounds this subject in the minds of most people, even among the "educated" classes.

Modes of Research in Genetics, by Raymond Pearl. Macmillan. \$1.25. *Being Well Born*, by Michael F. Guyer. Bobbs-Merrill. \$1.

LABOR LAWS

Professor Commons and Dr. Andrews, in their *Principles of Labor Legislation*, have rendered the public a real service in bringing together a summary of what has been accomplished in the various states and in foreign countries in the way of readjusting labor conditions and labor relations thru legislation. In addition to the historical material, there is a discussion of the economic basis, the operation and the results of various types of laws, such as those affecting hours of labor, minimum wages, safety and health, unemployment and social insurance. The constitutional aspect of the legislation is closely followed, and there are citations of important court decisions. There's a good general index, a special index of cases referred to, and a selected and classified bibliography of the most helpful sources.

Principles of Labor Legislation, by John R. Commons and John B. Andrews. Harper. \$2.

A CURE FOR WAR

Peace, like war, has its battles, its victories, its defeats; it has its call to heroism in action; and its call to courage of another kind in the fight against social injustice, political corruption, and industrial enslavement. But battles of words and pens and printer's ink somehow fail to stir the heart as does the martial trumpet. And why?

In *A Substitute for War*, Percy Mackaye answers the question somewhat to this effect. War knows how to throw over its brutal realities the glamor of imagination, embodying itself in splendid symbols and dramatic displays—flags, uniforms, and banners; color and music; ordered evolutions and the rhythm of marching feet. Peace has no pageantry, and for symbols only the pale dove and the olive branch. Give peace a splendid dramatic investiture, and its activities will arouse an enthusiasm such as war has hitherto enlisted. This dramatic investiture should take the form of masques and pageants celebrating peaceful labors and triumphs. As evidence of the beneficent effects to be expected from such dramatic displays, Mr. Mackaye cites the great masque he and others managed at St. Louis, with the coöperation of 7500 citizens and a chorus of 600. Direct results of this civic drama, we are told, were a progressive charter, a municipal bridge, and a choral society. Perhaps he is a

little sanguine about his "substitute," but whether he is or not, his suggestions can do only good, and the more they are realized, the better. This plan is sympathetically introduced by Professor Fisher of Yale, Viscount Bryce, and Norman Angell.

A Substitute for War, by Percy Mackaye. Macmillan. 50 cents.

OUT OF DOORS

TO READ ALOUD

Dallas Lore Sharp lives in *The Hills of Hingham* as a compromise between Boston and the Forest of Arden. He loves hills and bees and open fires. He has a sense of words, a sense of humor and a sense of the infinite. He writes with charm and sincerity of the little things of life, and of the big things. You will read *The Hills of Hingham* twice, or even three times.

Houghton, Mifflin. \$1.25.

FOR AMERICAN FISHERMEN

Louis Rhead, artist and fisherman, has discovered that European flies are not the best lures for American fishing, "America for Americans" applies forcibly to our fish. They prefer native insects, the varieties of which vary month by month. Mr. Rhead's pioneer book on *American Trout Stream Insects* is a valuable contribution to the literature of American fishing, and the artificial entomology described is full of interest to fly fishers.

Stokes. \$2.50.

A UNIQUE LOITERING-SPOT

The San Diego Garden Fair, which has outlived its showier neighbor, is discussed by Eugen Neuhaus in much the same way as was the San Francisco Exposition in the California professor's earlier books. There is a bit of history and some illuminating criticism of architecture, but one wishes for even more of the finely reproduced photographs, particularly more pictures of the lavishly beautiful gardens.

San Francisco: Elder. \$1.50.

A MAN BUILDS HIS HOUSE

A married Thoreau with a family to shelter is a piquant contrast to the celibate lover of the Walden woods. In *Child and Country* Will Levington Comfort, in his hermitage by Lake Erie, talks of Life and Nature to several fascinating little people. Some of the essays written by the "Little Girl" have a charm as engaging as that of Pet Marjorie. The book is breathed thru with love for the out-of-doors and the sincerities and inspirations of country life at its best.

Doran. \$1.25.

NOVELS AND PLAYS

FOR AMATEUR PLAYERS

Master Skylark, John Bennett's fine tale of a boy and girl in Shakespeare's time and town, has been dramatized very simply by A. M. Lütkenhaus in *Plays for School Children*, and now comes a fuller dramatization by E. W. Burrill, who has made such a delightful drama of the delightful story that it is used as the commencement play by Wellesley this June.

Century. \$1.25 and \$1.

ANOTHER SCHOOL SHAKESPEARE

In the Globe Theater edition of Shakespeare's plays arranged for school by D. H. Rich, much unexpected and some naive information is packed into small compass. Each play has introduction and glossary, and being planned for class use, this con-

cisely and clearly given data on the drama of the Elizabethan stage, Shakespeare's life and the advice as to methods of study are printed with each play.

Harper. 35 cents each.

THE COAST OF MAINE

Instead of the Thorn, by Clara Louise Burnham, is the story of a Chicago girl, charming, spoiled and wealthy. The financial ruin and death of her father, under circumstances which seem to involve her lover, transfer her for a time to a little town on the Maine coast. There she "finds herself." The morality is a trifle obvious, the story a trifle dull.

Houghton, Mifflin. \$1.25.

STEALING FOR PLEASURE

An Amiable Charlatan is a typical piece of E. Phillips Oppenheim fiction. There is a conventional young Englishman, a lovely American girl, and her father, an eccentric but agreeable gentleman who has read too many detective stories. Their extraordinary adventures, sprinkled with Scotland Yard detectives, gambling dens, much valuable jewelry and many, many restaurants and taxis, are entertainingly told.

Boston: Little, Brown. \$1.30.

IN THE USUAL WAY

When an author as deservedly popular as William J. Locke falls to the pot-boiler plane, not even a "pretty girl cover" can save him. For *Viviette*—his latest story—makes no attempt to redeem by novel situation or skillful characterization its trite triangle of two men and a flirt, who go thru all the usual motions in an exceedingly usual English country house, embellished by butlers and duels and ancestors and tea and all the rest.

Lane, \$1.

PIONEERS OF AUSTRALIA

The reviewer usually looks askance at a "prize novel," and his distrust is, in many cases, justified by the perfunctory character of the book. But *The Pioneers*, a \$5000 prize story of Australian life, by Katherine Susanna Prichard, is exceptionally interesting. It goes back to the earliest days of settlement; of convict camps; of privation, hard work and well won success for the settlers. Their children reap the harvest, and we feel that the struggle was worth while.

Doran. \$1.25.

A CALIFORNIA FOREST PLAY

Jack London has entered upon a new field, the drama. *The Acorn-Planter* is a pageant play "to be sung by efficient singers accompanied by a capable orchestra." Allegorical in form, its theme is the conflict between the warrior and the planter or life-maker. The characters are Indians and pioneers, which affords opportunity for picturesque stage effects, costuming and dancing. Plus appropriate music, it would make an effective production. It is good reading, too.

Macmillan. 75 cents.

ETHICS AND THEOLOGY

THE ROOTS OF CIVILIZATION

Our knowledge of the history of the Tigris-Euphrates valley has been of late so enlarged and modified by new discoveries that books of so recent a date as 1900 have become antiquated. Professor Rogers has almost completely rewritten his *History of Babylonia and Assyria*, and the volumes now give the story of the modern excavations and interpret according to this new knowledge the historical materials that reveal the course of human development in one of the three ancient centers in which are found the roots of western civilization.

Abingdon Press. \$10.

WHEN MISSIONS COME OF AGE

In the *Devolution of Missionary Administration* Dr. Fleming discusses the conducting of Christian missions in foreign lands. Dr. Fleming gives the history of this devolution in connection with five American missions in India, and shows the difficulties that appear in such transfer,

The Dish That Belongs to June

Puffed Wheat and Rice—the bubble grains—seem to belong to summer. They are light and airy, dainty and inviting.

Summer brings flower-decked breakfast tables, and Puffed Grains seem to fit there. Summer brings berries, and Puffed Grains mixed with them make them doubly delightful.

Summer brings dairy suppers. And these airy tit-bits, flaky, toasted and crisp, are the morsels to float in milk.

Playtime Bonbons Mealtime Foods

These are both foods and confections. Keep a package of them salted, or doused with melted butter, for the children to carry at play.

Use them in place of nut meats, in candy making, on a frosted cake, or as garnish for ice cream.

Almost every hour of the day, from breakfast to bedtime, brings some use for Puffed Grains. People consume, at this time of the year, a million packages weekly.

Puffed Wheat *Except in Far West* **12c**
Puffed Rice **15c**

Corn Puffs—Bubbles of Corn Hearts—15c

Consider Puffed Grains, above all else, as scientific foods. They are Prof. Anderson's invention. Every food cell is exploded. Every granule is made digestible. Every atom feeds.

They are not mere tit-bits—not mere palate-pleasers. They are made to make whole grains wholly digestible. They are made to avoid any tax on the stomach.

Why serve these grains in a lesser form, when everyone prefers them puffed? And why serve only one of them when there are three of these perfect dainties?

The Quaker Oats Company

Sole Makers

(1319)

JUNE 26

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

A Journal of Civilization

The Man Prepared

Mr. Purinton's greatest article since "The Triumph of the Man Who Acts" will be a leading feature of The Independent's Chautauqua and Efficiency Number of June 26.

The Future of National Education

will be another great feature of that number. In this article, by President George E. Vincent, of the University of Minnesota, and Chancellor of Chautauqua Institution, will sound the keynote of "The Most American Thing in America," the Chautauqua idea of popular education with special reference to the future of this gigantic national movement. Other articles by Chautauqua authorities will deal with new and live phases of the Chautauqua plan. This number will also be The Independent's

Quarterly Financial and Insurance Review

an institution unique among periodicals of general circulation.

The Independent

and yet the great advantage which comes thereby to the churches.

Revell. \$1.50.

WORSHIP

Two suggestive books for Sunday school leaders are *The Manual for Training in Worship* and *The Book of Worship for the Church Schools*, by Hugh Hartshorne, of the Union Theological Seminary. The first discusses the need for more care in planning the devotional part of the children's services and the second provides excellent material.

Scribner. \$1 and 55 cents.

SCIENTIFIC STUDY OF ST. JAMES

A noteworthy addition to the International Critical Commentary is Professor Ropes's *St. James*, a minute exegetical study for specialists. The wealth of illustration from Greek and Rabbinic literature make the work invaluable to those who love to deal with parallelisms of thought and expression. The epistle is ascribed to an anonymous writer of the second century.

Scribner. \$3.

SEMITIC LIFE

The Social Legislation of the Primitive Semites is a careful resumé of what is known of the primitive customs and laws of the Hebrews, Babylonians and Arabians. In each of fourteen chapters covering such subjects as Matriarchy, Next of Kin, Slavery, Inheritance, Sabbatical Year, and Taxation, Dr. Henry Schaeffer gathers all the indications which the Old Testament offers of the early Hebrew practice, compares it with the pre-Mohammedan practice of Arabia and then adds the data from the cuneiform inscriptions.

Yale University Press. \$2.35.

FOR CITIZENS

AXIOMATIC SUFFRAGE

"Let us no longer speak of woman's rights, or of man's rights, but consider human rights," says Nathaniel C. Fowler, Jr., in his concise and careful summary of the A B C reasons justifying votes for women. As a source book for suffrage orators *The Principle of Suffrage* ought to prove valuable, but as an argument it fails to convince because of the very multiplicity of its propositions.

Sully & Kleinteich. 25 cents.

CHARACTER AND CONDUCT

An excellent manual for moral instruction is found in *An Introduction to Ethics for Training Colleges*, by G. A. Johnston, of the University of Glasgow. The author first traces the development of character and defines the various elements which constitute it. On this basis he examines in a clear and concise way the relation of character and life to different spheres of conduct and activity.

Macmillan. \$1.

THE MEN OF THE HARBOR

In a study of *The Longshoremen* made by Charles B. Barnes the economic problems connected with the six thousand men handling freight at the New York docks receive most attention, but the author never loses his human sympathy. A group of men that have the reputation of being shiftless and disposed toward drink and idleness, but who refuse to work with drunkards, presents interesting problems in group psychology.

Survey Associates. \$2.

SAFEGUARDS FOR HEALTH

In *The New Public Health*, Dr. H. W. Hill explains significant changes that research has brought about in the course of the last fifteen years. The prevention of infection now means the guarding of germ-carriers, chiefly the sick persons, the prevention of contacts, and the elimination of flies. Fumigation after diseases is being discontinued; garbage is no longer judged a source of danger; "sewer gas" and "dust" have lost their terrors. But protection of the water, food and milk supplies comes to be an important part of the public administration.

THE PUBLIC SCHOOLS

Measuring the Work of the Public Schools, compiled by Charles H. Judd for the Cleveland Survey, contains conclusions that would probably apply to half the city school systems in the country. Study of non-promotions shows need for courses of study better adapted to the character of the population. Class room observations show too little adaptation of material to current needs. The kindergartens need better correlation and supervision; the upper grades and high schools richer courses of study, and more symmetrical development of the system.

Cleveland Foundation. 50 cents.

PEACE AND WAR

PERMANENT PEACE

Ways to Lasting Peace is a collection of sixty-five of the most significant constructive programs, proposals and manifestos issued by responsible organizations and individuals thruout the world for ending the war and establishing thereafter a durable peace. There is an admirable running comment by Dr. David Starr Jordan.

Bobbs-Merrill. \$1.

WAR AS RELAXATION

Sustained attention is the distinction of civilized man. The resulting tension, says G. T. W. Patrick in his *Psychology of Relaxation*, requires relief found normally in such activities as play, sport and laughter. Profanity and slang have a like effect. Alcohol and the deeper debauch of war used for this end cannot be banished "by summary means nor direct suppressions." They will require substitutes which meet fundamental, virile needs.

Houghton, Mifflin. \$1.25.

HOW THE SUBMARINE WORKS

The dream of flying is almost as old as the race. That of boating under water began about 1620. Modern science has realized both dreams and thereby revolutionized warfare and made it yet more horrible. Washington hoped for submarines. The Confederates had one—a gallant tale. Farnham Bishop's *Story of the Submarine* is a timely book, telling in simple style of the evolution, the mechanism, the power of this new engine of destruction.

Century. \$1.

"OUR GLORY IS TO SAVE"

Amid the needful but none the less deplorable talk of preparedness comes in a new edition the story of the army that marches the world over under *The Red Cross Flag*. Miss Boardman tells well humorous incidents of its beginnings and splendid tales of its work in great disasters and gives four chapters to its work in this war. The book's fault seems to the outsider to lie in needlessly scant credit to the first chief.

Philadelphia: Lippincott. \$1.50.

ANATOLE FRANCE ON THE WAR

The Path of Glory, which appears in a translation combined with the original text, is a collection of sketches and letters relating to the French side of the Great War. Anatole France, the Patriot, retains his vivid and graceful style, but while it is unthinkable that anyone else in the world could have written a line of the works of Anatole France, the Skeptic, any clever patriotic French author might have written this volume.

Lane. \$1.50.

WHEN WAR IS RIGHT

War and Religion is a booklet of 87 pages by the French scholar, Alfred Loisy, translated by Arthur Galton. The writer's point is that the religion of Jesus is rejected by those who have perpetrated the present war; yet he believes that the spirit and essence of religion is in the heart of those who defend their country, for self-sacrifice is religion. He gives great honor to Cardinal Mercier, but holds the position of the Pope of Rome to be pitiable.

Longmans, Green. 50 cents.

PEBBLES

Do It Now. Today Will Be Yesterday Tomorrow.—*Cincinnati Enquirer*.

Wilson Lauds Lincoln.—*Head-line*. The campaign is on at last.—*Philadelphia North American*.

Abe—Did you get the opera score?

Pandora—Yeah; they were tied in the last minute of the play.—*Stanford Chaparral*.

"Preparedness" is in the air. Frinstance, the Indianapolis telephone directory carries a line: "In case of fire call fire department."—*Boston Herald*.

The European belligerents who are turning the clock one hour ahead are probably wishing they could turn it back about two years.—*Brooklyn Daily Eagle*.

The common folks live in the hope
That they will hear the callopie;
But people in society
Must list to the callopie.

—*Cincinnati Enquirer*.

All the mechanics and laborers are receiving the highest pay known in their history, but they are demanding more.—*Pittsburg Dispatch*. How different from capital is labor. Capital, it is well known, invariably is content with just enough.—*Puck*.

IT PAYS TO KNOW YOUR OWN MIND

It is rumored that the cause of the death of W. J. Evans, who died here last fall, will be investigated. Mr. Evans was thought to have killed himself at the time, but was later undecided.—*Little River News*.

The door opened suddenly and a lady rushed in. "Oh, doctor," she cried, "the baby has swallowed some ink and now he's looking blue. What shall I do?"

"Give him a dose of blotter," said the doctor. "This is certainly an absorbing case."—*Cornell Widow*.

"How did you come out?" asked his friend. "Will she have you?"

"Her answer," replied the diplomatic attache, "is partially satisfactory. Enough so to continue negotiations. She says if she ever does marry it will be a man of good looks, courage, and ability."—*Judge*.

Having stood for the steam roller process as long as could be expected, the worm backfired and our East made a clean sweep.—Bozeman Bulger, in the *Evening World*. When a good pilot is at the throttle nothing can stop the early bird in its drive up the ladder.—*New York Tribune*.

"Can you tell me," said the Court, addressing Enrico Ufuzzi, under examination at Union Hill, New Jersey, as to his qualifications for citizenship, "the difference between the powers and prerogatives of the King of England and those of the President of the United States?"

"Yezzir," spoke up Ufuzzi promptly. "King, he got steady job."—*New York Morning Telegraph*.

If, However and But one night

Sailed in a German note.

Sailed on a river of phrases bright

That the Foreign Office wrote.

Sailed on the cable across the sea

Snuggled away in a special plea.

And they're always there, are the little words three.

If, However and But.

Brooklyn Daily Eagle.

A Long Island teacher was recounting the story of Red Riding Hood. After describing the woods and the wild animals that flourished therein, she added:

"Suddenly Red Riding Hood heard a great noise. She turned about, and what do you suppose she saw standing there, gazing at her and showing all its sharp, white teeth?"

"Teddy Roosevelt!" volunteered one of the boys.—*New York Times*.

RICHARD HENRY LITTLE
At the front in the Spanish American, Russian-Japanese and the present European wars. Mr. Little says:

"I have found Tuxedo a faithful companion in the field and in the camp. In all my campaigns I have regarded a few good pipes and a plentiful supply of Tuxedo tobacco as the most important part of my impedimenta."

Richard Henry Little

WM. PHILIP SIMMS
Manager Paris Bureau United Press and the first American correspondent permitted to visit the French Front. Mr. Simms says:

"Tuxedo gives me more real pleasure than any other tobacco I ever smoked. It always tastes good, outdoors or indoors, morning, noon or night."

Wm. Philip Simms

WALTER NIEBUHR
With the German army during the drive on Warsaw, for the United Press. Mr. Niebuhr says:

"Tuxedo is remarkably mild and delightfully fragrant. I find that I can smoke it all day and enjoy the last pipeful just as much as the first."

Walter Niebuhr

Famous War Correspondents Smoke Tuxedo!

Among the most brilliant men in the world today are those who give us in vivid pen pictures the stirring story of the greatest of all wars.

Here, famous reporters of the gigantic conflict tell why the modern war correspondent smokes Tuxedo.

That wholesome taste of "Tux" keeps his mind vigorous—and it's so wonderfully mild he can smoke it any time, every time and all the time and never know he has nerves!

Tuxedo

The Perfect Tobacco for Pipe and Cigarette

Tuxedo is made of ripe old Burley leaf, aged 3 to 5 years—and—it's "Tuxedo Processed!"

That's the big, overshadowing reason why Tuxedo is in a class by itself.

After the aged leaf has been "Tuxedo Processed," every particle of bite is absolutely removed—the tobacco becomes supremely mild—and you can smoke Tuxedo all you please—the sweet, fragrant, pleasant smoke that makes your pipe your best friend.

Tuxedo has plenty of imitators—but you insist on getting Tuxedo and avoid disappointment.

MEAD CYCLE CO., DEPT. K-198, CHICAGO

A Number of Things by Edwin E. Slosson

I know one man who will be pleased at Judge Tuthill's decision that Bacon wrote Shakespeare. He lives, or did live some thirty years ago, in Kansas and had then upon his library shelves a dozen volumes handsomely rebound in morocco and lettered in gold on the backs, "Dramatic Works of Francis Bacon."

Another Kansas admirer of that elusive author was lured by an unscrupulous agent into buying a set which he understood to be "Lord Bacon's Lights of History," but which when he got them turned out to be "Lord's Beacon Lights of History," a deservedly popular work for the parlor what-not.

Now that this controversy has been settled—for I suppose it would be contempt of court to question the decision of the Chicago judge—it seems appropriate to quote Arthur St. John Adcock's lines from the *Anthology of Humorous Verse*:

As Shakespeare couldn't write his plays
(If Mrs. Gallup's not mistaken),
I think how wise in many ways
He was to have them done by Bacon;
They might have moldered on the shelf,
Mere minor dramas (and he knew it!),
If he had written them himself
Instead of letting Bacon do it.

And if it's true, as Brown and Smith
In many learned tomes have stated,
That Homer was an idle myth,
He ought to be congratulated,
Since thus, evading birth, he rose
For men to worship at a distance;
He might have penned inferior prose,
Had he achieved a real existence.

To him and Shakespeare men agree
In making very nice allusions;
But no one thinks of praising me,
For I compose my own effusions;
As others wrote their works divine
And they immortal thus today are,
Perhaps had some one written mine
I might have been as great as they are.

Whether *vers libre* is beautiful or not is still a matter of dispute, but that does not matter now since it is turning out to be useful. It seems to be just the thing for newspaper controversy. In the New York *Evening Post*—what would its erstwhile editor, William Cullen Bryant, have thought about it?—a debate on Dr. Flexner's modern school has been carried on in the new medium. The plan for a school, in which most of the studies should be vocational and scientific, without the classics and abstract mathematics, was published in pamphlet form by the General Education Board "with a request for criticism." Professor Erskine, of the depart-

FRED'K J. WARBURTON, Treasurer.

Change of Address

If you are going away for the summer, you will want The Independent to follow you. Let us know your new address, if possible, three weeks ahead. Be sure to give us your old address also.

THE INDEPENDENT

ment of English in Columbia, was accommodating enough to comply with the request, which he did in this fashion:

ODE TO DR. A—— F——

Just after the Board had brought the schools up to date,

To prepare you for your Life Work
Without teaching one superfluous thing,
Jim Reilly presented himself to be educated.

He wanted to be a bricklayer.
So they taught him to be a perfect bricklayer

And nothing more.
He knew so much about bricklaying that
the contractor made him a foreman.
But he knew nothing about being a foreman.

So he spoke to the School Board about it,
And they put in a night course for him,
On how to be a foreman

And nothing more.
He became so excellent a foreman that the contractor made him a partner.

But he knew nothing about figuring costs,
Nor about bookkeeping,
Nor about real estate.

And he was too proud to go back to night school.

So he hired a tutor, who taught him these things.

Prospering at last, and meeting other men as wealthy as he,

Whenever the conversation started, he'd say to himself:

"I'll lie low till it comes my way—
Then I'll show 'em!"

But they never mentioned bricklaying,
Nor the art of being a foreman,
Nor the whole duty of being a contractor,
Nor figuring costs,
Nor real estate;
So Jim never said anything.
But he sent his son to college.

JOHN ERSKINE.

Whereupon another odist whom we may surmise to be Professor Robinson, of the history department of Columbia, retorts as follows:

ODE TO PROFESSOR J—— E——

(In allusion to his Ode to A—— F——.)

Jim Reilly's son Tom didn't know what he wanted to do.

So he took Latin and Mathematics and hoped they'd discipline his mind,
And prepare him for sharing in polite intercourse.

After three years he knew that two straight lines perpendicular to the same plane

Are parallel to each other.
For a short time he could say what were both *sine* and *cosecant*;

But a month after the examination he unhappily forgot which was which.

He had learned a list of diminutives; only *culum* and *bulum* remained to him—

So sweet was their euphony.
He knew the mute with l or r played a mystic rôle in the higher life,
Which in moments of depression he felt he didn't grasp.

An old book by an old man for the old
Tightened the reins of his youthful spirit.
When he reached the two gates of slumber at the end of Lib. VI

They gave him ready exit, and he never began Lib. VII.

But he had the elements of a liberal education, and,

Like his philistine father before him,
Whenever the conversation started he'd say to himself:

"I'll lie low till it comes my way—
Then I'll show 'em."

But they never mentioned the *cæsural* pause,

And rarely the first Archilochian strophe,
Nor Vercingetorix, nor the mute with l or r.

He had never got far enough to meet a reflection of Horace's

About those on whose cradles Melpomene smiles.

But he knew he couldn't play an Isthmian game as well as T. R.

Why Burden a Friend with the Care of Your Estate?

Unquestionably it shows confidence in your friend's ability and integrity to name him as executor and trustee of your estate, but is it fair to place on him such a burden of responsibility? Can he afford, from the standpoint of his own personal interests, to accept such an appointment?

Why not consider the selection of an executor and trustee as a business matter, and appoint the Bankers Trust Company, which is organized especially to undertake the duties of trusteeship?

It is the Company's business to be thoroughly familiar with all phases of trust business, and its organization is so complete and so well systematized that all details of administration are promptly and correctly attended to.

If there is some special reason for having a friend to serve, appoint him co-executor and co-trustee with the Company, thus relieving him of most of the burden.

A fact not generally understood is that the highly specialized and competent service rendered by this Company costs no more than the service of an individual executor and trustee.

The officers of the Company will be glad to talk with you, or to send you information in regard to this very important matter, or in regard to any trust or banking matters you may have in mind.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

SHAKESPEARE'S PORTRAIT

ONLY ONE THOUSAND LEFT

In this year when everybody is reading and talking about Shakespeare you will no doubt be glad of the opportunity to secure at nominal cost the excellent reproduction of Leopold Flameng's etching of the famous Chandos portrait of Shakespeare. We have printed a limited number on heavy coated paper. (Size 12 in. by 17 in.) While the supply lasts we shall be pleased to furnish our readers with a copy securely wrapped in a tube in such condition that it will be suitable for framing. Just send six two-cent stamps to cover the cost of wrapping and mailing.

One reader wrote: "It is a rare privilege to get such a famous facsimile at so trivial a sum and I am waiting its arrival with keen anticipation."

National Defense and International Peace

What the Engineers are Doing

THIRTY thousand American engineers are making a card index survey of American industry so that it may be prepared for its vital part in defending the Country, if need comes. The past eighteen months have taught us here in America what lack of industrial preparedness has meant to some of the countries now at war. These nations had the ships and they had the men; but when the hour struck, their factories were not able to furnish the colors with arms and shells and powder. Their factories were not prepared. And our factories are not prepared.

But it is not enough to draw a moral. In the United States five great Engineering Societies — Civil, Mining, Mechanical, Electrical and Chemical — have pledged their services to the Government of the United States, and are already working hand in hand with the Government to prepare industry for the national defense. They receive no pay and will accept no pay. All they seek is opportunity to serve their country, that she may have her industries mobilized and prepared as the basic line of defense.

All elements of the nation's life — the manufacturers, the business men, and the workingmen — should support this patriotic and democratic work of the engineers, and assist them cheerfully when asked. *There can be no better national insurance against war.*

The Associated Advertising Clubs of the World, representing all advertising interests have offered their free and hearty service to the President of the United States, in close co-operation with these five Engineering Societies, to the end that the Country may know what the engineers are doing. The President has accepted the offer. The engineers have welcomed the co-operation.

This advertisement, published without cost to the United States, is the first in a nation-wide series to call the country to the duty of co-operating promptly and fully with the Engineers to prepare industry for

NATIONAL DEFENSE AND INTERNATIONAL PEACE

REAL ESTATE

FOR SALE: A pleasant, 14 room house and 10 acres of beautiful grounds on Lake Lucy near Sorrento, Fla. The home of the late E. P. Powell. Price \$7000.00. (Miss) Gladys Powell, Clinton, N. Y.

SUBLET Summer months—all or part of high class apartment—8 rooms, 2 baths—fine air, overlooking Spanish Museum, near Subway and Hudson River. Apt. 41, 605 West 156th Street.

HIGH-CLASS SALESMEN WANTED

The largest real estate concern in the world is planning a National advertising campaign to advertise their New York real estate as the best investment opportunity in the country. We control \$10,000,000 of property on subways projected, or now in operation, and are planning to take on a few high-class salesmen. Positively no applications considered from men who cannot maintain their own personal expense while demonstrating their ability, but to such as are able to fulfill the requirements, a liberal contract will be made similar to the one under which our representatives are making as high as \$25,000 a year, and none under \$3,000. Every assistance given to men capable of making good, in the shape of a liberal individual advertising appropriation, and personal help in getting started.

Send samples of work, give experience, and such information as will enable advertiser to judge qualifications. Address CONFIDENTIAL, P. O. Box 1273, Philadelphia.

Book on Law Free

Write today for our new 171-page book on "The Power of Law Training." It carries a vital and inspiring message to every ambitious man. Find out about the opportunities that await the law trained man. Find out how you can learn from masters of the law right in your own home. No obligations. The book is absolutely FREE. **Write Today**—now while we are making a special reduced price offer.

American Correspondence School of Law
2485 Manhattan Bldg. Chicago, Illinois

SANATORIUM

Sanford Hall, est. 1841

Private Hospital

For Mental and Nervous Diseases

Comfortable, homelike surroundings; modern methods of treatment; competent nurses. 15 acres of lawn, grove, flower and vegetable gardens. Food the best. *Write for booklet.*

Sanford Hall, Flushing, New York

Father Jim took him into the office. He did not seem the worse for disciplining his mind.

He could make a deal *unice securus*, however disadvantageous to the buyer, And knew the difference betwixt a Martini and a Bronx, And appreciated the roundness of a maiden's arm, Without the help of Horace.

J. H. R.

I need not quote the controversy further since it is evident that the two lines of arguments, like lines perpendicular to the same plane, will never meet however far they may be produced.

The astronomer has his own peculiar way of looking at things. According to Camille Flammarion the history of the world is a rectilinear movement thru space in the direction of the Zeta of Hercules.

If so, the main object of our endeavors is so to act that the inhabitants of Zeta won't be ashamed of us when we get there. Judging by the present condition of terrestrial affairs we'll have to hurry.

It is proposed in Parliament to put a tax of \$5 on every cat in the kingdom. But cats are comparatively harmless creatures; even useful. How much better it would be to tax mice instead.

I have always heard that Valparaiso University was an up-to-date institution, but I was not aware that the students there were reading Caesar's Commentary on the Mexican War. Such, however, seems to be the case if I may judge from the following paragraph in the University Torch. Will it be as *Wilsonus cunctator* that our President goes down in history?

Apud Mexicanos longe dirtissimus et orneriissimus est Villa. Is F. Carranza et C. Obregon consilibus regni, cupiditate inductus coniurationem banditi fecit et eis persuasit ut de finibus suis cum omnibus copiis exirent; perfacile esse, cum omnibus praestarent,—et quod forte copiae Americani, quamquam premoniti erant, dormitabant in castra Columbi. Id hoc facilius eis persuasit, quod undique loci natura Mexicanis continentur; una ex parte flumine Rio Grando, latissimo atque altissimo, qui agrum Mexicanatum a Americanis dividit; altera ex parte monte Sierra altissimo, qui est inter copias Villae et exercitum Americanum; qua ex parte homines bellandi cupidi, in medio nocte, Columbum oppugnaverant. Qua de causa Woodrocius Wilsonus cunctator, conspicatus honorem Americani populi violentem deciman legionem in Mexicano, misit.

ALMA V. JONES

In the Middle Ages scholars spent their time speculating how many angels could stand on the point of a needle. Nowadays scholars spend their time determining how many microbes can stand on the point of a needle.

The world is so full of a number of things
It's strange we're not all as unhappy
as kings.

—New York Evening Post.

Do the best you can until you can do better.

Insurance

Conducted by

W. E. UNDERWOOD

SWAPPING POLICIES

Perhaps as often as a dozen times a year I receive letters from readers advising me of offers made them by life insurance agents involving the surrender of policies for the purpose of replacing them by other policies to be secured by the agents. The enterprising agents in each case always prove by figures the advantages to be derived thru the exchange. Sometimes the insurance sought to be thus terminated is of long standing—I recall one case in which the policy was eleven years old.

Now, it must be admitted that some people have a poor lot of life insurance, and they would only be benefited by abandoning it for something reliable, the sooner the better, for time is an important factor. But these are exceptional cases. The man who owns a policy in a good average company and has paid premiums on it for five or ten years or longer makes a mistake in surrendering it for the purpose of taking another policy in another company. He loses the advantages accruing to him thru the lower rate at the younger age; he probably sacrifices a portion of the reserve by withdrawing; and he loses at the other end of the transaction the years during which he has paid premiums by postponing maturity to that extent.

The agent who endeavors to get a policyholder to make an exchange of this character is called a "twister"; the practise is sternly prohibited by all reputable companies; and in many of the states it is forbidden by law. The only person who profits by such a trade is the "twisting" agent, who gets for himself out of the surrender value of the retired policy a good round commission as his pay for selling the new policy.

A proposition of that kind from an insurance agent—and there are some agents who can write new business for their companies in no other way—should put the recipient of the proposal on guard against him, particularly if the existing policy is of some years' standing. If in any case it can be thoroughly established that the policyholder's interests warrant the discontinuance of an existing policy, the proceeding is legitimate. Many persons who are carrying coöperative insurance that is unsupported by an adequate mathematical reserve, to illustrate, are losing time by keeping it; for as the years pass the cost increases until in old days it becomes prohibitive.

P. B. H., Marion, S. C.—The North American Accident is entirely sound financially, is well managed, has the reputation of settling its claims justly and promptly.

Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—\$10.00, \$12.00 and \$15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

Yale College Buildings Insured in the Hartford for 91 Years

In 1825 the famous "Old Brick Row" of Yale College was insured in the Hartford Fire Insurance Company. Ever since that date Yale buildings have been insured in the Hartford. One by one the quaint little buildings of the Old Brick Row have given way to many-storied, modern dormitories and recitation halls, until now only Old South Middle remains as a landmark. Yale has grown from a small college to a great university, and the Hartford from a struggling, pioneer enterprise to the fire insurance company doing the biggest business in the United States. Both have grown great through steadfast adherence to an ideal of service. It is this faithfulness to a century-old ideal that is today the most striking characteristic of the

INSURANCE SERVICE OF THE TWO HARTFORDS

The Hartford Fire Insurance Company for over 106 years has served the American people faithfully and well. In all its history it has met every obligation fully, fairly and on the dot of time.

The Hartford Accident & Indemnity Company carries into the field of casualty and bonding insurance the same high traditions and unquestioned financial strength that have made the parent company famous.

The two companies, between them, write practically every form of insurance but life insurance

JOHN KENDRICK BANGS

Presents THE GENIAL PHILOSOPHER

THE Genial Philosopher had been gazing out of the window for a considerable period, apparently too deeply absorbed in thought for words. The Cynical Sciolist, becoming restive under the unwonted silence, finally broke it.

"You seem to be doing a pile of thinking this morning, old man," he said. "What's on your mind?"

"I've been wondering about that very thing myself for the past hour and a half," replied the Genial Philosopher, arousing himself from his obsession with difficulty. "One minute it's one thing, and another minute it's another. Ten minutes ago I was trying to figure out just who is going to ride the Republican Elephant to victory or defeat and I hadn't more than got the Convention itself definitely pictured in my mind when a June-Bug, butting its head upon the window-pane, reminded me that these were bully days to go a-fishing; and just as I was endeavoring to decide whether I'd rather fish for trout in the Berkshires, for salmon on the Columbia River, for whales off the coast of Labrador, or Hudson River shad at Delsherrico's, the possibility of war with Japan popped into my mental machinery and discombobulated the whole mechanism. At the moment you spoke my mental processes were proceeding from an effort to concentrate upon the real causes of the latter-day degeneration of the buckwheat cake from a dainty edible into an unregenerate porous plaster to the undesirability of June marriages viewed from a strictly commercial standpoint, owing to the prevalence of bargain-sales in all our shops, and the consequent cheapness of desirable wedding presents."

"I should say that you were suffering from a bad case of intellectual scatter," said the Cynical Sciolist.

"Who's going to be the Republican nominee, speaking of the price of clams in the Philippines?"

"As to that there is only one sure thing to be said at this time," said the Genial Philosopher, using both hands to push his temples closer together in his effort to concentrate. "You may announce to a waiting world as coming from me that *Theodore Roosevelt will positively NOT accept the nomination for the Vice-Presidency*. He will not accept it if it is offered to him, and if elected he will not serve. Otherwise the thing is still open. As a prophet I believe that a policy of Watchful Waiting will prove more prophetable.

"Well, I guess you are right," said the Cynical Sciolist, "I don't see much

sense in worrying about who's to be our next President anyhow. We may have a Kaiser by that time."

"Or a Mikado," said the Genial Philosopher, with a sly wink at the hydrant across the street. "And that gives me a real idea, Brother Sinnick. With the Atlantic Coast in hysterics over an impending Kaiser, and the Pacific Coast smashing all the seismographs in creation with its tremblings over an overhanging Mikado, why wouldn't it be a good thing for us instead of dwelling upon gruesome thoughts of war and gore to set about a subtler way of meeting our problem. Why not lure both Germany and Japan into our midst; let the Germans land in New York, and the Japanese in San Francisco without firing a shot. Greet them with Committees of Welcome, who will escort them to their respective City Halls, and there with due ceremonial present them with the freedom of the country. Say to them, 'Gentlemen, our fat and teeming land is yours—GO TO IT!' A brief period of German Efficiency in the New York City Hall would work wonders for the great metropolis, and similarly San Francisco's municipal government under the astute management of the thrifty Japs would solve a good many of the problems with which the children of the Sierras are now impotently wrestling. *Institute a new and subtler kind of warfare based upon smiling courtesy, and a killing kindness*. Give the invaders public banquets, and while secretly undermining their digestions, lull them into a state of fancied security with the honeyed words of our most mellifluous after-dinner orators. Gas them not with noxious vapors, but with honeyed vaporings. Call upon Brother Bryan with his most fetching smile to address them over flowing bowls of liquid grape, and extending the glad hand of welcome to the Kaiser, speak not as two enemies, but as one Bill to another. And to the Mikado, just arrived at the Golden Gate, let Uncle Hiram Johnson in exalted periods say similarly, 'O Son of the Sun, Cousin of the Moon, and Father-in-Law of the Milky Way, today have Fujiyama and Shasta, like Righteousness and Peace, osculated in one glorious osculation. In the name of our fructiferous State of California I welcome you to our shores, and present to you at the unanimous request of my constituents all our State and Municipal Bonds, our Country, Shire, and Ward Deferred Debenture Certificates; indeed, Sire, with all the obligations past, present, and future, which our splendid Commonwealth has set apart as its gift to posterity.' And so on.

"What would be the result? Destruction? Not a bit of it. Murder, pil-

lage, arson and rapine? Not in the least. The Kaiser completely disarmed would settle down at the Ritz, the Mikado at the St. Francis, and then, my friend, *one of two things would happen*. They would either succumb, as have we, to the allurements of their new environment, and grow soft and flabby, or they would become profoundly jealous of each other. Probably the latter, after the fashion of potentates. The Mikado hearing of the enormous fortunes made in War Brides by the Eastern invaders on Wall Street, would be stirred to envy. The Kaiser, receiving reports thru his secret agents of the romantic times the Mikado was having, sleeping on delicious soft-cushions stuffed with thornless cactus, raising freckles on the highly manicured freckle ranches of Pasadena and Santa Barbara, feasting on toke-point oysters, fresh grape-fruit, luscious crab-meat, and green asparagus all the year round, with the climate of heaven itself bathing him from morn to dewy eve in its soft silkiness, would become a perfect Fafner of green-eyed jealousy. Ultimatums, Penultimatums, and Superdreadultimatums would be exchanged, and then WAR. Wilhelm would start for San Francisco, with an overwhelming force; the Mikado would start East for New York with another overwhelming force. They'd meet somewhere on the plains this side of the Rockies, and then would follow the titanic contest of the ages. We Americans would stand to one side and let them fight it out, manufacturing munitions for both sides, and then——"

The Genial Philosopher slapped his knee with a resounding thwack.

"Then, Brother Sinnick," said he, his voice trembling with emotion, "when these two overwhelming forces had fought themselves to a stand-still, and each was but the shadow of a frazzle, THEN would be Uncle Sam's opportunity. *He could summon the police and arrest what was left of 'em both for disorderly conduct, resume possession of his reorganized country, and fulfil his manifest Destiny*."

"It sounds good," said the Cynical Sciolist, "but after all it won't work. Both parties would make us pay all the expenses of the war, and we'd be ruined economically anyhow."

"Not in the end," said the Genial Philosopher, "for, don't you see, my dear Sinnick, that after having captured both the Kaiser and the Mikado we could put 'em in a cage and send them out upon the Vaudeville Circuit, and let the public look at 'em at ten cents a head. *Why, my dear man, as a drawing card they would have Charlie Chaplin beaten to a frazzle, and as long as they lived Uncle Sam would never have to levy another tax!*"

THE NEW PLAYS	
A realistic, tho highly colored picture of United States army life on the Mexican border is Augustus Thomas' timely melodrama, <i>Rio Grande</i> . (Empire.)	
A <i>Lady's Name</i> is an amusing English comedy that affords Marie Tempest an opportunity for one of her inimitable characterizations. (Maxine Elliott.)	
<i>Beau Brummel</i> . A revival of Clyde Fitch's masterpiece with Arnold Daly in the title rôle, made famous by Mansfield. Good, but not "darn" good. (Cort.)	
<i>Justice</i> , by John Galsworthy, is probably the finest play in New York, and also convincing propaganda for prison reform. John Barrymore and O. P. Heggie do some excellent acting. (Candler.)	
A <i>Woman of No Importance</i> . One of Oscar Wilde's brilliant, superficial and artificial high society dramas, with Margaret Anglin and Holbrook Blinn as stars. Nothing better of its kind. (Fulton.)	
The beautiful scenic effects in the Washington Square Players' production of <i>The Sea-Gull</i> , by Tchekoff, redeem their rather unfinished acting. The play is an interesting contrast to American drama. (Bandbox.)	
<i>The Tempest</i> , under Drama Society auspices, lacks poetry, but presents an uncut text and an interesting compromise between Elizabethan and modern staging. (Century.)	
Shakespeare's Sophomore show, <i>Merry Wives of Windsor</i> , is played by Sir Herbert Tree's company with a roisterous, almost undergraduate, good humor. (New Amsterdam.)	
The colored people of New York City, practically excluded from most of the theaters, have established their own stage and the Wright Dramatic Company is now playing <i>Othello</i> in a way superior to many a white stock company. (Lafayette.)	
<i>Caliban by the Yellow Sands</i> , by Percy Mackaye, is a remarkable achievement--elaborate pageantry, colorful scenery, music, recitation and pantomime, all blended into a community festival in honor of Shakespeare. (New York City College Stadium.)	

REMARKABLE REMARKS

THEDA BARA—I eat the hot milk.

RICHARD LE GALLIENNE—Be jocund thou.

WOODROW WILSON—This war was brought on by rulers.

DR. CHARLES H. PARKHURST—Poverty is nothing but a habit.

BISHOP J. F. BERRY—Everything is money, money, money.

JAMES J. HILL—Capital may be a shy bird for some time to come.

SENATOR CHAMBERLAIN—Everything we do in life is a compromise.

ED. HOWE—I know plenty of men who have been ruined by the church.

THEODORE ROOSEVELT—I am straight United States and nothing else.

DR. WOODS HUTCHISON—The real risks of war are not bullets but bugs.

HERBERT KAUFMAN—The "meant" in postponement won't help matters.

GEORGE BERNARD SHAW—We are the champion mendicants of the world.

MARY PICKFORD—But it's awful skeery business—this appearing in public.

J. PIERPONT MORGAN—I believe in every man attending strictly to his own job.

BARON D'ESTOURNELLES DE CONSTANT—The English people get up too late.

"DIAMOND JIM" BRADY—Broadway is New York and New York is Broadway.

CHRYSTAL EASTMAN BENEDICT—Alimony is not thought of by a real feminist.

HOWARD S. HADLEY—Roosevelt will be the next Republican Senator from New York.

ALICE G. KIRK—Underneath the dining room table should always be found a small hassock.

K. K. KAWAKAMI—Japan does not want Peking to become the Constantinople of the Far East.

ARTHUR BRISBANE—The moving picture in history will equal the discovery of the printing press.

GEORGE BERNARD SHAW—If I were the Pope I should order every combatant to lay down his arms instantly on pain of excommunication.

SIR ROGER CASEMENT—If London suffered what London has caused Brussels. Louvain, Liège to suffer—there would be no war in Europe.

THE DUKE OF MANCHESTER—I don't believe there is a single member of the British aristocracy who is not working for the government in some capacity.

PROF. STANLEY LANE-POOLE—The English ideal of imperialism is a state composed of nations. The German ideal of imperialism is a nation composed of states.

REV. CHARLES E. JEFFERSON—Every girl in her twenties who has found a man that has won her heart has the right to marry him in spite of the opposition of her parents.

ELIHU ROOT—Whether it will be necessary for the United States to act in defense of the Monroe Doctrine or abandon it, may well be determined by the issues of the present war.

SCHOOL PHYSICAL DIRECTOR OCKER—Military training in schools fosters a bombastic spirit of tin soldierism and false sense of patriotism which does not appreciate the seriousness of war or the glories of peace.

DR. SALMON—At Ellis Island, where I spent three years as a physician, doctors spent as much time in examining the mental condition of an immigrant as is spent by the gateman at a railroad station in examining your ticket.

THE BISHOP OF LIMERICK—If any one thinks that the millions of workmen trained in arms in Europe will settle down peaceably after the war to starvation in order to help reamass fortunes for their "betters" he may have a rude awakening.

The Clermont

-a distinctively Colonial and typically American pattern in STERLING SILVER
Table and Dinner Ware, Tea and Coffee Services

Have you noticed that the world always returns to the simple things, eventually?

Simplicity is the reaction from the excesses of elegance and the follies of fashion.

This beautiful Clermont design draws its inspiration from our own Colonial days, "*when simple faith was more than Norman blood.*"

But the Gorham designers have introduced into the Clermont a creative note of distinction which softens the austerity without sacrificing the spirit of the purely Colonial.

Complete furnishings in Dining Room Silver are obtainable in this pattern, for it is essentially a pattern to dominate rather than share the honors of the table.

Ask to see the Clermont design
which is trade-marked thus:

For sale by leading jewelers everywhere.

America Ready to Join a League to Enforce Peace, Declares President Wilson

An Address Delivered Before the League to Enforce Peace, May 27, 1916, at Washington

WHEN the invitation to be here tonight came to me, I was glad to accept it, not because it offered me an opportunity to discuss the program of the league (that you will, I am sure, not expect of me), but because the desire of the whole world now turns eagerly, more and more eagerly, toward the hope of peace, and there is just reason why we should take our part in counsel upon this great theme. It is right that I, as spokesman of our government, should attempt to give expression to what I believe to be the thought and purpose of the people of the United States in this vital matter.

This great war that broke so suddenly upon the world two years ago, and which has swept within its flame so great a part of the civilized world, has affected us very profoundly, and we are not only at liberty, it is perhaps our duty, to speak very frankly of it and of the great interests of civilization which it affects.

With its causes and its objects we are not concerned. The obscure fountains from which its stupendous flood has burst forth we are not interested to search for or explore. But so great a flood, spread far and wide to every quarter of the globe, has of necessity engulfed many a fair province of right that lies very near to us. Our own rights as a nation, the liberties, the privileges, and the property of our people have been profoundly affected.

We are not mere disconnected lookers-on. The longer the war lasts the more deeply do we become concerned that it should be brought to an end and the world be permitted to resume its normal life and course again. And when it does come to an end, we shall be as much concerned as the nations at war to see peace assume an aspect of permanence, give promise of days from which the anxiety of uncertainty shall be lifted, bring some assurance that peace and war shall always hereafter be reckoned part of the common interest of mankind.

We are participants, whether we would or not, in the life of the world. The interests of all nations are our own also. We are partners with the rest. What affects mankind is inevitably our affair as well as the affair of the nations of Europe and of Asia.

One observation on the causes of the present war we are at liberty to make, and to make it may throw some light forward upon the future, as well as backward upon the past. It is plain that this war could have come only as it did, suddenly and out of secret counsels, without warning to the world, without discussion, without any of the deliberate movements of counsel with which it would seem natural to approach so stupendous a contest. It is probable that if it had been foreseen just what would happen, just what alliances would be formed, just what forces arrayed against one another, those who brought the great contest on would have been glad to substitute conference for force.

If we ourselves had been afforded some opportunity to apprise the belligerents of the attitude which it would be our duty to take, of the poli-

cies and practises against which we would feel bound to use all our moral and economic strength, and in certain circumstances even our physical strength also, our own contribution to the counsel, which might have averted the struggle, would have been considered worth weighing and regarding.

And the lesson, which the shock of being taken by surprise in a matter so deeply vital to all the nations of the world has made poignantly clear, is that the peace of the world must henceforth depend upon a new and more wholesome diplomacy. Only when the great nations of the world have reached some sort of agreement as to what they hold to be fundamental to their common interest, and as to some feasible method of acting in concert when any nation or group of nations seeks to disturb those fundamental things, can we feel that civilization is at last in a way of justifying its existence and claiming to be finally established. It is clear that nations must in the future be governed by the same high code of honor that we demand of individuals.

We must, indeed, in the very same breath with which we avow this conviction admit that we have ourselves upon occasion in the past been offenders against the law of diplomacy, which we thus forecast; but our conviction is not the less clear, but rather the more clear, on that account.

If this war has accomplished nothing else for the benefit of the world, it has at least disclosed a great moral necessity and set forward the thinking of the statesmen of the world by a whole age. Repeated utterances of the leading statesmen of most of the great nations now engaged in war have made it plain that their thought has come to this: That the principle of public right must henceforth take precedence over the individual interests of particular nations and that the nations of the world must in some way band themselves together to see that that right prevails as against any sort of selfish aggression; that henceforth alliance must not be set up against alliance, understanding against understanding, but that there must be a common agreement for a common object, and that at the heart of that common object must lie the inviolable rights of peoples and of mankind.

The nations of the world have become each other's neighbors. It is to their interest that they should understand each other. In order that they may understand each other it is imperative that they should agree to cooperate in a common cause and that they should so act that the guiding principle of that common cause shall be even-handed and impartial justice.

This is undoubtedly the thought of America. This is what we ourselves will say when there comes proper occasion to say it. In the dealings of nations with one another arbitrary force must be rejected and we must move forward to the thought of the modern world, the thought of which peace is the very atmosphere. That thought constitutes a chief part of the passionate conviction of America.

We believe these fundamental things:

First, that every people has a right to choose the sovereignty under which they shall live. Like other nations, we have ourselves no doubt once and again offended against that principle when for a little while controlled by selfish passion, as our franker historians have been honorable enough to admit; but it has become more and more our rule of life and action.

Second, that the small states of the world have a right to enjoy the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon.

And, third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of peoples and nations.

So sincerely do we believe in these things that I am sure that I speak the mind and wish of the people of America when I say that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation.

There is nothing that the United States wants for itself that any other nation has. We are willing, on the contrary, to limit ourselves along with them to a prescribed course of duty and respect for the rights of others, which will check any selfish passion of our own, as it will check any aggressive impulse of theirs.

If it should ever be our privilege to suggest or initiate a movement for peace among the nations now at war, I am sure that the people of the United States would wish their government to move along these lines:

First—Such a settlement with regard to their own immediate interests as the belligerents may agree upon. We have nothing material of any kind to ask for ourselves, and are quite aware that we are in no sense or degree parties to the present quarrel. Our interest is only in peace and its future guarantees.

Second—A universal association of the nations to maintain the inviolate security of the highway of the seas for the common and unhindered use of all the nations of the world, and to prevent any war, begun either contrary to treaty covenants or without warning, and full submission of the causes to the opinion of the world—a virtual guarantee of territorial integrity and political independence.

But I did not come here, let me repeat, to discuss a program. I came only to avow a creed and give expression to the confidence I feel that the world is even now upon the eve of a great consummation, when some common force will be brought into existence which shall safeguard right as the first and most fundamental interest of all peoples and all governments, when coercion shall be summoned not to the service of political ambition or selfish hostility, but to the service of a common order, a common justice, and a common peace.

God grant that the dawn of that day of frank dealing and of settled peace, concord, and cooperation may be near at hand!

THE PRESIDENT ON THE ENFORCEMENT OF PEACE

THE address of President Wilson at the first annual banquet of the League to Enforce Peace will afford intense gratification to every one who believes that the world has come to the point where the united force of the nations must be made available to compel the settlement of international disputes by peaceful means. For the President of the United States is more than an individual; he is the spokesman of a great nation. As such he was attempting to give expression to what he believed to be "the thought and purpose of the people of the United States in this vital matter" of the hope of peace.

At the outset of his address the President entered a disclaimer; he was not discussing the program of the League. But what he had to say thereafter was quite as satisfactory as if he had taken up that program point by point. For it is not, after all, the program of the League that profoundly matters. It is its central idea, its basic principle. Of this principle Mr. Wilson's utterances were in thoro recognition and support.

The President's thought focussed itself in two passages of his address. In the first he declared the belief of the American people in these fundamental things:

First, that every people has a right to choose the sovereignty under which it shall live;

Second, that the small states of the world have a right to enjoy the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon;

Third, that the world has a right to be free from every disturbance of its peace that has its origin in aggression and disregard of the rights of peoples and nations.

So sincere is the belief of the people of the United States in these principles,

Mr. Wilson continued, "that the United States is willing to become a partner in any feasible association of nations formed in order to realize these objects and make them secure against violation."

In the second passage the President referred to the contingency that it might some time be our privilege to suggest or initiate a movement for peace among the nations now at war. In the event of such a possibility we ought to move along the line of "a universal association of the nations to maintain the inviolate security of the seas for the common and unhindered use of all the nations of the world, and to prevent any war, begun either contrary to treaty covenants, or without warning and full submis-

sion of the causes to the opinion of the world—a virtual guarantee of territorial integrity and political independence."

Finally, the President gave expression to his confidence "that the world is even now upon the eve of a great consummation, when some common force will be brought into existence which shall safeguard right as the first and most fundamental interest of all peoples and all governments, when coercion shall be summoned not to the service of political ambition or selfish hostility, but to the service of a common order, a common justice and a common peace."

These are admirable statements of the basic principles on which the platform of the League to Enforce Peace is built. The only difference between the two expressions—the President's and the League's—is one of method of approach. Mr. Wilson philosophizes on the truths which must be recognized in seeking international justice and world peace; the League outlines the course of action which the nations must take in the quest of these great ends. Mr. Wilson lays down principles; the League proposes ways and means.

Other difference there is none. When the President speaks of an association of nations to prevent any war begun without full submission of the causes to the opinion of the world he describes accurately the organization which the League proposes to establish. When he speaks of coercion summoned to the service of a common order, a common justice and a common peace, he sets forth the idea which distinguishes the League to Enforce Peace from every other peace movement.

With this high endorsement—this almost official endorsement—of its principles and its purposes, the

League to Enforce Peace takes a commanding position among organized plans for the securing of international peace. An almost indispensable element in the success of the proposals of the League is the initiation of the plan among the nations of the world by the Government of the United States. The taking of such an initiatory step at the appropriate time is foreshadowed by the President's address.

In thus endorsing its principles Mr. Wilson has given a lead to the people of the United States. The League in its first year of existence has achieved notable popular support. This popular adherence to its program ought to wax and multiply in ever increasing measure until it has accomplished its work for the world's welfare.

A DECLARATION OF INTERDEPENDENCE

It is hardly possible to exaggerate the importance of the President's speech last Saturday evening at the dinner of the League to Enforce Peace.

Here for the first time in history the responsible head of a great world power publicly proposes to translate the highest ideal of the greatest minds of all ages into an act of statesmanship substituting among the nations of the earth the reign of law for the reign of war.

It is a proposal that if accepted may change the course of history.

But more than that: Once let the warring nations be convinced of the wisdom of entering a League for the maintenance of a durable peace, and all the issues for which they are now fighting fade into insignificance. The President's high statesmanship may not only furnish the basis of permanent peace, but may also be the means of bringing the Great War to an end.

Woodrow Wilson has added to the Declaration of Independence a Declaration of Interdependence.

THE LEAGUE TO ENFORCE PEACE

EVER since the calling of the First Hague Conference, *The Independent* and its editor have been urging a League to Enforce Peace as the next great step in the political evolution of the world.

Tho the idea of world federation has been the dream of the poets, prophets and philosophers down the ages it is only in recent times that it has been put forward here and there as a practical possibility.

In 1905 at the Thirteenth Interparliamentary Conference at Brussels Richard Bartholdt, member of Congress from Missouri and president of the American delegation, presented a plan for consideration that would furnish the basis of a world federation.

In the same year Andrew Carnegie in his rectorial address at St. Andrew's University in Scotland developed the same idea.

In 1907, at the Second Hague Conference, Señor Ordoney, ex-President of Uruguay, in behalf of that republic, officially introduced a detailed proposal for a League of Peace to go into effect when adopted by "ten nations, of whom half shall have at least 25,000,000 inhabitants each."

In 1910, in his Nobel Peace address, delivered at Christiania, Norway, Theodore Roosevelt proposed a league of nations to guarantee national territory and sovereignty, to arbitrate all other questions, and to limit armaments by international agreement.

In 1911, at Baltimore, Maryland, the editor of *The Independent*, as president of the Third American Peace Congress, devoted his entire opening address to the exposition and elaboration of the principles of a league of nations.

When the Great War broke out, *The Independent* was the first paper in this country—possibly in the world—to urge editorially the formation of a League to Enforce Peace as the one sure way to maintain a lasting peace. This editorial, which appeared in our issue of September 28, 1914, under the title of "The Way to Disarm: A Practical Proposal," was reprinted by various organizations and widely distributed. It received much comment both in the United States and Europe.

It was this editorial, more than anything else, that led to a meeting of a small group of publicists and political scientists in New York City, who, after a series of conferences, formed themselves into a preliminary committee, drafted proposals for a League to Enforce Peace, and launched the idea on the 17th of last June, at a public meeting at Independence Hall, Philadelphia, the very spot where the United States of America was born.

The Independence Hall meeting organized a permanent committee, with ex-President Taft at its head, President Lowell, of Harvard University, as the chairman of its executive committee, and a thousand other of America's most distinguished citizens coöperating.

This American branch of the League to Enforce Peace has now, within less than a year, increased its membership and prestige until it is organized in almost every state and congressional district in the Union.

It has not only extended itself in the United States, but the idea has taken strong hold abroad; the group in England, for instance, being so close to the British Government that we can almost assume that Great Britain is officially behind it.

And now, at its first annual meeting at Washington

last week, delegates foregathered from every state in the Union to hear the principles of the League expounded and to devise ways and means to carry out its program. Nearly \$400,000 was subscribed to its treasury, and, to cap the climax, the President of the United States endorsed the League and put himself, as spokesman of the United States Government, at the head of this movement to enthrone reason instead of force as the final arbiter of the destinies of nations.

BRAWN

WE learn from the *Yale Alumni Weekly* that of the forty-five fortunates from the Junior Class who were "tapped" on May 18 for Yale's three famous secret senior societies, thirty-five, or seven-ninths, have athletic records.

As the greatest honor that can come to a Yale undergraduate is considered to be an election to "Bones," "Keys" or "Wolf's Head," it follows that the athletic ideal is still paramount at New Haven.

And yet the common sense of mankind never has rated and probably never will rate mere athletic aptitude very high compared with other human values.

GOOD WILL TO ALL MEN

THE American people, realizing that the Great War, like an earthquake, is a calamity bringing ruin alike upon innocent and guilty, have distributed their charities to the war victims of all nations. The sufferings of the Armenian and Syrian Christians have appealed especially to us because thousands of Americans have been for years contributing to the mission schools and churches of this region, and American indignation has been rightfully aroused against the Turkish Government for the cruel deportations and wholesale massacres which have been perpetrated under its authority. An effort is now being made to raise in America the large sum of money necessary to rescue the Armenians and Syrians from their present distress, and collections will be taken up in churches and Sunday schools all over the land. Yet the philanthropists who are heading the subscription list have just telegraphed the sum of \$60,000 to Constantinople for the relief of the Turkish people who are in little less need than their Christian compatriots. The Jews have set a good example to the Christians in this. The Jewish Relief Committee has ordered that the funds it has collected from the Hebrews in this country be divided between the Hebrews and Moslems of Turkey.

So, too, the American people, in spite of their justifiable indignation against the German Government, have contributed liberally for the Red Cross in Germany. Unfortunately their benevolent intentions in this direction have been frustrated by the action of the British Government, which prohibited the sending of hospital supplies to the German Red Cross even when sent from America by American ships to neutral European ports. Consequently the medicines and surgical appliances intended for the sick and wounded of Germany remain piled up on the docks at New York, while those for the Allies go forward regularly. The American Red Cross has accordingly been compelled to notify the public that no more contributions for the Central Powers can be received until England raises its embargo. Ex-President Taft has written to our State Department, protesting

against this outrageous violation of Article 16 of the Geneva Convention, which prohibits making Red Cross supplies contraband of war. It is to be hoped that President Wilson may induce the British Government to modify its blockade rules so that this one limitation on the universality of American charity may be removed.

WHICH?

THE Republicans at Chicago have three choices.

They can nominate Justice Hughes if they are willing to take him with his convictions on present issues veiled in impenetrable mystery.

They can nominate Mr. Roosevelt if they are willing to take him with his unequivocally expressed and forcefully definite convictions on present issues.

They can—but there is no other sane choice.

WHAT THE MIDDLE WEST THINKS

NOWHERE else in the world is there an area so large, wealthy and homogeneous as the stretch of states between Pittsburgh and Lincoln, and Duluth and Louisville. What it thinks today is likely to be the opinion of the dominant party tomorrow and what it will not stand for today is probably already lost. Ever since the Republican party emerged from it unexpectedly and completely in 1854 it has set the tune for American life. Its adherence to its own special leader, Lincoln, made possible the preservation of the Union; its peculiar financial troubles brought the United States face to face, first, with greenback inflation and then with silver inflation—and it was its own sober second thought rather than the campaign funds of Mark Hanna or the frenzied opposition of the East that stopped both of these cheap money movements short of disaster. In our own day its readiness to try remedies for political ailments has made it the stamping ground of reform and the hunting ground of reformers. What it thinks today will be the determining factor in the election next fall and in the foreign problem.

The public opinion of the Middle West is created by a comfortable middle class. When times are hard every one is discouraged; when times are good pessimism drops off and is forgotten. The over-rich are not feared, but they are suspected. Few are over-poor.

The Middle West is national-minded and idealistic. It is proud of the United States as such, and has felt that pride ever since it drove the reluctant East into the War of 1812. It likes to think of American intellectual leadership. It has caught the idea that Mr. Wilson has been teaching so patiently since the war began, and has glimpsed the notion of the United States as defending law for the sake of justice. It will fight for this relentlessly if it has to, but it will enter no fight for the sake of the fight itself, for the abstraction known as honor, or for conquest. Even the seductive appeal of its greatest newspaper, the *Chicago Tribune* (that does not disguise its lust for a second rape of Mexico), cannot stir it.

Ready to defend what it conceives to be a higher law of nations, the limitations of the Middle West have kept it from seeing all that such defense implies, and its inherited attitude toward great wealth has deflected its view. It has never consciously prepared itself for anything, and its political or social policies have been cor-

rective rather than constructive. It has not been accustomed to think of preparation, and few of its leaders have themselves felt the need of leading in this direction. In the present situation it might be more willing to undertake military preparedness did it not feel that much of the cry for preparedness comes from a tainted source. The great corporations that make, and make much out of, munitions have been disliked and mistrusted for so many years that the Middle West cannot now believe in their disinterested patriotism. Senator Cummins led an attack upon the trusts and the protective tariff in Iowa long ago; Senator LaFollette has ever preached suspicion against big business; Mr. Roosevelt's utterances against malefactors of great wealth have not yet cooled off. And with such an education Middle Westerners distrust a movement so obviously led by persons who may be selfish.

The Middle West will fight to defend an idea if it must, but no leader has yet explained preparedness on the right grounds, and until such an explanation has been impressed on the Middle Western mind the Western delegations in Congress will continue to wobble and shift. The support of Mr. Wilson is lukewarm because the Middle West is, on the whole, Republican. Mr. Roosevelt has not aroused the old thrills that used to be stirred up by his leadership because his allies are subject to suspicion and because he is charged with wanting a war. Mr. Bryan is weakening because he wants a peace. But the essential sympathy of the Middle West with the knight errant notion of an international law that the United States may have to defend is lying ready to be turned into political support for any leader whose connections are clear and who understands the homogeneous West.

P. P. C. OF SHAKESPEARE

MANY years ago a young man fresh from Johns Hopkins was called upon suddenly to take charge of a class in Shakespeare at a western university. The professor whom he succeeded was a veteran of the "scientific" school of literary research, one who would spend an hour discussing the age of Anne Hathaway or whether a punctuation mark on the thirty-third page of the First Folio was a period or a flyspeck. The newcomer faced a class expecting something of the same sort, only more so. But his first question was a surprise: "How many of you have come provided with Shakespeare? None of you? Well, every one in the class must have Shakespeare complete by tomorrow. That's all for today."

The next morning the campus saw a curious sight, a procession of students toiling up the hill loaded down with the Immortal Bard in all shapes and bindings. Some had their pockets stuffed out with handy volumes. Some bore old tomes as big as a dictionary or a family Bible. Some had a cheap padded leather volume with microscopic print. Some carried on alternate arms a twelve-volume set in a morocco leather case which had been locked up in the parlor bookcase since the day it had been received as a wedding present by their parents.

The new professor surveyed the class and their picturesque burdens with grim satisfaction. "Have you all got Shakespeare now? Well, read him. After that I shall have something to say to you. Class is dismissed."

The young man who started on his career in this un-

conventional style is now at the head of one of the English departments in one of our largest universities. He still insists that his students read the books they are talking about.

We are reminded of this incident in considering the attitude of some people toward the Shakespeare Tercentenary. They appear to have deposited their P. P. C. cards on Shakespeare's tomb and gone on their way rejoicing that they would not have to think of him again for the next hundred years.

Now, the Shakespeare celebration was really intended more as an introduction than as a leave-taking. All of the various pageants, speeches and contests, including our own contest, were designed, as we may now confess, to trick people into reading an author, who, it seemed to us, deserved more reading than he got. So far as our own share in the movement is concerned, it seems to have accomplished its purpose even better than we anticipated. Some ten thousand students from all parts of the country competed for The Independent Shakespeare Medal. This involved not merely reading the eight articles on Shakespeare's life and works by Dr. Frederick Houk Law in The Independent, but also considerable study of the plays themselves, in order to write the required essays. In about four hundred schools and colleges there were a sufficient number of contestants to secure one of the medals awarded by The Independent.

Now, of these ten thousand young people who have been induced to read Shakespeare by this device, and the hundred thousand or more who have been indirectly concerned in the contests, and the millions who have been interested thru the medium of the various Tercentenary festivities, there will be some who will continue to read Shakespeare, not for a prize, not because it is an anniversary, not because people are talking about him, but because they find him interesting and profitable. That's what all this fuss is for.

MOTORS AND MOVIES

THE 128th General Assembly of the Presbyterian Church in session at Atlantic City last week devoted time to denouncing the evil effects of the automobile and the moving picture. One speaker referred to the "movie" theater as "The modern Diana of the Ephesians." Another declared that the automobile was "carrying away from the Church the magnificent army of Christ."

Let not the brethren forget, however, that the automobile and the moving picture are the greatest educators of the age. The automobile carries you everywhere. The moving picture carries everywhere to you.

CONSCRIPTION

HAS the state of New York gone stark crazy? Her legislature has passed and Governor Charles S. Whitman has signed five bills that require, among other things, all men between eighteen and forty-five to be enrolled as members of the Militia Reserve beginning August 1, and all schoolboys between sixteen and nineteen to drill not more than three hours each week and go to summer military camps under the direction of the officers of the National Guard, and all school children over eight—girls as well as boys—to "receive as part of the prescribed course of instruction such physical training as the regents, after conference with the military train-

ing commission, may determine during periods which shall average at least twenty minutes in each school day."

These laws mean conscription in time of peace. They should be forthwith repealed. The American people believe in preparedness—sane preparedness—but this goes to the very brink of the precipice of militarism.

THE AMERICAN INVASION OF EUROPE

THERE is much difference of opinion as to whether there will be a large volume of immigration from Europe to this country after the war or not, but it is quite evident that there will be a host of people from America flocking over to Europe by the first steamers that cross after the treaty of peace is signed. Some of these will be immigrants or the sons of immigrants looking up their relatives or their property, but most will be tourists visiting the battlefields of the greatest war in history. Already we learn that all the rooms in the leading hotels of London and Paris have been engaged in advance by Americans who are going when the war is over.

In former times American tourists have spent something like \$150,000,000 a year in Europe, and the shutting off of this revenue for two years has caused great hardship, especially in Italy and Switzerland. The return of the tourist will revive their prosperity and his ready cash will do much to repair the ravages of war. Americans have a passion for ruins and thousands of travelers who have never cared to see the townhall of Ypres or the cathedral of Rheims in the height of their beauty will now be drawn to them for their historic interest. It is quite likely that the expenditures of visitors to Louvain will in the course of a few years be sufficient to rebuild the burnt quarter of that city. At any rate, tourism will contribute considerably toward the reconstruction of Belgian towns on a more wholesome and habitable scale according to plans which had been made before the war. The slums which had been the despair of the Belgian reformers then have in many cases been swept away by the tide of battles along with the irreplaceable treasures of antiquity and the city planner will have what he rarely gets in the old world, a *tabula rasa* for his model dwellings.

The long serpentine line of battle stretching from the sea to Switzerland and coiling about Ypres and Verdun will be a path of pilgrimage for all future time. It is historic ground sacred to the memory of the millions of young men who have here given their lives for their country. It should never be touched by the plow or allowed to lapse to mercenary use, like common soil, but should be preserved for a memorial of those who held the line against the invader. If one of those fine roads that the French know how to make were laid along the neutral strip between the battle lines, automobiles and buses could carry tourists all the way from Nieuport to Pont-a-Mousson. If the trenches on each side are kept intact and as nearly as possible as they look now they would prove as interesting as the Hotel des Invalides and far more worthy of reverence than the tomb of Napoleon. Such shrines we have in our own country at Gettysburg and Bunker Hill, silently teaching their lessons of patriotism to young and old, generation after generation. The battlefields of the Great War should likewise be dedicated to the perpetual service of calling to mind the awfulness of war and the glory of self-sacrifice. "It is altogether fitting and proper that we should do this."

THE STORY OF THE WEEK

Allied Interference With United States Mails

The State Department has addressed to the governments of Great Britain and France a vigorous protest against their interference with United States mails moving between this country and Europe. In principle there would seem to be no difference between the allied powers and ourselves on this point. For the American Government agrees that merchandise, whether carried by parcel post or in sealed letter mail, stocks, bonds and securities, money orders, checks, drafts, notes and other negotiable instruments, which may pass as the equivalent of money, are all subject to the same treatment of capture and confiscation as merchandise shipped in any other manner. Obviously it would not be fair to permit a belligerent or a neutral to beat the devil around the stump by sending contraband by post and claiming that it was to be treated otherwise than if it had been shipped as freight or as express matter. On the other hand, the allied governments admit that under international law and practise genuine correspondence is inviolable, and may not be seized or unduly detained.

The method of applying these principles in practise, says Secretary Lansing in the note, is the chief cause of difference. The allied governments, while declaring that they will not seize genuine correspondence on the high seas, seek to get around the assurance that they have thus given by seizing and confiscating mail from vessels in port instead of at sea. They compel neutral ships to enter their own ports or induce shipping lines, by some form of duress, to send their mail ships via British ports. They thus acquire by force or unjustifiable means an illegal jurisdiction.

The note proceeds to describe the nature of the illegal procedure adopted by the allied governments:

Acting upon this enforced jurisdiction, the authorities remove all mail, genuine correspondence as well as post parcels, take them to London, where every piece, even tho of neutral origin and destination, is opened and critically examined to determine the "sincerity of their character," in accordance with the interpretation given that undefined phrase by the British and French censors. Finally the expurgated remainder is forwarded, frequently after irreparable delay, to its destination. Ships are detained en route to or from the United States, or to or from other neutral countries, and mails are held and delayed for several days and, in some cases, for weeks and even months, even tho not routed to ports of north Europe via British ports.

The note further sets forth the injuries to neutral business caused by this improper and vexatious proceeding:

The arbitrary methods employed by the British and French governments have resulted most disastrously to citizens of the United States. Important papers which can never be duplicated, or can be duplicated only with great difficulty, such as United

States patents for inventions, rare documents, legal papers relating to the settlement of estates, powers of attorney, fire insurance claims, income tax returns, and similar matters have been lost.

Delays in receiving shipping documents have caused great loss and inconvenience by preventing prompt delivery of goods. In the case of the MacNiff Horticultural Company, of New York, large shipments of plants and bulbs from Holland were, I am informed, frozen on the wharves because possession could not be obtained in the absence of documents relating to them which had been removed from the "Nieuw Amsterdam," "Oosterdyk" and "Rotterdam."

Business opportunities are lost by failure to transmit promptly bids, specifications and contracts. The Standard Underground Cable Company, of Pittsburgh, for example, sent by mail a tender and specifications for certain proposed electrical works to be constructed in Christiania. After several weeks of waiting, the papers having failed to arrive, the American company was told that the bids could not be longer held open and the contract was awarded, to a British competitor. Checks, drafts, money orders, securities and similar property are lost or detained for weeks and months. Business correspondence relating to legitimate and bona fide trade between neutral countries, correspondence of a personal nature, and also certain official correspondence, such as money order lists and other matter forwarded by government departments are detained, lost or possibly destroyed.

For instance, the Postmaster General informs me that certain international money order lists from the United States to Germany, Greece and other countries, and from Germany to the United States, sent thru the mails, have not reached their destination, tho dispatched several months ago.

Because of these injurious practises the Government of the United States expects the present practise of the British and French governments in relation to mails from and to the United States to be altered forthwith. "Only a radical change in the British and French policy," says Mr. Lansing in closing, "restoring to the United States its full rights as a neutral power, will satisfy this Government."

The appointment of In Congress George Rublee to the Federal Trade Commission has been finally rejected in the Senate by a tie vote of 38 to 38. We commented editorially last week upon this disgraceful application of the system of so-called "Senatorial courtesy." Since then the vote has been reconsidered and once more the motion to confirm the appointment defeated by a very close vote.

It is probable that the appointment of Louis D. Brandeis to the Supreme Court will be confirmed. The Senate Committee on the Judiciary has voted, by the close margin of 9 to 8, in favor of confirmation. It is not likely that the opposition of conservatism and prejudice will be able to accomplish in the Senate—even in executive session—what it has failed to accomplish in the committee room.

Congress continues to avoid the issue of woman suffrage. By a parlia-

mentary trick—most of the members of the House being at a ball game—Minority Leader Mann secured the adoption of an amendment to the bill to reorganize the government of Porto Rico providing for woman suffrage there. The next day the question was reopened and the amendment rejected. Care was taken, however, to avoid putting any Congressman on record by means of a roll-call.

The House Judiciary Committee, which has before it the proposed constitutional amendment extending the suffrage to women, avoids the necessity of acting upon it by the simple expedient of not meeting. For this cowardly procedure the Democratic majority of the committee has been called to account by Congressman Mondell, who said:

To dodge the suffrage issue, or prevent the development of a majority favorable to the suffrage resolution, the chairman and the majority of the committee not only neglect the suffrage question, but all of the other important matters, responsibility for which has been placed on the committee by the Congress.

Whatever one may think of the suffrage amendment, whatever one's attitude may be toward it, there can be no difference of opinion as to the dodging and evasive tactics of the majority of the committee in attempting the avoidance of this issue, and in so doing, neglecting all of the important and responsible duties of the committee.

Honest opposition to the suffrage amendment on the part of the majority of the committee might be forgiven, at least by those who are not favorable to suffrage; but the policy of cowardly dodging and of neglect of duty will not be justified by anyone.

All is quiet along the border. Carranza is to address a new note to the American Government. Whether it will reiterate the demand for the withdrawal of the American troops no one knows. The regular troops on the border are being reinforced by militia from the border states. But 116 national guardsmen of Texas have refused to respond to the call to mobilize, and are to be tried by court martial. It is continually being reported that the Carranza forces are about to take some decisive action against the bandits who have made the attacks upon United States territory.

Meanwhile Villa is—nowhere.

Who Is to Blame? The lockout and strike of 60,000 garment workers in New York City goes doggedly on. The fact which makes this industrial conflict unusually deplorable is that it disrupted perhaps the most promising plan ever invented for the avoidance of such disputes between employers and workers. In such a conflict it is always a difficult matter to fix the responsibility for its beginning. In the present case, however, there is now available the deliberate judgment of a group of independent

observers, who do not hesitate to put the blame squarely on one side.

Twenty-four professors in Columbia University have signed a statement of the results of their study of this lock-out in the needle trades. It is so unequivocal in its conclusions and so convincing in the reasons it gives for those conclusions that we print it entire:

The trade agreement between employers and employees in the cloak, suit and skirt industry in this city maintained for five years a relation of peaceful coöperation and brought about great betterment in the industry. The breakdown of this voluntary plan, which has attracted the attention of the entire country, cannot be a matter of indifference to students and teachers of economics and political science.

After a careful examination of statements of the Manufacturers' Protective Association we prepared what we believed to be a fair statement of the facts, drawn

almost entirely from the written statements and explanations submitted to us by the Manufacturers' Protective Association, with the request that they correct or amplify it in any regard in which it might seem to them inaccurate or incomplete.

To this request, the officers of the Manufacturers' Protective Association have replied that our statement of the facts is substantially correct. Our conclusion, after careful consideration, is that the Manufacturers' Protective Association broke its two-year agreement—which still had more than a year to run—without other justification than the fear that the agreement might thereafter be broken by the union, at a time less favorable to the manufacturers' interests.

The basis for this fear that the union was planning to strike at a favorable time is hard to discover. It seems to us that the real reason for the action of the Manufacturers' Protective Association is that its officers were unwilling to accept the consequences of their agreement, and, as their

president has stated, they wished to return to the conditions existing prior to 1910. We regard this as little less than a public calamity, and earnestly urge that every effort be made to restore the agreement.

In our opinion, a just interpretation of the admitted facts warrants fixing the burden of the responsibility for the present crisis directly upon the shoulders of the executive committee of the Manufacturers' Protective Association. The breaking of this important trade agreement involves a responsibility which we feel the rank and file of the employers in this industry cannot afford to assume.

We, therefore, sincerely hope that the action taken may in some way be subjected to revision after more deliberate consideration on the part of the entire membership of the Manufacturers' Protective Association.

Among the names signed to this statement are those of such men as John Dewey, professor of philosophy; Charles A. Beard, professor of politics; Samuel McCune Lindsay, professor of social economy; Franklin H. Giddings, professor of sociology; Edwin R. A. Seligman, professor of political economy.

Such a statement made by such men demands more than the general denial entered by the representatives of the manufacturers. Unless weighty evidence can be produced against its conclusions, it will have a great influence on the public opinion, which is the real court of final jurisdiction in such controversies.

An Exciting Week at Verdun

Following upon several weeks in which the news from Verdun contained nothing except the uncertain loss and gain of a few hundred yards of trenches we hear of important operations on both sides of the Meuse. The French executed offensive movements with unexpected vigor, but on the whole the advantage at the end of the week seems to lie with the Germans.

The French began on Monday with an assault of Fort Douaumont. This was the first important point taken by the Germans when they began their attack upon Verdun last February, and in fact is the only one of the older

TRYING TO STAMPEDE HIM

forts about Verdun that they have yet captured. It stands upon a ridge five miles northeast of Verdun and commands a view of that city. From this high the German guns have been brought to bear upon Verdun and have demolished most of the buildings with the exception of the Cathedral. This historic edifice has been hit by only one shell and this was doubtless an accident since it towers above the rest of the town.

Except for its use as an artillery station, however, the possession of Douaumont was not of much value to the Germans, for they could not advance along the plateau toward Verdun because this is covered by the guns on Dead Man Hill on the other side of the Meuse. Accordingly the Germans have ever since the capture of Douaumont been devoting their efforts to getting possession of the hills west of the river.

After two months of the hardest kind of fighting the Germans seemed likely to gain Le Mort Homme and Hill 304, the chief heights west of the Meuse when General Nivelle turned tables upon them by delivering an assault upon Fort Douaumont on the eastern side of the river. He brought his heavy artillery to bear upon the fort and after a bombardment that began on Sunday and continued till Monday afternoon he ordered a charge. The infantry advanced singing the "Marseillaise" and carried everything before them until they reached the fort. This also they captured with the exception of the northeast corner to which the Germans clung tenaciously. But the French were not able to keep the foothold they had gained at Douaumont. During the next two days the Germans drove them out of the fort and out of the trenches to the south of it. In the fighting at Douaumont the Germans claim to have taken prisoner 48 officers and 1943 men.

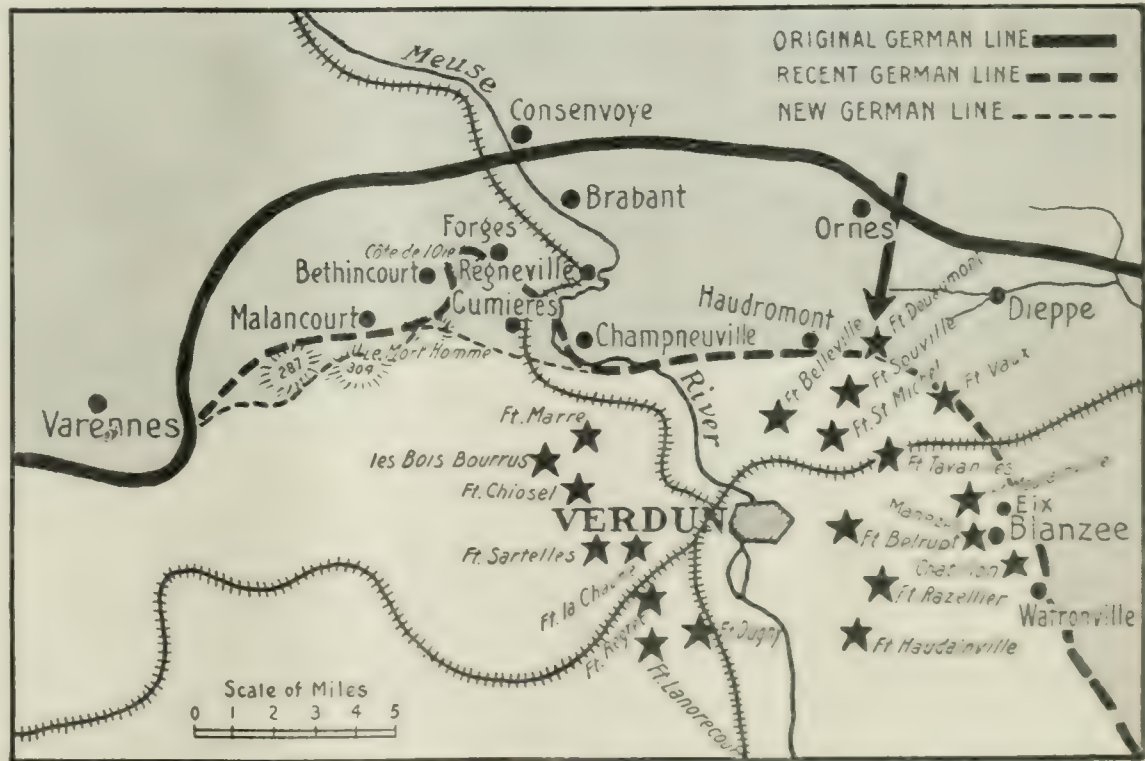

West of Douaumont are the quarries of Haudromont, which have been converted into a labyrinth of underground

passages. The quarries were captured by a charge of Saxon troops on April 16 but the French regained them at the same time that they took Douaumont tho here again they were not able to hold their gains against the German counterattack.

On the west side of the Meuse a body of Thuringians carried by storm the village of Cumières, taking more than three hundred prisoners. A few days later the French regained part of it. Cumières stands on comparatively low ground near the river two miles east of Le Mort Homme. Its sole importance lies in the fact that thru it the Germans can get access to Le Mort Homme from the east as they already have access to it from the west and north. One of the two summits of Le Mort Homme is now held by the Germans and they have possession of part if not

all of Hill 304, which stands next to it on the southwest. Sixty thousand fresh German troops have just been brought up against these hills, so it is evident that the Germans are determined to persist in their attack on Verdun. On page 396, under the title "Half a Million Madmen," we quote from an eye witness of the fighting at Verdun.

The Austrian Plan The Italians admit that the Austrian drive in the Tirol took them by surprise, and the general in command of this sector of the frontier has been removed for negligence. The attention of General Count Cadorna, commander-in-chief of the Italian forces, was fixed upon the eastern frontier, where he was delivering heavy blows on the defenses of Görz, when it was suddenly distracted by a powerful Austrian of-

VERDUN AFTER THREE MONTHS
During the past week the French have made a strong but not altogether successful effort to regain Fort Douaumont and Haudromont on the eastern side of the Meuse, while the Germans on the western side have taken the village of Cumières and gained some ground on Le Mort Homme and Hill 304. The shaded area is that held by the Germans. That within the lighter dotted line shows their latest gains

fensive from the Trentino in his rear. It seems strange that the Italians should not have been forewarned if not forearmed against attack from this quarter, for the Trentino, where the preparations were being made, is chiefly inhabited by Italians who would be only too glad to give information to their brethren over the border. The concentration of troops in the Trentino, as the southern part of Austrian Tirol is called, began early in the spring, and if we can accept the Italian estimates, the Austrians massed in these mountains some 600,000 troops, with over 3000 cannon. Many of these troops have been brought from Serbia and Galicia, showing that the Austrians have little fear of a serious offensive either by the Russians on the Galician front or by the French and British at Salonica. Further evidence of the lessened importance attached to the Balkans is found in the Italian report that Bulgars have been brought to the Isonzo front.

Such an offensive as the Austrians have now undertaken was feared a year ago when Italy entered the war, and pessimistic prophets were heard to say that the Austrians would be in Venice within three weeks. It appears that troops were actually massed in the Trentino with this object, but they were transferred instead to Galicia, where the Russians were threatening to cross the Hungarian frontier.

The inner meaning of the Austrian

invasion of Italy is as difficult to divine as of the German attack upon Verdun. It may be merely a demonstration of strength to forestall an Italian offensive and to relieve the pressure on the Isonzo front. On the other hand, it may be an attempt to disable or dismember Italy and so compel her to withdraw from the war. An advance of thirty-five miles by the Austrians in the direction they are now headed would put them in possession of Padua and deliver the whole province of Venetia into their hands. This would serve as valuable "trading stock" when it came to making terms of peace, but it is hardly likely that Austria would attempt to annex Venetia again, even if she could, for this would be a permanent source of danger to Europe and insure the implacable enmity of Italy.

The Descent from the Tirol

from the instructions found on the Austrian prisoners. From these it appears that the movement is called "the offensive in Po Valley." The soldiers on entering the enemy's territory were told that they must not show themselves weak, but that they must avoid all brutality. They were promised for the summer baths in the Adriatic at the Lido, the fashionable bathing beach on the reef outside Venice.

The Austrians therefore intend, or

Some clue to the Austrian intentions may be inferred

desire to be understood as intending, to advance down the Po River to the Adriatic. But so far their advance has been to the north of this; that is, they are striking east from Trent toward Vicenza, not south from Rovereto toward Verona. At least the movement southward down the Adige River toward Verona seems not to be pushed with much vigor and the Italians claim to have brought it to a halt. Verona forms the northeast angle of the famous Italian Quadrilateral, the smashing of which gave Napoleon his reputation as a military genius. The other angles are Peschiera at the foot of Lake Garda and Mantua and Legnago, forming the southern side of this Quadrilateral of fortresses.

But the Austrians by striking east instead of south will avoid the Quadrilateral. They are pressing forward on a twenty-mile front between the Astico and the Brenta Rivers. This leads them to the frontier towns of Schio, Arsiero and Asiago, from which railroads lead down to Vicenza. The 38-centimeter guns of the Austrians have already been brought to bear upon the defenses of these towns and the inhabitants have fled into the interior. The Italians seem to have given up hope of holding back the Austrians in the mountains and are withdrawing from the valleys of the Brenta and the Astico. The Austrians claim to have taken some thirty thousand prisoners and numerous guns.

But the Italians in falling back are

THE AUSTRIAN INVASION OF ITALY

The Austrians from the Trentino are moving out of the mountain passes into the valleys leading toward Venice. Their guns are already thundering at the forts of Arsiero and Asiago, in their effort to reach Vicenza and push on to the Adriatic. In this sketch map the dark portion represents Italian territory. The boundary line was drawn in 1866 along the edge of the mountains so as to give the Austrians the advantage which they are using in this war.

getting upon a terrain more favorable to their forces, while the difficulties of the Austrians will increase with their advance. If they succeed in taking Arsiero and Asiago and entering the plateau beyond they will be subject to attack from both sides. Here the Italians will have the advantage of railroads, while the Austrians will have no means of communication with their base in the Trentino except by the mountain passes thru which they have entered Italy. The Italians should be able to put into the field a force from three to five times as great as any the Austrians could muster and in the open country numbers will count for more than in the mountains.

Let George Do It The recent outbreak in Ireland has shown the necessity of a radical and immediate reorganization of the Irish Government. As soon as the disorder had been suppressed Premier Asquith went to Dublin for a personal investigation. He was sworn in as a member of the Irish Privy Council and held conversations with all parties, including some of the captured rebels. On his return he announced that the cabinet had selected David Lloyd George to negotiate a settlement of the Irish question and requested that in the meantime all criticism be avoided.

Mr. Lloyd George seems to be regarded as the handy man of the cabinet to be sent to settle difficult disputes because of his unusual ability in conciliating warring factions. In his new post of Minister of Munitions he has induced both employers and employees to suspend their most cherished rights and to submit to unprecedented burdens and restrictions. He stands well with both Sir Edward Carson, leader of the Ulster party, and John Redmond, leader of the Nationalists, and may be expected to effect a possible compromise on the home rule question.

It is assumed that some sort of local government for Ireland will be established, but under the authority of Parliament, and that both the Ulster and Nationalist volunteers will be brought into the army. An attempt to disarm

either of these bodies would precipitate trouble. The government did not dare attempt it before the war and it would be still more ticklish to do it now. Premier Asquith has publicly recognized the fact that the execution of the rebel leaders has caused an unfortunate impression in America. This is evidenced by the very unusual action of 28 members of the House of Representatives who petitioned the Speaker to have reported from the Committee on Foreign Affairs the Dyer resolution expressing "the horror of the American people" at the execution.

A Food Dictator No sausages to be had. The weekly butter allowance cut down from four ounces to three. Potatoes limited to less than a pound a day. Meat reduced to half a pound a week. Not enough milk for the babies. The beer supply running short as summer begins. Riots in the market place. Such are the reports from Berlin.

That the situation is alarming is proved by the extraordinary measures taken to alleviate it. The Kaiser came suddenly back to Berlin and reorganized the department of the interior.

THE GREAT WAR

May 22—Turks withdraw on Tigris south of Kut-el-Amara. French enter Fort Douaumont.

May 23—Germans take Cumières. Italians retiring from Sugana Valley.

May 24—British expenses for two years of war \$11,900,000,000. Lloyd George takes charge of Irish situation.

May 25—German Government takes over all food supplies. Germans regain Douaumont.

May 26—Rockefeller Foundation appropriates a million dollars for Polish and Balkan relief. Austrians attack fortifications of Arsiero.

May 27—General Gallieni, defender of Paris, dies. French regain part of Cumières.

May 28—Bulgars occupy Demirhissar in Greek territory. Germans attack British front near Loos.

Dr. Clemens Delbrück, Vice Chancellor and Minister of the Interior, was graciously permitted to resign on the ground of ill health and overwork. Dr. Karl Helfferich, the brilliant young Minister of Finance, is likely to succeed him. A Department of Food Supplies has been created and at the head of it has been placed Tortilowitz von Batocki, who has distinguished himself by the ability he has displayed in the administration of East Prussia during the war. The Bundesrat or Federal Council has empowered this new officer to seize and dispose of all the foodstuffs and fodder of the empire and to regulate sales, prices, transportation, importation, exportation and consumption. His power is not limited to Prussia but overrides the administration of the several States. He even has the right in cases of emergency to overrule the regulations of the Federal Council itself, tho he must submit his acts to the approval of the Council immediately afterward. In short Herr von Batocki is a food dictator with practically unlimited power over all matters of food except in the army.

The adoption of bread tickets and the use of potatoes in bread were sufficient to carry the population thru the first year of the war, but the harvest of 1915 was short by nine million tons in wheat, rye, barley and oats. Cattle and pigs had to be killed because it was not possible to import fodder for them as had been done in former years. Thanks to these precautions the grain supply held out and there will be more than enough bread to last till the harvest. But meats and fats of all kinds are running low and the people of Germany will have to go upon a vegetarian diet in part at least. It is believed, however, that season may be tided over by taking stock of all the food supplies of the empire and so regulating their distribution that all classes shall share in them. Bavaria and the other southern states are better off than Prussia in the matter of food. The conquered territory of Belgium, France, Lithuania, Poland and Courland is being put in crops by the government.

THE NATIONAL DEFENSE THERMOMETER

RE-ENTER REPUBLICANISM

BY W. G. HARDING

THE people of the United States are ready and eager to acclaim the Republican party returned to the nation's service. The tide is swelling and irresistible, altho the political situation is unmatched in all our history. There is as marked a desire for a Republican restoration for our industrial sake as when the American people turned hopefully to William McKinley in 1896, and there is an anxiety for our nationality not unlike that which sought out Abraham Lincoln in 1860.

A good many people thought they saw the end of the Republican party in 1912, but when the effects of defeat were measured in the country's misfortune, we saw we had wasted perfectly good Republican energy in smashing a precedent which might have been flung aside with one sweep of a sober hand, and concord was shattered in the smashing. But it is useless to talk of 1912. I prefer to regret the unhappiness and its attending defeats, and turn and invite all who believe in Republican principles to touch elbows again and move on to the triumphant national return which has already been hailed so gladly in many states.

The Republican party has applied the best of thought and honest intent to the solution of all problems which attend exceptional growth, and means to go on—without stopping the growth—deliberately, orderly, conscientiously, neither yielding nor appealing to prejudice or passion, but strengthening the weak in the supremacy of law, always seeking the ideal over safe and proven paths.

This is not always easy in popular government. The Republican party became so absorbed in national perils that it ignored party weakness. That was our undoing. A party could become so concerned about its own affairs and its appeal for popular approval that it might ignore a national peril. There are always extremes to be avoided, and there is no loftier statesmanship than that which finds the righteous mean. There must be some safe attitude, for example, between being "too proud to fight" and magnifying the chip on the shoulder which calls for a scrap.

It seems characteristic of our American life that we must have periodical Democratic disaster to bring us to appreciation of the healthful glow of Republican activity. There would be worse depression in the land today than there was between 1893 and 1897 if the European war had not saved us from the blight of Wilsonian Democracy. We have

The Independent — in harmony with long-established policy — is publishing all sides of the Presidential problem in the most interesting campaign year since 1860. Senator Harding of Ohio, who is to "strike the keynote" as temporary chairman of the Republican Convention opening June 7, speaks with authority for the Grand Old Party.—THE EDITOR.

the burden of a war emergency tax when imports exceed those of the corresponding months of peace, and our exports far surpass all previous figures because of our enormous war shipments to Europe. Not only has the European war *not* destroyed our business, but it has given us the *only* business we have. It has given us a fictitious, sectional prosperity, but it does not blind us to the depression

SENATOR HARDING

likely to follow, nor to the industrial reconstruction which must be worked out, nor to the industrial and commercial menace of desperate Europe struggling, after peace is restored, for its own rehabilitation.

All that the Wilson Administration has said concerning its economic policy is disproved by facts, and is challenged by its change of attitude on sugar and the tariff commission. A party committed to a tariff for revenue only has again proven a party deficient in revenue always. The tariff commission plan is a professed conversion, not to magnify the series of succeeding changes, but to hide the tariff blunder of 1913. On the other hand, while nobody pretends that any Republican tariff has been perfect, we know that none has ever been destructive.

Democracy reduced the capacity to live and left the cost mounting higher. It has been talking a hundred years about the interests of the American consumer, and never a thought for the American producer. In saying "producer" I mean the toiler. It is not what the consumer pays that counts so much; the big thing is the consumer's ability to buy. It is the prospering producer that makes a capable consumer. It is not the consumer who made the higher American standard, but the producer with coin in his pocket and attending ability to buy.

Our protective policy is certain to be the great issue of the coming campaign. There will be more spectacular issues, there will be the patriotic appeal for preparedness, with Republican committal to an adequate program for national defense. And it will be no new declaration for the Republican party. But the protective policy is inseparable from any preparedness discussion. Aside from the self-dependence in production, which is a nation's first reliance, it affords the means of providing an army and navy without the burden of direct and odious taxation. I like the thought of making our foreign competitor pay this cost of guarding us against his possible trespass of our national rights.

One cannot recall a yawning Federal Treasury under Republican administration, but the pathetic spectacle of the present attempt at preparedness by the present Administration is due to threatened bankruptcy of the Treasury amid the demands of ordinary expense and the utter inadequacy of income notwithstanding the emergency war tax and the new Federal levies. The Democracy that

"would have burned the custom houses" is in the saddle, and the inadequacy of revenue is the invariable effect of a Democratic cause.

I do not mean to dilate upon the weakness of the Democratic party or detail its blunders, or to proclaim the weakness of the Democratic policy or the wobbling of the Wilson Administration. I do not object to a president changing his mind, but I do not think that it ought to be made a specialty. I would rather proclaim the strength of the Republican party and its capacity to promote the common weal and the nation's good.

One is reluctant to criticize the Administration in its foreign policies, at a time of anxiety like the passing days. I should prefer to present a united front to the world, even at the sacrifice of some notions of my own, than to convey the impression of a divided people. I want to stand by the President, but I want him to stand by my country. It is good to keep out of war, but not at the sacrifice of all American rights. It is possible to speak for justice and be unneutral, but we may assert an American right with partiality to America and neutrality to the world.

We want a real and righteous Americanism abroad, and we need a newly-consecrated Americanism at

G. O. P. EPIGRAMS

It is useless to talk of 1912.

The war has given us a fictitious, sectional prosperity.

I do not object to a president changing his mind, but I do not think that it ought to be made a specialty.

We should make America prosper first.

The Republican party is too big to trail any man.

home. We want the spirit truly American and all-pervading, and we want an outward manifestation. We must be a people with one great ideal, one all-encompassing aspiration, one guiding hope, one common interest, one people and one flag. That's why I am Republican. I do not mean to say that our party has a monopoly on American patriotism. But we must have a slogan of prosperity and we should *make America prosper first*. That is the Republican doctrine. It is our doctrine to proclaim the same preparedness in Illinois that we proclaim in Massachusetts. We must exalt the same Americanism in Iowa that we exalt in Texas. We must urge the same tax on incomes in Louisiana that we urge in New York, and give

one the same authority in spending that tax as the other. We must urge the same economic policy for North Dakota as we do for Connecticut or Pennsylvania, and the same social justice in Oregon as we do in South Carolina. This is the course of political righteousness, and the blend of Americanism which bespeaks the great nation.

The editor of *The Independent* wishes to know my views about Colonel Roosevelt. There is no reason why Theodore Roosevelt should not be consulted if he is back in the Republican party, but *the party is too big to trail any man*. The principles of the party stand ahead of any candidate or all the candidates together. I am distinctly a party man. We are a popular government, thru the agency of political parties, and principles come first. The nominee should best represent our platform.

The salvation of the country rests with the Republican party. I think we all feel that. I think Colonel Roosevelt himself feels it as deeply as any of us. If Colonel Roosevelt wishes to be a member of the Republican party we welcome him, and want him, his advice and coöperation, but the Republican party, as I have said, will not trail any man.

Washington, D. C.

A WOMAN OF PARIS

(SEPTEMBER 10, 1914)

BY EDNA DEAN PROCTOR

For more than half a century Miss Proctor has been writing poems, articles of American and European travel and stories for *The Independent*. Now, nearly ninety years old, she writes with the same interest and vigor of events today.—THE EDITOR

Retreating towards the Marne, his regiment
Would pass at morn a neighboring suburb
thru;
And thither walked his glad young wife,
intent
To see her soldier, strong and brave and
true;
And in her arms, or pattering with light feet
Beside her steps, she held her baby boy—
O the proud moment when his eyes should
greet
Their little Victor brimming o'er with joy!

Upon the curb she stood as past they filed,
When something barred the way and, un-
awares,
The line a moment stayed; then wife and
child
A corporal saw—the father's friend and
theirs—

And springing from the ranks he seized her
arm:

"Courage, courage, Madame! Your husband
fell.

Yesterday, by my side, at Maux." . . . Ah well. . .

Ah well . . . her eyelids closed, her heart
stood still. . . .

What joy henceforth can wile, what grief can
harm! . . .

Then swift above her head, with deathless
will

She raised her boy, presenting him, and cried,
For all her anguish, "Vive la France!"

A thrill

Ran thru the throng, and with the line's ad-
vance

Cheers filled the morning sky for her and
France

As if no soldier in his place had died!—

For France, secure, invincible, immortal,
While women such as she are at its portal!

THREE OF US WITHOUT A CARE

BY HAROLD HOWLAND

FOR the perfect holiday three things are essential: one canoe, one chosen companion, and all outdoors. The canoe should be light—Grey Brother weighs but fifty-five pounds; seaworthy—Grey Brother rides rough water like a gull; stanch—Grey Brother carries eight times his own weight without a stagger; faithful and friendly—if you have ever known a canoe like Grey Brother intimately, you know what I mean.

The chosen companion should have all those qualities of sportsmanship, understanding, cheerfulness, patience, and grit that you pray for yourself in your secret moments with the Red Gods. Such companions are rare, but those same gods sometimes grant us companionship not after our deserts but according to their own great-heartedness.

The outdoors should be as nearly pure wilderness as may be; the works of man can do nothing but mar the perfect holiday.

There lie before me two diaries of such a great adventure, of a splendid two weeks wherein Milady Joconda and the Tortoise—to say nothing of the good Grey Brother—went “to dance before the Trues.”

Let us turn over the pages of these journals, and see what simple doings spell contentment when the feverish ways of men are left behind. The story opens with sundry lists. This sounds prosaic, but if you are of the vagabond fellowship yourself, you know that one of the sure manifestations of the return of the wander longing when the crows begin to caw again in the spring is an explosive, “Let’s make a list!” It matters not how far away the trip itself may be, to “make a list” is the one sure way to clap a mortgage on the future.

The story proceeds antiphonally, now Joconda speaking, now the Tortoise. The scene is in the Canadian wilds, where one steps from the train, launches Grey Brother and slips into solitude.

Sunday, September 24—Left Joe Lake Station at 10:50 a. m. Paddled thru Joe Lake, Little Joe and an endless, tortuous creek, lifting over beaver dams, tracking here and there, and carrying around falls. Stopped for lunch at head of carry into Island Lake: hard-tack, cheese, one piece Peter’s and three dates apiece. Decided to camp there. Dinner: corn-bread, broiled ham, stewed apricots.

Weather cloudy and overcast, with occasional showers. Saw downy woodpecker, flicker, loon with chicks, blue jay, Canada jay, sandpiper, kingfisher, chickadee, great blue heron, and some other unidentified birds; also a mink and four deer. Heard continually the voice of the white throat. To bed at 7:15.

Three of us without a care
In the red September

Making merry with the rain,
With the fellow winds a-fare
Where the winds remember.

JOCONDA AND GREY BROTHER MAKE A PORTAGE

Solitude? Not exactly the right word, you think? A much peopled solitude, indeed, with all these woods folk about. But they are not man; and it is only man that produces crowds and noise and bustle and fretfulness. In another sense, too, it is the reality of solitude. The chiefest of vagabonds, R. L. S., said it once for all, “There is a fellowship more quiet even than solitude, and which, rightly understood, is solitude made perfect. And to live out of doors with the woman a man loves is of all lives the most complete and free.”

Monday, September 25—Passed a very good night for the first out of doors. Rained at intervals. During the night a deer, presumably annoyed at finding something with a strange and disagreeable odor on one of his favorite stamping grounds, made a great fuss. He whistled “whi-i-s-s-s-h, whi-i-s-s-s-h,” and went off stamping his feet and blowing as if to clear his nostrils of the hateful man scent. Lay in bed till late. Misty, with rain from time to time, so no good reason for hurrying to get up. Breakfasted about nine, in tent, off cold corn-bread, cheese, nuts and raisins. Spent morning chiefly in extended toilets. Dull gray all day,

only sometimes darker gray than others. Lunch: bacon, rice, apple sauce.

Walked across portage to take an observation, came back and carried Grey Brother across. Paddled up to end of pond, where found another portage half the length of the first, leading to another body of water. Can this be Island Lake? The morrow will tell. Certainly the maps won’t!

Great inspiration—packed up three food bags, leaving out only what we wanted for supper, breakfast and lunch. Packed them across the portage with tump line to leave them with Grey Brother, thus saving labor tomorrow. Second great inspiration—if we leave the grub there unprotected, bears or porcupines may get it. Too great risk—so packed them back again.

Supper: Mock turtle soup, hot biscuits, stewed prunes. Mem. If you turn the biscuits over in the reflecting baker when they are nicely brown on the bottom, they will brown nicely also on the top—now the bottom—rare discovery. To bed at seven.

What odd hours one keeps in the woods, to be sure. “Lay in bed till late” and breakfasted—at nine. What slothfulness! “To bed at seven.” What sleepy-heads! But that is what Mother Nature teaches when you sit at her feet and give yourself up to learn. In her school a day is a day—each divided from the other as the light was divided from the darkness in the first days. You are ready for bed when the sun seeks his—for you have had plenty of good hard work to tire your body and relax your nerves; and ready to begin again when he comes round once more—for refreshing sleep is one of the open’s freest gifts.

Tuesday, September 26—Morning dawned white and misty, but with promise of a beautiful day. Rose at seven, made breakfast (bacon, cold biscuits and prunes) and put up lunch of fried ham and biscuit sandwiches. Broke camp and portaged into pond seen the day before. Made portage in two trips, tho it was really too hard for the Tortoise. (*Umph!—T.*) Paddled across pond and made short portage into Island Lake. Three trips each, including Grey Brother. Sun shining, tho occasionally obscured by great flying masses of cloud. A glorious day! Paddled thru the strait and part way up Island Lake. Stopped on a point to eat sandwiches. Then paddled on and delightedly watched a bunch of six ducks and the antics of three foolish loons. Made camp on point of island—which must give the lake its name—about two o’clock. Camp of the loons.

Dinky little stone fire-place of Tortoise’s construction about two yards in front of tent door, which is now raised, making little piazza roof.

Made camp and explored island a little. Supper: delicious cocoa, apple sauce and toasted biscuits. Work all done by six o’clock; sat before fire till eight. “Wonderful clear night of stars.” Heard what we thought to be barking of a fox on eastern shore—later consideration suggested bob-cat more probable. Loons were very diverting again;

practised flying exercises for our benefit. Evidently very curious; they laughed and wailed till late. T. slept well, J. badly first half, well second half. Thought pine needles falling on White Cap were rain; had fire drill in consequence, madly dashing out and collecting all damageables inside of tent. Fooled again—but it is good practice.

The simple life! Just paddling, tramping, cooking, eating, sleeping, working, loafing, contemplating, observing, musing—in fact, just living. "The world is so full of a number of things—"

Wednesday, September 27—. . . Toward evening the nor'wester which has been steadily blowing up mounts to half a gale. It drives smoke-black clouds fearsomely over the sky. An awe-inspiring evening. We do not like the fury with which the wind tears at White Cap, and beats its sides. Joconda suggests that White Cap be dropt where he stands and that we make our bed under him, with our heads at the doorway. Done as suggested. We go to bed without supper—lunch had been a great feast—and spend an excellent, warm night, assisted by the hot-water bottle (it was a wise woodsman who declared that device worth many pounds of extra blankets), in spite of wind and cold.

Thursday, September 28—Real ice in the water bucket when we get up and frost on everything. Brilliant sunshine but considerable northwest wind with lots of snap in it. Rice cakes, werry delectable, bacon and apple sauce for breakfast. Paddled across Windy Bay, which lived pretty well up to the name we proceeded to give it, to Otter Slide portage and walked across to Little Otter Slide Lake. Killed a partridge with the Browning pistol (see any foreign or English detective story) after sadly ineffectual attempts at two others. A rifle and a pistol with a five inch barrel are two things. Said killing a heinous violation of the law; but we want chicken for dinner, and quiet our consciences with weighty reflections on the difference between *malum prohibitum* and *malum in se*, and the absence of moral turpitude. Anyhow we had chicken for dinner.

Back to camp with our treasure trove of one partridge, a dozen potatoes from a sack hanging in the deserted shelter hut, a can of Dutch cleanser, and two boards for the 'satisfiable fire. Partridge broiled in the baker, fried potatoes and onions (a most galumpshious mess), hard-tack and butter, nuts and raisins for dessert. As Kim used to say, rubbing his tummy softly the while, "It was a great feast."

After the feast made a balsam bed and a windbreak to the nor'west of White Cap. Windbreak made of great pine branches from an old tree which had been cut down, presumably for just such a purpose, by other campers. It was a shame to sacrifice so noble a tree, but being sacrificed, it would have been a shame not to make use of his offerings. Windbreak made, the wind went down; but it made camp so cosy that we regretted the labor not at all. No supper except a bowl of bouillon for the Tortoise. To bed betimes on a fragrant couch of new pulled balsam.

There is a great deal of food in this chronicle, is there not? There are several reasons for it. The vivid woods hunger makes meal time a real

event; one never comes reluctant to table. Then the gentle labor of preparing meals is part of the fun of it all. Cooking over an open fire, in whatever weather may be going at the moment, with simple implements, and the elementary ingredients that one is able to carry in canoe and on back from trip's end to trip's end—this is not drudgery, it is an absorbing interest. It is a fascinating game to see what variations you—she, rather—can play upon that simple scale of staple food-stuffs. Finally, it tastes so good withal—wood smoke and an occasional cinder give a rare flavor.

While we are on the subject of what the boys of the family call "eats," let me give some gratuitous hints. You will find in our food list a number of "fads and frills"—nuts and raisins, dates, milk chocolate, dried fruits, cheese, maple sugar. But these are not sheer frivolity. They have their real uses.

The Indian and the hardened woodsman may find it easy to live on salt pork, flapjacks and beans. But the sophisticated appetite of the town-dweller soon demands more variety and a greater proportion of what may be called "interesting" victuals. We have tried it both ways; believe us, the "frills" will save your digestion and your disposition. But do not neglect the staples. For a day's paddling and portaging you need something that will "stick to the ribs."

Friday, September 29—In the morning it still rained and we still slept. (Note—White Cap no longer leaked.) At ten we sat up in bed and ate hard-tack and butter, cheese and maple sugar. Then we slept. At five we woke. The Tortoise cooked some ham (it no longer rained but was still misty), which with hard-tack topped off with dates was consumed. Then we slept. Woke maybe once in the night to discover that it had cleared; but then we slept—and dreamed—and both were good.

What a sleep! Such lack of energy, such laziness! What waste of time! Not so at all. What better way to recreate oneself than giving up in perfect relaxation to "the season of all natures, sleep." The sleep that you get in the woods, lulled by the fragrance of balsam and pine, harmonized by the wind whispering in the trees, the tiny waves lapping on the shore, the quiet under-chatter of a little rapid in the stream, the steady diapason of a tireless water-fall—that is one of the best medicines for fretted mind and jaded nerves.

At home weather is either largely a matter of course when it is good, or emphatically a nuisance when it is bad. In the woods there is no bad weather, if you are worthy of the

woods life. If the sun shines and the skies smile you expand your soul and glory in it; if it rains and blows and glooms, you go about your business just the same—and glory in it.

Sunday, October 1—A fine night of sleep. About six a wonderful display of red, pink and opal tints in the east. In half an hour it had passed, leaving only the familiar dull uniform gray. "Morning red" to complete the prophecy, and the wind in the south. Before breakfast—late—is ready the rain is here, mild but steady. Corned beef hash with onions and corn bread—best yet—for breakfast, eaten in tent. Then to vegetate under the blankets; a little "Don Quixote" and "Wild Wales," a few poems, some sleep and a couple of repair jobs, to say nothing of several pipes. About three the rain stopped, tho the sky remained overcast. We bestirred ourselves, prepared and disposed of another great feast of ham, spaghetti with cheese, cocoa, nuts and raisins. Night came on with the wind shifted a little toward the northeast, but with little promise for the morrow. To bed at seven.

Do not forget the books. Cervantes and Borrow, Kipling ("Five Nations"), and "The Open Road," an anthology of outdoor verse—these made up our library, and fitted royally our vagabond mood. There are plenty of others; we shall choose another list next time. But, oh, leave behind all "summer novels" and such like trash. If they have any proper place in the world's cosmogony, it is not the woods.

Tuesday, October 3—Morning dawned unwontedly propitious, so we struck camp and turned our faces—and Grey Brother's nose—southward. The loons bade us farewell; and with many backward glances at our dear island home we sought new scenes and adventures. The Tortoise soon wearied of paddling in the stern, so Joconda joyously took his place and had a fine fierce struggle against wind and wave across Island Lake. Lunch of hard-tack, cheese and nuts and raisins at beginning of first portage; then accomplished the two portages and the intervening pond with considerable ease and the minimum of fatigue. Paddled down the stream to the falls and there made a very comfortable "lodging for the night."

Wednesday, October 4—Morning broke almost fair after rain in the night. Took up our way again. Very bad going thru the stream. Water low and beaver dams frequent as well as fallen logs. Lifted and carried and sloshed around in the mud and water. As we progressed a great wind sprang up which waxed and raged and beat with fury upon the tree tops. These bent and sometimes broke with a report like a rifle. They came hurtling down, now to fall among the trees on the bank, now to drop into the stream itself. Our advance become thrilling—almost perilous. The black fir tops tossing and rocking against the flying gray clouds made a splendid picture. Our little craft working his way down the winding stream seemed very frail and quite at the mercy of the great elements.

After a considerable struggle we came out into the open water of Little

BY YOUR LONE

BY O. W. SMITH

NOT everybody can endure the silent places without human companionship, but for those who can, their ministry is very real and very satisfying.

I am an outfit crank, and have evolved one weighing only a few pounds and costing more than a few dollars. From silk shelter tent to folding cooking kit I think it about the lightest, most compact and serviceable equipment for the man who desires to make his way alone into the wilderness. That outfit is the result of years of experience. But right now I desire to select an outfit within the reach of Mr. Everyman.

"A square of sheeting," five feet by nine, will make a satisfactory tent. Simply rub into the fiber of the cloth hot linseed oil, first having sewed in a braided clothes-line around the edges with loops every two feet. Such a sheet can be used for a multitude of purposes, from a shelter tent to a sleeping sheet, one end under, the other over, and it is waterproof. A hand ax, a sheet iron fry-pan, a three-quart pail with a two-quart to fit inside, both provided with sacks, granite iron cup and plate, knife, fork, and spoon, and there you are. Of course you will purchase a good blanket like the U. S. army, or better, the Hudson Bay. Do not economize in the matter of a blanket. For a pack-sack use a common grain sack, tying a small potato in one corner of the bottom about which you can knot a scarf, fastening the other end to the puckered throat.

Perhaps I should pause right here to discuss the matter of food, tho to do so adequately in a few words is exceedingly difficult. Much will depend upon the character of the country into which you are going. If there are farms continually within reach, you can call upon them for supplies whenever your stock runs out; but if you plan to penetrate an uninhabited wilderness the problem is somewhat complicated. I am writing of short trips, tho my wife and I have gone into the wilderness for three weeks and suffered no great inconvenience. Let us suppose then that you will be within the reach of a farm house once in every two or three days. You need not bother with flour unless you wish to putter with bread making. Buy your loaf; you will get better bread. Carry a little screw-top jar for butter and another for bacon. Sugar can be kept in an oiled sack such as can be secured of any supply house, or in a screw-top can. Keep each article in a separate sack plainly

Independent readers will recognize Outdoors W. Smith—otherwise the Rev. O. Warren Smith—as one who has often gossiped with them about the woods, waters and fishing, especially fishing. — THE EDITOR.

marked on the outside. Confine yourself largely to the "solids," like rice, beans, etc. Plan to live off the country as much as possible. Unless in harvest time I carry a little dried fruit, not much, but enough to add variety to the bill of fare. You will crave sweets, and even dried apples help out wonderfully. Do not forget the necessary things, like salt, pepper, tea, coffee, and the like. Carry a few spare matches in a well corked bottle, not many, but enough for an emergency should the contents of your pockets become soaked. You will be surprised to discover how simple is the matter of food provision.

I have said nothing of personal equipment, as that is a matter for the individual to settle for himself. I carry a change of underclothing, stockings and sweater only, a good serviceable old suit, with well-worn

but sturdy shoes. Do not load up with a lot of non-essentials. If you are a fisherman you probably will invest in one of those little "Sunday rods," than which nothing is better for your purpose, tho you can carry a few flies and a line, cutting your rod from Nature's supply. You will find yourself turning to the primitive with joy. Your pockets will contain a good knife, waterproof match box, compass and whatever you consider absolutely essential to happiness. But do not overload. Essentials are few.

"But," some one is saying, "suppose it should rain, suppose it should be unusually cold, suppose——" Stop. Suppose it should do any of a hundred and one things. Let it. If it rains, remain under your shelter. You have all the time there is. If it is cold, build a large fire with a back-log that will reflect the heat into your shelter. Take what the gods send with a grin. Bless you, a week of pack-sack sauntering in the wilderness near home will teach you more than a hundred and one sermons.

In packing, wrap your blanket up in the oiled sheet and put it in the bottom of the sack with the other articles on top. I would not so arrange them if I were carrying supplies for a couple of weeks, but you are not, and you desire the edibles get-at-able and you will not want to disturb the tent and bed until camp-making time. Always bear in mind what you are going to want next when you pack the sack, and so save a deal of trouble and rummaging.

So there is a vacation within the reach of any one with a scrap of courage and modicum of imagination. I can not begin to tell you how much good even a week-end will do a frayed business man. You can find wilderness enough out where the street car line ends, a wilderness as quiet, recreative, restful, and as near the great heart of mother Nature as can be found in the North Woods.

As I said at the beginning, not every man can go alone, for it takes something of a man to stand his own society; then select a companion, but as you hope to forget the work-a-day world, select a fellow saunterer with all the care you would exercise in choosing a life companion. Personally, I believe in the go-alone theory as an antidote for present day difficulties, mental, physical and spiritual, yes, spiritual. What we need is not better spiritual advisers, but opportunity for Moses' God to make bushes burn.

Dare you go alone? Prove it.

JUNE BRIDES

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "THE RECORDING ANGEL," "THE CO-CITIZENS"

APRIL is a child, ever divided, like a child, between smiles and tears. May is a maiden, pale and sweet, twisting blossoms in her hair like any other maiden. But June wears a wedding veil, and every flower in the fields, every rose in her gardens, is a bridesmaid to witness every nuptial morning, and every blissful night nature's marriage vows.

And here they come, the other brides in June, a long procession, from everywhere. They are moving down cathedral aisles. They are standing before dingy altars in village churches. They are joining hands with their bridegrooms in the humblest mountain cabins, and at the foot of grand staircases in the grandest mansions. They are flying along green country roads to face 'squires and magistrates, passionate little outlaws of prudence and reason, hurrying to swear into life-long obedience to love.

So many flowers are blooming in June, so many girls are marrying in June. What a month of wisdom it is. When youth casts aside all other wisdom, and chooses love for its faith with the courage of youth and love! And they are justified in this love—locked like a treasure, kissed with peace, filled with every hope and promise.

There is no reasonable danger to their happiness. They have only to labor for love, and to be faithful to love, forsaking all others for the sake of this one man and this one woman each has chosen. It is a simple ritual which has survived all other rituals and every other form of government, because it is founded upon the one everlasting thing in the heart of nature—love. June is no time to appoint a receiver for bankrupt marriages in a divorce court. It

is the season to send for the priest and found your estate in hopes and start your dividend in happiness.

And all this is so because this is June in a country where peace is a principle, and love is a heritage which no man has dared to destroy. But what shall we say of those other lands where hate is the ruling principle, and death is the heritage of love? It is June in France and Belgium and Germany, too. But what a June! All her roses and blossoms trampled beneath the feet of armed men, and her wedding veil a shroud. Her brides are the widows of love. Her bridegrooms lie in a million graves, slain by the sword. They are falling day by day before Verdun, and behind Verdun, along all the battle lines in Belgium, in the trenches in Argonne, all the best and strongest young men of many nations. And somewhere in the shades of sorrow never lifted by the brightness of June days stand the maidens, one for every lover slain, pale and tear-stricken while they watch the smoking ruins of churches where they might have been married—in June.

When this war is over, it will not be finished, when every field in France is a cemetery, and the streets of the cities are filled with the lame and blind beggars which the long fight has turned into so many victims, the makers of war will face a terrific reckoning. There will be debts to pay, widows and orphans to pension, fighting men to teach peace, and a thousand noisy demands for a justice which has been slain and cannot be resurrected. And behind all importunate multitudes, ever retreating into the deeper obscurity of the fruitless years will be the brides of the dead, who never can know the hopes and happiness of love, who cannot voice their sacred grief, nor even dare to mourn the lover whom they might have married in June.

The Valley, Georgia

FOUR MILES HIGH

BY FANNY BULLOCK WORKMAN, F. R. G. S.

THE most difficult mountain I have ascended in the high Himalayas is the Hispar Watershed peak, lying above the source of the Hispar Glacier and overlooking both the Hispar and Biafo glaciers. It is a very sharp pyramid, as the picture shows. From the Hispar Glacier it looks unclimbable on all sides. It lies some four miles north of the Hispar Pass, and these four miles of rising, snowy upland are broken by ice falls of gigantic ice pinnacles and slants riven by wide, bridgeless chasms, so that it was well-nigh impossible to arrive at its base to see if any side of it could be scaled.

As the view from its summit would be incomparably grand and of geographical importance, showing all

Mrs. Workman is well known to the older readers of The Independent, for whom she has several times written of her twenty-five years of exploration among the world's highest mountains. She was made Officier de l'Instruction Publique, France, for her brilliant scientific achievements. — THE EDITOR.

the upper area of two great Karakoram glaciers, I was determined to reach its apex if a way could be found. Only the guide, Savoye, and three Italian porters accompanied us that season, so we had to depend on Nagar coolies to carry loads. Unlike the Suru men, they "would rather cut their throats" than climb a mountain.

However, after endless difficulties

and by dint of much parleying we succeeded in bringing nineteen of them from the upper Hispar Glacier camp to a hollow on the flank of the peak at over 19,000 feet, where small shelter tents were pitched. I have always wondered how Savoye and the porters got the grumbling coolies over the intricate and dangerous snow surface that had to be covered. In fact, ten of them threw down their loads some 300 feet below camp and left them to the porters to bring up. Late in the afternoon Savoye and a porter went out to examine the difficult arêtes of the peak, which rose like perpendicular needles above camp, to see which could be attempted the next day.

At dusk he returned to tell us that there was only one shoulder, that fac-

ATOP OF HISPAN, 21,350 FEET HIGH. THE TINY DOTS AT THE TOP ARE MRS. WORKMAN AND HER PARTY, TELEPHOTOGRAPHED BY DR. WORKMAN FROM ANOTHER PEAK THREE MILES AWAY

ing the Hispan Pass, which offered any chance of access to the summit. This appeared to be a narrow ice precipice of over 2000 feet, but the other arêtes, while less steep, were fluted with snow cornices which would probably give way if trod upon.

We were just at the end of a period of fine weather. When, at dawn, we were ready to start, the sky had a filmy look which we knew would bring storm within ten hours. I therefore left with Savoye and two porters for this peak, while Dr. Workman and the third porter started for another one east, which had also to be climbed for geographical observation. It was necessary to get the two peaks in that day, for to be storm-bound in the present camp would most probably prove fatal to the whole party.

After a twenty minutes' crossing of some snow slopes the ascent of the arête was begun. Seen from below this great shoulder shot skyward like an appalling blue pillar of verglas. The sun had not yet touched it and each step had to be cut in the ice covering, which slow process caused us to feel the near-zero temperature greatly.

We continued straight up for one and a half hours. Had I been in the least inclined to vertigo I should have turned back at the outset, for the

arête we were on was at most a foot and a half wide and the precipices on either side the most awful I recall on any ascent. They fell sheer 3000 feet into a dark intangible depth. It is much less nerve-trying when a precipice is only on one side, for a wall or broad snow slope on the other offers a certain moral support. At last a small ice shelf broke the upward monotony, and here we halted five minutes for taking photos and a bit of breakfast. The sky looked uncertain, so we hastened to attack an ice wall which now rose in our way. This was a nasty bit of about twenty feet; the sun had melted the snow and steps had to be hacked in the blue ice, and these filled with water as soon as cut. We moved sideways, each foot only half in a step. Below, exposed to view, lay half the mountain, a tortuous mass courting instant death to him who made a false step.

The wall overcome, we arrived again on the shoulder, which rose sharper than ever and was doubly arduous in the now softened snow. Still, by plodding on, we came in sight of the top at last, and crossing an easier slant we arrived at the apex, a small cone, which was really a snow cornice upon which only one person at a time could stand in safety.

Looking across a great void we saw the other party on their summit.

Our mountain was still clear of cloud and Dr. Workman succeeded in taking a telephotograph of my party just as it approached the top. In view of the mist soon to envelop all, we were very lucky to secure this souvenir.

The scene spread before us from this peak was, as I had expected, most remarkable for grandeur and topographical interest. Before my dazzled eyes lay one of the most magnificent of the world's mountain-scapes; two of Asia's largest glaciers ran thirty miles east and west, made more splendid by their beautiful tributary glaciers and bordered by hundreds of wild and picturesque snow and rock peaks, varying from twenty to twenty-five thousand feet in height.

I had barely finished noting my instruments when a wreath of cloud encircled our peak below where we stood, and before we had time to realize it, more than half the surrounding mountain world was lost in fluffy cloud vapor. But I had seen and learned much of the topography of the region in the short time I stood on the Hispan Watershed peak at 21,350 feet above sea level, and fully satisfied with my day's work, began the dangerous descent of the great arête. Slowly we moved amid mist and snow flurries, which rendered great caution necessary at every downward, slippery step. Still,

we passed safely thru the shifting fog, down the long inclines, past the deep precipices now filled with cloud and finally arrived at camp.

Altho we had had quite enough with the severe day's climb it was deemed unsafe to remain that night at the high camp, so packing up as quickly as possible we pushed down about 1500 feet over the broken snow area before mentioned to a fairly safe snow plateau, where by the time tents were pitched a storm destined to last forty-eight hours burst in all its fury.

One of our most delightful first ascents was of Mt. Bullock-Workman, the first time we had climbed to over 19,000 feet. The mountain is in the region of the Baltoro glacier, Western Karakoram, and the guide with us that season was the famous Swiss exploring guide, M. Zurbriggen. The camp made before the ascent was on moraine strewn glacier at 17,400 feet and we christened it Haunted Camp. It was just safe from rock avalanches, which fell with reverberating thunder all night from some tall needles which towered 4000 feet above. Evidently the glacier spirits wished to warn us from further invasion of their habitat, for at intervals thru the night we experienced distinct writhing movements of our beds, similar to the sensation noticed during earthquake shocks.

During pauses in the avalanche cannonade, my already overwrought nerves were treated to another sensation, that of the approaching quick tread of booted feet as on a polished floor. It came on steadily, growing louder as it neared the tent, then ceased a bit and began over again. No paboo-shod coolie nor European booted mountaineer could walk thus regularly and daintily over moraine blocks in inky darkness, so I prefer to credit the glacier sprites with the mysterious noises.

My companions insisted on naming the new peak Mt. Bullock-Workman, after me. I have wished since that I had not allowed this, as I don't approve of personal names for new peaks and glaciers which one may discover, and have avoided their use on subsequent expeditions.

My highest climb was made in the Nun Kun group situated in the Punjab Himalaya. It is a vast massif of lofty mountains, the highest of which is 23,450 feet, and from it flow large and intricate glaciers. Besides exploring these glaciers, from which several high peaks were ascended, we made the first circuit of the group, covering in doing this a distance of ninety miles, mostly on snow and ice.

As we wished to make a study of rarefied air on the human body by camping at great heights for several days, we took with us, besides the guide, Savoye, six Courmayeur porters, who were to replace the coolies when they should give out and refuse to go higher. Our base camp on the Shafat Glacier, in the heart of the range, was at 15,000 feet. Here we remained two weeks getting acclimated and making minor ascents of eighteen or nineteen thousand feet. From here, as weather

A man is born with relations; he picks out his friends for himself.

So with tires—the tires that are on a new car the car manufacturer selects.

When a car owner buys tires he selects them himself.

Nearly every Kelly-Springfield tire used is selected by the car owner.

Kelly-Springfield Automobile Tires - Hand Made

THERE is an important fundamental principle involved in this tire selection. You ought to understand it.

Few users buy Kelly-Springfield tires until after they have had experience with other tires. And fewer, having once used Kelly-Springfield tires, voluntarily discontinue their use. There is a reason for both conditions.

The reason few users try Kelly-Springfield tires first is that the initial selection of their tires is made by the manufacturer who equips the cars which they buy. And Kelly-Springfield tires cost more.

The manufacturer must put tires on the car he sells, but need not put on tires which give excess mileage. He is only obliged to equip with tires which yield the mileage most tire manufacturers guarantee. That is all the car buyer expects.

If the car manufacturer equips with a tire which gives a greater mileage than this, he has to pay the additional cost out of his own pocket—and why should he?

Considering proper manufacturing economies, he equips with tires which

cost him least and yet give reasonable satisfaction. He equips his car with higher priced tires only when he buys advertising value for his car, as well as tires.

Now we cannot meet the manufacturer's price requirements. Hand-made tires cost more to make and yield excess mileage. We cannot compete on price when the excess mileage doesn't count. So we rarely sell tires to car manufacturers.

Kelly-Springfield tires are sold almost exclusively to car owners who pay higher initial prices because they know they receive excess value. At present the demand is far in excess of our production.

The demand has been so great that owners order tires before they need them to get them when they need them.

It is important to you to know these conditions and to know true tire economy.

The Highest Choice

DO not let it be merely a question of initial cost when you make your choice of pianos. The matchless music of the Steinway has lifted it above the "price" atmosphere for all time.

It is true, the Steinway does cost a little more. But no one who owns a Steinway has ever a shadow of regret for the price paid. It is but little higher than the cost of other pianos, and the Steinway carries within its perfect mechanism the guarantee of a satisfaction beyond all price.

For more than three-score years it has been the ideal of the greatest music masters of their day. So the Steinway must command your respectful attention before your choice is made.

Write for illustrated literature about the

Subway Express Station at the Door

allowed, the guides and porters made reconnaissances of the highest snow peaks lying above us, to plan out a route to the one I wished to attempt.

When all was ready a start upward was begun, with as little kit as possible, consisting of five or six small flannel-lined tents, the necessary warm clothes, bedding and tinned food for eight days. The first snow camp was at 17,660 and the second at 19,900 feet. The third day's climb was short but very trying, being at first up an ice wall which brought us to a snow covered ice-slant with a convex surface inclined at sixty degrees which overhung a 3000-foot precipice. We Europeans were roped by a light silk rope tested to a strain of 2500 pounds, but I must say that when a porter stumbled once, altho he was quickly hauled up by the guide, my whole spine shivered. The natives were attached to a second rope led by two Italian porters and no one was loaded to over thirty-five pounds.

At over 20,000 feet halts to breathe were so frequent that progress at these precarious places was exasperatingly slow, as we trod silently the white ladder of approach to the mysterious unknown. The mental strain of a prolonged dizzy climb at such a height is intense. Finally this scarp ended in a snow crest which on measurement proved to be at 21,000 feet; here we just saw the tops of the highest Nun Kun peaks.

In this never-before-trodden snow vale, at an altitude of 7000 feet higher than the Matterhorn, we were destined to pass three nights. A descent of 400 feet now had to be made into the basin where, as clouds were rushing in bringing snow flurries, and the snow under foot became too soft and deep for further progress, tents were pitched at 20,600 feet.

The coolies flung down their loads and then began a series of deep salaams toward the summits peering thru the clouds. Having finished these exercises, they begged to be allowed to descend, showing no fear of facing such a descent alone in uncertain weather. A coolie will never find his way up a mountain alone, but is usually expert enough when bent on going down.

There were still three miles to the actual base of the peak. After a descent to the center of the plateau, the ascent at about thirty degrees was continuous over an undulating surface, for this elevated basin was by no means an easy flat snow meadow as might be imagined from its designation. Near the base of the peak a spot safe from avalanches was chosen and two tents pitched. Mist coming in so softened the snow that it was doubtful if the guides could return to us with their kit as planned, so it was agreed with Savoye that they should all go down to the last night's camp and return by night if snow conditions allowed; if not, they would sleep at the lower camp and rejoin us at daybreak. We unpacked kit and instruments and set to work at our observations, but the idea of passing the night alone, as we should probably have to do, at such an altitude, was

What's Keeping Me Back?

You've wondered why you don't get ahead. Why your pay isn't increased. Why you don't get promoted. You've blamed everything and everybody, when the real drawback is *yourself*.

You're standing still because you lack *training*. Because you have not *prepared* yourself to do some one thing better than others. If you really want to get ahead, the way is open to you.

For 25 years the International Correspondence Schools have been helping men to climb into good paying positions. Nearly 5000 reported last year that I. C. S. training had won them advancement. You can get I. C. S. training in your spare time in your own home without losing a day or a dollar from your present employment.

Position, power, good money, independence, are within your reach. The I. C. S. are ready to help you be the man you want to be. Let them show you how. Mark and mail this coupon.

I. C. S., Box 4511, Scranton, Pa.

rather uncanny. We named this Camp America and its height proved to be 21,300 feet. Altho the sun shone sickly thru the mist, the afternoon heat was intense, the solar thermometer registering 193° Fahr. at 2 p. m. At sunset the temperature fell to freezing and an hour after to 10°, reaching a minimum of 4° below zero before morning.

The night seemed the longest and coldest we ever passed in camp and little sleep came to break the dragging hours. One can breathe better in the erect position than when lying down. As soon as we began to doze, and the respiratory movements diminished in force and frequency, the tissues did not get enough oxygen, and we would start up gasping for breath, so that our night rest was worth little. We suffered also greatly from thirst, the water in the flasks having, of course, become solid ice. At last the gray dawn penetrated the tent canvas and soon the welcome footsteps of Savoye and two porters were heard on the hard snow without.

Those who start out from a warm hotel in the Alps to make a winter ascent often think they are enduring hardships, but that is really mere play compared to getting up in an unwarmed tent on snow, with the glass below zero, collecting one's things, trying to boil coffee over a stove so affected by diminished atmosphere that it won't light and, above all, to my mind, the wrestle with frozen boots! However, we got off in time.

I will not describe in detail the ascent of the sharp peak broken by dangerous ice falls and gashed by yawning crevasses. Happily the day was clear to begin with and the sun when it came warmed us a bit, for movement was of necessity slow at 22,000 feet. The latter part of the ascent of 300 feet was mostly over rock, which is much harder to negotiate than snow at a great height. The gradients were from 60 to 65 degrees. The view from the summit was a bird's-eye one, for we overlooked most of the wide galaxy of mountains, tortuous glaciers and ribbon-like valleys stretching on all sides.

The rarity of the air was severely felt on the least exertion with camera or instruments. An icy wind and want of time soon drove us down to join the others, where, after a light meal, the descent to camp was completed. I named the peak Pinnacle. It was a glorious climb, but like others of similar nature, enjoyed more in retrospect than at the time. A second uncomfortable night was passed at Camp America, where none of us had a wink of sleep. The temperature fell to 6° below zero.

The following morning we descended to 19,900 feet, where our fifth night on snow at high altitudes was spent, and the day after reached base camp, very well satisfied with our high journey. It was arduous, but it had resulted in the first ascent of a high peak, which gave me the world altitude record for women, and in the acquisition of interesting information on climatology and the effects of rarefied air.

Paris

SPORTSMAN'S HANDBOOK

I want to send a copy of my "Sportsman's Handbook" and catalog to every one who loves the Big Outdoors. It is the most complete **Sporting Goods Catalog**

I have ever written. It not only illustrates and describes hundreds of articles for the Camper, Fisherman, and Hunter, but tells of my experience in the wilds. There are pictures of birds and animals, and advice as to selection of duffle, pitching a tent, caring for firearms, preparing skins for the taxidermist, etc., etc.

Camping, Fishing, Hunting

There are chapters on where to Camp, Fish and Hunt; what to take, what to wear, and many "kinks" in wildcraft.

I send this book free—mention No. 766

POWHATAN ROBINSON, President.

NEW YORK SPORTING GOODS CO.

the new Encyclopaedia Britannica

["HANDY VOLUME" ISSUE]

*will advance in price—\$11 on the
cheapest binding; \$19 on the highest-priced [other bindings
proportionally]*

THIS advance is due to circumstances over which we have no control. The war has forced up the cost of all raw materials for making these books. *Paper* costs very much more than it did before the war. Some *leathers* cost 75 per cent more, and others cannot be imported—they are under embargo.

It will soon be impossible for us to supply sets in the most expensive leathers at any price because of the British embargo on fine leathers.

The Britannica is *a work that you need*. The

greatest of all reference works, in this new edition, it is made up of 29 volumes, more than 30,000 pages, 44,000,000 words, 41,000 articles, written by 1500 experts chosen for their supreme fitness. There are 15,000 pictures and maps. An index of 500,000 entries makes all this wealth of information easily available.

All yours now at a great price saving—in any binding, shipped complete for a first payment of only \$1. Satisfaction guaranteed or your money back.

If your order is to be accepted at the present low prices it must be postmarked *before 7.33 p. m., June 17th. Don't wait until the last minute. Order to-day.*

We take all the risk. You are protected by our guarantee. There will never be such a chance again.

MORE AND MORE THE CALL OF THE AMERICAN PLAYGROUNDS IS BEING HEARD BY AMERICANS WHO MAKE HOLIDAY IN THE SUMMER MONTHS. FROM THE MAINE COAST TO THE HARBOR OF THE SUN, FROM THE RUGGED ROCKIES TO THE WELL-GROOMED WHITE MOUNTAINS, FROM THE WILDERNESS TO THE HISTORIC ST. LAWRENCE, THERE IS A WIDE RANGE OF SUMMER PLEASURES TO BE FOUND ON OUR OWN CONTINENT WHICH BECKON TO THE ADVENTURER—DOUBLY SO IN THIS SECOND YEAR OF THE EUROPEAN EMBARGO ON TOURISTS. HERE ARE EIGHT TRIPS CONVENIENTLY PLANNED, WIDELY DIFFERENT IN COST, TIME AND CHARACTER, ADAPTED TO DIFFERENT TASTES AND PURSES, BUT ALL RICH IN POTENTIAL ENJOYMENT

NIAGARA FALLS, TORONTO, THOUSAND ISLANDS
ADIRONDACKS, MONTREAL, QUEBEC
MAINE COAST, WHITE MOUNTAINS
NOVA SCOTIA

GLACIER NATIONAL PARK
WESTERN NORTH CAROLINA
NEW JERSEY SHORE RESORTS
GRAND CANYON, CALIFORNIA, YELLOWSTONE PARK

ADIRONDACKS — MONTREAL — QUEBEC

Time—Two or Three Weeks

First Day. Leave NEW YORK in the morning. Leave OLD FORGE in the afternoon. Arrive RACQUETTE LAKE in the evening. Hotels and camps \$2.50 up per day, American plan. This is one of the prettiest of the many lakes in the section. One day must be given for the trip to Blue Mountain and Lake and return. The steamer crosses Racquette Lake and then winds its way thru the narrow Marion River. Change to train is made over a short carry and another steamer awaits to take you to your destination. After luncheon at one of the many hotels or camps, you start on the journey back. You will find it a unique and interesting trip.

Third Day. Leave RACQUETTE LAKE in the morning and by boat and auto arrive LONG LAKE about noon. Hotels and Camps \$2.50 up per day, American plan. Spend the afternoon and night here and in the morning leave by stage for Long Lake West and there meet train.

Fifth Day. Arrive LAKE PLACID in the afternoon. Hotels and Boarding Houses \$2 up per day, American plan. A boat trip around Lake Placid with its thickly wooded shores, drives to Wilmington Notch, Saranac Lake, Keene Valley in the heart of the mountains, climbing and horseback riding will make the days go quickly here.

Tenth Day. Leave LAKE PLACID in the afternoon. Arrive MONTREAL in the evening. Hotels \$1 up per day, European plan. Spend the first day in seeing the many points of interest in the city. Sightseeing cars will give you a good general idea. A sightseeing car also makes a trip around the mountain and the Incline Railway will take you to the top of Mt. Royal, where you can get a magnificent view of the city.

Thirteenth Day. Leave MONTREAL by steamer or rail.

Fourteenth Day. Arrive QUEBEC by steamer or within five hours by rail. Hotels from \$2.50 up per day, American plan. This quaint town has unlimited attractions. Old landmarks, picturesque streets, convents and cathedrals must all be visited. One day should be given for the trip to St. Anne de Beaupres via electric cars. On the way you will get a fine view of the falls of Montmorency. You will stop off there on the return trip and take the elevator which rises 274 feet and lands you near the Kent House, built in 1778. Refreshments can be had here. A side trip may be made to the Saguenay. The steamers leave at night, returning the third evening.

Twentieth Day. Leave QUEBEC in the morning. Arrive MONTREAL in time to connect with train for Plattsburg. Arrive PLATTSBURG in the evening, board steamer for trip thru Lake Champlain and Lake George.

Twenty-first Day. Leave PLATTSBURG in the morning. Arrive LAKE GEORGE in the evening. Hotels \$3 up, European plan. Small houses \$2.50 up, American plan. Boat and trolley trips may be had here.

Twenty-third Day. Leave LAKE GEORGE in the morning. Arrive SARATOGA in about an hour. Hotels \$2.50 up

per day, American plan. This Spa now ranks favorably with those of Europe. The drives are many and varied and Saratoga Lake is attractive.

Twenty-fifth Day. Leave SARATOGA in the morning. Arrive NEW YORK in the evening.

Approximate cost of trip from New York and return\$48.55

NIAGARA FALLS — TORONTO — THOUSAND ISLANDS

Time—About Ten Days

First Day. Leave NEW YORK in the morning. Arrive NIAGARA FALLS in the evening. Hotels \$2 up per day, American plan. Three days at least must be spent here to appreciate the majesty and beauty of the Falls and to enjoy the walks and drives along the main avenues and in the by-ways. There are also many interesting trolley trips.

Fourth Day. Leave NIAGARA FALLS in the morning. Arrive TORONTO at noon. Hotels from \$1.50 up per day, European plan. Spend one day here driving about the city and visiting the points of interest.

Fifth Day. Leave TORONTO in the afternoon by steamer.

Sixth Day. Arrive ALEXANDRIA BAY in the morning. This attractive resort is a good central point from which to take delightful excursions among the wondrously beautiful islands, rich in natural attractions. One day must be spent in taking the trips via steamer among the islands and one day in fishing with a competent guide, who will cook the fish you catch. A trip to the quaint city of Kingston is also enjoyable.

Tenth Day. Leave ALEXANDRIA BAY in the morning. Arrive NEW YORK in the evening.

Approximate cost of trip from New York and return\$24.05

GLACIER NATIONAL PARK

(Season—June 15-October 1)

Time—About Two Weeks

First Day. Leave NEW YORK in the evening.

Second Day. Leave CHICAGO in the evening.

Fourth Day. Arrive GLACIER PARK in the evening. Glacier Park Hotel \$4 up day, American plan. This is the gateway to the second largest of our national playgrounds. During the day spent here you will decide on the various trips which you may want to take. Some of those already planned are: One day tour, by auto stage, from Glacier Park Hotel to Two Medicine Chalet and return; cost \$3. One day tour, by auto stage, from the Hotel to St. Mary's Chalet, thence by launch to Going-to-the-Sun Chalet and return; cost \$8. Two day tour, by auto stage, from Hotel to Many Glacier Hotel; spend the afternoon and evening here and after breakfast the following morning leave by auto stage for St. Mary's Chalet, then by launch to Going-to-the-Sun Chalet on one of the most beautiful of the Glacier Park lakes; cost

\$13.50. Three day tour, by auto stage, to Many Glacier Hotel; the next morning a horseback ride to Iceberg Lake and return, and the third day return to Glacier Park Hotel via St. Mary's Chalet and Going-to-the-Sun Chalet; cost \$17. Four day tour, daily, July 1st to Sept. 1st. First day, by auto stage to Many Glacier Hotel. Second day, by saddle horse over Swiftcurrent Pass to Granite Park Chalets. Third day, by saddle horse to Many Glacier Hotel. Fourth day, by auto stage back to Glacier Park Hotel, including side trip by launch from St. Mary's Chalet (passed en route) to Going-to-the-Sun Chalet; cost \$21.50. Five day tour, from July 1st to Sept. 1st. This tour is similar to the four day tour, but in addition you take a horseback trip to Iceberg Lake; cost of this trip \$25. These tours are laid out for you and tickets are sold covering the entire trip. If you prefer you can wander about the Park at will. The two hotels, one at the entrance to the Park and the other in the heart of it, make rates of \$4 up day, American plan. The Chalets, which are most attractive, have a uniform rate of \$3 per day, American plan, and the Teepee Camps charge fifty cents per bed per night. These are located near the Chalets, where food may be purchased at reasonable prices. Use of utensils and range in the camps is allowed.

Eleventh Day. Leave GLACIER PARK in the evening.

Thirteenth Day. Arrive CHICAGO in the evening.

Fourteenth Day. Arrive NEW YORK in the evening.

Round trip rate from New York to to Glacier Park via New York Central or Pennsylvania R. R... \$86.70
Via other lines..... 82.20
Round trip rate from Chicago to to Glacier Park 48.00
Pullman berth from New York, one way 14.00
Pullman berth from Chicago, one way 9.00

NOVA SCOTIA

Time—About Three Weeks

First Day. Leave NEW YORK in the evening by boat.

Second Day. Arrive BOSTON in the morning. You will have the morning to get a glimpse of Boston by taking one of the sight-seeing tours, returning to the dock in time to leave. Leave BOSTON at one p. m. by steamer.

Third Day. Arrive YARMOUTH in the morning. Hotel \$3 up per day, American plan. Yarmouth has charm of scenery and environment. The climate is good and immune from hay fever. All these points make it popular with the summer visitor. You will find a good hotel here which adds much to the comfort of the traveler. A couple of days will give you an opportunity to take some of the popular drives, the most interesting being to the bathing beach at Port Maitland, twelve miles distant. You will also get fine boating and fishing.

Fifth Day. Leave YARMOUTH in the morning. Arrive DIGBY in about two hours. Hotels \$2.50 up per day. Digby is located on Annapolis Basin. Its back ground of hills makes an attractive setting. Sail-

ing, boating, bathing and driving are among its many diversions. It is in the center of a number of summer resorts which can easily be reached and are objective points of the more important drives. Take one day for a trip to St. John, New Brunswick. This will show you the beauties of the Basin and the narrow strait which separates it from the Bay of Fundy. You will have several hours to spend in St. John.

Ninth Day. Leave **DIGBY** at noon. Arrive **ANNAPOLIS** in about one hour. Hotels \$2 up per day, American plan. This town is one of the oldest on the American Continent and was settled by the French in 1604. It is a delightful spot and typically Nova Scotia.

Tenth Day. Leave **ANNAPOLIS** in the early afternoon. Arrive **KENTVILLE** in about three hours. Hotels \$2.50 up per day, American plan. A stop is made here for the purpose of visiting Cape Blomidon, the highest point of land in the province. Connection is also made for Parsboro by train and boat. This will give you an opportunity to see Minas Basin, where the famous Nova Scotia tides reach a height of from fifty to sixty feet.

Twelfth Day. Leave **KENTVILLE** at noon. Arrive **WOLFVILLE** in an hour. Hotels \$2.50 up per day, American plan. This is the University and Academy town of Nova Scotia, and from here many delightful drives may be taken. This is the very heart of the "Land of Evangeline." Be sure and drive to the old church at Grand Pré and en route from one of the high points near Wolfville get the view of lovely and peaceful Gasperau Valley, one of the most charming pictures in all Nova Scotia.

Fifteenth Day. Leave **WOLFVILLE** about noon. Arrive **HALIFAX** in the evening. Hotels \$3 up per day, American plan. This is the capital of the Province and a picturesque garrison city. Its public buildings and its parks and public gardens are of much interest. Spend one day in a trip to Chester, which is considered one of the most delightful shore resorts in Nova Scotia. While here take a side trip to Charlottetown, Prince Edward's Island and also to Cape Breton, thru the Bras d'or Lakes.

Nineteenth Day. Leave **HALIFAX** in the evening (Tuesday).

Twenty-first Day. Arrive **BOSTON** in the morning. Arrive **NEW YORK** in the evening.

Approximate cost of trip, New York to Nova Scotia and return.....\$26.00

GRAND CANYON, CALIFORNIA AND YELLOWSTONE PARK

Time—About a Month

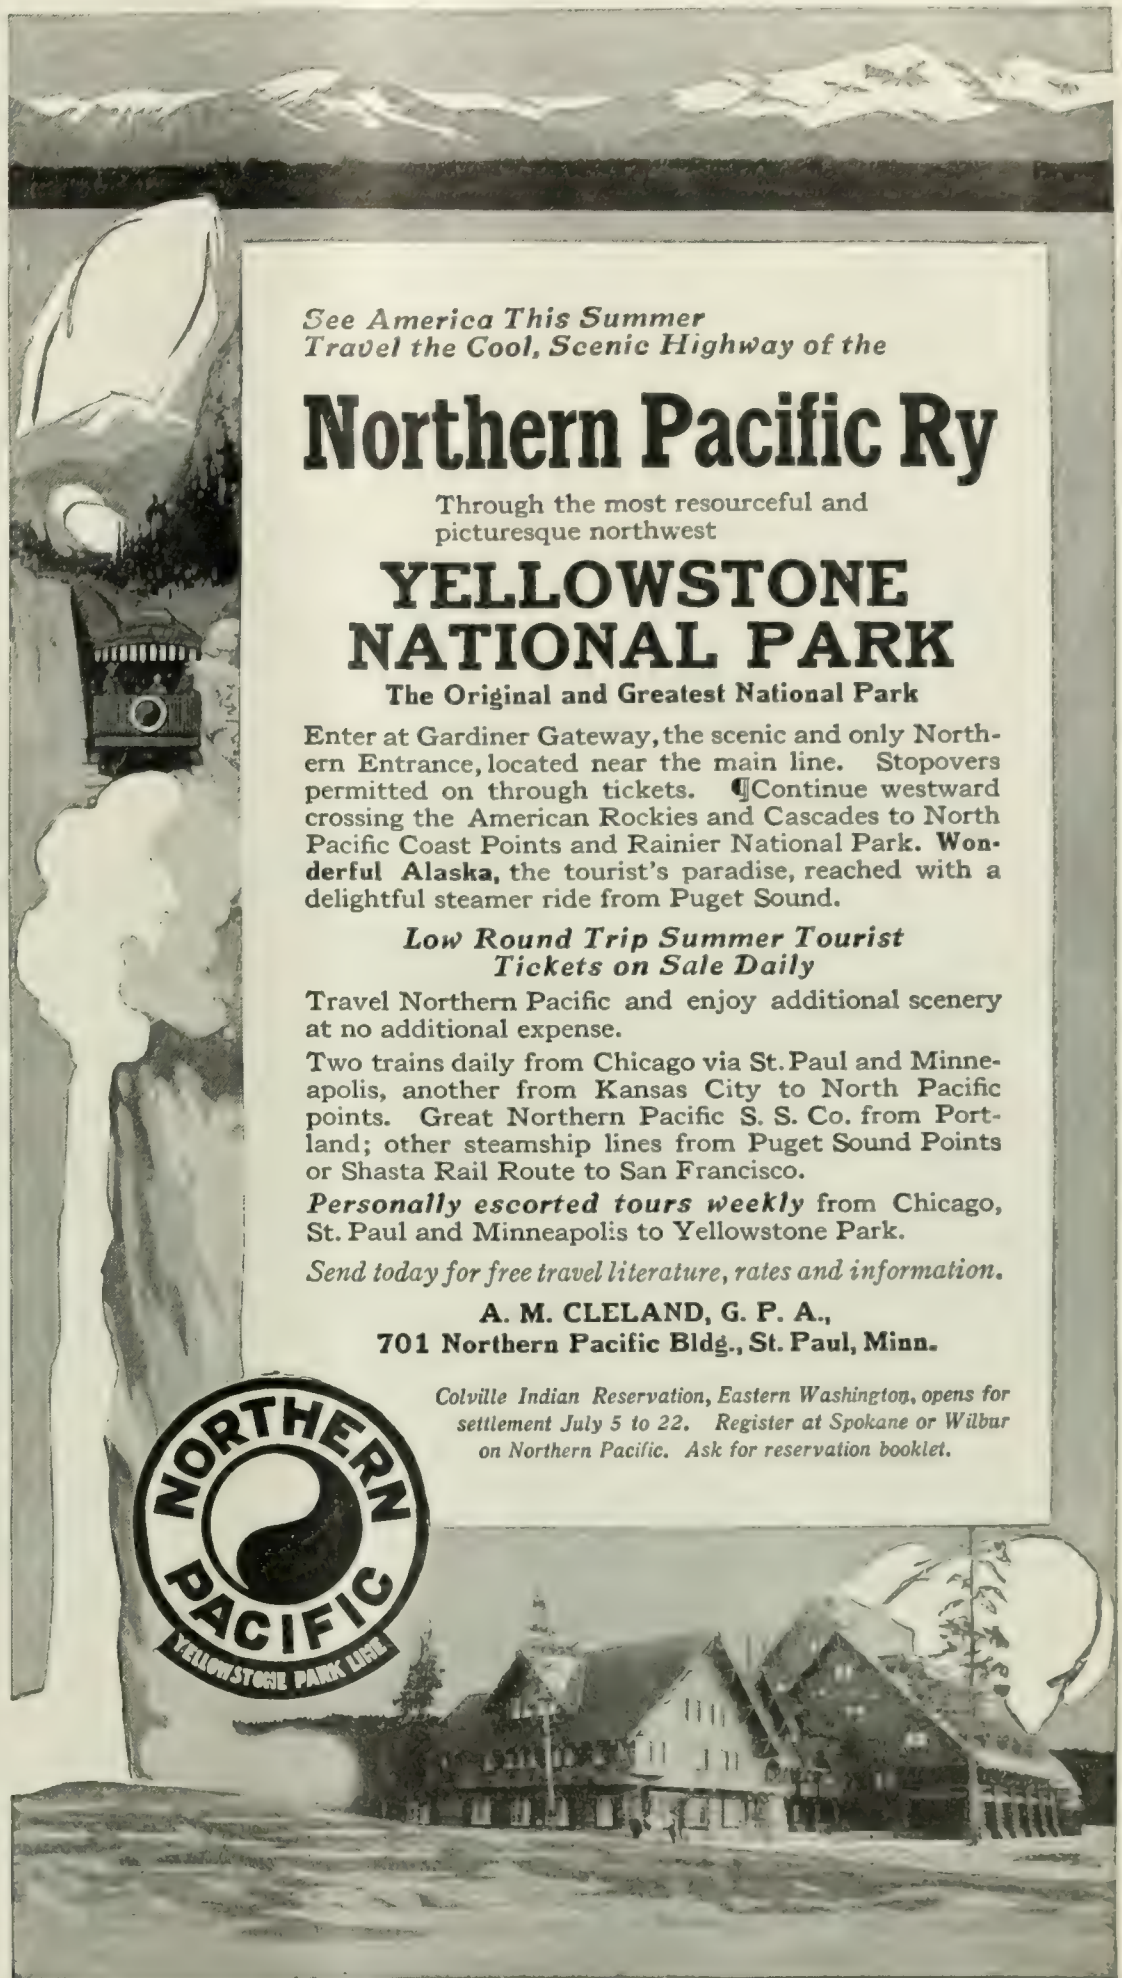

First Day. Leave **NEW YORK** in the morning.

Second Day. Arrive **CHICAGO** in the afternoon. Leave **CHICAGO** in the evening.

Fifth Day. Arrive **GRAND CANYON**. Hotel El Tovar \$4 up per day, American plan. Bright Angel Cottages \$1 up per day, European plan. This tremendous chasm in the northwest corner of Arizona is 6000 feet deep and thirteen miles wide. There is nothing in the world so stupendous; its grandeur cannot be described. Visit Hopi House opposite the hotel, a reproduction of the dwelling of the Hopi Indians. Here live a small band of Hopis—men and women—weaving, making pottery or hand silver ornaments. In the evening they entertain you with their weird songs and queer dances. There are many drives, among them to Mt. Hopi and return, leaving morning and afternoon; cost \$1.50. Mohave Point and return, leaving 9 a. m. and 2 p. m.; cost \$2. Hermit Rim Road and return, leaving morning and afternoon; cost \$3. All of them give fine views of the Canyon. If you prefer you may take the many horseback rides or longer motor trips.

Seventh Day. Leave **GRAND CANYON** in the evening.

Eighth Day. Arrive **SAN DIEGO**, Cal., in the afternoon. Hotels \$1 up per day,

backs your decision—in this year of vast National Crises? Two men of the widest experience have written books you need to read.

Our Military History

By Leonard Wood
Major General, U. S. A.

"Should be read by every American citizen and should find a place in every reading-room and library in the country."—Chicago Tribune.

(\$1.00 net)

Imperiled America

By John Callan O'Laughlin, Asst.
Sec. of State under Roosevelt

"A sober and moderate exposition of our present standing in the world and of the problems that confront us."—New York Times.

(\$1.50 net)

The Reilly & Britton Co., Chicago

A SUMMER JOB FOR EVERYBODY

Thousands of copies of The Independent are sold to students in High Schools. Now that school is closing these students will not be able to obtain copies at their schools. The parents as well as the students will want to continue to read The Independent. You can supply them without much work. Write today and we will set you up in business and tell you how to make some extra money every week acting as our Local Secretary.

THE INDEPENDENT

119 West Fortieth Street

New York

European plan. San Diego is old in history and is favored in location, mountains, climate. Coronado, should you prefer to stay there, is reached via trolley and ferry. Two days must be given to the Exposition—the grounds, the buildings, the wonderful open air organ on which daily concerts are given, and the exhibits. Spend a day in taking various trips, among them the one to the Old Mission.

Eleventh Day. Leave SAN DIEGO in the morning. Arrive LOS ANGELES in the afternoon. Hotels \$1 up per day, European plan. There are many delightful trips to be taken here. Around the beaches by trolley; cost \$1. Old Mission trolley trip; cost \$1. Balloon Route Trip; cost \$1. Mount Lowe, considered the greatest mountain scenic trip in America; cost \$2. Spend one day in visiting Catalina Island; cost \$2.75; and take a one day trip to Riverside and Redlands, going by train and trolley, cost \$3.

Fifteenth Day. Leave LOS ANGELES in the morning. Arrive SANTA BARBARA at noon. Hotels \$3 up per day. American plan. One day must be given to this charming city which in location resembles Mentone, in France. Take the mountain drive in the afternoon—get the fine views of the ocean and islands and return via Miramar.

Sixteenth Day. In the morning visit the Mission, the most interesting and best preserved of any in the state.

Sixteenth Day. Leave SANTA BARBARA at noon. Arrive DEL MONTE in the evening. Hotel Del Monte \$4 to \$6 per day, American plan. "The Riviera of America" is the name given to the peninsula on which Del Monte is located. This delightful resort is situated in a park of 126 acres, the beauty of which is worth the trip across the continent. Take the famous seventeen-mile drive. You will be interested in the grove of ancient cypress. Visit Monterey, from 1770 to 1849 the capital of California. It has many landmarks—old adobe buildings and early missions. Then drive three miles to the Carmel Mission, where lies the body of Father Junipero Serra. There are many other drives here if time permits. A fine golf course of eighteen holes, tennis courts in perfect condition, a bowling green and archery provide for sports.

Nineteenth Day. Leave DEL MONTE in the morning. Arrive SAN FRANCISCO in the early afternoon. Hotels from \$1 up per day, European plan. You get a good idea of the city by taking the sightseeing car, leaving Ferry Loop at 10 a. m.; cost 75 cents. A three hour ride, with stop at the Cliff House to see the beach, the Seal Rocks and Golden Gate. Take one day for the trip to Mt. Tamalpais, including Muir Woods on the return journey; cost \$2. Take Sausalito Ferry from Ferry Building and at Sausalito change to electric railway nestled in a canyon. Transfer here for the trip to the summit (2592 feet), which is made over the "crookedest railroad in the world." The views are impressive. Stop here long enough to take the walk around the peak and then have luncheon at the tavern. At 2 p. m. the train leaves for Muir Woods. A stop of two hours is made here, giving you an opportunity to walk thru the valley and see many "big trees." San Francisco is reached at 5 p. m. Another day visit Berkeley and Oakland. This is over the Key Trolley Route and the boat leaves Ferry Building at 10 a. m. It covers sixty-eight miles and the cost is \$1. In Berkeley you see the University of California campus and recent buildings, the Greek Theatre, Campanile and new library. The grounds are very beautiful. The trip to Oakland takes in the public buildings, Lake Merritt and Oakland Museum. There are sightseeing cars, as well as autos, which take you about the city, showing you all the points of interest.

Twenty-fourth Day. Leave SAN FRANCISCO in the morning.

Twenty-fifth Day. Arrive SALT LAKE CITY in the afternoon. Hotels from \$1

up per day, European plan. A sightseeing trolley leaves the hotel about 10 a. m., going about the city as far as Fort Douglas. This will give you a good idea of Salt Lake City and also of the surrounding country. On the return the car stops at the Mormon Tabernacle in time for the noon concert. After this is over, visit the various buildings in Temple Square open to the public. A guide is usually sent around and the trip is most interesting, as well as instructive; cost \$1. In the afternoon go by train to Saltair Beach on Great Salt Lake. The feature at Saltair is the bathing. Cost from city and return on train is 25 cents.

Twenty-sixth Day. Leave **SALT LAKE CITY** in the evening.

Twenty-seventh Day. Arrive **YELLOWSTONE STATION** in the morning. (Five days in the Park.) You leave the Park entrance in the morning, after excellent breakfast at the Station dining room, follow the road which winds along the Madison River to where it joins the Gibbon, the two forming the Firehole. Fountain Hotel is reached by eleven o'clock and you stop there for luncheon. Time is given to walk about and see some of the geysers and the Paint Pots. Arrive Old Faithful Inn about 4 p. m. The evening is spent here, as there are many interesting geysers all about, such as the Grotto, Giant, Oblong and others. Old Faithful, the most noted of all, adjoins the hotel and it plays with scarcely a variation every sixty-five minutes. It rises to a height of from 125 to 150 feet and one never tires watching it, both at sunset and at night, when the searchlight illuminates it. The next morning the stage leaves for the second day's trip, and between the Upper Geyser Basin and Yellowstone Lake the tourist twice crosses the Great Continental Divide. Thumb Station is reached next and there you stop for luncheon. At this point a choice of routes is given the traveler. You can continue by stage over the mountains or go by boat up Yellowstone to the next night stop at Lake Hotel. This is a delightful resting place, where you may enjoy fishing excursions or boating about the lake. The third day the stage road leads along the Yellowstone River thru the lovely Hayden Valley. Cañon Hotel is reached soon and you spend the afternoon and night here. There is plenty of time to visit the canyon. Other canyons may be larger, but none can compare with this in beauty of coloring. The lower falls of the Yellowstone, 598 feet in height, are near by and may be reached by good roads and trails. The fourth morning you go thru pine forests and along the Gibbon River to Norris Geyser Basin, where a stop is made at Norris Hotel for luncheon. There are many boiling springs all about, covering a large tract unsafe for walking except on the boardwalks which cross it. Here may be seen the Black Growler, the Hurricane, the Constant and other important geysers. Stages leave after luncheon and arrive at Monmouth Hot Springs Hotel about 4 p. m.

Thirty-first Day. Leave **MONMOUTH HOT SPRINGS** in the morning. Arrive **YELLOWSTONE STATION** in the late afternoon in time to connect with night train.

Thirty-second Day. Arrive **SALT LAKE CITY** in the morning.

Thirty-second Day. Leave **SALT LAKE CITY** in the morning.

Thirty-third Day. Arrive **GLENWOOD SPRINGS** in the morning. Hotel Colorado \$5 up per day, American plan. A stop at Glenwood Springs makes an interesting break in the journey. It is in the heart of the Rockies and is noted for its fine drives, its natural hot vapor baths and its open air swimming pool (near the hotel), which is 600 feet long and 110 feet wide.

Thirty-fourth Day. Leave **GLENWOOD SPRINGS** in the morning.

Thirty-fifth Day. Arrive **COLORADO SPRINGS** in the afternoon. Hotel \$1.50 up per day, European plan. Colorado Springs

Spend Your Vacation

at the

Seashore

The ideal summer resort.

Enjoy the cool sea breezes; surf bathing; sailing on bay and ocean; boating, fishing, crabbing and many other amusements and recreations.

You may golf also at the leading resorts.

And there are delightful automobile trips.

NORTHERN CRUISE

THE GREAT NORTH AMERICAN CRUISE LINE

The Finest Cruise on the Atlantic Coast

Including all essential expense, visiting **HALIFAX, NOVA SCOTIA**, the truly European capital of this Province, and **ST. JOHN'S, NEWFOUNDLAND**, the unique and busy farthest north city on the Atlantic Seaboard. The splendid steamships "Stephano" and "Florizel" of the

RED CROSS LINE

are especially built for the accommodation of tourists, having ample deck room, comfortable cabins and lounge, and exceptionally pleasant dining saloon, in which is served to the music of an orchestra, meals of unusual excellence. The boats are new and able, with every modern device for safety, including full boat equipment for passengers and crew. No cruise on the Atlantic Seaboard gives such novelty and grandeur of scenery and is so health-giving and altogether delightful. Send now for handsome folder 11, giving full particulars of this cruise.

BOWRING & CO., 17 Battery Place, N. Y.
 ⇒ Reduced rates for superior accommodation during June, Sept. and Oct.

is well worth a couple of days' stay. A trip to Manitou and Pike's Peak will take one day. The sightseeing automobiles make the trip to the Garden of the Gods and to South Cheyenne Canyon. The thirty mile auto trip to Crystal Park must not be omitted, as it takes you into the heart of the Rockies.

Thirty-eighth Day. Leave **COLORADO SPRINGS** in the afternoon. Arrive **DENVER** in about three hours. Hotels \$1.50 up per day, European plan. Visit the public buildings and take a trip on the sightseeing cars. There are also many outings via trolley and autos to the nearby mountain peaks. Among them Mt. McClellan, Lookout Mountain, "Moffat Road," etc. There are also trips to Boulder, New Rocky Mountain National Park and Estes Park.

Forty-third Day. Leave **DENVER** in the evening.

Forty-fifth Day. Arrive **NEW YORK** in the evening.

Cost of ticket from New York back to New York, not including Canyon or Yellowstone Park.....\$115.20
Additional cost for trip to Canyon 7.50
Additional cost for trip through Yellowstone Park, including stage fare and hotel accommodations... 53.50
\$176.20

Lower berth to the coast, \$19.

WESTERN NORTH CAROLINA

Time—Two Weeks

First Day. Leave **NEW YORK** in the afternoon.

Second Day. Arrive **ASHEVILLE** in the afternoon. Asheville, the center from which many delightful resorts can be easily reached, is a city of charming hotels and attractive boarding houses. Ten days may be well spent here visiting the various points of interest.

Third Day. Drive thru the Biltmore estate, over fine roads and thru beautiful scenery, stopping to visit the model dairy with its hundred head of registered cows and incidentally indulge in a dish of ice cream made of pure cream.

Fourth Day. Drive to Mountain Meadows Inn for luncheon. The views of mountains and valleys on the way are glorious.

Fifth Day. Go via train in the morning to Lake Toxaway, which you will reach in time for luncheon at Toxaway Inn, situated on the shore of the lake near the station. The lake is 3000 feet above sea level, fifteen miles in circumference, a beautiful sheet of water with rugged Mt. Toxaway at one end of it. Trains leave in the late afternoon and you are back in time for dinner at your hotel in Asheville.

Sixth Day. Climb or drive to Sunset Mountain, from which you get a fine view of Asheville and the far off majestic Blue Ridge, of which Pisgah, 6540 feet high, forms the center.

Seventh Day. Trip to Mt. Mitchell at an altitude of 6711 feet, the highest point east of the Rockies. Train leaves Asheville at 8:30 a. m. and arrives at Mitchell Ridge at 1 p. m. This is a part of the great National Forest owned by the United States. Three hours are given to walk about, have luncheon and revel in the wonderful panorama of mountains and valleys for scores of miles on every side. At 4 p. m. you leave and 8 p. m. finds you back in Asheville.

Eighth Day. Leave some time during the day by rail or auto for a trip to Hendersonville and Flat Rock. The former is one of the most delightful and progressive cities of western North Carolina. Here you will find good hotels and see many attractive homes and parks. Historic Flat Rock is a short distance to the south. This spot was settled by Charleston people in 1820. Highland Lake has an attractive hotel where there are opportunities for golf, tennis, boating and bathing.

Ninth Day. Spend the day in a trip to Bat Cave Section, Hickory Nut Gap. The drive is delightful because of the variety

of scenery it presents. You cross the plateau on which Asheville is located, skirt the mountains and then climb up and across the range into the Gap. A roaring stream follows the road and on either side tower the mountains, one of the most interesting being Chimney Rock, 6000 feet high. If you are wise you will bring your luncheon and find a cosy spot near the stream and spend a couple of hours in the glorious out-of-doors before beginning the return journey.

Tenth Day. The clearest and brightest day of your visit must be given to a trip by auto to Mt. Pisgah, the most beautiful of all these mountains. The road up the mountain, seventeen miles long, was built by the late George Vanderbilt. It winds about the face of the mountain till the Lodge is reached at an elevation of about 5800 feet. Luncheon under the trees with the wonderful panorama of valleys and mountains stretching on every side is an experience out of the ordinary.

Thirteenth Day. Leave ASHEVILLE in the afternoon.

Fourteenth Day. Arrive NEW YORK at noon.

Cost of round trip, New York to Asheville and return\$31.50
Cost of Pullman berth 4.25
Cost of round trip Chicago to Asheville and return 27.90

THE MAINE COAST AND THE WHITE MOUNTAINS

Time—About Two Weeks

First Day. Leave NEW YORK in the afternoon by boat.

Second Day. Arrive PORTLAND in the afternoon, or

First Day. Leave NEW YORK in the evening by train.

Second Day. Arrive PORTLAND in the morning. Hotels \$3 up per day. Boarding houses \$2 up per day. Portland combines the attractions of city life and the pleasures of a shore resort and, being famous for its beautiful natural scenery, is well worth several days' visit.

Third Day. Spend the day wandering about the city by trolley, visiting the Eastern Promenade with its view of the Harbor and then the Western Promenade with its view of forests, rolling farm land and distant mountain peaks.

Fourth Day. If the day is fine take the sail among the islands of Casco Bay, stopping for luncheon (shore dinner) at one of the islands. Cost of trip 75 cents.

Fifth Day. Go to the celebrated Poland Springs. Autos may be hired at reasonable prices, or you can go by train to Danville station and motor to the springs. Cost \$3.50. The mammoth hotel, the spring, the library and art gallery, the beautiful grounds and the view are all well worth seeing.

Sixth Day. Leave PORTLAND at 9 a. m. by rail for a trip thru the Songo River. Change to steamer at Sebago Lake Station. The sail is varied and full of interest. You sail up a river called the "crookedest" of all Maine rivers, go thru a lock and after crossing the Bay of Naples enter narrow Long Lake. The last landing is made at 1:15 p. m. and shortly after that you start on the return journey. Portland is reached at 5:30 p. m. Cost of trip \$2.50.

Seventh Day. Take a trip by trolley to Old Orchard, one of the finest beaches on the Atlantic Seaboard and one of Maine's leading shore resorts.

Eighth Day. Leave PORTLAND in the morning. Arrive INTERVALE about noon. Hotels \$2 up per day, American plan. This is one of the interesting resorts at the gateway to the White Mountains, noted for its many hotels and boarding houses to suit all purses. The climate is dry and there are fine groves and pine trees. Take a drive by auto to Mt. Surprise and on to Jackson, returning thru Conway.

An Envious Vacation

Ever envy the lucky fellow who strikes a place for his vacation among active people—people who are in for every sport—bathing, fishing, golfing, tennis, etc.? That's what constitutes the *ideal vacation*—good people, good times, good climate—nothing out of the ordinary but simply a regular vacation on .

Long Island

You have the same opportunity as the fellow you envied last year. All the tackle you need to land such a place is the book of actual pictures and condensed reading matter of Long Island, entitled "Long Island & Real Life." It contains a list of the best hotels and boarding cottages, their rates, etc. Mailed upon receipt of ten cents postage by the General Passenger Agent, Long Island Railroad, Pennsylvania Station, New York.

The glorious Springtime, with the interesting walks, drives, trout fishing, tennis and golf, make this an ideal place for a vacation with lots of healthful outdoor life. The arbutus, lots of it, is blooming. In the midst of all these pleasures, first class accommodations are to be found.

J. W. HURLEY, Manager

Ninth Day. Leave *INTERVALE* in the afternoon. Arrive *BRETTON WOODS* in about two hours. Hotels \$4 up per day, American plan. This is the radiating point for many trips and while you are here go via train or auto to Jefferson with its fine hotel and wonderful views of the White Mountain range; to Crawford House for a trip up Mt. Webster by foot or on stage; to Bethlehem, whose unique Main Street, extending about one mile, is lined on either side with summer hotels, large and small. Take one day for the trip to the summit of Mt. Washington, reached either by carriage road or inclined railway.

Twelfth Day. Leave *BRETTON WOODS* in the morning. Arrive *PROFILE* in about an hour. Hotel \$5 up per day, American plan. This is the place in the White Mountains where the Great Stone Face is to be seen. The Profile, called the "Old Man of the Mountain," is renowned as the most wonderful rock formation in the world. While here, drive to Franconia for the mountain views there.

Fourteenth Day. Leave *PROFILE* in the morning by stage for North Woodstock, where connection is made by train for New York. Arrive *NEW YORK* in the evening.

Approximate cost of trip, New York
boat to Portland, rail to New

NEW JERSEY SHORE RESORTS

Time—One Week to Ten Days

First Day. Leave *NEW YORK* in the morning by train or boat. Arrive *ASBURY PARK* in about two hours. Hotels \$3 up per day. Boarding houses \$2 up per day. Asbury Park is a miniature Atlantic City, with superb bathing beach, boardwalk, casino, fishing piers and fine hotels. Take time to visit Ocean Grove, which you will find a contrast to its gay neighbor. It is a popular Methodist Camp Meeting Ground. Its great auditorium seats 10,000 persons and has a fine organ.

Third Day. Leave *ASBURY PARK* by train or trolley. Arrive *SPRING LAKE* in fifteen minutes. Hotels \$3 up per day, American plan. This place is noted for having some of the most beautiful hotels in the country. The walks and drives are attractive. Bathing, fishing, golf and tennis are all popular. Take a part of a day for a trip by trolley to Sea Girt, one and a half miles distant. It is the summer headquarters of the National Guard of New Jersey. You may continue the trip to Point Pleasant, which extends from the ocean to the Manasquan River.

Fifth Day. Leave *SPRING LAKE* in the morning. Arrive *BEACH HAVEN* in a few hours. Hotels \$2.50 up per day, American plan. This resort is located on a narrow island twenty miles long, and is noted for its wonderful beach. The bathing is ideal, the beach being level, hard and clean. The bay is one of the finest for sailing; a large fleet of comfortable boats are here and may be hired by the day or season. Fishing and hunting are both good. It is an ideal resort for people suffering from hay fever.

Seventh Day. Leave *BEACH HAVEN* in the morning. Arrive *ATLANTIC CITY* in the afternoon. Hotels \$2.50 up per day, American plan. The "Playground of the World," is one of the most attractive cities of America. Its boardwalk, sixty feet wide, is five miles in length. There are four great steel piers crowded with features of interest, and along the opposite side of the walk are shops, theaters and hotels in almost unbroken succession. Here you may spend your time yachting, boating, fishing and crabbing. The chief pleasure is bathing. Golf can be had at the Country Club, and many of the hotels have tennis courts nearby. Trips by trolley may be taken both on the island and the main land.

Tenth Day. Leave *ATLANTIC CITY* in the afternoon. Arrive *NEW YORK* in about three hours.

Cost of trip, New York to Atlantic
City and return\$8.93

AN EXTRAORDINARY CONCESSION BY JAPAN

By Rev. J. Ingram Bryan

The Expatriation bill recently passed by the Imperial Japanese Diet will prove one of the most significant international measures in the country's history. One of the chief difficulties of the immigration problem has been the refusal of the Japanese Government to acquiesce in the naturalization of Japanese subjects abroad. The attitude was not a mere whim or conceit of narrow nationalism, but the logical and necessary outcome of Japan's theory of citizenship and patriotism, which holds the Imperial House to be divine and expatriation to be treason.

What Japan had in mind was that altho Orientals are not conceded rights of naturalization in America, yet anyone born in the United States may be regarded as an American citizen. Not to be liberal beyond the barest necessity, the new expatriation law enacted by the Imperial Diet in Tokyo allows only those Japanese subjects who have been born abroad to seek naturalization in foreign countries. A Japanese born at home and going abroad temporarily or permanently is not allowed foreign naturalization. Even those born abroad and desiring to become citizens of a foreign country must first obtain the permission of the Minister of Home Affairs in Tokyo.

That the question was brought forward just at the present juncture is probably due to the problem created by the Germans in the United States. Since many German subjects in America have proved a source of menace to American neutrality during the war, Japan began to feel that the natural uneasiness thus likely to be aroused concerning the status and behavior of aliens in the United States would possibly work against the interests of Japanese there, as most of them were without the privileges of American citizenship. This consideration, taken together with the fact that the Webb law militated against Japanese interests chiefly because the Japanese were supposed ineligible to citizenship, forced the legislators of Japan to take some action. Japan maintained that the Webb law was aimed directly at the Japanese, tho the measure singled out no race or nation. In fact, the one and only reason why the law worked against the interests of Japanese nationals was because of their inability to acquire citizenship, which, as a matter of fact, most of them did not wish to obtain, since it would be to them something like what loss of salvation would mean to a Christian.

None but those familiar with the peculiar genius of Japanese civilization realize how radical is the move involved in this new expatriation law. To suggest that a Japanese born abroad might be allowed to exchange allegiance to the Emperor for allegiance to an alien sovereign or potentate, was like suggesting to the Christian that if his chil-

CANADA STEAMSHIP LINES

dren were born in India they should become Brahmins or Buddhists. To Japan patriotism is religion. Worship is devotion to the Emperor and the imperial ancestors; and the ancestral spirits are the gods of the nation. How the House of Peers, which represents the old aristocracy of Japan, and the House of Assembly, which stands for the masses, could agree to so revolutionary a measure is something that astonishes those who know Japan.

As the law stands it will effect the relief of about 15,000 Japanese born in American territory, speaking in round numbers; but doubtless they will, if granted citizenship by the American authorities, be able to take advantage of sufficient privilege to accommodate all the remaining hundred or more thousand Japanese in America and Hawaii. The only question now is whether the American Government is prepared to grant citizenship to all Japanese born in the United States. At present much indignation is expressed in Japan that her nationals are refused citizenship, while the favor is granted negroes and Filipinos; America excludes Orientals from citizenship: Japanese are Orientals, but Filipinos are not. Or, as the Japanese vernacular papers allege, the Japanese, in American eyes, are yellow, and the Filipinos white. All of which to the Japanese mind savors of insincerity and effrontery.

Tokyo, Japan

HALF A MILLION MADMEN

When the Verdun deadlock changed to the most terrific pitched battle in history, fully half a million men were engaged in the slaughter. Whole regiments melted in a few minutes, but others took their place, only to perish in the same way.

A staff captain who left the fortress on a special mission to Paris tells this story of "the battle of madmen in the midst of a volcano eruption":

Between Saturday morning and noon Tuesday we reckon the Germans "used up" 100,000 men on the west Meuse front alone. That is the price they paid for the recapture of our recent gains and the seizure of our outlying positions. The valley separating Le Mort Homme from Hill 287 is choked with bodies. A full brigade was mowed down in a quarter hour's holocaust by our machine guns. Le Mort Homme itself passed from our possession, but the crescent Bourrus position to the south prevents the enemy from utilizing it.

The scene there is appalling, but is dwarfed in comparison with fighting around Douaumont. West of the Meuse, at least, one dies in the open air, but at Douaumont is the horror of darkness, where the men fight in tunnels, screaming with the lust of butchery, deafened by shells and grenades, stifled by smoke.

Even the wounded refuse to abandon the struggle. As tho possessed by devils, they fight on until they fall senseless from loss of blood. A surgeon in a front line post told me that in a redoubt at the south part of the fort of 200 French dead fully half had more than two wounds. Those he was able to treat seemed utterly insane. They kept shouting war cries and their eyes blazed, and, strangest of all, they appeared indifferent to pain. At one moment anesthetics ran out owing to the impossibility of bringing forward fresh supplies thru the bombardment. Arms, even legs, were amputated without a groan, and even after-

The Coast Line to Picturesque Mackinac

There is real rest and recreation in these splendid boat trips to Mackinac Island—the historic and beautiful summer resort of the North Country—The D. & C. Line Steamers embody all the qualities of speed, safety and comfort. Freedom of the decks—commodious staterooms and parlors—and unexcelled cuisine, makes life aboard these floating palaces a source of continual enjoyment. And there's fun aplenty for every minute of your stay—boating, sailing, fishing, bathing, golfing and sight-seeing furnish endless amusement; and you can revel in the cool lake breezes and nature's most seductive scenery.

"D. & C. a Service Guarantee"

Four trips weekly from Toledo and Detroit to Mackinac Island and Way Ports. From June 25th to September 10th Special Steamer Cleveland to Mackinac Island direct, two trips weekly, making no stops enroute except at Detroit, each direction. Daily service between Detroit and Buffalo, and Detroit and Cleveland. During July and August delightful day trips between Detroit and Cleveland—also two boats every Saturday and Sunday night. Daily service between Toledo and Put-in-Bay, June 18th to September 9th.

Railroad Tickets Accepted

For transportation on D. & C. Line Steamers between Detroit, Buffalo and Cleveland, either direction. Send for Illustrated Pamphlet and Great Lakes Map, showing routes, rates, etc. Address L. G. Lewis, General Passenger Agent, Detroit, Mich.

ward the men seemed not to have felt the shock. They asked for a cigarette or inquired how the battle was going.

Never have attacks been pushed home so continuously. The fight for Cemetery Hill at Gettysburg was no child's play, nor for Hougoumont at Waterloo, but here men have been flung 5000 at a time at brief intervals for the last forty-eight hours. Practically the whole sector has been covered by a cannonade, compared to which Gettysburg was a hailstorm and Waterloo mere fireworks. Some shell holes were thirty feet across, the explosion killing fifty men simultaneously.

Before our lines the German dead lie heaped in long rows. I am told one observer calculated there were 7000 in a distance of 700 yards. Besides, they cannot succor their wounded, whereas of ours one at least in three is removed safely to the rear. Despite the bombardment supplies keep coming. Even the chloroform I spoke of arrived after an hour's delay when two sets of bearers had been killed.

The dogged tenacity needed to continue the resistance far surpasses the furious élan of the attack. We know, too, the Germans cannot long maintain their present sacrifices. Since Saturday the enemy has lost two, if not three, for each one of us. Every bombardment withstood, every rush checked brings nearer the moment of inevitable exhaustion. Then will come our recompense for these days of horror.

In the twilight preceding the dawn the French sentinels announced that the enemy were advancing in streams along parallel communication boyaux until their trenches were filled. The 75s immediately concentrated on the hostile trench line, including the new saps mentioned by the sentinels, as they were pushed forward during the night. The enemy suffered heavily, but persevered, and soon dense columns appeared amid the shell-torn brushwood on the southern fringe of Corbeaux Wood, pouring down into the valley separating them from the former French position on the hillside.

Thinking the French still held the latter they deployed with the most recent trench-storming device in the form of liquid fire containers, which special groups of four installed, two then working the pump and two directing the fire-jet. The grayness of the dawn was illumined by sheets of green and red flame, and black oily clouds rolled along the valley toward the river like smoke from a burning "gusher."

Suddenly the air was filled with shrill whistling as shells of the 75s were hurled against the attackers. Thanks to the devoted sentinels dying at their posts in the sea of fire, the range was exact, and the exploding melinite shattered the charging columns. An appalling scene followed. The shells had burst or overthrown the fire containers, and the Germans were seen running wildly amid the flames, which overwhelmed hundreds of wounded and disabled.

In this confusion the French charged with the bayonet, despite the furnace heat and fumes produced by the red-hot containers lying in all directions. The enemy offered little resistance. It was like a slaughter of frenzied beasts.

Vainly the officers tried to maintain order. The demoralized mass broke again in a rush for shelter to the nearest shell holes. Hundreds fought in a terror-stricken mob to hide in a hole that might have sheltered a score. Those beneath were stifled. Those above threw themselves screaming into the air as the bullets pierced them, or fell dead in a dash toward a safer refuge. Flushed with success the French charged again, right to the entrance of the wood, and the slaughter recommenced.

Of a brigade 5000 strong that began the attack it is estimated that under 500 reached their own trenches in safety. In shell holes and boyaux the French captured some hundreds, and a similar number of wounded were removed by our stretcher bearers, but nearly 3000 gray-clad corpses covered the slopes and valley, the majority charred out of human semblance.—*New York Times*.

Why It's GLACIER NATIONAL PARK

GLACIER PARK is established as America's Vacation Paradise—for reasons. It surpasses the Old World's most famous Nature-pictures in mountain splendor, the azure beauty of its 250 skyland lakes.

Here, at the Continental Divide, the Rocky Mountains reach their supreme glory. Go on horseback over wide trails, through sky-reaching passes, join a hiking party or drink the Park's cool breezes in luxurious automobile or launch. Fine modern hotels and Swiss chalet groups. Tepee camps. Vacations, \$1 to \$5 per day.

Glacier Park is on the main transcontinental line of the Great Northern en route to Spokane and its vacation places—Seattle, Tacoma and Puget Sound resorts—Portland, Astoria, with the new Columbia River Highway and Clatsop Beach resorts—Vancouver, Victoria and Alaska.

Round trip fares to Glacier National Park in effect June 1 to Sept. 30; to the Pacific Northwest, Puget Sound and Alaska May 1 to Sept. 30.

The twin Palaces of the Pacific—S. S. "Great Northern" and S. S. "Northern Pacific"—three times weekly between Portland, Astoria and San Francisco. Folder on request.

THE NEW BOOKS

OLD LANDS AND NEW

Pathetically few this year are the volumes that treat of travel abroad. Among the handful published is an attractive little book, *Rambles in the Vaudois Alps*, by F. S. Salisbury. It has nothing to do with adventurous mountain climbing nor does it touch on the characteristics of the Swiss people, but any lover of Alpine flowers and Alpine scenery will enjoy it. It is a pleasure, too, to mention the third edition of P. H. Ditchfield's *Cathedrals of Great Britain*, which includes the five recently added, and with those of Wales and Scotland, brings the number above fifty. The accounts are shorter than in Mrs. Van Rensselaer's handbook that Americans have for a generation been tucking in their satchels, but this is the guide to take on a trip that is to include the lesser sees. The host of illustrations are delightful drawings by Symonds and other English artists.

When—long ago—there were plans for the celebration of a century of peace, Sulgrave Manor, the home of Washington's forebears, came into frequent notice. Anne Hollingsworth Wharton of course visited that among the other *English Ancestral Homes of Noted Americans*, but she found out also many less known spots, as the two lovely dwellings of William Penn, and Ecton, the home of the Franklin family of sturdy blacksmiths. Even in London she leads to some little trodden corners, as that of the Church of St. Ethelburga, where Hudson and his men took communion before setting sail on their first voyage.

This year, however, such books as these serve only as reminders or as prophecies. For practical purposes we read of this side the water. Here the distance be not limited, variety is, and after the rush of books occasioned last year by the two Panama fairs, the presses are rather quiet. The latter half of Thoreau's delightful journal, "In the Maine Woods," is just published in an illustrated edition, entitled *Canoeing in the Wilderness*, and the Maine Woods and ways of camping have changed a bit since 1857, Thoreau, the forerunner and the master of all our prophets of the woods and hills, never loses his charm.

As far as may be from his simplicity, indifference to conveniences and absorption in nature is the sophisticated guide *By Motor to the Golden Gate*. The journey as described consists mainly of runs from one hotel to the next, and the book has practical value in that it tells precisely what you are to expect in each place; adds daily expense records; maps of each day's run, for the Lincoln Highway is still "like the equator"; and sound advice as to the car to use and what to put in it. But one fancies that the folk who have done this trip less

luxuriously, camping out most of the nights instead of one, made up in fun and interest what they lacked in creature comforts.

Mary R. Rinehart's *Through Glacier Park* is yet another sort of a story. On horseback for days among the fastnesses of the Great Divide, with early morning starts and evenings around the camp fire; with paths along precipices and fishing in mountain streams; this is a real holiday, and a bit of life that the old world can never give us. If everyone who reads this lively little book follows his certain impulse and writes to reserve a place in one of the long single file processions that follow Howard Eaton where the motor can never go, there will surely be another clerk needed at the Glacier Park Post Office.

Rambles in the Vaudois Alps, by F. S. Salisbury. Dutton. \$1. *English Ancestral Homes of Noted Americans*, by A. H. Wharton, Philadelphia. Lippincott. \$2. *The Cathedrals of Great Britain*, by P. H. Ditchfield. Dutton. \$1.75. *Canoeing in the Wilderness*, by H. D. Thoreau. Houghton, Mifflin. \$1. *By Motor to the Golden Gate*, by Emily Post. Appleton. \$2. *Through Glacier Park*, by Mary R. Rinehart. Houghton, Mifflin. 75 cents.

CAVE MEN

The history of the prehistoric is nowhere more interestingly or more broadly painted than in the *Men of the Old Stone Age*, by Professor Osborn. During a three weeks' tour of the regions containing the best preserved relics of the Stone Age in France and Spain, he was impressed by the continuity of the record of man's residence and activities for a period of some 100,000 years. In addition to giving the chronological sequence of the cave men's development, the climatic changes, the character of the environment and the animal life of each period are described.

The author acknowledges his indebtedness to the artists of the stone age, for he has drawn upon the engravings, sculptures and paintings of the caves and grottos for much of his illustrative material, and this adds incalculably to the interest. One is impressed by the keen observation and the skilful strokes of the ancient artists, quite as much as by the inventiveness of the artizan. The many restorations from human remains include the work of American as well as European scientists. The restorations of Professor McGregor impress one at first as being somewhat glorified, in view of the antiquity of the people they are supposed to represent; but Professor Osborn's theory that these ancient worthies were rapidly developing a high degree of intelligence justifies the upward look and alertness expressed in the faces. The importance of the Stone Age in the evolution of the human race is summarized as follows:

During this age the rudiments of all the modern economic powers of man were de-

veloped; the guidance of the hand by the mind, manifested in his creative industry; his inventive faculty; the currency or spread of his inventions; the adaptation of means to ends in utensils, in weapons and in clothing. The same is true of the esthetic powers, of close observation, of the sense of form, of proportion, of symmetry, the appreciation of beauty of animal form and the beauty of line, color, and form in modelling and sculpture. Finally, the schematic representation and notation of ideas so far as we can perceive was alphabetic rather than pictographic. Of the musical sense we have at present no evidence. The religious sense, the appreciation of some power or powers behind the great phenomena of nature, is evidenced in the reverence for the dead, in burials apparently related to notions of a future existence of the dead, and especially in the mysteries of the art of the caverns.

Our 200 illustrations with maps and diagrams add to the interest and value of a book that has already twice out-run its printing.

Men of the Old Stone Age, by Henry Fairfield Osborn. Scribner. \$5.

HERE AND THERE IN EUROPE

A manifest change is taking place in the tenor of war books. With actual military operations for the most part barred against correspondents, they now proceed to describe conditions in the countries involved. This is what chiefly interests in *With the French in France and Salonika* by Richard Harding Davis. His is the attitude of a man who has seen much of the world and become broadly tolerant. Thus he refers to former troubles at the French front in an entertaining vein, and consorts with Levantines of endless guile determined to preserve a humorous outlook. But he is clearly serious when he comments upon the adverse sentiment in Europe directed upon his own country. He lays responsibility upon several home causes, not the least being overeagerness on the part of some Americans to profit financially from the war, together with indifference toward the acute distress of nations for whom he felt a deep sympathy. This, while the French are fully appreciative of the help rendered by other Americans. As an able war correspondent, a writer possessing the rare gift of strength and charm combined, it is with regret we turn the cover upon his active and useful career.

Doubtless the publishers of Stanley Washburn's *Victory in Defeat* have in their safe the warrant, ukase, or whatever document is necessary for permission to emblazon the Russian Imperial Arms on the cover. It is very artistically done, but Grand Chamberlains and Grand Marshals of the Court are chary of their privileges. Even in democratic England you get into serious trouble for using the royal arms without a license. However, as the publishers announce on the wrapper that the author is a friend of the Czar, Grand Duke Nicholas, Foreign Minister Sozonov, General Alexieff and all other Russians in high war authority—quite a social circle to keep up with—probably no international difficulty would result had the aforementioned rescript been overlooked.

Now the book "by the one American who can say 'I saw'" the ravishing of

Belgium. Thus introduced to Arthur Gleason's *Golden Lads*, with the further indorsement of Theodore Roosevelt, we have read the evidence produced with impartial care. From this we gather that Mr. Gleason saw twenty-six peasant houses burning at Melle, a babbling old man *threatened* by a German sentry with a bayonet, three bodies carried out of the houses, a dead farmer in a yard, and himself with others destined for a screen of German troops marching on Ghent. But the latter was merely a surmise, for nothing of the kind transpired. He saw the wreck of the convent school at Melle, but learned none of the sisters had been harmed. At Witteren Mr. Gleason visited a hospital and witnessed eleven peasants suffering from bayonet wounds. The statements of these people are credible in so far as no testimony from the other side was obtainable. But contributory to it is Mr. Sweetser's report in "Roadside Glimpses of the Great War" of a German surgeon's horrified recollection at Valenciennes of Belgian peasant atrocities committed upon captured German soldiers.

Mr. Gleason also saw the ruins of bombarded Belgian cities. Otherwise his evidence is at second or third hand mainly. While granting all this makes no creditable German reading, yet it is far from convicting the whole German army of deliberate barbarity as distinct from what some persons insist upon terming *civilized* warfare. More convincing is the author's chapter on the spy. Unquestionably Germany prepared thoroly, and was a painstaking news-gatherer. Especially noteworthy is Mrs. Gleason's contribution: *How War Seems to a Woman*. It is such an entirely modern feminine view, yet ethically so ancient that the writer offers a subject likely to produce discussion. Briefly, as Mrs. Gleason puts it, let a woman but share a man's danger and she occupies her natural place. What that natural place is, the reader must be left to discover.

It is but reasonable that an artist should feel personally wounded before the destruction of beautiful monuments, and naturally Walter Hale dwells with feeling on this form of atrocity in *By Motor to the Firing Line*. Presently, however, the mind flits to the statue of Oliver Cromwell in London, and wonder takes us that an English sculptor of the first rank could have been found to fashion in bronze a representation of him who was as impeachable a Hun in this respect as anyone. The answer may be that in human dramas of such appalling magnitude architectural and all other material treasures sink into insignificance. It is the American news-gatherer — traveling hither and yon in rapid passage—who grasps a stray gleam of promise, not, as we read, the imaginative or artistic observer who seems to halt dumb-founded and bewildered as he confronts the grim facts swept into the foreground in the tornado of strife. There is no charm in war, no picturesqueness anywhere. But, as Mrs. Gleason says in *Golden Lads*, "What is in the man comes out

under the supreme test." If out of him should happily come an awakened conscience of justice, truth and right the world over, our loss in precious monuments will not have been in vain. Mr. Hale has written a very readable book illustrated with several sketches of distinct merit.

It would be impossible in less than a chapter to do justice to the wealth of vividly contrasting material gathered by John Reed in *The War in Eastern Europe*. In Salonika, onward thru Serbia, a military prisoner at Cholm, into Russia, back to Constantinople and the Bulgarian Declaration of War, the author presents a succession of swiftly moving pictures, from which strong character sketches of all manner of strange people hang in the reader's mind.

For example, at the station of typhus stricken Gievieglie "a stout man in a dirty collar, spotted clothing, etc.," revealed a financial scheme for selling Serbia outright to America "for a music" and "make money big." Mr. Reed's experiences in Russia hardly present that country as on the verge of a new enlightenment. He saw political prisoners on the way to Siberia, was warned not to ask too many questions, was trailed by detectives and found bribery everywhere unblushingly practised. With frankness the Jew was excluded from benefit in any future political reform. As Mr. Reed, however, entered Russia under suspicion of being a German secret agent, it is possible he was unable to reach channels of broader public opinion. Wayfarers in Russia appear to be extremely chary of suspicious traveling companions, and tell them perchance what is considered best for German consumption. The illustrations are by Boardman Robinson in the new art style, which makes the book a bit risky to leave near a child with a pair of scissors.

With the French in France and Salonika, by Richard Harding Davis. Scribner. \$1. *Victory in Defeat*, by Stanley Washburn. Doubleday. Page. \$1. *Golden Lads*, by Arthur Gleason. DEMOCRATIC EDUCATION

Professor John Dewey in *Democracy and Education* presents for the first time in a unified form the philosophic foundation of his educational theory.

Growth, "the characteristic of life," is one with education. The possibility of growth means the power to learn from experience, or the capacity of adaptation and the forming of dispositions which give "control over environment, and power to use it for human purposes. Education or growth so defined is an end in itself and can look to nothing further except more growth.

The native impulses, however, must be set toward the aims of the group, which can be achieved by creating an "identity of interest." The subject matter of education will, therefore, be that which has meaning with reference to these aims. Only that which has meaning can be operative in the development of a fruitful experience.

WINTER: THE CAROLINA, PINEHURST, N. C.

Education is on this view a social process. For a democratic society the criteria of valuation of any "form of social life" are "the extent in which the interests of a group are shared by all its members and the fullness and freedom with which it interacts with other groups."

The aims of education, like all aims, are but conscious projections into the future of the results of our natural activities. It is the task of philosophy to criticize the various possible results and propose methods of harmonizing the various interests. Professor Dewey's book is itself a most brilliant example of the function of philosophy, for he gives us a transvaluation of educational ideals and methods in the light of a theory of knowledge of which he has been the chief originator.

Democracy and Education, by John Dewey. Macmillan. \$1.40.

"OUR" GERALDINE FARRAR

Pleasant and exhilarating reading is this brief little autobiographic sketch of a great American prima donna. From it one might almost think that a great *artiste's* life was a succession of dazzling triumphs easily won. Almost, yet not quite, for there are disquieting allusions to the long, toilsome years of preparation, the ceaseless grinding labor, the nervous strain of holding huge audiences, and the cruel fatigues that follow thereupon. For all these allusions to the laborious and troubled side of such a life, this autobiography throws no such realistic light upon the difficulties that beset the path of actress or opera singer as is thrown by Sarah Bernhardt's larger, and 'discreet yet illuminating, account of her early and painful struggles and subsequent successes. Americans, however, be the shortcomings of this book what they may, cannot fail to read with pride and pleasure this sprightly account of the world-wide triumphs of their compatriot, who began life humbly in a little New England town; and who, after successes in Berlin, Paris and elsewhere, was proudest when she returned to her own country, and won by her great gifts, her art and her irresistible beauty and charm her high place in the hearts of her own people.

FOREST AND HILLS

Let Us Go Afield is a group of essays on out of door topics. Emerson Hough betrays himself as by birth an angler, but one wishes every bird hunter might read *Wealth on Wings*, and his discussion of being a sportsman versus paying to see other men play is worth notice. (Appleton, \$1.25.)

Chronicles of the White Mountains, by Frederick W. Kilbourne, is accurately named. In it one finds almost nothing of the geology, the plant and animal life, the scenery, but one does find the legend and the history of man's connection with those loveliest highlands of the East. (Houghton, Mifflin, \$2.)

To the lover of the hills, *The Mountains*, by John C. Van Dyke, with its mingling of science, philosophy and esthetic appreciation, will be a welcome little essay, and

the knowledge it imparts by the way, of how the mountains came to be and what they are and what they do, is all interesting and worth while. (Scribner, \$1.25.)

The Latch String is the attractive title of Walter Emerson's discursive but enthusiastic description of the attractive land of Maine. (Houghton, Mifflin, \$2.)

In *Along New England Roads*, W. C. Prime writes of the delights of travel, with horse and carriage. Scenery, sunshine, birds, flowers and whatever might be seen in such now novel wandering, he makes mighty interesting reading. His chapter on epitaphs and names culls the rare and unusual out of the commonplace. (Harper \$1.)

WHEN SCHOOL CLOSES

In *Marooned in a Forest*, A. Hyatt Verrill adopts the Robinson Crusoe plot as a thread to string all sorts of woodcraft lore. It is an impossible tale, but it gives an amount of miscellaneous information most attractive to any boy or girl who loves adventure and the woods. (Harper, \$1.25.)

A much more reliable work by Mr. Verrill is *The Ocean*, a good book to take to the seashore, where it will answer many questions for grown-ups as well as youngsters. (Duffield, \$1.25.)

For *Commencement Days* Dr. Gladden truly did, as he says one must, bring his best. These papers ranging from personal counsel to national needs, are broad minded and inspiring. Do not be deceived by the sentimental blue cover! (Macmillan, \$1.25.)

Thompson Seton may not teach science, but he is a master in inspiring sympathy with our furry kin and in writing healthful and charming romance. *Wild Animal Ways* has a dog story, a horse story, one of a bat, one of a bad monkey, and best of all, one of a razor back hog. (Doubleday, Page, \$1.50.)

On the shelf of popular handbooks of growing things there was one real gap which Elizabeth Marie Dunham's *How to Know the Mosses* fills. This introduces them without the aid of microscope, and will find warm welcome by those who cannot be scientists but who still love moss. (Houghton, Mifflin, \$1.25.)

An uncommonly beautiful and useful book is *A Year with the Birds*, by Alice E. Ball. Under the headings Winter, Early Spring, Later Spring, the 56 color plates, by W. H. Horsfall, of the Museum of Natural History, and the accompanying verses, which children will love, will teach any child to notice bird life and know our commoner birds. (Gibbs & Van Vleck, \$3.)

BOTH WORK AND PLAY

A Living from Eggs and Poultry, by H. W. Brown, a city man who has succeeded in a country business, is not a scientific treatise, but a handbook of practical directions for beginners. It goes into details often taken for granted in larger works. (Judd, 75 cents.)

The Vegetable Garden, by R. A. Watts, the director of the Pennsylvania experiment station, is a good guide for novices. It contains careful directions for soil preparation, and then directions for the special culture needed for each kind of vegetable. (Outing Pub. Co., 75 cents.)

In *Low Cost Suburban Homes*, edited by Richardson Wright, the would-be builder will find a discussion of the initial cost and upkeep of buildings of various materials, with their relative cost in various parts of the country. The plans are attractive and range in price from about \$4000 to \$10,000. (McBride, \$1.25.)

Tennis for Women is by Molla Bjurstedt, the Norwegian player, who won our championship in last year's tournaments.

The GLEN SPRINGS

WATKINS, N. Y.
ON SENECA LAKE
Wm. E. Leflingwell, Pres.
OPEN ALL THE YEAR

A Mineral Springs HEALTH RESORT and HOTEL, known as THE AMERICAN NAUHEIM. Beautiful location in Private Park with miles of accurately graded walks for Oertel hill climbing, ranging in altitude from 750 to 1100 feet. Five minutes' walk from Watkins Glen. Midway between the Great Lakes and the Hudson on the Southern Tier Highway, all Macadam. Well-kept Golf Course, Miniature Golf, Clock Golf, Tennis, Motoring, Boating, Music, Dancing.

THE BATHS

are directly connected with the Hotel and are complete in all appointments for Hydrotherapy, Electrotherapy and Mechano-therapy.

The Bathing Springs are similar to the waters of Bad Nauheim, but about five times as strong. The Radium Emanation from Brine Spring No. 1 averages 68 Mache Units per liter of water and is due to Radium Salts in solution.

For the treatment of Heart, Circulatory, Kidney, Nutritional and Nervous Disorders; Rheumatism, Gout and Obesity we offer advantages unsurpassed in this country or in Europe.

BLUFF HOUSE

MILFORD, PIKE COUNTY, PA.

Opens June 24; 95 miles from New York City; accommodates 350; most charming resort on bank of Delaware River; rooms en suite with bath; orchestra; baseball; tennis; magnificent roads; boating, bathing, fishing, etc.; no mosquitoes. Automobile bus from depot to hotel. Send for illustrated booklet.

P. N. BOURNIQUE, Proprietor.

It is a clear, practical and modest discussion of training of the different strokes and of the play desirable for women. She makes a vital difference between the men's game and the women's. (Doubleday, Page, \$1.25.)

Dominoes, by F. W. Lewis, will cause you to take the dust covered set from the top shelf, for the simple old game the children played of rainy days is but a small part of the amusement to be drawn from the black and white counters. There are the French and Spanish games, and Threes and Fives, and Sebastopol, and more. (Dutton, 50 cents.)

A valuable primer of general information on mechanics and the psychology of handling a car is A. H. Verrill's *A B C of Automobile Driving*. The chapter on Getting Out of Difficulties is packed with ingenious first-aid suggestions, and the introductory talk on Safety First ought to be "required reading" for every licensed operator. (Harper, 50 cents.)

PRESENT DAY TOPICS

A timely and interesting book is *Presidential Nominations and Elections*, by J. B. Bishop. These chapters do not present idealistic pictures from our history, but they are none the less needful to our understanding of present and past political situations. (Scribner, \$1.50.)

There is now issued in book form the Address delivered by Elihu Root last February before the New York Republican Convention, in which he scored the present administration on many counts, but especially its policy in regard to the European war. (Dutton, 50 cents.)

Woodrow Wilson, by H. J. Ford, is a "mid career appreciation." It is made up largely of extracts from speeches and writings, and the one must wait for a critical analysis or a really human picture of the President, since these cannot be made en route, this will prove very useful for setting forth the obvious features of his life. (Appleton, \$1.50.)

In the Social Service Series are three small books for the general reader on present day topics; *Government Finance*, by C. C. Plehn, an argument for business in place of hit or miss methods; *Trusts and Competition*, by J. F. Crowell, on "big business"; *The American City*, by H. C. Wright, dealing with the kinds and the duties of city government. (Chicago: McClurg, 50 cents each.)

Arthur Lynch, M. P., attempts in *Ireland's Vital Hour* to explain to England and the world Ireland's present position in respect to internal problems, economic, political, and social. In fact the author, a voluminous writer on a variety of subjects, pretends, and not without considerable success, to be an authoritative interpreter of Ireland. In politics the author is an Irish Nationalist and apparently thoroly loyal to the British Government, tho at times a severe critic of its Irish policy. The book is valuable for an understanding of present-day Ireland. (Philadelphia: Winston, \$2.50.)

CELEBRATED DAYS

Mother in Prose and Verse, one of the Shaufler and Rice anthologies, gathers within reach some real poetry, as well as sincere verse and prose. (Moffat, Yard, \$1.50.)

Easter is the latest volume in the handy books of verse and prose for holidays compiled by S. T. Rice and edited by R. H. Shaufler. One wishes more of the quaint early and medieval hymns had been included in the small carol section, but the collection covers a wide range. (Moffat, Yard, \$1.)

Our Mothers, compiled by M. A. Ayers, is less successful, tho in it will be found many popular favorites. As one looks over

these collections, called forth by Mother's Day, however, one wonders if feeling for one's own mother or even for motherhood be not an emotion rather personal for public celebration. (Boston: Lothrop, Lee & Shepard, cloth, \$1; leather, \$2.)

SUMMER AFTERNOONS

The Sign of Freedom, by Arthur Goodrich. To write a Civil War story today seems a rather thankless task, but an exciting plot, a complicated dual love affair and a good deal of wholesome patriotism makes this attempt not unsuccessful. (Appleton, \$1.35.)

The Light That Lies, by George Barr McCutcheon. The story of a young man who thought that he did not want to do jury duty. A very slight but comparatively entertaining bit of fiction, with a clever climax which is somewhat slow in coming. (Dodd, Mead, \$1.)

Susan Clegg and Her Love Affairs, by Anne Warner. Probably you have met Susan Clegg before. Her amusing monologic conversations make the sort of easy, entertaining reading which is highly to be recommended to convalescents. (Boston: Little, Brown, \$1.30.)

Hearts and Faces, by John Murray Gibbon, is a distinctly interesting description of artist life in Scotland, London and Paris. Tho much of the material is unpleasant, it is sanely and simply treated. The plot is weak, but the characters are extremely well done. (Lane, \$1.35.)

The Desire of the Moth, by Eugene Manlove Rhodes, has a good, unbackneyed plot. It would make an excellent film drama of western life, tho, in transferring it to the screen, the eccentric and entertaining conversation of its hero, John Wesley Pringle, would unfortunately be lost. (Holt, \$1.)

Seven Miles to Arden, by Ruth Sawyer, contains a dozen or more impossible situations from which the hero and heroine are extricated by a whole Pantheon of *dei ex machina*. Patricia O'Connell, late of the National Players, and the Tinker are entertaining tho highly incredible people. (Harper, \$1.25.)

Under the Country Sky, by Grace S. Richmond, is a pretty little love story, quite free from "problems," complex characters, "thrills" and similar incumbrances. It is sure to appeal to any one who, in this day and generation, is fortunate enough to have time for such gentle reading. (Doubleday, Page, \$1.25.)

My Lady of the Moor, by John Oxenham. A curious tale of the regeneration of two men by the love of a woman who had great faith. It is a strange book, compelling attention tho not altogether convincing. There are excellent descriptions of Dartmoor, the scene of the story. (Longmans, Green, \$1.35.)

People Like That, by Kate Langley Bosher. A society girl goes to live among "people like that" to learn what they are really like and the responsibilities of her sort of people toward them. A love affair mingles with the interesting problems which she meets and the solutions she suggests. (Harper, \$1.25.)

The Proof of the Pudding, by Meredith Nicholson, is a pleasant story of the Middle West. Every town must have a country club in these days. Better, it is growing the fashion to have a boys' club and a gymnasium. The lesson of this wholesome story lies in the hero's plan of life: "just helping, just being kind." (Houghton, Mifflin, \$1.35.)

Old Judge Priest, by Irvin S. Cobb. Judge Priest and his friends, the old soldiers, politicians and other citizens of a sleepy southern town, form the material for some very good stories, dramatic, pathetic, but chiefly humorous. Taken in large doses, however, Mr. Cobb's easy journalistic style does grow wearisome. (Doran, \$1.25.)

**Trust Your Taste
Not Mine**

Most of the thousands of men who are smoking J. R. W. cigars were satisfied with a store cigar before they tried mine. It surprised them to find one so much better.

You have wondered at times if there was a better cigar than your regular smoke at the same or less money. If you are smoking a 100 straight or two for a quarter, there is. But don't take my word for it. Your taste should decide.

A Big Saving

Cigar value is based on one thing only — the fineness of the leaf. There can be no inflated values in J. R. W. cigars, because the salesmen's salaries and expenses and the store up-keep have been eliminated. These savings are made in your favor.

Many men answer my advertisements merely from curiosity, and admit it when they write. I am glad to hear from them. I want to satisfy your curiosity also. When you smoke your first J. R. W. you realize that you have found an unusually sweet cigar smooth-burning and mellow.

The leaf I use is selected for me from the crop grown in the Vuelta district of Cuba. Only the best of the year's output is used. Proper aging and careful cigar-making combine to make the J. R. W. a delightful smoke.

Smoke Five Free

Send me only your name and address on your business card or letterhead, and enclose 10c to cover revenue, postage and packing. I want you to smoke five from the box I will send you. When you find they are really "your smoke," send me a check or money order and I will replace the five smoked. My price is close to cost—\$2.60 for 50, \$5 per hundred. Write to day.

J. ROGERS WARNER
149 Lockwood Bldg., Buffalo, N. Y.

FACTS, arguments, briefs for debates. Outlines, literary, historical, scientific and other material for club papers, orations, speeches and lectures. **BUREAU OF RESEARCH**, 318 E. 5th Street, New Albany, Ind.

**Physical
Culture
for the Face**

Will make you look younger and more beautiful than all the external treatments you might use for a life-time. No massage, electricity, vibration, astringents, plasters, straps, filling or surgery, nothing artificial—**Just Nature's Way.**

Results come soon and are permanent. My system makes muddy, sallow skins clear, and the complexion as fresh as in girlhood; firms the flesh, and never fails to lift drooping and sagging facial muscles, **removing the wrinkles they cause.** The too thin face, and neck are rounded out and hollows filled in. No one too old or too young to benefit.

My system makes the face clear, bright, and it leaves the best skin after any treatment. No matter what the condition of the face, I remove all blemishes, freckles, and give the most exquisite coloring for a whole evening.

Write for a FREE New Booklet.

If you are interested in this system, please send me the booklet, and I will send you the booklet, and I will send you the booklet.

THE HERITAGE OF TYRE

By WILLIAM BROWN MELONEY

The first, direct, uncompromising demand for a new American mercantile marine. Mr. Meloney points out the opportunity that is now ours, the opportunity to recover our lost sea prestige and to set our flag waving again in every great port of the world. Not only is this merchant marine needed by our commerce—it is absolutely necessary and indispensable to the support of a truly adequate navy. The United States must be a vassal on the seas no longer. *Fifty cents.*

THE PENTECOST OF CALAMITY

By OWEN WISTER

Author of "The Virginian," etc. "Mr. Wister may well be congratulated upon having voiced the opinion and feelings of all those of his American countrymen who, proud of the nation's past, hold that you 'cannot pay too high for the finding and keeping of your own soul.'"—*Philadelphia Ledger*.

"In this book speaks the man, not the diplomat—the interpreter of the feelings of the American who comprehends the divinity that is in history."—*Boston Advertiser*. *Eighteenth printing.*

Fifty cents.

STRAIGHT AMERICA

By FRANCES A. KELLOR

The United States is a huge melting-pot wherein are mixed the conflicting traditions and ideals of every race and people in the world. This book shows how we can control this process, how we can best educate and train the immigrant to make him indistinguishably American—an integral and necessary element in an enlightened and united nationalism.

*Ready in June.**Fifty cents.*

THE FORKS OF THE ROAD

By WASHINGTON GLADDEN

Awarded the prize offered by the Church Peace Union for the best essay on war and peace.

A powerful indictment of war which calls upon the political and religious forces of our country to give up preparedness programs and to follow a policy that will make for the prevalence of peace. Never has Dr. Gladden written with such fervor and inspiration; his book goes straight to the heart of our national problem; without cant or sentimentalism, he shows the course true Americanism must take.

Fifty cents.

THEIR TRUE FAITH AND ALLEGIANCE

By GUSTAVUS OHLINGER

With an Introduction by Owen Wister.

A fair, impartial discussion of German propaganda in America describing the methods in use and the results achieved.

"For the sake of the facts that it gathers, this book should be read, not once, but two or three times, by all Americans who believe in Union, in Lincoln and in Liberty."—*Owen Wister*.

Fifty cents.

AMERICANIZATION

By ROYAL DIXON

What are we doing to Americanize the alien? How can we make sure that he will emerge from the melting-pot willing to support and to contribute to our institutions? These are questions which Mr. Dixon asks and to which he offers a clear and simple answer, broad and practical in vision. His suggestions are more than merely constructively patriotic—they are stirringly hopeful.

*Ready in June.**Fifty cents.*

THREE OF US WITHOUT A CARE

(Continued from page 370)

Joe Lake. We were met by a furious head wind which contested every foot of the crossing with us. But eventually we prevailed and slipped into the comparatively quiet waters of the creek. It soon became apparent that we must promptly make camp, for the wind continued to blow with unabated fury, making the crossing of the larger lake a difficult if not a hazardous undertaking. To add to our troubles bursts of rain descended upon us every few minutes.

Camp sites there were none. Everywhere the shores were encumbered with fallen dead stuff and the banks behind were choked and slashed to a tremendously uncomfortable degree. At last we fought our way thru and up to a comparatively clear bit of woodland and sat us down on a log to consume hard-tack, cheese and figs. Hunting in vain for a good camp site, we were constrained to pitch White Cap in a kind of trail that afforded barely room for his eight-foot spread. Despite the interminable rain we contrived to make a dry camp with a fairly good balsam bed, to which we presently retired with our books. Later we sat up in bed and ate hard-tack and raw onions (the result of the Tortoise's reading about the gustatory habits of Sancho Panza).

Two toilsome days. But what splendid, purple days! To pit your so finite strength against the mighty power of the elements is royal sport. You defy the waves with Grey Brother's fragile shell, you push his quivering length forward foot by foot against the vicious thrust of a blustering head wind, your two slender paddles springing and bending under the strain. You bend and sway instinctively like rope walkers as the waves shoulder Grey Brother about. It is slow, muscle-cracking business, this paddling into the teeth of a fine young gale. But every inch you gain is a new count to your credit in the rude game you play with Nature. When at last you have won, and the farther shore is yours, you have done something well worth the doing. You have added by a hair's breadth to your moral stature.

When you have made camp where camp site there is none, have drawn in the dripping, freezing wilderness a little circle of warmth and dryness and comfort, have made a home to you, another victory is yours. The Red Gods nod approval of your hardihood, endurance, courage, resourcefulness, as the rough elements growl vanquished at your feet.

Too high a note this is? Just try it once. Match yourself bare-handed against wild Nature's forces, and win—you will not think it so, if red blood flows in you.

Friday, October 6—Still gray and cold. Made good breakfast of ham, cold biscuit and cocoa. N. B.—Cocoa very good; take two cans next time and more evaporated cream. After washing up sat before the fire and ruminated. Began to rain, donned rubber fishing shirts and continued to sit. Then it snowed and eventually we filled the hot water bag and retired to the blankets where we now are. We intend to have dinner of spaghetti and tomato sauce. It is snowing hard and very cold. . . .

And so home. With vivid, glowing memories to be with us and keep us all alive and brightly happy until we come this way—or another way, so we three be together and alone—once more.

GOOD BOOKS

THE ABINGDON PRESS

The Abingdon Press is the trade imprint of the oldest publishing house in the United States

THIS HOUSE OF GOOD BOOKS has been actuated by the ideal of distinctive service ever since it was established in 1789. It has always aimed to give disinterested help to readers and authors alike, and realizing this parents have freely consulted it with regard to their own reading and the mental food of their children.

The spirit of THE ABINGDON PRESS is expressed in one way by a special book service. If you want the best book on a certain topic, ask THE ABINGDON PRESS for its name.

Should there be any question among the staff as to which book should be recommended, the matter will be referred to a specialist in that particular line. This service is without cost other than the regular charge if the book is furnished.

The better shops everywhere carry the ABINGDON PRESS publications. Catalog on request. Below are given two of the latest issues:

SIX FOOLS

By ROLLO F. HURLBURT

A series of ethical essays designed to show the folly of certain courses of living. Suggestive chapter headings are: "The Companion Fool," "The Woman Fool," "The No-God Fool," with many illustrations from the Bible.

A CHALLENGE TO HOUSEKEEPERS

By Thetta Quay Franks

Author of "Efficiency in the Household"

"Americans are not thrifty, but spendthrifts," said Henry W. Longfellow. At this tragic moment of the world's history, when thousands are starving and nations are driven to extreme measures of economy of the food supply to preserve their very existence, it seems fitting that American women should focus their best intelligence upon the question, "Are we, upon whom devolves the responsibility of purchasing and preparing the food supply of our nation, attending to this duty as so vital a trust demands?"

If, by improved methods of administering their household affairs, American women could save one dollar per household, it would mean a saving to the nation of twenty millions of dollars a year. To ensure greater economy of time, money and effort is a valuable contribution to good citizenship.

God forbid that our nation should be drawn into the struggle which is devastating the world, but if it should be, administration of the food supply might be of vital moment to our existence as a nation. This form of preparedness is women's work.

In the following Household Efficiency Test grade each satisfactory answer 5. The total will give your percentage of efficiency.

1. Do you consider your occupation of housewife a profession which requires your most intelligent attention and to which you are proud to belong?

2. Do you look upon yourself as your husband's business partner, whose responsibility in spending the income is as vital to the family welfare as his responsibility in earning the income?

3. Does your husband look upon you as his business partner? Do you share with him a knowledge of his financial status, his future prospects, and the ends toward which he is directing his energies? Are you in sympathy with his aims and doing all in your power to aid him?

4. Do you know the amount of income which you are free to spend upon food, clothing, servants' wages, household furnishings, recreation, etc.? Have you planned your disbursement of this income upon the budget plan?

5. Is this income placed at your disposal at the beginning of each month, or at some other definitely determined period, for your free disbursement? Is whatever surplus may accumulate, because of your careful and intelligent management, yours to dispose of as you think best?

6. Do you deposit your monthly or other allowance or income in a bank and draw it out by check? Do you consider that such well-established business methods are as useful to you, in your business relations, as to your husband in his business relations, and that making use of the most approved business methods adds dignity to your profession of housewife?

7. Do you know that the United States Post Office will supply you with 500 stamped 2-cent envelopes and print your name and address in the upper left-hand corner for the sum of \$10.62, which sum is only 62 cents above the price of 500 2-cent stamps? Have you supplied yourself with these business envelopes?

8. Do you know that your bank will

have your name printed upon the checks in your personal check book free of charge? Have you supplied yourself with such a personal check book? Do you believe that personal checks add dignity and authority to your profession of housewife?

9. Do you preserve receipted bills and other business communications in letter files?

10. Have you adopted a cost-keeping system which is a complete record of every day's expenditures? Are you able to state clearly, at the end of each month or year, exactly how much money you have spent and for what?

11. Is your house planned thruout for your own specific use on sanitary, economic principles?

12. Are the heating and ventilating systems adequate and hygienic?

13. Is the light, both natural and artificial, up to the maximum of quality and quantity, but down to the minimum cost?

14. Have you accurate knowledge of every labor-saving device applicable to your household? Have you supplied those which you approve and can afford?

15. Have you taken all possible fire protection and precaution? Have you a complete inventory of all your household belongings?

16. Have you a practical knowledge of the intelligent planning of the work of a household, so that labor may be justly divided and each employee given a reasonable time of rest?

17. Do you tell each worker exactly what to do, how to do it, and then hold him or her responsible for results?

18. Have you a practical knowledge of cooking? Of economical buying? Of the balanced ration?

19. Have you a complete personal grocery list, stating the brands or varieties which you have assured yourself, to the best of your ability, to be unadulterated and healthful? Do you take stock of the groceries in your house at the beginning of each week or month? Do you buy in quantities and as economically as possible? Do you think that this plan saves time, money, and the nervous strain of the daily ordering of supplies?

20. Have you compared all your methods of housekeeping, in detail, with those of at least a dozen other women whose similar incomes might make their experiences of value to you? Are you willing to be told that your methods might be improved, by such practical housekeepers, by an employee, by an expert?

MRS. FRANKS

Sent Free, Postpaid, for Examination

An ornament that will grace any library table. The volumes are pocket size—just the thing for travel reading—for campers, canoeists and all who love to read out of doors!

Thirty Books

Limp Leather—only \$5⁷⁵
World's Masterpieces, Unabridged—Pocket Size
A Set Sent Prepaid on Approval—Book-Rack Free

An Excellent Gift—Especially For Graduation

FOR those who love good books, these volumes have been published. Glance over the list of titles. They include many of the world's greatest poems, plays, essays and stories—complete and unabridged. They are works you want to read and reread a score of times. They are books you want to commune with quietly under your library lamp. You will carry them with you always—to read in spare moments on trains, or on your vacation-trips—by the sea—in the woods! Shakespeare's greatest tragedies, De Maupassant's most vivid stories, Emersons profoundest essays, Kipling's stirring ballads and tales, great works of Tolstoy, Oscar Wilde, Lincoln, Maeterlinck, Ibsen, Dickens, Poe and a dozen others—these are books you want to live with. And nothing could be more appropriate as a gift to the grammar school, high school or college graduate.

Why the Price is so Low

The price of this set is so very low that, if you know books, you may imagine these cannot be of good quality. They are, remarkably so! They are bound in real book-leather—not imitation—and are printed on excellent paper in clear readable type. Heretofore books of such quality have oftentimes sold for \$1.00 apiece and probably never before for less than 50c each. Yet these excellent little volumes sell for less than 20 cents each, by the set. Among publishers themselves it has been the year's sensation that books so beautiful could be offered at so low a price. But it is no secret as to how this was done. Several hundred thousand volumes were printed at one time, relying upon the public's love for good books, to make the venture self-sustaining.

See Them First Before You Buy

If you wish to have a set of these books—thirty of them—with a book-rack free—you need send no money in advance; you can have them sent, postage prepaid, on approval. You can then judge for yourself whether they are as represented. If you do not want them, send them back within five days. This is an eminently fair offer—it is made in the confidence that no book-lover who once places this set on his library table will ever wish to part with it. This approval offer is only made to those who buy the complete set of thirty volumes. If you wish to buy single volumes, send the necessary money in advance. If you are not satisfied, return them at once, and your money will be refunded without question.

A MESSAGE TO PARENTS

If Education is to be preparation for complete living, boys and girls must be led to a proper appreciation of the vital interests, movements and events of the present. No one is fitted to take his place as an American citizen and voter unless he has an intelligent understanding of modern, national, political and social problems. It is surprising to see how many students are uninformed on the most commonplace news of the day. These students are not really to be blamed, for most of them have not been given the proper advice and guidance.

Give Them The Independent

THE "SQUEEZE-PLAY" AT THE CAPITAL

BY W. J. GHENT

THIS is not a tale of the daring and ingenious device practised in our favorite national game by which a runner secures an unearned base. It has to do wholly with the various minor grafts, pinches, "squeezes," hypothecations and excises by which our national lawmakers convert to their own use money or service, which, according to law, does not belong to them. The major grafts—pork barrels, river-and-harbor, "good-roads" and building appropriations, retainer fees, outright bribes and other considerable sources of revenue—have from time to time been treated by others. This time only the minor grafts will be considered—grafts which, though often petty enough individually, make up a staggering collective total.

Curiously enough, the real facts are never presented in print. Often an attempt is made to treat one small phase of the subject—for instance, the mileage graft. Sometimes will appear a sensational article regarding the pen-knives, manicure sets and chatelaine bags obtained by Senators and Representatives from the official stationery rooms. The implications made in such an article, however, are always absurdly misleading. On the one hand, none of these commodities can be had by anybody without purchase; and, on the other hand, they can be bought by anybody about the Capitol—the elevator boy or the doorkeeper being quite as privileged a purchaser as the Congressman. And as a wide assortment of excellent stock is kept, and as prices are only a little above manufacturers' rates, there is no wonder that our statesmen and their women folk, as well as others, buy liberally. These stationery sales do not in themselves furnish a case of graft, tho there is, perhaps, a question of graft in the whole stationery allowance. And yet it is only a trifling matter when compared with the other grafts by which our statesmen piece out their earnings. These various "squeezes" constitute a system of pilfering which goes on uninteruptedly.

A Congressman's perquisites are many, and the average Congressman makes full use of all of them. Sent to the Capital to make laws for the government of all of us and to safeguard the public treasury, he first sees to it that nothing tangible to which, under the shadow of the law, he can lay claim escapes him. Some of the lawmakers, of course, are there for any kind of graft, legal or illegal, customary or unusual; but even the legislator who prides himself on being above bribery will unblushingly practise forms of graft that are despicable in their meanness.

There is, for instance, the mileage graft—in which *all* share. It is an old "squeeze," dating back to the early days of the Republic. Before the close of the Civil War the rate was 40 cents a mile. By the Salary Act of 1866 the Congressmen lifted their net recompense from \$3000 to \$5000, but they

Two years' experience as a secretary to a Congressman gave Mr. Ghent a first-hand knowledge of the disgraceful conditions he sets forth. He is the author of "Our Benevolent Feudalism," "Mass and Class" and other books. — THE EDITOR.

cut the mileage to 20 cents. In 1873 they pushed their salaries another notch forward, to \$7500, but the protest that went up from every part of the nation persuaded them, during the following year, to repeal the raise. In 1907, however, they restored the \$7500 figure. In all this salary legislation they left the mileage rate untouched, and it has thus remained constant since 1866. Technically, it has no basis in law, since it was not mentioned in the law of 1907; it is, however, included in the appropriations every year.

THE MILEAGE GRAFT

MILEAGE works both ways—that is, going and coming. Also, it works whether the Congressman takes a train or an auto. Or if one session runs close to another, the Congressman may remain right in Washington and still draw his mileage for two round trips. When Representative Tawney, of Minnesota, acting as chairman of the Committee of the Whole in the House, on January 29, 1904, made his decision in the matter of the special session which ended on the fifth of the previous December, and the regular session which began two days later, a settled precedent was established which gives the lawmaker his double mileage even though he doesn't return home.

Now, mileage isn't much of a matter to the Congressman who lives in Maryland or Virginia. To the Kansan or Missourian, however, it is an agreeable bonus, and to the Californian it is a juicy "melon." And nobody in high place these days is rejecting melons. Yet somehow, among the people, there has grown to be a fairly widespread objection to this particular form of graft, and consequently the echoes of this feeling are often heard on the floor of the House of Representatives. The Senate, heretofore indirectly elected, has not usually bothered itself with such an undignified subject; but among the direct representatives of the people at the other end of the Capitol a discussion has often arisen which has prompted shudders of apprehension.

Every year, in the discussion of either the general appropriation bill or an urgent deficiency bill, up comes the mileage question. The procedure is almost always the same. A new member, fresh from the people, moves that the rate be reduced to 10 cents a mile. Another, not to be outdone, amends to make it 5 cents. Still another moves a substitute to reduce the allowance to the actual expenses of travel. Then there is a discussion and a cross-fire of parliamentary motions. The subject is

soon lost in a fog; there is an adjournment, and the next day the old rate is re-enacted without argument.

Or perhaps it transpires that one of the movers is really in earnest and that an alarming number of Representatives show a disposition to vote for a reduction. Thereupon one of the old-timers, from a district where the people never revolt at anything, rushes into the breach with a plea which allays all objections. Mileage, he contends, has nothing to do with the transportation rate on railways. It is an addition, a bonus, to the regular salary, which a grateful people decrees to its representatives. Time and precedent, he argues, are on its side. That the rate happens to be very much in excess of the average railway rate for transporting passengers is a point at once irrelevant and incompetent. The people should not be insulted by the supposition that they entertain any picayunish ideas about the recompense of their representatives, and anyhow the old rate should stand. Of course his grateful auditors agree with him; there is a synchronous sigh of relief from all present as they realize the averting of a threatened disaster; and the old rate stands.

Every year, and sometimes twice a year, this farce is repeated. The fact that at a recent conflict over the matter in the House the present rate was sustained by a majority of only ten carries small significance of a change. Usually it is known beforehand, by a counting of noses, just about how the vote will stand. Those members, therefore, who want the rate continued, but who stand in a wholesome fear of a critical constituency, are enabled to have their votes recorded in favor of a reduction, in the blissful confidence that everything is safe. Nor is the fact that at a still more recent consideration of the matter the reduction was actually carried in the House, indicative of a change. The amendment was, of course, defeated in conference. The Senate—even the directly-elected-by-the-people Senate—is confidently expected to act its historic role as a check on popular caprice, and there is nothing to fear.

THE FRANKING GRAFT

THE franking privilege is a rational one so long as it is not abused.

No Senator or Representative who performs his duties and attends to the correspondence of his constituents could afford to pay first-class postage for all his letters or other class postage for his documents and seeds. But every one about the Capitol and the two big office buildings knows that this privilege is not honestly observed. Of course there are none of the outrageous abuses of several years ago. Too much publicity spoiled that graft. No Congressman would now frank his weekly laundry home to be washed and ironed by his colored washwoman and franked back again. No one would now frank his typewriting machine for a transcontinental trip.

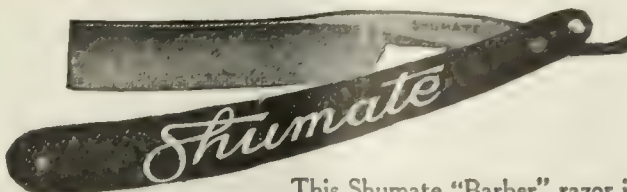

But the two big boxes—and one of them is cedar, so that it may repel moths from clothing—to which each Congressman is entitled, make their way back and forth between sessions at Uncle Sam's expense. Millions of franked speeches—many of them of no earthly interest to any one—clog the mails. Carloads of seeds, 85 per cent of which have been purchased from private growers, and 50 per cent of which go to waste, are freely distributed. Letters—hundreds of thousands of them—and telegrams, too, which have nothing whatever to do with public business, journey post free or wire free. It is no part of Uncle Sam's contract to pay the campaign expenses of his Congressmen. Yet much of this correspondence—perhaps most of it—is personal; it concerns itself with politics, with conditions in the home district or State, with promises of rewards or with mollifying explanations of unfulfilled pledges. It is the Congressman's own business and not the public's. And yet the public pays for it.

There are some Congressmen who, along with their secretaries, scrupulously observe the distinction between private and public matter and who pay postage where postage is due. But even a limited experience with official life in the legislative buildings will convince an observer that the franking privilege is grossly abused by a large number, if not a majority, of the members of both Houses.

THE STATIONERY GRAFT

The stationery allowance of \$125 may also, for present purposes, be admitted to be a reasonable one. Technically, it is a yearly allowance; but as a matter of practise it is made for every session. An industrious Congressman, or any kind of Congressman with an industrious secretary, may well use up \$125 worth of stationery during a busy session. One of the first things a Congressman learns, however, is that this allowance may be demanded in cash. The thing he usually learns second is that he can get absolutely free from any of the committees of which he is a member all the printed letter heads and envelopes that he can use. He will still have to pay for ink, pencils, pens, paste and similar articles. But it happens that a large number of Congressmen have only the most incidental and infrequent use for such things. They therefore draw their stationery allowance in cash at the beginning of the session. If they need stationery, they run up a bill for it; oftener they do without. A soft picking of \$125 is not to be ignored.

It is very likely that this allowance was not intended, when first made, as a cash addition to a Congressman's salary. The public, in the main, is not acquainted with the fact that it is so regarded by the Congressmen themselves. In so far as public opinion sanctions it, the grant is merely a maximum allowance for needed supplies. The general practise of grafting, however, has transformed it into a cash perquisite. A good many Congressmen graft it in

You Take No Risk

This Razor is
GUARANTEED FOR LIFE

This Shumate "Barber" razor is so good that we dare guarantee it to you for life. Here's the reason—the blade is made from Tungsten Alloy Steel, which takes a keener edge than any ordinary steel can—and it holds it. You can use it for years without honing. The secret of this wonderful steel is *ours alone*, and we guard it jealously.

Here's our *unqualified guarantee*: Buy a Shumate "Barber" razor and use it—not once, but as long as you like. If you say after an exacting trial that you don't like it, we'll exchange it *without a word*.

Sent postpaid, **\$2.00**

In remitting, mention your dealer's name, and a chammois lined, rust-proof case will be included with your razor.

State whether you want light, medium or heavy blade. Heavy blade for very strong beards.

Established 1884
Capacity 6,000 razors daily

Shumate Razor Co., 691 Locust St., St. Louis, U.S.A.

THE BAFFLING of BOGGS

THE dinner-table talk went casually about such topics as the latest play, the new dance, servants and sermons, until the great voice of Boggs suddenly boomed the lighter talk into stunned silence.

Boggs roared his views of the international situation, raked the Administration over verbal coals, shot off into Mexico, and made a side trip into our National Parks and the conservation problem—all between the roast and the salad. Only the need for food ended this tremendous onslaught.

And then as the revived Boggs opened his mouth to begin again, Tom Ainsworth, noted for his modesty and reserve, surprised everyone by saying:

"So far, Mr. Boggs, you have misstated nearly every fact."

Boggs glared. Round eyes turned on Thomas. But for once he didn't seem to mind. Coldly and patiently as an analytic chemist in his laboratory, he took every one of Boggs' statements, held them up for a moment in a mental test-tube, let all the diners see their fallacy, and then proceeded to demolish them with a bewildering explosion of fact piled upon fact. When it was over, Boggs' face was a study in chagrin.

Later on, when the women and Boggs had gone, the host rose solemnly and took Ainsworth by the hand.

"It was cruel, Tom, cruel, but absolutely necessary. Now tell me, confidentially; where did you get that dope?"

"Can you keep a secret?" asked Tom. "Well, a short time back I invested in a set of the latest encyclopædia. The one I had been using was five or six years old, and I found I didn't dare trust to it for the late information everybody needs just now. By the merest chance, I happened to have read up on just those subjects that Boggs was manhandling. I tell you what, a man ought to have some real facts if he wants to back up his opinions in this new, truth-seeking time we're living in, and I don't know any more agreeable way of getting facts than is offered by this new, up-to-date encyclopædia."

* * * *

Thomas Ainsworth is right. Ignorance of facts that are bound to affect your very existence and the future of your country is inexcusable.

You'll be surprised to find with what absorbing interest subjects you've always intended to read up are treated in the Second Edition of the New International Encyclopædia.

This edition is a thorough, complete revision of the preceding work. Every article has been rewritten, every page reset and the whole work printed from new type. It is the latest, most authoritative and most accurate encyclopædia published today. Its information is easily gotten at—the subjects are arranged alphabetically, like the words in a dictionary. Anyone can understand it.

You can now buy this encyclopædia at a special introductory price and pay for it in small monthly amounts while you are using it.

Write your name and address in the blank space below, tear off and mail today. We'll send you full particulars of our offer, a free 80-page book of information about the work, or a volume of the encyclopædia for examination and comparison. Of course, you do not obligate yourself in any way.

Select Your Boat From this Catalog

Products of 225 Leading Boat-Builders to Choose From

3 Books
On Request

More boats are shown in the 1916 boat-builders' catalog than you can see at any motor boat show. This book is published by the Gray Motor Company in conjunction with the 225 leading boat-builders throughout the United States and Canada. It shows every class of boat from the little 16-ft fishing launch to the most handsome express runabout, or a snug, safe, roomy cruiser with all the comforts of a home.

Boats a Girl Can Operate

These boats are powered with guaranteed Gray Motors, which can be equipped with self-starters, and are operated the same as any motor car, nothing exposed but instrument board and controls. This book tells you where you can buy the kind of boat you want at the price you want to pay—it also gives you the name of the leading boat-builder nearest your locality.

Gray Marine Motors

The new marine engine catalog shows a complete line of both 2 and 4 cycle marine motors, 3 to 90 H. P., 1 to 6 cylinders, with every feature you have ever hoped for in a marine motor.

The Gray Book of Boats

A new and effective idea, full of authoritative information on boats and engines—just what its title explains it to be. A book that will solve hundreds of the little problems that confront everybody considering a hull or a power plant. *No theory here—all actual practice.* Not the opinion of one man but the boiled down experience of thousands of boatmen in all parts of the world.

These three books sent free to anyone writing for them.

GRAY MOTOR CO.

656 Gray Motor Building, DETROIT, MICH.

20-24 H. P., 4-Cyl., 4-Cycle Model "D",
Other Grays, 3 to 90 H. P., 1 to 6 Cylinders.

a lump as soon as they reach Washington. Of course there are others—the busy and industrious ones—who exhaust it entirely, and expend a good deal more besides, for supplies. But there is probably not a single Congressman in either House who does not, on figuring up his purchases from the stationery room and finding a balance in his favor, draw the amount in ready money.

CURBING THE PRINTING GRAFT

There would be a huge printing graft if it were not for the ceaseless watchfulness of the Congressional Record Clerk at the Capitol. A Congressman likes to see his name in print. Also he likes to have his constituents see it. If he writes a speech and delivers it, he wants them to see that also. If his secretary writes it for him, or if he buys it ready-made from one of the numerous literary bureaus about town, he is perhaps even more eager that it shall meet the eyes of his constituents. In such a case it is likely to be a greatly superior production to the Congressman's own effort. So whenever he delivers anything on the floor of the House to which he belongs, he is tempted to have the matter separately printed and distributed back home. Sometimes this temptation lures him into great expense. Printing costs money, and tho the Government Printing Office does the work as cheaply as it can be done anywhere, the cost of a few large editions of several speeches may mount up into the heavy hundreds. The impulse to print more than one can pay for is strong with some Congressmen, and the determination to stave off payment as long as possible is strong with many others. Here is where the Congressional Record Clerk finds a large part of his duty. His business is to see that the delinquent gets no more printing till he pays for the former lot, and to harry him more or less gently until payment is made. Sometimes this official must appeal to the sergeant-at-arms, who pays the salaries. Sometimes, in spite of all precautions, the Congressman finishes his term a debtor to Uncle Sam. That the case is infrequent is due not so much to the scruples of Uncle Sam's lawmakers, as to the alertness of the Record Clerk.

THE CLERK HIRE GRAFT

But the meanest and most detestable of all the Congressional grafts is the outright theft of money due the Congressmen's employees, or in the case of those Congressmen who do not employ a secretary, due the government. Every Representative and Senator is by law entitled to a secretary, with a salary of \$1500. This appropriation is known as "clerk hire." It was presumably not intended as an added compensation to Congressmen, but as an allowance for a supposedly needed assistant. Formerly the pay was \$1200. But when the Congressmen, in 1907, raised their own wages by \$2500 each, they very generously added \$300 a year to the compensation of their secretaries. This money is paid, however, not to the employee, but to the Congressman.

consequences are sometimes serious. Several Representatives have been retired from public life by reason of an issue having been made of the matter in their home districts. It could be made an issue in half of the districts and half of the States of the Union. Yet such is the desperate determination to hold on to this contemptible form of robbery that the average Congressman will risk his career rather than let go.

For many years the secretaries and their defenders sought to get upon the statutes a law compelling the payment of this salary direct. In the winter of 1912-13 a partial recognition of this demand was made in the enactment of the law that every secretary should be formally registered. But no change was made in the practise of paying the Congressman instead of the secretary. As a consequence, there has been not the slightest change for the better. At least half of the statesmen who are biennially selected from among the people to make laws, to decide ethical questions, to safeguard the treasury and to protect the rights of the weaker, constantly practise this swindling upon their hard-working employees, or else filch the money in a lump sum from the government. The theft is odious enough when practised in the House; it is more odious yet when practised in the Senate. That highly distinguished body divides itself up into enough committees to give almost three-fourths of its members chairmanships. To each of these chairmen goes a committee clerk, who in most cases is hardly to be distinguished, by the nature of his services, from a private secretary. Thus the Senate lays an extra heavy tax on Uncle Sam for clerk hire, and the individual Senators—a number of them—convert a part of this money to their own uses.

When this money is filched outright—that is, when no part of it is paid out for clerical services—the sum is apparently taken only from the public treasury. That impersonal thing, the government, is the sufferer, and nobody seems to care. In reality, however, it is taken from some unemployed person whose labor has been designated, and whose recompense has been provided, by Uncle Sam. Somebody somewhere has been cheated out of a job. When only the major part of it is pocketed, and a miserable wage paid to an overworked typewriter, there is both exploitation of an employee and faithlessness to the Congressman's obligation to have actual secretarial duties performed. The government pays for the work, not presumably for the mere convenience of the Congressman, but for the extension of public service. And when, finally, a part of this compensation is squeezed from a person who does real secretarial service, the meanness of the theft is such that it cannot be fittingly characterized.

For to many of these Congressmen the secretary's coöperation is of the utmost helpfulness. Many of them would cut but a sorry figure indeed if it were not for their subordinates' alertness and

industry. Upon the efficient secretary falls all the necessary routine labors of the office and a good many extra-routine duties. On the care and intelligence with which he performs these duties a good deal of the Congressman's reputation and efficiency depend. Yet there are Congressmen in plenty who have accepted the fullest measure of such faithful service from their secretaries and have meanly pocketed a portion of the governmentally designated wage.

The men who practise all these grafts are the nation's lawmakers. They draft statutes which define embezzlement, misfeasance in office, malversation of funds and violation of trust, and they penalize offenses by fine and imprisonment. But tho they ordain punishment for other men who pilfer, they are themselves often pilfering from the government and from their hard-working employees.

Los Angeles, California

ODDLY STATISTICAL

The retail business center of New York City is moving uptown at the rate of an inch an hour.

Compressed paper with a thin leather covering is being used in Germany as a substitute for leather shoe soles.

During the last year 2,658,717 people used the books and magazines in the central building of the New York Public Library.

The average floating population that goes thru New York City every day is about 200,000. During last winter it increased to 250,000.

United States investors have put \$645,000,000 into railroads in Mexico; \$250,000,000 more of American money have gone into Mexican mines.

In the 1916 edition of the *Almanach de Gotha*, a French year book, appears the curious information that the German Crown Prince is colonel of a regiment of British hussars.

The most valuable fruit tree in the world is said to be an alligator pear in Whittier, Los Angeles County, California. It is insured by Lloyd's of London for \$30,000. Last year the tree earned \$3000.

Greece has made enormous profits from her merchant marine since the war began. Freight rates are so high that the proceeds of a single voyage are sometimes more than the entire value of the ship making it.

Recently a Paris newspaper asked French women to answer the question, "Do you believe in woman suffrage?" It hoped to obtain about 200,000 answers in all, but it got a million replies in the affirmative.

When the immigration officers recently threatened to deport Delia Burke, for fear she might become a public charge, 600 anxious housewives, looking for a servant girl, were on hand with promises of a situation for her at good wages.

The safety record for railroads is held by the Hudson Tunnels. Since they were opened, eight years ago, 400,000,000 passengers have been carried under the river without loss of a single life attributable to train operation. Eighteen hundred trains are sent thru each day, with only ninety seconds headway during rush hours.

The largest contribution ever made to the government "conscience fund" was \$30,000, just received from some one in Philadelphia. The sender explained that it was the last instalment on a payment of \$80,000, which he had made to the United States Government in order to return four-fold the money he had stolen years ago. The "conscience fund" now contains over \$500,000.

Best Outdoor Friend

THE Smith Motor Wheel

wins friends quickly. One short ride is your introduction and in a few

moments you are on friendly terms with this new travel comrade.

It attaches in five minutes to any bicycle. Two easy turns of the pedals send the power flowing into the steel sinews of your wheel and you coast magically along.

There is a simple "grip" control—a turn of the wrist gives you 4 to 20 miles, as

Smith Motor Wheel
DETACHABLE

you choose. No troublesome levers, belts, clutch or transmission. Your new steed needs but a

gallon of gasoline for up to 125 miles, and any bicycle road—uphill or down—invites you.

No special riding togs are needed—you travel the clean way.

Get acquainted with the "Smith" at your dealer's, or write for free illustrated catalog. More than 10,000 Motor-Wheelists have found this new pleasure, and the same outdoor joy may be yours.

Independent Opinions

We can remember the time when the youthful aspirant to oratorical honors made choice between the speeches of Spartacus, Regulus and Patrick Henry or, if he wanted something ultra-modern, Wendell Philips' "Toussaint L'Ouverture." But now it takes a question of current interest to win the award of the judges. We are flattered to find that The Independent has been employed for this purpose in the schools where it is used and that our editorials, properly voiced and furnished with gestures other than those we used while composing them, have brought laurels to the contestants. We had not thought of aspiring to compete with Demosthenes and Cicero on their own ground, but hereafter we will read our editorials aloud in order to see if the sentences swing right. The clatter of the typewriters should serve as well as the noise of the surf.

We find that the editorials make excellent orations, of the type that is most appealing to the modern audience. In one of the preliminary oratorical contests, one of the boys in the Junior class won a place in the June finals on the editorial on the Mexican situation in a February issue. A Sophomore girl won honorable mention by reciting some weeks ago a portion of an article by Mr. Purinton on "Concentrate." Other pupils have selected parts of editorials and given them with marked effect. Our Friday lessons on current topics have been most interesting since we have used The Independent. The Senior class in their study of argumentation find the occasional briefs in the magazine helpful to them in preparing their own briefs, and in arranging for their debates. In short, The Independent is the ideal magazine for the teacher of English looking for help.

ALICE M. DUNBAR

Wilmington, Delaware

Has it ever been explained—

—Why the English quietly permit the Germans to do all the air-raiding? Is the trip so far as the Kiel Canal, where the latter's navy is supposed to be, too much for the nerve of the English aviators? Or is there other reason for doing nothing?

—What the force is of the complaint of outrageous "inhumanity" in trying to "starve the innocent women and children," and other noncombatants, of a nation, by shutting off their food supply? Except in the scale of it, is it anywise different from the "siege" which has always been regarded as a legitimate method of reducing a city to surrender?

—Why, if England may prevent intercourse with the Central Powers by more or less successful "blockade," the same thing is not permissible to Germany by the establishment of a "war zone"? No tolerance, of course, for contemptibly sneaking modes of enforcing such blockade, or whatever it may be called, by any combatant.

R. H. YOUNG

Haines City, Florida

1. In regard to the backwardness of the English in air-raiding, you must remember that they have no Zeppelins or other dirigibles of equal size. They have, however, made a number of aeroplane raids over towns in Germany and

CHANGE OF ADDRESS

If you are going away for the summer you will want The Independent to follow you. Let us know your new address, if possible, three weeks ahead. Be sure to give us your old address also.

THE INDEPENDENT

the German territory in France and Belgium. In these they claim to have done considerable military damage, altho the Germans deny this, and refer instead to the number of innocent civilians killed.

2. There is no apparent difference between besieging a city and besieging a country. No doubt the Germans would have completely isolated the British Isles and starved out the population if it had been possible.

3. Either country has a right to blockade the other if it can, but as a matter of fact neither side has declared a formal blockade, because it could not enforce it. Our protests to Great Britain have been because they have stopped neutral ships and confiscated non-contraband goods by Orders in Council when there is no blockade, and our protests to Germany have been because of the sinking of merchantment without warning.

Those who read MacManus's rhapsody on "Ireland's Holy Dead" in your issue of May 15 should read also as a wholesome commentary thereon "Story of the Week," on page 238 of same issue, especially the paragraph referring to the ambushing of the constables in Meath, killing ten of them and wounding eighteen, and the story of the snipers who kept up their work *con amore* for some days after the organized revolt was over. I think that Mr. MacManus himself, if he should read and realize all that happened, might not have so much to say about the holiness of the dead on the one side only. It is still true as of old that as a man sows, so shall he reap, and that they who take the sword, shall perish by the sword. It is not only true, but it is right.

J. W. MILLER, JR.

Philadelphia, Pennsylvania

Mr. Miller has acquired the art of reading The Independent. To see things in their proper perspective two eyes are necessary and the farther apart they are the better the object can be seen. That is why we publish opinions and facts on both sides of a question, altho we thereby offend those readers who want to look on the world thru one eye.

The number for April 17 is better than usual, but I beg to disagree with the editorial, "Illiterate Humbuggery." The crowds of unemployed, the fact that the great mines and foundries prefer foreign workers and so pay only low wages, show the foreigners do have a bad influence on wages. Further, if immigration is going to be toward Europe, what does our law restricting something that does not exist matter? The Efficiency paper was the best yet.

THADDEUS LAW

Amsterdam, Missouri

On the question now being debated all over the country, is Ford a joke or not, and if so is he a good joke or a bad joke, the Professor of Law in the University of Michigan makes an interesting communication:

To citizens of Michigan few things have been more amusing than the way in which the outside world has taken the vote for Ford at the Presidential primary. The writer, for some time an Independent subscriber, regrets to see the Independent no more discriminating than the rest. In your editorial note heading the article by one Ellis O. Jones in your issue of May 15 you say: "But he takes Mr. Ford seriously—just as the voters of Michigan and Nebraska did." I know nothing about the Nebraska vote, but I do know something

about the Michigan vote. The point of it all is that Mr. Ford's win over Senator Smith was due to the votes of thousands who did not take Mr. Ford, as a Presidential candidate, seriously, however he may be taken as a maker of automobiles. When any one man knows of dozens of voters who voted for Mr. Ford for reasons other than a belief in his fitness to be President of the United States, the conclusion is forced upon one that the vote should not be taken seriously.

Curiously, Mr. Jones, in his article, stumbled unwittingly upon the real reason for the Ford vote. He says: "The Republicans voted for Ford, who was not a candidate, and refused to vote for Senator Smith, who was a very active candidate." There, in the italicized words, you have it all. On the ballot were the names of Smith, Ford and Simpson—at least as I write that is the name I recall. Could you beat it? Very few voters really thought that any one of the three was fit to be President, or had a chance to be. The result was that thousands of voters looked upon the whole matter as a joke, and Ford jokes are popular. There was involved also a desire on the part of many to repudiate Smith, a presumptuous politician.

The Independent might well take the Michigan vote as the basis of an editorial on the worth of Presidential primaries. You could argue to either conclusion, for look at the rebuke to Smith.

RALPH W. AIGLER

University of Michigan

In "Story of the Week," issue of The Independent of May 1, you state: "So Nebraska may be assumed, on the face of the primary returns, to be for peace and against prohibition."

On the face of the complete official returns Nebraska seems to be for peace all right enough; but certainly not against prohibition. Here are the figures for the candidates for Governor as officially reported:

Republican	Democratic
Sutton (Dry)... 30,902	C. Bryan (Dry) 33,022
McKelvie (Dry)... 30,097	Neville (Wet)... 46,662
Madget (Dry)... 5,039	
George (Dry)... 8,426	
Miles (Wet)... 20,020	
Total Dry vote:	Total Wet vote:
Republican 74,464	Republican 20,020
Democratic 33,022	Democratic 46,662
Total 107,486	Total 66,682
Dry majority 40,804	

M. BRUGGER

Columbia, Nebraska

Some time ago you stated in an article that General French of the English Army had been in the habit of going to Belgium every summer for several years prior to the war to look over his future battlefields. Upon your authority I made this statement and have been asked to prove it. Will you kindly let me have any information which will prove this?

FRED D. GOLDSTONE

Milwaukee, Wisconsin

There is no secret now about the preparations made by the French, British and Belgians to meet the anticipated German invasion. The following paragraphs from the *London Times History of the War*, of June 15, 1915, will show what part Sir John French took in them:

As Lord Haldane publicly testified in a speech delivered on March 20, 1915, Sir John French had been studying the possibilities of a conflict for five years or more. The Lord Chancellor admitted that Sir John's interest had been that he might have to command the Expeditionary Force, and with this in mind he had given the closest study to the possibilities of the future. Particularly did he familiarize himself with Belgium, where he knew that the inevitable struggle would be contested, just as Marshal von Hindenburg spent years of his life in studying the bare plains and lonely swamps of Poland, to which his name will forever be attached. Always a

believer in following out on the ground the lessons taught in the military text and history books, Sir John had made annual pilgrimages to Belgium for a number of years in succession, accompanied by one or two of his staff, visiting the battlefields of Marlborough's and Napoleon's campaigns, but always studying the ground with an eye to a possibility which he knew could not long be delayed. Among the Field Marshal's friends the name of "The Traveling Party" was given to him and his companions on these tours.

Our monthly briefs on current questions are intended primarily for the use of debaters, but they are also proving useful to readers who want a concise and impartial summary of the arguments on "both sides" and references for further reading. Mr. F. L. Faurote of the Lesan Advertising Agency, New York, writes us that "'Both Sides' is one of the greatest things that has been done in tabloid journalism for some time."

In view of the complaints by the British that the British prisoners have been ill-treated in Germany, and the counter complaints of the Germans that the German prisoners have been ill-treated in France, the suggestion made by the Rev. Dr. McNeill of Westminster Hall, Vancouver, has a special timeliness. Certainly the Germans, since they suffer more than any of the other belligerents from shortage of food, would be willing to agree to it.

Are neutral nations doing all they can for the relief of suffering among prisoners of war? As the economic situation in a belligerent nation becomes acute there is an inevitable temptation to reduce the rations of prisoners. To languish in slow starvation is a fate surely worse than death on the field of battle. And in view of past events now familiar to all there is cause for grave anxiety over the lot of prisoners in Germany during the last stages of that nation's losing struggle.

Why not have all prisoners interned in neutral nations, and fed and maintained at the expense of their own governments? The increased cost (if anything at all) would be inconsiderable; the humane advantages would be incalculable. It could hardly make any difference in the outcome of the war; and it is difficult to see any insurmountable obstacle to the adoption of such a proposal if it were agreed upon by leading neutrals and urged upon belligerents in a friendly way. Only from neutrals could such a measure originate. Why not at least give the warring nations this humane proposal to consider?

JOHN T. MCNEILL.

Vancouver, British Columbia

I wish to express my gratification for the courageous, strong editorials in The Independent touching on the race problem.

I have known many brave, patriotic men who would charge in the very mouth of a cannon in the defense of their country, but when it came to speaking boldly in defense of justice and humanity to a weaker race they would either say nothing or dodge the issue.

Your strong, practical editorial on Haiti, the editorial on the St. Louis segregation ordinance, and "The Negro Nonconformist" have the ring of the true patriot of the Garrison-Sumner-Phillips type, who still has in his bosom the spirit of freedom and justice to humanity, the foundation upon which the Republic was built.

We all go up or down together. Reason and common sense demand that all forces work together for the development and elevation of the entire citizenship.

SAMUEL D. HOOKER

Muskogee, Oklahoma

Here Are the Facts About

Nujol

REG. U.S. PAT. OFF.

OUR booklet, "The Rational Treatment of Constipation," summarizes briefly some of the facts which doctors have learned about constipation—what causes it, and why the use of Nujol as an internal lubricant is an effective method of treatment.

Casual dosing with laxatives and cathartics is an extremely unwise way of dealing with a disorder which is so full of potential dangers as is constipation.

If you are interested in learning the facts about a far saner and safer treatment, you should have this booklet. Clip and mail the attached coupon.

Most druggists carry Nujol, which is sold only in pint bottles packed in cartons bearing the Nujol trademark. If your druggist does not carry Nujol, we will send you a pint bottle prepaid to any point in the United States on receipt of 75 cents—money order or stamps.

A REVIEW OF FINANCE AND TRADE

THE INVESTOR'S SERVICE

The Independent is now offering a Service for Investors in which personal attention will be given to the desires of its subscribers for information in regard to investments of all kinds. We cannot of course decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves.

RAILROAD STOCKS FOR INVESTMENT

THE small investor has been continually told to steer clear of stocks; the argument was in favor of being a bondholder rather than a stockholder. Yet there are good corporations and bad ones, as there are good stocks and poor bonds, and the small investor should place himself in a position to discriminate between them. Since this article was planned, railroad stocks have had somewhat of a rise, but may still be purchased at a price where the return on the investment is quite respectable. A man who purchased five years ago the stocks of such railroads as the Atchison, Union Pacific, Southern Pacific, Great Northern, Northern Pacific, Pennsylvania, New York Central or Norfolk & Western is still receiving dividends and the stocks are all selling at about par or much over. On the other hand, the bonds of many railroad systems that were developed at an extravagant rate and fell into the hands of receivers have been selling at foreclosure prices, as low as ten cents on the dollar, whereas at one time they sold in the nineties.

There is no argument against all stocks and in favor of all bonds without any qualifications. It all depends upon the character of stocks and what percentage of one's entire holdings such stocks will form.

The question of investment in either stocks or bonds resolves itself into a matter of earnings record, value of property, territory served, management and other factors rather than whether we have to deal with bonds or stocks. As a rule stocks are not desirable as sole investments for a woman because they are speculative, but they may form a small part of a woman's investment holdings if selected with care. A business man having investments amounting to say ten thousand dollars in high grade bonds yielding around 4.50 per cent might very well afford to place say five thousand dollars additional in such stocks as Pennsylvania Railroad or Atchison unless he was buying at a time when prices were the highest in years.

The man or woman who can set aside ten, twenty or fifty dollars a month to apply to the purchase of good stocks is better off in the long run than if that

sum were placed in the savings bank at $3\frac{1}{2}$ per cent or 4 per cent. But the person without a "rainy day" fund in the savings bank should not think of placing his savings in stocks. By a "rainy day" fund is meant a sum equivalent to several months' salary to be used only in case of illness or unemployment.

At the same time it should not be forgotten that sound stocks have a value as collateral for loans and many stocks listed on the New York Stock Exchange have an immediate and close market and better value as collateral than some comparatively inactive and unknown bonds. So, in the absence of funds, the holder of conservative stocks can always pledge his certificates for a loan, either at his bank or at his broker's office.

Dividends on stocks are paid by check either quarterly or semi-annually, without any deduction for the normal Federal income tax. The wise investor will place his dividend checks in the savings bank to accumulate until they have reached an amount sufficient to purchase an even share of the same stock, which may be added to the investment.

If a fond parent wishes to provide a fund for his son's college expenses, there is no better form of saving than the systematic purchase of high grade stocks. A man having a son of seven years whom he expects to send to college at seventeen has ten years in which to accumulate a fund. Twenty-five dollars a month for ten years will produce \$3,000, exclusive of accrued interest, and that amount should be sufficient to send a normal boy thru one of our best universities.

To the investor who has his eye on some "war bride" which is reputed to be earning 30

per cent, or 100 per cent, and not yet paying dividends, this article will not appeal because the most that can be offered is 5 to 6 per cent. The war stocks have sold far above normal, due to exaggerated reports of earnings, and have tumbled in a heap when the truth has come out. Many a man has seen his savings of years fade away because he wanted 20 to 30 per cent.

Railroad stocks may still be purchased at prices which will admit of some enhancement and where the return is ample. Unless stocks can be bought to yield at least 5 per cent, there is no object in buying them as there are many bonds which can be had on that basis. The small investor should buy stocks not so much with the view of future enhancement as for steady income, though he is a wise man who buys good stocks when they are low.

There are so many "tips" going around these days that a word regarding them may not be amiss. The lambs had best be wary of such advice. While money has been made on "tips," the money-maker is usually on the ground in Wall Street and knows when the so-called insiders are unloading their accumulations at high prices. The man in Great Falls or Oshkosh may be dreaming of melons while his stock has dropped twenty or thirty points. There is a time to buy on a tip and also a time to sell. So the small man who is not in direct touch with Wall Street had better keep strictly away from tipsters and be satisfied to purchase conservative railroad stocks.

It is well to mention that stocks may be purchased on the partial payment plan, on the same basis as outlined in the case of "Baby Bonds" in our February 7 issue. However, investors are warned not to buy more than they are sure they can pay for. It is preferable to take on one share at a time for cash and obtain the certificate than to buy ten and have a misfortune occur which may prevent one from continuing his payments. There is no embarrassment to be felt in going to a banker or broker with an order to purchase one share of stock. The buyer of one share today may buy a thousand in the future.

*Estimate of Wall Street Journal.

PEBBLES

Germany finds it easier to set the clock than to set the table.—*Brooklyn Daily Eagle*.

Carranza seems to be much stronger for the recall than the initiative.—*Columbia State*.

At the present rate, there isn't going to be much left of the earth for the meek to inherit.—*Columbia State*.

At least Villa and the Crown Prince have proved that dying is not nearly so fatal as it once was.—*Chicago Daily News*.

Villa may derive some consolation from the thought that the whipping he's getting hurts us more than it does him.—*Washington Post*.

Flossie Flirt—Jack, that man in the box hasn't taken his eyes off me for an hour.

Her Escort—How do you know?—*Punch Bowl*.

"G. M. Sickles, M.D., has leased from Mrs. Arnold the vacant lot adjoining his residence and will begin operations in the spring."—*From the Watkins Review*.

Lawyer—Don't worry. I'll see that you get justice.

Client—I ain't hiring you for justice; I'm hiring you to win the suit!—*Puck*.

A little boy only six years old was boasting that he worked in a blacksmith shop. "What do you do there?" he was asked. "Do you shoe horses?"

"No, sir!" he answered promptly. "I shoo flies."—*Our Dumb Animals*.

"Why must you always go out every time one of my women friends calls?"

"Well, my dear," responded her husband, "I am glad to meet your friends. But you must remember that I have heard the story of your Atlantic City trip about seventeen times now."—*Indianapolis Star*.

"Won't you be very, very happy when your sentence is over?" cheerfully asked a woman of a convict in prison.

"I dunno, ma'am, I dunno," gloomily answered the man.

"You don't know?" asked the woman amazed. "Why not?"

"I'm in for life."—*The Christian Herald*.

Berlin, April—There is no question that terrible damage was caused in London by the latest "Zeppelin" raid. The commander of the "Zeppelin L-10" has brought back with him to Germany a sketch which he made while he was flying over the British metropolis. It clearly shows the houses of Parliament in flames and Sir Edward Grey running along Piccadilly with his coat-tails afire. The sketch has been warmly commended by art and military critics.—*New York Times*.

One of the diminutive flower maidens at a school fête attended by the Queen Mother was both pretty and plump, and when Her Majesty stopped for an instant to smile down upon her, what did she do but put up her wee mouth for a kiss, which she received.

"Molly!" gasped her astounded mother, after the distinguished visitor had passed on. "How could you?"

Molly gave good reason. "I fought," said she, "it 'ud be interestin' to tell my gran'children."—*The Christian Herald*.

Here is a story which if it is not true ought to be. The soldier in the train was dilating on his changed life.

"They took me from my home," he said, "and put me in barracks; they took away my clothes and put me in khaki; they took away my name and made me 'No. 575'; they took me to church, where I'd never been before, and they made me listen to a sermon for forty minutes. Then the parson said, 'No. 575, art thou weary, art thou languid?' and I got seven days' C.B. for giving him a civil answer."—*Manchester Guardian*.

Insurance

Conducted by
W. E. UNDERWOOD

A SEMI-CENTENNIAL

This year the National Board of Fire Underwriters completes the first fifty years of its existence. The event is to be fittingly celebrated by the fire insurance people. In addition to the regular annual meeting held in May, the program of which is unusually elaborate, there is to be a banquet at the Waldorf-Astoria at which United States Senator Sherman of Illinois, Hon. Thomas U. Sisson, member of Congress from Mississippi; Hon. Burton Mansfield, Insurance Commissioner of Connecticut; other citizens of national and state reputation, and prominent fire underwriters will speak. Commemorative of the event, the Board has ready for distribution an historical volume, "Fifty Years of a Civilizing Force," written by Harry Chase Brearley.

There are many fire underwriters' organizations of national and sectional scope, but the National Board of Fire Underwriters is the great representative body of that important business and may fairly be regarded as the parent of all others, the special object of which, thru the lessening of fire hazards, is to reduce the tremendous destruction of values which occurs in this country every year. As an organization, the National Board ranks in point of service in its sphere with the American Bankers' Association, the National Association of Manufacturers and the National Association of Credit Men in their lines. Devoting itself to the big general problems of building construction, scientific investigation and analysis of hazards, legislation and the relations of fire insurance to the community, the Board assumes no jurisdiction over rate-making nor any of the lesser functions and details involved in the administration of the fire insurance business. It is a purely deliberative body.

Contrary to popular belief, fire insurance associations do not exist primarily for the purpose of imposing, thru combination, the will of the companies on the premium-paying public. Their object is a more comprehensive one, as any impartial investigator will conclude if he will take the trouble. Compared with other nations, we are an extravagant, careless and improvident people. As the result of these characteristics, we permit the destruction by fire every year of from \$200,000,000 to \$250,000,000 of the national wealth, seventy-five per cent of which is due to preventable causes. In working for the enactment of proper building codes, fire marshal laws, standard fire prevention measures and fire-fighting facilities, efficient fire departments and adequate water

The Government Wants
All Americans to Visit

Yellowstone National Park

Secretary Lane thinks all Americans should see our national parks. The Department of the Interior has published a book telling all there is to see in the Yellowstone, our greatest scenic domain. Acting as distributors, the *Union Pacific* will send you a copy free, together with illustrated literature which tells what the Yellowstone trip costs, time required, how you may stop in Colorado and Salt Lake City, how Yellowstone Park is easily reached en route to California and North Pacific Coast. You want this great Government book, you need our concise travel book, to help plan your vacation.

Keep Out the Wind

KEEP
OUT
THE
DUST
AND
DIRT

KEEP
OUT
THE
NOISE
AND
SMOKE

Showing strips used for sides of sliding windows. The Corrugations (exclusive Chamberlin feature) insure perfectly fitted sash, allowing windows to slide without friction.

Real comfort in your home can only be secured when you keep out the wind, dust, noise and smoke. Ordinary building construction does not permit this, but the trouble can be overcome by the use of Chamberlin.

Windows and doors equipped "The Chamberlin Way" mean increased efficiency of your heating plant, and reduced cost in fuel consumption. The Chamberlin service is not a luxury, it is an economy and a necessary part in building. As an investment, it will pay for itself many times over in smaller fuel bills.

Chamberlin Metal Weather Strip is a positive guarantee against the letting in of cold air, dirt, dust or soot. And windows never rattle. Can be fitted to sliding or hinged windows or doors with equal effectiveness. Chamberlin Metal Weather Strip is made of metal—nothing to wear out.

THE INDEPENDENT

supplies, in maintaining laboratories for analyzing building materials, sustaining, unsupported, a propaganda of education in fire prevention, these associations are rendering a valuable public service. All these efforts are aimed at reducing the waste by fire and cheapening the cost of insurance protection. In work of this kind the National Board has been an aggressive leader and it truly embodies the title chosen by Mr. Brearley for his book. Its contribution to the civilizing forces of the past fifty years is a substantial one.

W. C. N., Martinsville, N. J.—Presbyterian Ministers' Fund is an excellent institution. Records of associations named will be looked up and reported on in a later issue.

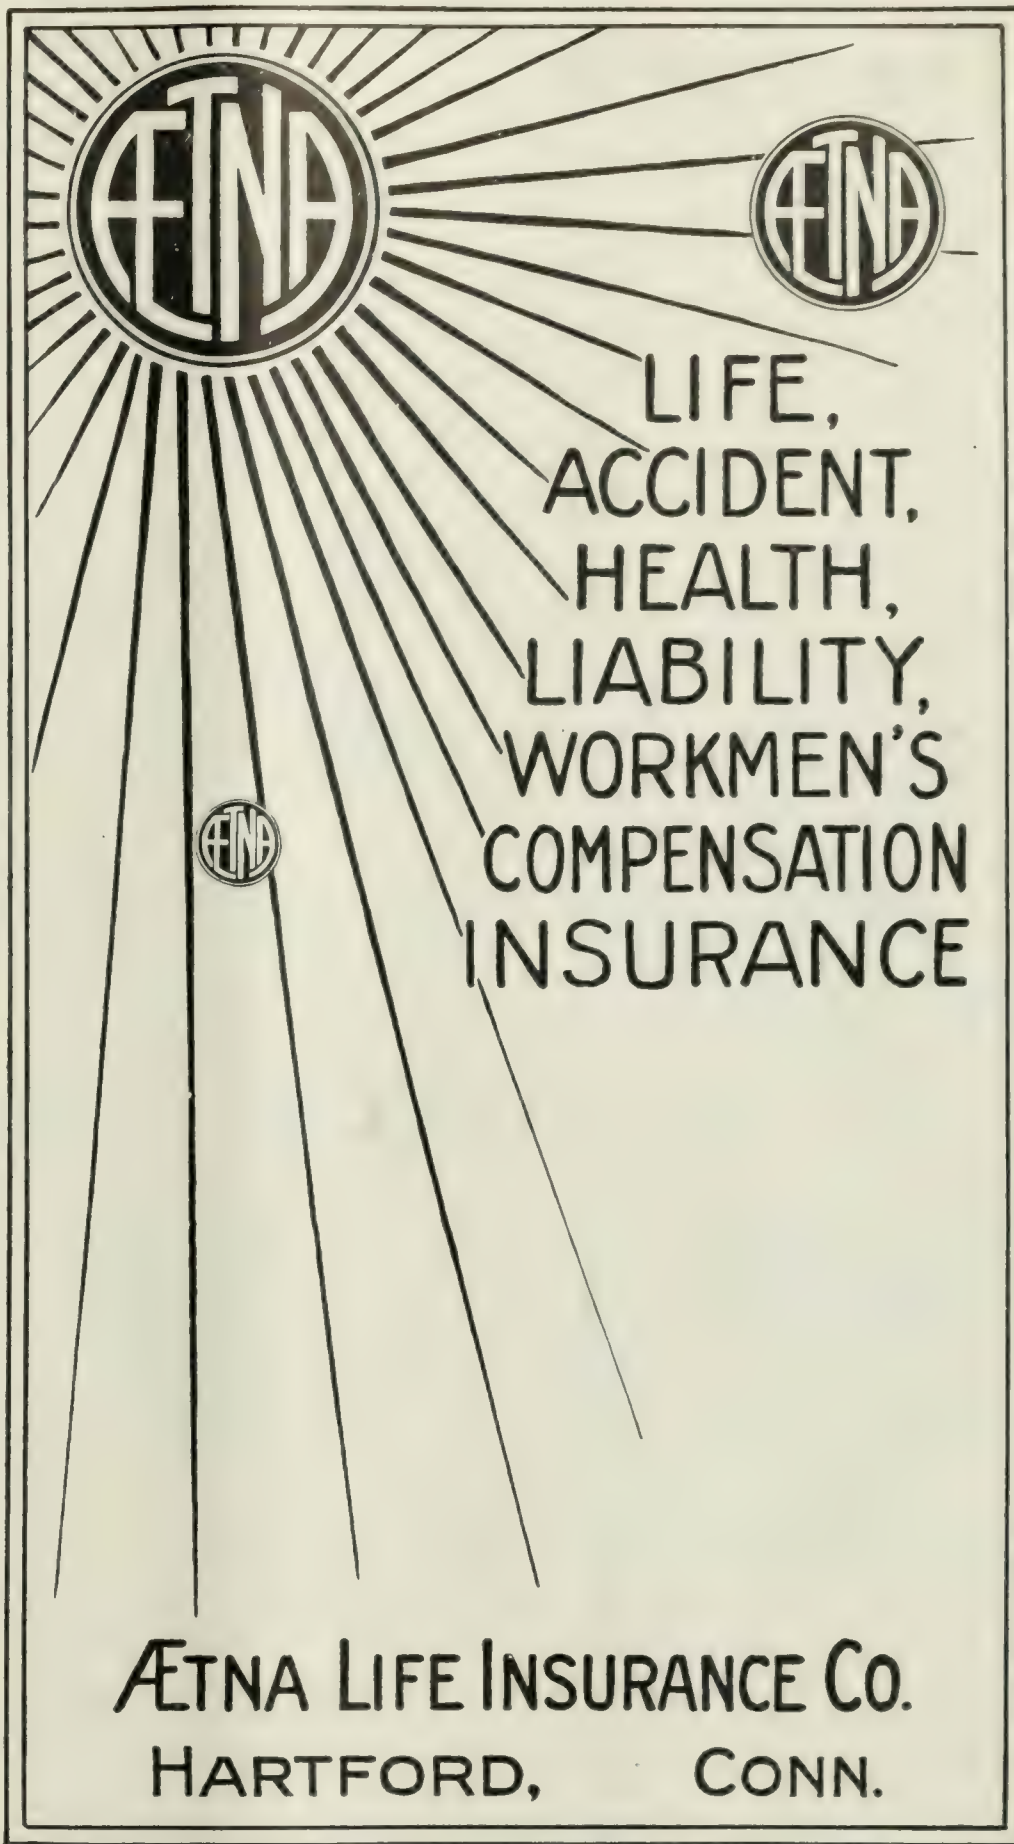

W. C. J., Waitsburg, Wash.—The Western States Life is of good repute. It writes non-participating policies only. On January 1 its assets were \$2,067,624; its surplus, \$1,070,023. This surplus includes the capital of \$1,000,000.

H. W. W., Roulette, Pa.—The assets of the Standard Life of Pittsburgh on January 1 were \$1,162,760; its surplus (including capital of \$347,225) was \$416,076. It writes non-participating insurance only. The management expenses are rather high. Claims are paid promptly.

O. M. S., Mason City, Iowa.—In my judgment you would make a mistake to surrender an ordinary life policy taken at age 23 after carrying it eight years. I recognize the argument made to induce you to surrender and take another kind of policy in another company; but it is plausible only, and misleading. Such advantages as you now see are transitory. Keep your policy.

A. W. B., Newark, N. J.—If you read the explanation of how life insurance rates are calculated, which appeared in this department of May 15, you must conclude that the assessment charges of nearly all the fraternal orders are inadequate. The Teachers' Protective Union of Lancaster, Pa., which is not even listed in the directories or handbooks especially devoted to coöperative life associations, seems to be a small affair with \$8000 to \$10,000 total assets, with no liabilities in the form of reserves. Figures of 1915 are unavailable yet, but I find that in 1914 the total income was \$31,161; claims paid, \$15,494; expenses, \$10,332; total disbursements, \$25,827. It is clear that it is accumulating no reserve, in which case, if its contracts include life insurance, I cannot recommend it.

C. D., West Somerville, Mass.—You have raised a question that is often discussed on the inside of life insurance. The custom of charging interest on deferred premiums is an old one. The annual premium, as calculated, requires that it be wholly paid by the policyholder in advance, so that the company may invest it at the rate assumed in the calculation. When only one-fourth of it is paid once every three months, unless interest is added, the calculation goes awry. The general rule is to add 4 per cent to the annual premium and divide by two to ascertain the semi-annual rate, and to add 6 per cent and divide by four for quarterly premiums. That some amount of interest should be added, is plain; the real question revolves around the rate: Are 4 and 6 per cent too high? Many think so. You have indicated a remedy when you propose to divide the amount of insurance by two or four and securing annual rates under as many policies dated six months or three months apart. In that case, however, the applicant would be compelled to undergo a physical examination each time. I am of the opinion that the companies will eventually reduce the interest rates on deferred premiums.

Pres. Importers and Traders Nat. Bank

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.31 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

YOUR PICTURES, PLEASE

The Independent-Harper's Weekly News Pictorial has begun publishing pictures from our readers' news-photograph service. There is a page of them this week. We want to print more pages—and better ones—from this time forward. Remember that we buy pictures from everywhere and everybody, if they are, first, good news, and second, good pictures. News, in our way of thinking, is something too fresh to be passed by without notice and too big to be interesting just in your street or your town or your state. Ten Dollars for the best one in any single week, Two Dollars for each of the others—those are the prices we pay. We want you to be watching all the time for the picture-opportunity that may bring a fresh increment of interest to us and a check for ten dollars to you.

REMARKABLE REMARKS

HENRY FORD—I am likely to do most anything.

THEODORE ROOSEVELT—Whatever defects I have, I do not pussyfoot.

M. SANTOS DUMONT—The modern flying machine can brave any gale.

HAVELOCK ELLIS—The English have always been great amateurs.

WOODROW WILSON—I would gladly assent to a disentangling alliance.

EMILIO ZAPATA—I am the man who should be President of Mexico.

JAMES HUNEKER—My country 'tis of thee, oh land of pork and preparedness.

ROSE PASTOR STOKES—Capitalistic society has not succeeded in making me bitter.

HAMLIN GARLAND—Today the great magazines are edited largely for the advertisers.

FRANK P. WALSH—No man should be permitted to work more than eight hours a day.

LAURA JEAN LIBBEY—The average widow is unsuspicious regarding matrimony.

ELLIS O. JONES—Why should Britannia rule the waves. Let the waves rule themselves?

MARY PICKFORD—Children are always so unhappy when they witness the death of flowers.

DR. W. LEE HOWARD—She who motors with open mouth will never have sweet lips to kiss.

OSCAR L. STRAUS—We need a man of the majestic mental stature of Theodore Roosevelt.

H. G. WELLS—The educated and leisure classes have been rotten with individualism for a century.

PROF. R. L. GARNER—I should say that there are not now more than 2000 gorillas in the world.

J. PIERPONT MORGAN—It isn't my job to deal with the international affairs of the United States.

CHARLES S. MELLE—I'm not so sure that transportation isn't at the bottom of all preparedness.

PRES. WILLIAM DEWITT HYDE—Selecting a professor is almost as solemn an act as taking a wife.

E. LOWES DICKINSON—One of the attractions of war is that it affords an opportunity for the gratifications of passions repress in normal life.

CARDINAL FARLEY—The Papacy stands alone today as the world power for peace and righteousness.

SENATOR SHAFROTH—I do not believe that the right to vote should be dependent on the right to kill.

BISHOP J. F. BERRY—I am absolutely opposed to this highly organized tabernacle form of evangelism.

CONSUL GENERAL CITIADONI—Argentina and the United States are now enjoying their honeymoon.

SENATOR ASHURST—I would like to see the color of the hair of the man who can imprison my thoughts.

SENATOR LA FONTAINE—Your great cities are crushing all neighborliness out of your community life.

DR. MAX BAFF—The runaway germ which impels girls to leave their homes is due to high blood pressure.

THEDA BARA—I have known girls with rosebud mouths and limpid violet eyes—and the hearts of criminals.

PROF. G. F. PEABODY—Not one of the historical creeds of the church pledges a disciple to a consistent Christian life.

MRS. AMELIA E. BARR—For girls to play golf, tennis and other games that rightfully are men's sports is outrageous.

W. J. BRYAN—Those who have nothing but the Eastern metropolitan press to rely upon are fortunate if they get any truth.

SULTAN HUSSEIN KEMAL OF EGYPT—One of the greatest results of the war to the Orient will be the complete emancipation of women.

E. H. SOTHERN—My parting wish is that we may soon see the plays of Shakespeare being presented to the plain people at a nominal price.

JOHN D. ROCKEFELLER, JR.—Some think life is like a layer cake, a layer of ability, some jelly, then a layer of character, then a layer of religion.

G. K. CHESTERTON—The Germans heave up a lumbering wooden doll drest in tinctacks to tell us that their culture has found expression at last.

J U S T A W O R D

We reproduce on the cover this week the spirited statue by Barye, by courtesy of Dr. George Frederick Kunz, of Tiffany & Co.

We are mostly concerned nowadays with the woman of tomorrow and with prophecies, both bright and gloomy, of the place she is to take in the world's work. But Corra Harris, who, as much as any writer of today, has helped to answer the "Woman question" in the light of common sense, finds that the chief importance should be given to *The Woman of Yesterday*. In an article soon to be published in The Independent she supports convincingly her belief that "The woman of yesterday was the most truly and wisely progressive woman this country has yet produced."

Are you ready? As a nation, as a community, as an individual are you looking to the future and planning how best to meet it? For the secret of achievement is preparedness and "the test and sum of our preparedness is to prepare for life, to fight for opportunity," says Edward Earle Purinton in a stirring appeal for *The Man Prepared*, the next article in his efficiency series for The Independent.

June Brides and Berries

Brides and berries come in June—but no matter when they come there is Shredded Wheat Biscuit to welcome them with health, contentment and happy days. In all the joys of June there is nothing to compare with

Shredded Wheat Biscuit and Strawberries

a combination that is deliciously wholesome and nourishing and is easily and quickly prepared. All the goodness of the whole wheat grain made digestible by steam-cooking, shredding and baking. Each little loaf of baked whole wheat is a good meal in itself, containing all the strength-giving nutriment needed for a half day's work.

Heat one or more Shredded Wheat Biscuits in the oven to restore their crispness; cover with strawberries prepared as for ordinary serving; pour over them cream or milk and sweeten to suit the taste. Deliciously nourishing and satisfying with any kind of berries, or fresh fruits.

Made only by

The Shredded Wheat Company, Niagara Falls, N. Y.

ARMAGEDDON ON THE SEA

OUR eyes have been for so long earthbound and myopic, watching daily gains and losses measured by the yard as on a football field, that we had almost forgotten the possibility of a sudden and decisive combat on the sea. But the thunder of the guns off Skagerak reminds us that the Great War, which seems likely to drag on painfully for another year, might be brought to an end in a single day if the fleets met and fought to a finish in the North Sea. Should it chance that the British fleet was destroyed Germany would easily win the war, for the British Isles, blockaded on all sides, would be soon starved out, and the continental Allies, deprived of British money and munitions, could not hold out long. If, on the other hand, the German fleet should be destroyed, the victory of the Allies would be equally sure, altho perhaps not so easy. It is not certain that the Central Powers could be starved out, altho completely isolated, and Gallipoli has shown that it is practically impossible to break thru a defended coast line even with full command of the sea. If this were possible a British army would long ago have been landed at Zeebrugge on the Belgian coast and so have taken the German army in the rear. But once the German fleet were out of the way the British and Russians would have command of the Baltic as well as the North Sea and the Kiel Canal connecting them. Germany would then have a new frontier to guard, and she has not men enough to do it.

It is this thought that has hitherto kept the German navy safely hid away behind Heligoland, while it was left to the submarines and a few sea rovers to do what they could to harry British commerce. Winston Churchill's threat that if the German warships did not come out of the Kiel Canal soon the British would "dig them out of their holes like rats" did not induce Admiral von Tirpitz to alter his opinion that discretion was, under the circumstances, the better part of valor. Another famous phrase of Churchill's proved his finish, that the British at Gallipoli were "within a few miles of victory," a perfectly true tho misleading statement. After this Mr. Churchill was removed from the position of First Lord of the Admiralty to one better suited to his talents, that of critic of the First Lord of the Admiralty.

But while it was obviously wise for the Kaiser not to risk his precious fleet in a fight that might prove to be fatal, it was equally wise for the British to let it alone so long as it remained bottled up at Kiel. The conse-

quence was that Great Britain has had so far almost as complete freedom of action as tho there had not been a German fleet in being. Her total losses hitherto have probably been less than the new ships built during the war, and in all parts of the world except in European waters her commerce has been practically uninterrupted. English writers discussing strategic problems before the war generally express the fear that the German warships would make communication with France difficult if not impossible, and a tunnel was talked of for that reason. They could not have imagined that a British army of two million would be transported to France and kept in supplies by a Channel ferriage more frequent and almost as safe as in times of peace.

SO the North Sea, which the Germans for some reason or perhaps purely by preference call the German Ocean, has remained under British control in spite of the Germans, while the Baltic Sea has remained under German control in spite of the Russians. Traffic between Sweden and Germany across the Baltic has been as free as between England and France across the Channel. No British warships except an occasional submarine have tried to pass thru the narrow and tortuous channels connecting the two seas, the Skagerak and Cattegat, but the Kiel Canal has enabled the German fleet to play hide and seek behind Denmark and appear in either sea as needed. For the last twenty years the Kiel Canal has controlled the peace of Europe. When it was completed in 1895 it doubled the power of the German navy, for it enabled one fleet to patrol both seas. But in 1906 England regained her supremacy on the sea by introducing a new and more formidable fighting machine, the "Dreadnought," that doomed to the scrap-heap all existing battleships. Germany could not outbuild the "Dreadnought" because the Kiel Canal was not deep enough. So the possibility of war was postponed until the canal could be doubled in width and deepened from 29½ feet to 36. This task was undertaken the very next year and on June 24, 1914, the enlarged canal was opened. Five days later the Austrian Crown Prince was shot at Serajevo and the Great War had virtually begun.

In the ten years since the first "Dreadnought" was launched hundreds of millions of dollars have been put into this new type of battleship, which was tried out for the first time last week between the Skagerak and Kiel. Here, on the last day of May, the greatest naval battle in all history was fought, but whether it will

prove to be one of the decisive battles of the world remains to be seen. The vantage lies with the Germans, but the victory is questionable. It appears that the British loss in total tonnage is at least twice that of the German, but the British claim the victory on the ground that the German fleet withdrew from the North Sea.

The British navy was at the beginning of the war twice as strong as the German, according to the estimate of the British Admiralty. In the twenty-two months since both countries have of course been building as rapidly as possible, but nobody knows how they now stand. Great Britain was accustomed to build more ships in a year than all the rest of the world put together, and with the outside world to draw upon and a smaller proportion of her workmen at the front she has probably been able at least to keep her lead. For some years before the war the British Government had allowed its building rate to drop from twice to 1.6 times the rate of German construction, but this was not so much from inability to keep up with the German program as from a belief that a larger navy was not necessary.

But even tho the British supremacy of the sea remains unshaken, it is undeniable that British prestige has received a hard blow. Not since 1667, when a Dutch fleet sailed up the Thames, has the British navy suffered such a shock. The battle-cruisers that were sunk on Wednesday were the pride of the fleet. In the "Times History of the War" of a year ago a naval officer speaks of them in the following fashion. He is describing as an eyewitness the battle of August 28, 1914, when, to use William Watson's infelicitous phrase, "We bit them in the Bight, the Bight of Heligoland":

There straight ahead of us in lordly procession, like elephants walking thru a pack of pi-dogs, came the "Queen Mary," "Invincible" and "New Zealand," our battle-cruisers. Great, grim and uncouth as some antediluvian monster, how solid they looked, how utterly earth-quaking!

But now two of these elephants, the "Queen Mary" and the "Invincible," walking thru this pack of pi-dogs, were brought down and four others with them. Altogether since the war began the British have lost twenty-three dreadnoughts and cruisers of over 7000 tons, while the Germans have lost seven, or, according to British belief, nine, of such major warships.

The loss of life in the North Sea battle, some eight thousand, counting both sides, is not more than may fall in a single day at Verdun, yet the sea fight may prove to be more important than the capture of Verdun would be. There is an appalling element of chance in a naval engagement. If the battleship fleet had arrived on the scene an hour earlier, or if the weather had been clearer, the German fleet, we are told, might have been wiped out. On the other hand, if twenty shells of the thousands that the Germans fired had happened to hit a vital spot in the largest British vessels, or if twenty German torpedoes had been true to their aim, the British sea power might have been destroyed. The calculus of probabilities is against such a happening, but one cannot banish the thought of it. Granting that the British are twice as strong as the Germans on the sea, there is a greater chance that one fleet may beat another twice its strength than that an army should beat another twice its strength. What could not be settled by two years of steady fighting at Ypres and Verdun may possibly be determined any summer afternoon on the

North Sea. Perhaps despite the prophets Armageddon may be fought, not on the land, but on the sea and in the air.

THE MAN IN THE STREET

IF you stopped the first ten men you met on the street and asked them whom they would choose for President, what would they say?

We were curious to find out, so we tried it right in front of The Independent's office, not a hundred paces from Broadway. No straw vote, tho it run into the thousands, is conclusive; we give this one for what it is worth. The answers surprized us; perhaps they will surprize you.

1. *Business man in a hurry, about thirty*: "Wilson for me," with enthusiasm. "I'd vote for him three times if I had the chance."

2. *Young man with Panama and pink carnation. What people from Oshkosh call "typical New York," which means typical Broadway*: "Oh, I don't know. I'm disgusted with the whole thing, and I haven't read the papers. The way sentiment is turning, it looks like Roosevelt. But the public is very fickle; you never can tell."

3. *Prosperous, portly citizen, middle age*: "Wilson, decidedly. He's had experience in extraordinary times, and it doesn't do to swap for an unknown horse."

4. *Ruddy, stocky Teuton, bristly brown mustache*: "Dot iss my bussiness." Enter the hyphen.

5. *Chauffeur, about thirty*: "Wilson. He may not be perfect, but he's as good a man as we can get. He knows the ins and outs better than anybody else."

6. *Hebrew, young man; after much urging*: "I'd vote for a Republican. Yes, Roosevelt if he gets nominated. Wilson? No. No."

7. *Middle-aged business man*: "I'm not voting for Wilson. Roosevelt? No, anybody but that. Hughes? Yes, possibly. Any Republican but Teddy."

8. *Elderly business man, white mustache*: "I voted for Wilson last time, but never again. It's Roosevelt for me this time, if I get the chance."

9. *Porter, moving furniture*: "I'm for Wilson. He ain't looking for trouble, and there's plenty of it 'round."

10. *Young fellow, also rather "New York"*: "I voted Democratic last year, but this time I've got a leaning toward Teddy. Oh, there's no doubt about his getting nominated. He's got 'em buffaloed. They'll have to take him whether they want him or not, and the country's in something the same position."

That is the poll. The safe and sane Wilson man comes out on top, with plenty of evidence of the spell of the Preëminent Personality. But who's for Hughes?

THE CANADIAN MENACE

THE "Japanese Menace" and the "German Menace" we have been hearing about so long that we have got quite used to them. The "Mexican Menace" has materialized, so we need no longer shiver at it. But the idea that we must prepare without delay to repel an invasion from the north brings a new terror into our peaceful life. It has been a hundred years since we tried to conquer Canada and we had not expected that Canada would try to conquer us for at least a hundred more to come. In fact we had hoped that the mutual invasion of each other's territory by unarmed armies that is going on all the time would prevent any armed aggression for all time.

But it appears not. According to the "preparedness" people we have got to get some guns right away and point them at our Canadian cousins. The Patriot Film Corporation is presenting at the Lyceum Theater, New York, "an object lesson in preparedness to the United States" in which the fortifying of the Canadian frontier as well as other frontiers is urged as essential to our

safety. In a very striking motion map the northern border is shown bristling with cannon all the way from Quebec to Vancouver, 42-centimeter caliber or bigger, and enough of them to blow every Canuck to the North Pole or beyond. Of course, thus to erect defenses on our northern border would convert the Anglo-American agreement of 1817 into "a scrap of paper," but what do the "preparedness" people care about that?

What is worse, this plea for the violation of our pledged word to England by fortifying our northern boundary is backed up by a series of films showing that Great Britain has now "a vast and efficient army" of five million. These pictures showing "How Britain Prepared" were, it is stated, "photographed by authority of Hon. Arthur J. Balfour, First Lord of the Admiralty; Earl Kitchener, Minister of War, and the Hon. Lloyd George, Minister of Munitions." If so, to use these really fine films as an argument for arming America against England seems to us a bit discourteous, besides being very foolish and wicked. This exhibition is represented as having the approval of Secretary of War Baker and Assistant Secretary of the Navy Roosevelt, but we venture to doubt whether they realized fully what sort of an argument they were putting their names to.

MR. JUSTICE BRANDEIS

THE confirmation last week by the Senate of Louis D. Brandeis as an Associate Justice of the Supreme Court of the United States, tho belated, is most gratifying. The Republicans, however, by making it a party issue and voting solidly in opposition have committed a serious political blunder. The Democrats will not be slow to make the most of it during the coming campaign. In fact, Mr. Wilson can ask nothing better than to have the Brandeis issue brought before the voters between now and November 4.

But all's well that ends well. Mr. Brandeis, we feel confident, will add luster to the Court and his nomination will tend to strengthen the confidence of the people in its impartiality and freedom from reactionary bias.

NATURAL ALLIES

JOHN BARLEYCORN and the Captain of the Men of Death are an extraordinarily fit team. French physicians have the saying: Consumption is contracted *sur le zinc*—that is, across the bar. Also that alcoholism *fait le lit*, that is, makes the bed, of consumption. The physician Lancereaux computes that more than half the cases of tuberculosis among men have been chronic alcoholics. And any interne working in the male wards of any large charity hospital will express the same half and half proportion. Physicians declare that consumption is more frequent in heavy drinkers than in people of moderate habits in the proportion of three to one.

So much for the idea a good many people have that whisky cures, or helps in the cure of, consumption. Pulmonary tuberculosis is almost invariably found in persons who have died in the course of chronic alcoholism; abdominal tuberculosis is pretty sure to accompany hobnail liver. Acute ("galloping") consumption is all the more "hasty" in alcoholics, who must inevitably succumb. The English physician Kellynack has found eighty per cent of consumption in patients that

have died of alcoholic neuritis; and Osler's proportion in such cases is eight in eleven.

By no means all men whose alcoholism has led to consumption have been ill-intentioned. Many workmen, of a cold winter's morning, will take their dram before going to work, not to satisfy a vicious appetite, but in the hope of tiding their below par constitutions over another day. And the stuff they do take down!—fusel oil, wood alcohol whisky—"the kind of stuff you put on old doors to scrape off the paint with." One must remember, too, the concomitants of whiskey in these circumstances—insanitary habits, poverty, sunlessness, ill-ventilated living rooms, lack of nutrition, bad food, wifely ignorance of how to cook—and the lack of a living wage. Also there is the baneful property of stimulants when taken into an empty stomach—to give a transient sense of sufficiency and to destroy the appetite for food.

CONGRESSIONAL POETRY

CONGRESSMEN haven't time to give sufficient consideration to the river and harbor bill, the preparedness bill, the immigration bill, the Philippine bill and other measures of this kind. One reason why they haven't time is because they waste it. Recently Mr. Moore of Pennsylvania moved to strike out the last word of the agricultural bill in order that the Clerk of the House should read the following unoriginal poem which he regarded as applicable to the question of the appropriation for the eradication of the bugs infesting cotton, tobacco and sugar cane:

Eat a plate of fine pigs' knuckles
And the headstone cutter chuckles,
While the gravedigger makes a note upon his cuff.
Eat that lovely red bologna
And you'll wear a wooden kimono,
As your relatives start scrapping 'bout your stuff.

Some little bug is going to find you some day,
Some little bug will creep behind you some day;
Eating juicy sliced pineapple
Makes the sexton dust the chapel;
Some little bug is going to find you some day.

The *Congressional Record* devotes nearly a column to this stuff at the expense of the taxpayer for time lost and printing. And the men who are responsible for this sort of thing are the same who propose to establish a censorship over the motion pictures of the United States! What the country needs more is a board of censors for Congress, one to censor their poetry, one to censor their science and one to give them some notion of efficiency.

THE HONORABLE HYPHEN

THAT the hyphen may weld—and not separate—two nationalities is a possibility which we seem to find little reason for remembering these days. We are scathing in our criticism of the immigrant who fails to become a true American, but we pay little attention to the means by which his transformation must be accomplished. We forget that the hyphenated American should be simply the American in the making.

Fortunately the immigrants do not wait for us to Americanize them, but go ahead finding their own opportunities and creating their own agencies for assimilation. Among these perhaps the most important are the 1500 foreign language newspapers published in the United States, which reach daily an audience of nine

million people, most of whom have no other way of learning about American ideals and institutions. Naturally their editorial influence is enormous and their responsibility proportionate.

Recently some of these papers have proved their keen realization of this responsibility by publishing the following announcement of their aim:

To help preserve the ideals and sacred traditions of this, our adopted country, the United States of America. To revere its laws and inspire others to respect and obey them. To strive unceasingly to quicken the public's sense of civic duty. In all ways to aid in making this country greater and better than we found it.

This is a statement of which every American may well be proud. It shows intelligent purpose as well as steadfast loyalty. And, best of all, these foreign language papers seem to be practising what they preach. Many of them publish daily lessons in English, civics, history and the methods of acquiring citizenship in the United States. They are now even proposing to hold a conference of the foreign language editors of America for the purpose of uniting on a definite program of Americanization. That program may well be worthy of our earnest consideration—whether we are owners of an actual hyphen or merely of a framed facsimile from the Society of Genealogical Research.

FIAT TIME

THE Kaiser has decreed that noon shall be called one o'clock from May 1 to October 1. France, Denmark and other European countries followed the example of Germany. England, where the scheme was first proposed, was the last of the Powers to adopt it, but on May 21 the British clocks were by act of Parliament set ahead one hour. Luxemburg and Ireland, as we should expect, decline to concur with the rest of Europe.

The change was made as a war measure for the purpose of economizing on light and heat and it remains to be seen whether it will prove to have sufficient advantages to compensate for its manifest inconveniences. It has been talked about for ten years. Now we shall see it tried.

As a war measure it may be justified like fiat money and bread tickets. Nobody knows how much a mark is worth, tho it is suspected to be worth considerably less than twenty-four cents. If setting the clock wrong will make the English go to bed earlier it will doubtless reduce the danger from Zeppelins and perhaps have a good influence on health and morals.

But it appears doubtful whether a permanent change in habits can be effected by such a simple trick. Many people have tried to speed themselves by keeping their watches five minutes fast or setting their alarm clock half an hour ahead of the time when they must get up. But such self-deception does not last long with persons of intelligence. They soon get to allowing for it as they do for a banquet that is announced for "7:30 sharp" and really begins at 8.

So we question whether setting the alarm clocks of a nation one hour too fast by law will make people get up earlier or go to bed earlier in the long run. If they really wanted to get up earlier they could do it now, most of them, without any legislation. The early morning hours are highly spoken of by poets who nevertheless are apt, like the rest of us, to spend them in bed.

The fact of the matter is that people prefer dark-

ness to daylight for their hours of recreation, and whenever they get money and leisure enough they shift their working day to later hours. It is the object of all social climbers to get to a stage where they can stop breakfasting by lamplight and take to dining by lamplight. As the days get longer the dinners get later. When the theaters give a performance in the daytime they exclude the light. The amusement parks are very dull places until the electricity is turned on. The lights of the Great White Way are mostly used for decoration, not illumination.

The advocates of the change call it a "daylight-saving" measure and present figures to show what a great economy would be effected by setting the clock ahead. But we question if people want to save daylight and we are skeptical of the economy. The basis of the argument is that sunlight is always cheaper and better than artificial light, but this is not necessarily the case. In a great city sunlight is expensive. One can rent a dark room and provide it with electric light cheaper than he can rent a sunlit room. Writers and students, who can arrange their hours to suit themselves and have tried both plans, often come to the conclusion that they can work better at night than in the daytime. Much of the prejudice against artificial light has been carried over from the days when the faint and flickering candle or the foul smelling kerosene was the only means of illumination. So, too, some of the calculations of daylight-saving that appear in American papers are borrowed from the British without allowing for the fact that England is in the latitude of Labrador and that north of Edinburgh it is twilight all night in the summer time. We even hear it said that there are more hours of daylight before noon than after noon in summer and so the clocks should be set ahead!

The maximum amount of daylight work is obtained at all seasons of the year when noon comes in the middle of the working day. Shifting it earlier would allow some of the workers to go to bed soon after dark—if they want to—but it would compel others to get up before dark. To make milkmen, newsboys, market men, domestic servants and factory operatives and their wives lose their summer privilege of lying abed till daybreak in order that a few employers may have time to play golf in the afternoon is not fair play. So the trades-unionists of Germany view the change with disfavor.

Farmers go by the sun anyway, so a change in nominal time would not affect them. Most factories and business houses could, if they wished, set their hours ahead in the summer time and if there was any great demand on the part of patrons or employees for such a change they would do so. But so long as there seems no disposition to make such a change on the part of those who are now at liberty to arrange their hours to suit themselves it would be bad policy to trick them into it by monkeying with the clock. The Kaiser's decree sounds too much like Jack Cade's reform proposals: "There shall be in England seven half-penny loaves sold for a penny; the three hooped pot shall have ten hoops." Since time and tide wait for no man it would be better for man to adjust himself to them rather than pretend to alter them. As to the working of the plan in England all we hear so far is that the clocks have all joined in the forward movement, but the sundials have unanimously adopted a policy of passive resistance.

CAN'T YOU TALK?

Drawn by W. C. Morris

CAN'T YOU STOP TALKING?

THE STORY OF THE WEEK

Roosevelt or Hughes?

The Old Guard will reluctantly accept Hughes in order to beat Roosevelt. The Old Guard will reluctantly cooperate with Roosevelt in order to beat Hughes. The Old Guard will negotiate with the Progressives thru conference committees and nominate a candidate who will command Roosevelt's support. The Old Guard is at sea and has lost its grip of the convention.

These rumors were characteristic of the last few days before the Republican and Progressive National Conventions opened at Chicago on June 7, and one could take his pick. The one thing clear was that these two candidates, active and passive (or neuter?) dominated the thought of the delegates, and that while the definite refusal of the Progressives to accept a still silent Hughes, together with the definite refusal of the Republicans to take Roosevelt, might lead to a compromise candidate, the choice was most likely to lie between the two men.

Colonel Roosevelt finished a Middle Western tour on June 1, with a speech at Newark, New Jersey. He was heard with great enthusiasm at Kansas City and St. Louis. Justice Hughes said nothing during the week, not even "No." His secretary denied that Frank H. Hitchcock, former chairman of the Republican National Committee, who has been heading the Hughes workers, was acting on the authority of the Justice, but as Mr. Hitchcock had already repudiated any such claim, the announcement was not of material importance. More significant was the visit of three German-American editors and publishers to Chairman Hilles of the Republican National Committee to announce that the German-American voters would never accept either Roosevelt or Root, but would support Hughes.

Tho Root, Fairbanks and Burton somewhat emerged from the swarm of favorite sons, the principal activity on behalf of that aspiring company was a series of dickers for the Vice-Presidency. The respective managers of the less conspicuous candidates, however, claimed first-ballot votes as follows: Weeks, 200; Burton, 112; Cummins, 106; Fairbanks, 93; Root, 75; Sherman, 65; Knox, 56; Brumbaugh, 41; Ford, 30; LaFollette, 26; General Wood, 15; DuPont, 14; Borah, 5.

Mr. Justice Brandeis

After more than four months' delay, the nomination of Louis D. Brandeis to be an associate justice of the Supreme Court was confirmed by the Senate on June 1. The vote was 47 to 22, one Democrat, Newlands of Nevada, voting against confirmation on the ground that Mr. Brandeis was lacking in the judicial temperament, and three Republicans voting with the Democratic majority.

THE CONVENTIONS

Republican National Convention at Chicago June 7.

Progressive National Convention at Chicago June 7.

Democratic National Convention at St. Louis June 14.

Harold J. Howland, associate editor of The Independent, will report the three conventions. His first article, summarizing and analyzing the action of the Chicago conventions, will be published, with convention photographs, in The Independent for next week, dated June 19, 1916.

House Passes Navy Bill

While the news of the Battle of Jutland reached the House of Representatives too late to affect details of the Naval Appropriation Bill, which was passed on June 2, the destruction of the British battle-cruisers is likely to influence the action of the Senate, which now takes up the bill. The House appropriated a total of about \$270,000,000, with a building program of no dreadnoughts, five battle-cruisers, four scout cruisers, ten destroyers, fifty submarines, and one fuel ship. Probably the results of the sea fight will lead to the addition of two dreadnoughts to this program, perhaps at the expense of the battle-cruisers. The Republican minority in the House fought for these dreadnoughts, as well as for additional vessels in all classes, and a motion whose effect would have been to adopt this minority plan was lost by the close vote of 189 to 183.

Important amendments made last week increased the number of submarines from twenty to fifty, and the appropriation for aeronautics from \$2,000,000 to \$3,500,000 (both at the initiative of the Republican minority); provided for a government armor-plate plant at a cost of eleven millions; and appropriated six millions for equipment in the navy yards to make possible the building of capital ships at Philadelphia, Puget Sound, Norfolk and Boston, and construction work at other yards in case private contractors should not offer satisfactory terms. A curious addition to the bill authorizes the President to initiate an international court of arbitration. Since the Senate has already passed a bill providing for a government armor-plate plant that provision now needs only the President's approval.

Los Angeles, Long Beach, San Diego, Duluth and Superior will divide over a million and a half dollars of Rivers and Harbors money if the additions made by the Senate to the House bill are accepted in conference. The total appropriation as the bill was passed by the Senate came to about \$44,000,000. The Republicans, charg-

ing that the bill was a grossly extravagant pork-barrel measure, and aided by several Democrats, had been filibustering against it for more than a month, and the majority in its favor was only three votes.

Carranza Charges Bad Faith

The Mexican situation is still muddled. After delay and general denials that such action was contemplated, the Mexican Ambassador-designate at Washington presented, on May 31, a garrulous and offensive note from Carranza. It charged that the United States was acting in a way to justify the suspicion that it expected to fight Mexico, and demanded a precise statement of American intentions and an immediate withdrawal of American troops in Mexico.

Meanwhile, however, General Obregon continued to dispose his troops so as to cooperate with the American forces in policing Chihuahua, and General Gavira, Carranza's local commander, conferred amicably with General Pershing as to details of this program. No immediate answer was made to the note, and the Administration was inclined to minimize its importance, and by no means to withdraw the expeditionary force until Carranza's ability to keep order was proved.

The note may be summarized as follows: General Pershing's force was sent into Mexico, "thru error or haste," before the conclusion of any protocol permitting such action. No agreement having been reached at the El Paso conference, and General Scott, according to the Mexican version, having admitted there that Villa's band was dispersed, there was no longer either legality or apparent justification for the continued presence in Mexico of American troops. The subsequent pursuit of the Glen Springs raiders by Major Langhorne, in violation of General Scott's alleged promise that no more soldiers would enter Mexico, tended "to convince the Mexican Government that something more than a mere error is involved."

The Mexican Government, after having made clear its unwillingness to permit the crossing of new American troops into Mexican territory, will have to consider the latter as an act of invasion of its territory, and therefore it will be forced to defend itself against any group of American troops which may be found within it.

Tho the President had emphatically declared that the action of the United States was wholly disinterested, there was evidence of warlike intentions on the part of the military forces, for the troops had not been withdrawn when their work was done, the United States declined to limit operations to a border zone, Mexican rebels were equipped and armed on American soil, and shipments of arms and machinery to the Carranza government were held up in the United States.

. . . There has been a great discrepancy between the protests of sincere friendly coöperation on the part of the American authorities and the actual attitude of the expedition, which, on account of its distrust, its secrecy regarding its movements and the arms at its disposal, clearly indicated that it was a hostile expedition and a real invasion of our territory.

The note was well received in Mexico City and may have been intended chiefly, in the new diplomatic phrase, "for home consumption." Several of its premises are contradicted by the facts as American officials hold them.

Actors in the A. F. of L. The Actors' Equity Association, which has 3,000 members among "legitimate" actors, voted on May 29 to affiliate with the American Federation of Labor. Its president, Francis Wilson, explains that the step was taken to secure

the wonderful psychological effect such a power has on the minds of our opponents. They feel then that for the first time in our existence we have the power, whether we exert it or not—and, mark you, it is generally not exerted—that we have the power to call a strike, the power to call into operation a boycott under the guidance of past masters in the art. It is the logical offset to the present blacklist.

At present the association is confining its efforts to securing for its members what it calls an equitable contract, which adjusts transportation allowances, limits the period of free rehearsals, requires two weeks' notice—thus assuring that much salary to the cast of a play that fails, provides extra pay for extra performances, and requires full pay for the week before Christmas and Holy Week, when half salaries are usually paid.

This contract has been for some time in use by Daniel Frohman, and it has been adopted in whole or in part by other managers. David Belasco and others object to the union as "undignified." As the musicians and stage mechanics are now unionized, and vaudeville performers are organized as the "White Rats," the coercive power of those employed in the theaters will be considerable if the new union can maintain its solidarity.

Three Labor Disputes The cloak, suit and skirt lockout in New York, which has kept 30,000 garment workers idle for six weeks, became a strike on June 1, when the 409 shops of the Cloak, Suit and Skirt Manufacturers' Protective Association opened their doors and invited their employees to return to work, for practically none of the union workers went back to their machines. Another 30,000 are striking against the members of the Mutual Cloak and Suit Manufacturers' Association, composed of manufacturers who were nominally independent, but have now formally allied themselves with the other group in fighting the union. The strikers stand for the abolition of sweatshops, a 48-hour week, an arbitration agreement, a guarantee of the preferential union shop, and a wage increase. The manufacturers, who forfeited public support by repudiating the award of

the Mayor's Council of Conciliation, refuse to concede or to arbitrate what they declare to be the vital issues: the right of discharge and the closed shop. In a statement they explain that they declared the lockout to forestall a threatened strike in July, which is the busy season, and state their conclusion, after six years of experiment with arbitration and conciliation, that "adjustments by such methods do not result in substantial justice."

The Manufacturers' Association looked for a gradual return of several thousand workers to their places. Union leaders, however, expected to be able to hold out until July, when the strike would be most embarrassing to the employers.

The Commercial Telegraphers' Union, with 30,000 members, threatened a strike on the eve of the Republican National Convention. Their principal grievance is that the Western Union admittedly makes a practice of discharging men who are found to belong to the union, but they also want an eight-hour day and a ten per cent wage increase. Secretary Wilson sent Roland B. Mahany, of the Bureau of Mediation of the Department of Labor, to treat with the union at its convention in New York last week, and owing largely to his efforts immediate action was postponed, pending an investigation ordered by the Massachusetts Legislature into the discharge of union telegraphers in Boston.

A big piece of collective bargaining was begun on June 1, when representatives of 235 railway systems, with 250,000 miles of tracks, met the delegates of the four great railway brotherhoods, with a total of 350,000 members, to ne-

gotiate the demands of the workers and counterdemands of the railroads. The unions ask, in freight, yard and hostling service (a railroad hostler cares for a locomotive between runs and takes it in and out of the roundhouse), an eight-hour day, with time and a half for overtime. It is the overtime charges that make up a large part of the \$100,000,000 increase in running expenses which the railroads say they will have to assume if the demands are granted, and which will put a stop to all expenditures for improvements. But the men declare that since 65 per cent of all freight trains make more than ten miles per hour it will be possible to do a day's run, 100 miles, in eight hours, and overtime pay will normally not be necessary. The union delegates have no power to call a strike or to accept arbitration, but are instructed simply to negotiate for these concessions. The hearings are public and both sides have taken steps to enlist public sympathy.

A Week of Pageantry The outdoor dramatic spectacle has gripped American fancy so completely that one hears of scores of pageants, masques and plays at a time, and the commencement season is filling many campuses with revels, Shakespearean and otherwise, but mostly Shakespearean this year.

The great spectacles of the month have been seen in New York City and Newark, New Jersey. The Shakespeare Masque in New York, "Caliban by the Yellow Sands," was presented ten times in the stadium of the College of the City of New York, from May 24 to June 5, to audiences ranging from

The FROST of the Prophets (Right Center)

THE FROST OF THE PROPHETS

Every year the men and women of the Art Students' League in New York hold a burlesque exhibit of their own. Ordinarily it satirizes the Academy of Design exhibit. But this year the art students have gone further afield for their victims

THE GREAT SEA FIGHT OF THE GREAT WAR

The German fleet, coming probably out of the Kiel Canal, but perhaps out of the Skagerrak, was met in the afternoon of May 31 by Admiral Beatty's fleet of swift cruisers and a twelve hour battle ensued. Toward night the British superdreadnoughts, presumably from Firth of Forth, arrived on the scene and the Germans retired to the shelter of their mine fields behind Helgoland. See, in addition to the account on this page, the article on page 439

17,000 to 21,000. It was the climax of the Tercentenary Celebration in New York, and was the result chiefly of the initiative and energy of Miss Mary Porter Beegle, chairman of the Festival Committee of the New York branch of the Drama League. Percy MacKaye wrote the masque; Arthur Farwell composed the music; Joseph Urban, Robert E. Jones (who designed the setting for Barker's production of "The Man Who Married a Dumb Wife") and Mrs. John W. Alexander were responsible for the setting and the costumes; Joseph Ordynski was director.

As Mr. MacKaye explained in *The Independent* for April 10, 1916, the theme of the masque was the civilizing influence of the theater on brute man—Caliban, who in the person of Lionel Braham was a huge and dominating figure. Ten fragments from Shakespeare's plays were presented on a superbly designed inner stage, and there were many dance interludes, of which the most spirited was an Elizabethan May-day presented by the English Folk Dance Society. The various historical interludes were given in part by national groups—the Germanic episode by the German University League, for instance—and the assembling of the 1500 performers was a notable piece of coöperation. A number of distinguished actors, among them John Drew

as William Shakespeare and Edith Wynne Matthison as Miranda, were volunteer participants. A permanent organization in the interest of community drama is being formed as the outgrowth of this successful experiment.

In Newark, at a natural amphitheater in Weequahic Park, a pageant and masque were given from May 30 to June 2 to audiences of 40,000 and over. The two hundred and fifty years of the city's history were summarized in a pageant created by Thomas Wood Stevens, author of the *St. Louis Pageant* of 1914. It began, after a prolog devoted to the Lenni Lenape, who held New Jersey when the white man came, with the settlement of the city in 1666 by Robert Treat and his Puritans from Connecticut and carried the narrative thru four episodes.

The pageant ended with a masque in which the city's future was symbolized, Strife, Greed and Ignorance yielding to Religion, Education and Law, and representatives of all nations taking their place in Newark's life.

Under the direction of Mr. Stevens and H. Wellington Wack, executive adviser, the performance was carefully planned and executed, even to the addition of three barrels of bluing to the artificial lagoon in front of the natural stage for the sake of precise decorative harmony.

The event that has been anxiously expected for twenty-two months has at last come to pass. For the first time in history two modern fleets have come in conflict. The superdreadnought has been put to the ordeal of battle.

The details of the battle are obscure, but from the various accounts the general course of events is tolerably clear. The engagement began with battle-cruisers on both sides, but later they were joined by German and British battleships. The battle-cruiser is a new type of vessel that aims to combine the highest possible speed with the greatest possible gun power. Naturally something has to be sacrificed, and in this case it is defensive armor. For instance, the battleship "Warspite" has a belt of 13½-inch armor, while the battle-cruiser "Queen Mary," almost as large, has only 9-inch. Battle-cruisers usually carry eight guns, of 12-inch caliber on the "Invincible," of 13½-inch on the "Queen Mary." They can make 26 or more knots an hour, but they are not able to stand punishment like the regular battleship. For safety the battle-cruiser depends mostly upon its speed, which enables it to keep its distance and pound the enemy at long range.

A cruiser squadron under Vice-Admiral Sir David Beatty while patrolling the North Sea on the afternoon of May 31 encountered a similar squadron about 150 miles west of the Danish coast and 125 south of the Norwegian. The British flagship was the "Lion," and with her were the "Queen Mary," "Tiger," "Princess Royal" and "Indefatigable," besides lighter cruisers and minor craft.

The German advance squadron under the command of Rear-Admiral Hipper was inferior to the British, but this was soon reinforced by the most powerful of the German battleships, which had at first been kept in the background and concealed by the mists along the Jutland coast. Vice-Admiral Reinhard Scheer was in command. The battle joined about four in the afternoon and kept up until it was too dark to fire, but the torpedo boats and destroyers of both sides continued their activity all thru the night.

The battle-cruisers opened fire at a distance of fifteen miles, but soon closed in to ten, and finally to five. A second British squadron, composed of the "Invincible," "Indomitable" and "Inflexible," under Rear-Admiral Horace Wood, came to the aid of Admiral Beatty, and shortly before dark the largest vessels of the British navy, the superdreadnoughts completed since the war began, the "Warspite," "Barham," "Valiant" and "Malaya," with Admiral Sir John Jellicoe in command, appeared on the scene, tho too late to take an active part in the fight.

The Germans had one decided advantage over the British. They had eyes in the air. Their Zeppelin warned them of the approach of the main British fleet and they retired under cover of the night to their base at the en-

LOSSES IN NORTH SEA BATTLE		
British		
Name		Tonnage
Queen Mary (battle-cruiser)	..	27,000
Indefatigable (battle-cruiser)	..	18,750

Another battle-cruiser	26,200
A light cruiser	4,870
One submarine	1,000
Three destroyers	2,000

trance to the Kiel Canal. Here the British could not pursue them because of the mine fields which are laid all about Heligoland.

The losses, so far as they are known, are given in the accompanying table. On the British side the chief loss is the "Queen Mary," a battle-cruiser of the largest size and armament, completed the year before the war. She had on board about a thousand officers and men, and of these only eight are known to have been saved. The Germans at first claimed to have sunk the "Waspite," a still more important vessel, but this was apparently a mistake for the "Invincible," which the Germans did not include in their list of British losses. The "Invincible" took to the bottom with her all on board, some 780, including Admiral Hood. More than five thousand men must have perished on the British side and at least half as many on the German.

The German Admiralty report mentioned no losses except the "Pommern," a battleship of the predreadnought type, and three small cruisers, the "Wiesbaden," "Frauenlob" and "Ebling."

But the British Admiralty asserts that the official statement of the German losses is certainly false:

We cannot yet be sure of the exact truth, but from such evidence as has come to our knowledge, the Admiralty entertains no doubt that the German losses were heavier than the British, not merely relative to the strength of the two fleets, but absolutely.

Bulgars Enter Greece It has been repeatedly rumored that the Allied troops at Salonica were preparing for an invasion of Bulgaria or Serbia as soon as the season was far enough advanced. The French

and British troops stationed here during the winter are supposed to number two or three hundred thousand and they were reinforced in April by the Serbian soldiers, who after being driven out of their own country were conveyed to the Greek island of Corfu and there recuperated and reorganized.

The opposing lines are held by some three hundred thousand Bulgars and such Austrian and German troops as still remain on the Balkan front. But it has been reported that Bulgarian soldiers are in the Austrian army in Italy and in the German army in France, and some of the Serbs are said to have been transported to France, so it is impossible to make any true estimate of the number of troops on either side.

Hitherto the Bulgars have scrupulously refrained from violating Greek territory, notwithstanding the fact that it had been occupied by the armies of the Allies. Now, however, they seem to have determined to take the initiative and they have crost the boundary to the northeast of Salonica. Here the Bulgo-Greek frontier is formed by an almost impassable range of mountains, thru which runs the Struma River by the Rupel Defile. A body of 25,000 troops have come thru this pass from the Bulgarian side and occupied Demir-

hissar, ten miles within the Greek line. The Greek garrison evacuated under protest, but without resistance, as they did when the Allies occupied their fortifications on the Serbian frontier. The Bulgarian, German and Austrian officers signed a promise to restore the forts as soon as the military necessity for holding them had ceased and to indemnify Greece for any damage done by the occupation.

This move gives the Bulgars command of the railroad running east from Salonica to Constantinople and affords them an opportunity to attack the Allies on the right flank if they advance north into Serbia.

The Austrian Offensive In the third week of their advance from the Trentino the Austrians seem to have made less progress than at first. Whether this apparent slackening is due to the diversion of Austrian troops to Verdun, as the French report, or whether it is merely that it takes time to bring up ammunition thru the mountain passes and to establish the 38-centimeter howitzers in new positions cannot yet be ascertained.

During the first fortnight of their offensive, according to the Vienna account, the Austrians captured 30,388

THE TRENTINO CAMPAIGN

The Austrians are attempting to invade Italy from the Tirolean Alps by way of the Adige, the Astico and the Brenta rivers. On the first and third of these valleys, the Val Lagarina and the Val Sugana, they are making little progress, but between these, they have advanced down the Astico River and crossed the frontier, where they are now threatening Schio, Arsiero and Asiago. If they break thru the Italian defenses here they may keep on to Vicenza and perhaps even to Padua and Venice. The shaded area is Austrian territory before the war. The arrows indicate their advance

Italian prisoners, including 694 officers, and took 298 cannon. The valleys of the Astico and Brenta rivers were sufficiently cleared to enable the Austrians to cross the frontier and come within reach of the Italian towns on the south-eastern slopes of the Tirolean Alps. Three of these towns stand in a row about ten miles inside the Italian boundary, Schio, Arsiero and Asiago, barring the way to Vicenza, with which they are connected by a single line of railroad. The hills in front of them were fortified long before the war for the purpose of meeting just such an Austrian attack as they now must support, but it remains to be seen how long they can endure the shock of modern artillery. All three towns have been evacuated by their civilian population. Arsiero, as the foremost and midmost of the three, has to stand the brunt of the attack. The Austrian troops, debouching from the mountains, have crost the Porsina torrent, which runs just south of Arsiero into the Astico River, and are now in a position to take this town or to strike at Schio on their right or Asiago on their left. On account of his failure to fortify the passes thru which the Austrians are now invading Italy, General Brusati, hitherto commander-in-chief of the Italian armies in the Trentino, has been relieved of his command.

Attack on Ft. Vaux The hundredth day of the battle of Verdun saw the Germans within two miles and a half of their goal. Fresh troops have been brought up from the other fields and the attacks renewed with redoubled vigor. The French say that they have never had to face such furious artillery fire or to withstand such fierce assaults as during the past week. German troops recently stationed in Russia, Serbia and Belgium have appeared at Verdun and, according to the French account, 60,000 or more Austrian troops have also been brought here. We might expect that the withdrawal of troops from these fronts would have so weakened the lines that the Russians, Italians or British might assume the offensive with some chance of success, but there is as yet no evidence of such activity on their part.

The Germans have followed their custom of attacking alternately on the western and the eastern side of the Meuse, and made gains on both. The situation in the two sectors is curiously the same, that is, the French line projects in a loop about a hill and the Germans are trying to cut it off by capturing the woods behind. On the west the hill is La Mort Homme, of which the French still hold some of the slopes. Behind it is the forest of Caurettes, which the Germans are striving to penetrate from the village of Cumieres, a railroad station on the bank of the Meuse, as well as from Hill 304 on the other side. But even if they succeed, as they seem likely to, in cutting off the French salient and bringing their own line down to Chattancourt, they will still have before them what is supposed to be the hardest part of

their task, that is, the capture of the permanent fortifications that cover the heights between Chattancourt and Verdun.

On the other side of the Meuse the French have not been able to hold Fort

Underwood

THE MOST SUCCESSFUL AUSTRIAN

Field Marshal Conrad von Hotzendorff, chief of the Austrian General Staff, is in charge, with Archduke Frederick, of the important offensive which has once more put the Austrian army on the map—the map of Italy

Douaumont, which they recovered a fortnight ago by an unexpected offensive. By a succession of mass attacks the Germans drove the French out of the fort and of the trenches beyond. Then they carried Caillette Wood that lies behind, taking there 2000 prisoners. This brings them also in the rear of Fort Vaux, which they are also attacking from Damloup on the other side. The capture of these points would give the Germans possession of the plateau lying northwest of Verdun and within two miles of that city.

While increasing their efforts at Verdun, the Germans are also keeping up their attacks upon the British front in Belgium. Southeast of Ypres, where the Canadians hold the ridges between Zillebeke and the famous Hill 60, the fighting has been incessant. Here the Germans took the front line on the evening of June 2, and during the fol-

lowing night they carried by storm the trenches beyond to a depth of 700 yards. Much of this ground was recovered by repeated charges of the Canadians on the next morning. Both sides lost heavily in these operations. The Germans report the capture of 15 officers and 350 unwounded men. Two generals of the Third Canadian Division, General Mercer and General Williams, who were inspecting the front trenches, were lost.

A Disastrous Antarctic Expedition Sir Ernest Shackleton, who started out in August, 1914, to cross the Antarctic continent, has returned without having even been able to reach that continent. The relief expedition which was sent out to meet him on the other side of the Pole likewise had to return unsuccessful. Both expeditions had to leave parties behind whom it is hardly possible to rescue.

This is Shackleton's third attempt to reach the South Pole. As a lieutenant in the Royal Navy he accompanied Scott in his dash for the Pole in 1901, but broke down on the way back to the coast. In 1908 he returned with an expedition of his own and got within ninety-seven miles of the Pole, when he was obliged to turn back on account of a shortage in provisions. For this achievement he was knighted, but the Norwegian explorer, Amundsen, reached the Pole December 16, 1911, about a month ahead of Scott.

Shackleton's present expedition, fitted out by the gift of an unknown friend at a cost of \$375,000, was the best equipt of any that have attacked the Antarctic. It was his intention to enter the continent south of Cape Horn, penetrate to the Pole and come out on the side opposite New Zealand. The "Endurance" left the island of South Georgia in December, 1914, but as it approached the Antarctic coast it was caught among the ice floes, from which it never escaped. In July the ice had piled about the ship in ridges forty feet high. By fall the pressure had become so terrific as to throw the ship up upon the ice. When the ice broke up the "Endurance" was so strained and leaky that she was abandoned that she was abandoned on October 27 and sank a month later.

The party rescued such supplies as they could and camped all winter on the ice, which was drifting toward the north. In April they came within reach of Elephant Island, one of the South Shetland group. Here Shackleton left most of his party and with five men set out in a small boat for South Georgia Island. This he reached two weeks later and walked across the island over the glaciers to Stromness, where there is a Norwegian whaling station. South Georgia Island had been visited by German scientists, but no one had ever ventured to cross it before. With a boat and crew provided by the Norwegians, Shackleton tried to rescue the party left on Elephant Island, but could not reach it, so he went to the Falkland Islands for help.

THE GREAT WAR

- May 29—Austrians attacking defenses of Arsiero, Italy.
- May 30—Germans take Caurette woods from Cumieres, northwest of Meuse River.
- May 31—Great battle on the North Sea between British and German fleets.
- June 1—Germans take Caillette woods, behind Vaux, northeast of Verdun.
- June 2—Germans take British trenches at Zillebeke.
- June 3—Austrians take 5600 Italian prisoners near Asiago.
- June 4—British Admiralty claim that eighteen German ships were sunk in Wednesday's fight.

FROM STATE TO STATE

CALIFORNIA: In 1909 President Taft withdrew from settlement certain lands in the Mariposa district of this state on which there were no settlers and on which no discovery of oil had been made. Subsequently, several oil companies entered that field and took millions of dollars' worth of oil from it. Ever since that time the government has been trying to oust those companies and get an accounting of the oil taken. Now the United States District Court, sitting at Fresno, has rendered a decision authorizing prosecution of six suits against more than 100 defendants for such accounting. It is said this decision means more than \$5,000,000 to the United States; and there are twenty other similar suits pending.

COLORADO: Under the leadership of the women of the Civic League, "Plant Day" is celebrated each year by practically the entire population of Colorado Springs. On that day the league receives contributions of plants and seeds, which it distributes among householders who promise to plant and care for them. This spring it made a new departure by converting a portion of the grounds of one of the public schools into a flower garden, which the pupils have promised to care for throughout the year. The league's plan is to provide a similar garden for one additional school each year. As another part of the general scheme of beautifying the city, the County Agriculturist is organizing boys' and girls' clubs for converting vacant lots from weed patches and making dumping grounds into vegetable gardens.

DELAWARE: The Wilmington Board of Health is being severely criticized for the manner in which it handled the recent smallpox flurry in that city. It is generally admitted that the first steps were taken with commendable promptness and energy. All houses in which the disease was found to have existed were at once quarantined, and schools, churches, theaters, saloons and other places where people were likely to congregate were ordered closed. Almost immediately, however, the order closing the saloons was rescinded, while those against the other places were left in force. The charge is freely made that even in so important a matter the board could not resist the temptation to play politics.

FLORIDA: Thru the efforts of the Children's Homes Society of Florida, a bill was passed by the last legislature providing for a commission to investigate and report on the need of a law to pension indigent mothers by the state. This commission has now been organized and sufficient work has been done by it to warrant the belief that its report to the next session of the legislature will recommend the enactment of such a law. In this work the Florida Sunday School Association has given notable aid. In its recent state-wide observance of Mothers' Day the subject of these pensions was made a prominent feature.

IDAHO: Work has been begun on a new irrigation system and a parallel electric railroad leading from Boise into the new territory, which is locally known as the Bruneau country. The system, installed under the Carey Act, will reclaim about 75,000 acres of land. One of the provisions of the contract is that no land is to be sold by the promoting company until water is running in the canals. The railroad which will connect this section with Boise will pass thru the Grandview project also, and will cut the Oregon Short Line railroad at Orchard.

INDIANA: As one of the monuments to be erected in this her centennial year, Indiana purposes to establish a number of state parks for the preservation of her most impressive scenic tracts and historic spots. Richard Lieber, a member of the Indiana Historical Commission, is credited with having done most of the preliminary work, even to the writing of the proclamation which Governor Ralston recently issued, calling upon the people of the state to contribute the money needed for the purchase of the sites. Civic bodies and public spirited individuals are soliciting these funds and they hope to establish many parks this year.

IOWA: This state now puts its seal on butter manufactured here under the rules of the Dairy and Food Commission. One plant has complied with the conditions required by the state law and eleven others are trying to meet them. The law provides that creameries which put out a butter rating above 93 per cent may use the Iowa stamp, a guarantee that the state stands behind the product.

KANSAS: Thru a news bureau, to the maintenance of which the state contributes \$10,000 conditioned upon the contribution of a similar amount by the newspaper proprietors, this state is furnishing Eastern manufacturers with information as to the needs of Kansas people; so that the manufacturers will give more advertising to the Kansas newspapers and help to increase the business of the local merchants.

MAINE: A delegation of state congressmen, with Richard B. Dorr, of Mt. Desert, recently called on President Wilson to offer informally to the United States 5000 acres of forest land on Mt. Desert island to be used as a national reserve. It was suggested that the President accept it under the Roosevelt act without consulting Congress. Representative Guernsey of Maine already has a bill in the House to authorize the Secretary of Agriculture to select lands in the region of Mt. Katahdin for a national park, one of the provisions of which is that no lands shall be taken without the consent of the Maine State Legislature.

MINNESOTA: The first meeting of the All-Minnesota Development Association has been called. This organization was effected by a combination of the Northern Minnesota, the Southern Minnesota and the

West Central Minnesota development associations, in accordance with a wish expressed by the late Governor Hammond only a short time before his death. He pointed out that the three associations were to a considerable extent neutralizing each other's work, whereas if they would all pull together they might accomplish much for the state as a whole. River control will be one of the first matters taken up by the new organization, with special view to better drainage of the extensive swamp lands of northern Minnesota.

MISSISSIPPI: A law which has just gone into effect makes it illegal to circulate, post or print any kind of liquor advertisement in this state. This means that no publication, wheresoever printed, containing such an advertisement may be circulated in Mississippi. The same law prohibits the making of any mailing list of residents of this state for the purpose of furnishing it to liquor dealers anywhere. The statute relating to shipments of liquor into the state permits each adult citizen to import two quarts of whisky or twelve quarts of beer every four weeks.

NEW JERSEY: Newark's celebration of her 250 years of community life is realizing all that was expected of it, which is saying much. The program, which includes five months of activities, was successfully begun on May 1 with elaborate parades, soon followed by the opening of an attractive industrial exposition, to be continued for a month. Other special features of the program are a local historical pageant, an interdenominational meeting to unite the church interests in the celebration, summer athletic contests and a large number of national conventions which are bringing multitudes of visitors.

NEW MEXICO: It has been the common practice of New Mexican cattle and sheep raisers to send their stock out of the state for "finishing"—that is, for final feeding and fattening for market. Even those farmers who raised alfalfa and other feed frequently have sold it outside the state and then sent their cattle and sheep away to be fattened upon it. Last year Mr. Frank A. Hubbell, who had recognized this practice as an economic waste, undertook to demonstrate it to the stock men. His experiments have shown them how to make stock-raising much more profitable.

NORTH DAKOTA: At the college of mining engineering of the University of North Dakota at Grand Forks and at the mining substation at Hebron extended work is being done on a variety of new and practical methods of using lignite. Special attention is paid to the production of gas for heating, lighting and power purposes and the manufacture of briquets. Lignite deposits in this state cover approximately 32,000 square miles, many of them from ten to fifteen feet thick and capable of producing several hundred billions of tons of lignite. Since the Federal Government controls great tracts of this land, the

United States Bureau of Mines is aiding in the experiments, which promise wonderful results in the production of cheap fuels.

OHIO: The recently closed season of entertainments for children given by the juvenile motion picture committee of Columbus ran for ten weeks and was so successful that plans are being made for a larger series next year. The entertainments were given at a local theater on Saturday mornings, the proceeds being used for charitable purposes. Students from the Ohio State University acted as ushers.

OREGON: The people of this state have just celebrated the dedication, on June 7, of the Columbia River Highway, which has been declared by experts in road engineering to be one of the greatest highways ever built to meet the conditions of modern traffic. The scenic attractions along this road are said to be unsurpassed by those of any highway in the world.

PENNSYLVANIA: The exhibit for which the Pennsylvania Board of Health received the grand prize at the Panama-Pacific International Exposition last year was placed on view recently in Philadelphia to show the public what its state board is doing in the way of preventing disease, and to teach individuals how to make their surroundings healthful. Models of homes, schools, factories, under both proper and improper conditions, and a large number of educative maps and diagrams, are intended to create a stronger popular sentiment behind the board in its fight for better health conditions.

RHODE ISLAND: Under the auspices of a local committee, the membership of which includes leading men and women from all the important civic and social bodies of the state, Mr. John Ihlder, secretary of the Ellen Wilson Homes in Washington, has begun a systematic study of the housing conditions of Providence. He expects to be able some time this summer to report fully on the real housing conditions, including density of settlement, numbers in households, accommodations provided for them, and matters pertaining to cleanliness and sanitary conditions. He will then make recommendations as to what the city should do to improve the situation.

TEXAS: The farmers and fruit growers of Texas are rapidly learning the lesson of coöperation. A coöperative poultry association at Friendswood has been of so much advantage to its members that it has extended its activities beyond the marketing of products and now buys all supplies at a great saving to its members. It has also undertaken the management of a creamery and a coöperative loan company. The success of coöperative organizations in the state has induced the large number of Satsuma orange growers to come into the South Texas Citrus Exchange, which has increased the profits of its members without adding to the prices paid by consumers.

THE DEATH OF AN AIRMAN

THIS REMARKABLE PHOTOGRAPH OF THE DESTRUCTION OF THE AEROPLANE IN WHICH FLIGHT LIEUTENANT R. C. FERRICK OF THE BRITISH AVIATION CORPS WAS MAKING OBSERVATIONS WAS TAKEN FROM THE GERMAN TRENCHES AFTER THE MACHINE HAD BEEN STRUCK BY A SHELL FROM A GERMAN ANTI-AIRCRAFT GUN AND HAD CAUGHT FIRE AS IT FELL.

THE BATTLE OF JUTLAND

BY REAR-ADMIRAL CASPAR F. GOODRICH, U. S. N. (RETIRED)

SINCE the launching in 1907 of the first battle-cruisers, the three British invincibles, their general value, and especially their employment in engagements, have provided topics for endless discussions, not only among naval officers but among civilians as well. Few persons, if any, wholly condemn this new type; many there be, chiefly outside of naval circles, who advocate it as a complete and satisfactory substitute for the battleship proper. Until last Wednesday, when facts took the place of theory, this controversy, always piquant and at times heated, has been purely academic, but recent events have supplied fresh and hitherto unavailable data to help in solving a vexed question.

Since this is written with the information available Sunday morning it is entirely possible that subsequent news may impeach the soundness of our conclusions. The meager official reports from Berlin and London, together with private dispatches from abroad, furnish a very slender basis upon which to construct the story of the battle between the German "High Sea Fleet" and a detachment of Great Britain's "Grand Fleet." Some facts, however, are well known. They relate to the place, the time, and in a certain extent to the results admitted by both sides.

The place—About eighty nautical miles north of Heligoland and in the North Sea lies a shoal called Horns Reef, some ten miles off the Danish shore. Between this reef and the shore, the northern extremity of Denmark, the opposing forces met, probably not far from Ring Koping, approximately twenty-five miles north of Horns Reef. This inference is drawn from the fact that windows were broken in that Danish town by the shock of heavy gun fire. What courses the opposing ships followed thereafter is still in doubt. The British Admiralty states that the engagement began at 3.15 p. m., Wednesday, May 31, and continued during the night, altho the big ship fighting was over by fifteen minutes past nine o'clock of that evening; after that the work was done by destroyers and submarines.

The forces employed—Here we enter upon debatable ground. According to the British Admiralty the ships present at the opening were "the battle-cruiser fleet, some cruisers and light cruisers, supported by four fast battleships." The numbers are not given. They were under the command of Vice-Admiral Sir David Beatty. Opposed to him were five

large modern dreadnoughts, "hardly exact as to type," eight cruisers and twenty destroyers, as counted by a Danish steamer which witnessed this part of the fight. The British official report gives to this van of the German fleet five battleships and three battle-cruisers without mentioning other vessels. Reinforcements of battleships, the Germans first, arrived later on the scene. How many is nowhere mentioned. Berlin dispatches state that the full German High Sea Fleet was engaged—a remark corroborated by the British Admiralty's announcement that "we met and defeated the entire German battle fleet." As Admiral Jellicoe, in command of the Grand Fleet, is reported not to have been in the action, it is apparent that the whole British fleet was not engaged. Doubtless it was unable to reach the scene in time.

Incidents of the battle—While the Danish steamer above-mentioned was being boarded by two British destroyers the German fleet came in sight and opened fire. This approach to within range was due to the hazy weather which prevailed that day. It is these destroyers, presumably, which went to the westward pursued by the German fleet. Evidently this movement brought the German battleships in contact with the British battle-cruisers, upon which the brunt of the action fell. The Admiralty divides the battle into four phases. The first opened at a quarter past three o'clock, when the British battle-cruisers, at a range of six miles, joined action with German battle-cruisers. Shortly after, the second phase began with the arrival on both sides of battleships, the Germans arriving first. The third phase was the engagement of battleships, which was never more than partial; this phase included a running fight as the German dreadnoughts fled toward their base. Then came one of the most weird features of the battle, as German destroyers made attack after attack like infantry following artillery preparation, on the British big ships, but their onslaughts were singularly futile, not a single torpedo launched by them getting home. With the morning these attacks ended and the scene of battle was swept by Admiral Jellicoe's fleet; not a single enemy vessel remained in sight. It is much to be regretted that we have not a similar account from German official sources to give the other side of this story.

General results as claimed—Germany contends that they are highly satisfactory, not only in respect of

the comparative losses of the two fleets, but in the fact that the Germans maintained the field after the battle. Great Britain contends that she met and defeated the entire German fleet and compelled them to return to port. It is not for a neutral to award the palm of victor in this instance, but it may be remarked that seldom if ever in history have the results of such a great fight been so gratifying to both of the contestants. The German sortie cannot be regarded a parade of bravado; it must have had some serious purpose. If we knew what that purpose was we could better judge the success or failure which followed.

Lessons taught—It would seem from what we are told that overconfidence in the battle-cruisers led to their taking an undue share of hard knocks and that it would have been more prudent to let them draw the German battleships to within range of the British battleships fast coming to their relief. Apparently with two Zeppelins, if not more, the Germans were better informed than the British of the state of affairs beyond the visible horizon. The need of an abundance of air scouts should not be lost sight of by us. There can be no doubt that the German gun fire was exceedingly accurate; how much of this accuracy may be credited to observations from Zeppelins and aeroplanes can only be guessed. In the opinion of many experts this use of aircraft is their best rôle in naval warfare. Altho the battle continued until after nine o'clock that evening it must be remembered that the sun did not set on the scene that day before eight o'clock, and that in so high a latitude, 55° 56', the twilight is of long duration.

It will be instructive to learn how much damage was done respectively by gun fire, mines, Zeppelins, destroyers and submarines. Such information would be invaluable in shaping our own naval policy. If the gun was actually the most efficient weapon we may call attention to the fact that the Germans had none above eleven inches in caliber, while the British battle-cruisers mounted twelve, or even, in the case of the "Queen Mary," 13.5. From the technical standpoint this great contest is particularly illuminating as to the vexed question of the right tactical use of the battle-cruiser; furthermore, it is likely to strengthen the belief, general among naval officers, that the battleship remains, as before, the arbiter of fights on the sea.

Pomfret, Connecticut

WILL THE WOMEN VOTE TOGETHER ?

BY FOLA LA FOLLETTE

FOR the first time in the history of this country "Votes for Women" promises to be a national political issue. According to the estimate based on the United States census of 1910, in the twelve states where women now vote, there will be over four million women eligible to cast their ballots for President in November, 1916, and by the time this article reaches its readers Iowa will have voted on woman suffrage and may have increased the number of women voters to almost five million. The power of these women voters to aid in securing the vote for their disfranchised Eastern sisters depends solely on how effectively they can be mobilized for united action. Since this is the first national election at which an organized appeal has been made to voting women to put the enfranchisement of all women of the United States before other political issues in casting their ballots, the election returns will be regarded by many as an acid test of the sex solidarity of American women. The degree of unity these women voters will achieve is difficult to predict, as there is no previous national record from which deductions can be made. At minor elections, however, a sufficient number of Congressmen have already been penalized for their party's lethargy toward the federal enfranchisement of women to warn party leaders that these Western women may have dangerous potentialities of national solidarity hitherto unsuspected. Therefore it is not suffragists alone, but astute politicians as well, who are anxiously asking in what degree these four million women voters of the West will respond to the appeal of the disfranchised Eastern women.

The difficulty in predicting the policy and power of this new political factor lies not only in its being an unknown quantity, but also in the fact that the suffragists themselves are divided as to the way in which the Western women's vote should be organized and directed against political candidates. There are at present two distinct organizations of women—the Congressional Union and the Congressional Committee of the National American Woman Suffrage Association—working along entirely different lines to secure the passage of the Susan

One of the women who can speak with most authority on the significance of the 4,000,000 votes which will be cast by women in the next presidential election is Fola La Follette, a prominent suffragist in New York City. Since her graduation from the University of Wisconsin she has been in touch with the public as an actress, an author, a political speaker, and a suffrage campaigner. We are glad to present the case for the woman vote, as we have already done for the Roosevelt vote, the Hughes vote, the Ford vote, and the "straight" party votes of the Republicans and the Democrats.—THE EDITOR.

B. Anthony suffrage amendment, which reads as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each house concurring therein), That the following article be proposed to the legislatures of the several states as an amendment to the Constitution of the United States, which, when ratified by three-fourths of the said legislatures, shall be valid as part of said Constitution, namely:

"Article —, Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.

"Section 2. Congress shall have power, by appropriate legislation, to enforce the provisions of this article."

Both these organizations are appealing to the power of the women voters to force congressional action on this amendment. But they are asking Western women to direct their votes along entirely different lines of attack.

The Congressional Committee, for example, as a branch of the National American Woman Suffrage Association, believes in working simultane-

ously for federal and state enfranchisement of women. The officers of the Congressional Committee and their followers consider it still both necessary and expedient to gain more equal suffrage states in order to secure the passage of the Susan B. Anthony amendment. Therefore, the Congressional Committee, not wishing to complicate state suffrage campaigns, follows the traditional non-partisan policy of the National American Woman Suffrage Association. It is a negative policy in that it supports neither individual candidates nor parties. Its action is based on the theory of the individual legislator's responsibility for failure to pass legislation. It concentrates all its efforts on defeating candidates who are individually opposed to suffrage regardless of their party affiliations.

The Congressional Union, on the other hand, confines its work entirely to passing the Susan B. Anthony amendment because it considers this the simplest and quickest method of securing political freedom for all the women of the United States. The Congressional Union has no interest in the enfranchisement of women by state action, for it regards this method as a wasteful, slow process no longer necessary. It believes that thru the political power women already possess Congress can be forced to pass the federal suffrage amendment. Since it holds the need for state enfranchisement obsolete, the Congressional Union quite logically bases its policy entirely on the idea of party responsibility. It attacks the party in power, whatever that party may be, so long as it refuses to pass the federal suffrage amendment. It holds the party in power responsible for the activity or lethargy of its

Congress, just as men hold the dominant party responsible for its foreign policy in "hard times" occurring during its administration. On this basis the Congressional Union endeavors to align the women voters against the candidates of any party in power which has failed to pass the Susan B. Anthony amendment, regardless of the individual conviction or vote of those candidates on suffrage legislation. At present the Congressional Union is making every effort to mobilize the women's vote in the equal

Illustration in the Woman's Journal

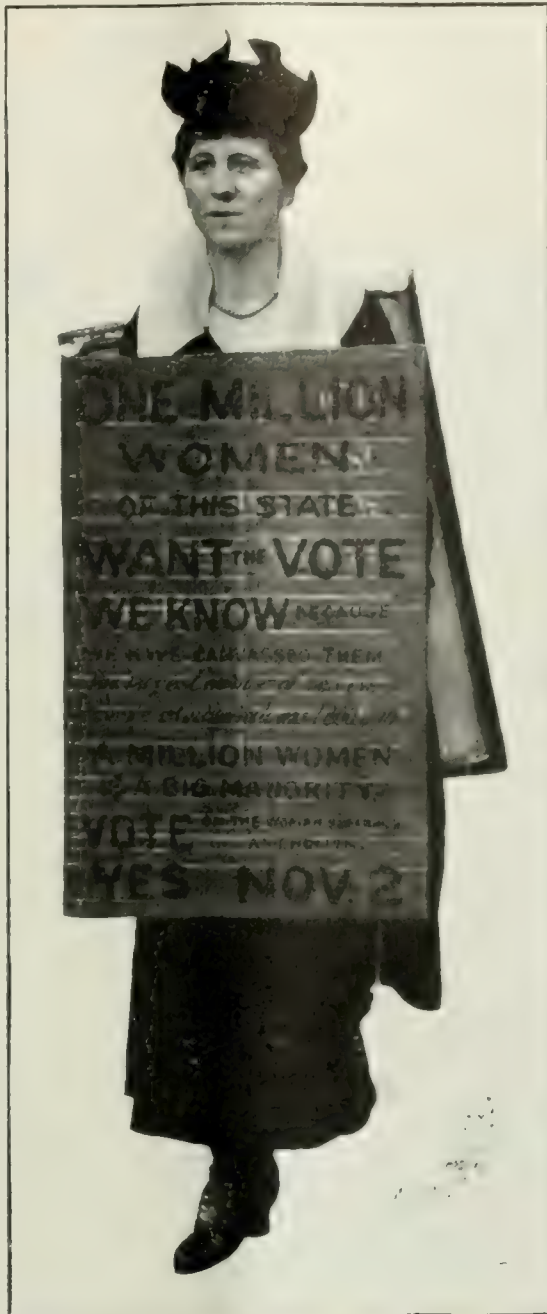

A TEMPTING MORSEL

suffrage states to secure the passage of the federal amendment during the present Congress. If the present Congress fails to pass the amendment, then this mobilized force will be directed against the Democratic party at the presidential election in 1916, just as it was at the minor elections in 1914.

There is a further corollary to this attack: namely, that every effort will be made to have this mobilized force throw its votes wherever they will prove most helpful to the enfranchisement of women by federal amendment. Should the present Congress, for example, pass the federal amendment, the Democratic party would undoubtedly secure the cordial support of these mobilized voters. If, however, Congress fails to pass the amendment and the Republican party should nominate a presidential candidate who openly declared himself for the federal amendment, or if it should even go further and put a pledge in its platform for the federal amendment, one may reasonably assume that the Republican party would secure the votes of a majority of the Congressional Union followers.

The Democratic presidential candidate, who will undoubtedly be Wilson, will, of course, be opposed by the Congressional Union forces, unless the present Congress passes the federal suffrage amendment. The Congressional Committee of the National Suffrage Association will, however, not oppose him, as he has personally declared himself for suffrage. It is not possible to predict the Republican candidate so definitely as yet. But should it be Roosevelt, he will, of course, not be opposed by the Congressional Committee, as he is a suffragist. And, if nominated, his recent declaration in favor of the Susan B. Anthony amendment will undoubtedly assure him the votes of the Congressional Union forces that are deflected from Wilson.

If, however, the Republican party should nominate Root, or any other candidate who is an avowed anti-suffragist, he would probably not secure any votes from either the Congressional Union or the Congressional Committee forces. Furthermore, there would be a considerable number of both men and women who might not have felt intently enough the finer distinctions of states' rights versus federal enfranchisement, or party responsibility versus individual responsibility, to ally themselves with either the Congressional Union or the Congressional Committee. Yet many of these women, and men, too, would be sufficiently devoted to the principle of equal suffrage to make that the

PERSONALITY PLUS

Miss La Follette takes up some weighty arguments for woman suffrage in New York

deciding factor in scratching the name of an avowed anti-suffrage presidential nominee. It is also entirely conceivable that if the Republicans nominated Root or any declared "anti," an organized opposition might develop, not only in the Western equal franchise states, but also in the man suffrage states of the East and Middle West. The suffragists are organized thruout the country, and have developed able speakers with varied experience in political campaigning. They would undoubtedly conduct a concerted attack on such a candidate, not alone along the line of his suffrage opposition, but also on all the weak points in his political record. The results of a well organized country-wide campaign of this sort, conducted even by disfranchised women, might develop into a serious menace.

It may be argued that if the suffragists campaigned against an anti-suffrage presidential candidate the organized anti-suffragists would support him. This is also conceivable.

But the active and open support of the organized anti-suffragists would prove a dangerous boomerang to any national candidate they might support. For a clean-cut contest between Eastern suffrage and anti-suffrage forces regarding a presidential candidate would arouse women voters to a greater degree of solidarity of intention and activity than could be achieved in any other way. This increased activity of Western women resulting from Eastern "anti" opposition might easily focus the political fight within their states on this particular issue, and force many local political leaders into the arena against an "anti" candidate, either on principle or to save their official necks. As one-fifth of the votes for President come from the equal suffrage states, such a potentiality would scarcely be offset by the contribution of even well organized anti-suffrage indirect influence.

It would seem, therefore, that for the first time in the history of this country no wise political leaders of any party would dare nominate as candidate for President any individual openly opposed to suffrage, however desirable his other vote-getting qualities might be. This is in itself an interesting touchstone of the tremendous advance Votes for Women has made in this country.

So far the sex solidarity of American women has never been really tested. What the efforts of the organizations now mobilizing the women's vote will accomplish not even the most astute politician can foretell with certainty. It is an unknown quantity which may prove far less powerful than suffragists hope; on the other hand, it may prove far more dangerous than politicians yet realize. It is a well known fact that Presidents who have had a popular majority have failed of election because they did not secure a majority of the presidential electors. Women vote for ninety-one electors; that is, over one-sixth of the electoral college. If Iowa goes for suffrage this week this total will be increased to one hundred and four. Altho women are in a minority in the equal suffrage states, when one recalls that California went Progressive by only five hundred votes, it becomes apparent that in a close election their votes might prove the deciding factor in electing a President.

Perhaps the time has come when the passage of the federal suffrage amendment by the Democratic party or a Republican plank pledging national enfranchisement to women may be good politics.

Croton-on-Hudson, New York

UNNUMBERED WORLDS

BY HARRY KEMP

Unnumbered worlds flash round unnumbered suns:
World-generations battle, labor, cease,
And millions go down to the final peace
Thru all the starry Vast, while on there runs
Fierce generation still, and little ones
Clap tiny palms on million mothers' knees—
Themselves to toil and strive till death's release
And from their loins pour newer millions.
From time to time all Space doth halt and cry
On Thee, or Life,—for they would gladly know
Whence they have come and whither they must go—
Then a star falls, and Silence gives reply . . .
No answer else!—and Nature trudges on
With death, and life, and sunset, night and dawn.

READING AFTER THIRTY

BY ROBERT C. HOLLIDAY

SOMEWHERE in the mass of that splendid, highly personal journalism of his, William Hazlitt declares that he was never able to read a book thru after thirty. That penetrating man, Samuel Butler, reflecting in his "Note-Books" on "What Audience to Write For," says: "People between the ages of twenty and thirty read a good deal, after thirty their reading drops off and by forty is confined to each person's special subject, newspapers and magazines." Thirty again, you see.

We all have friends who have been omniverous readers, persons who, to our admiration and despair, seem to have read everything in "literature." It may have struck us, however, as a curious thing that, except possibly in rare instances, such persons appear not to read much now, beyond newspapers and magazines. The upshot of what they are able to say, when you ask them why this is true, is that one simply reaches a time of life when one "quits reading," as one ceases to dance, or cools in interest toward the latest fashions in overcoats.

But, undoubtedly there are persons who continue to read, apparently with unabated industry and zest, no matter how old they may become. Dr. Johnson, of course, was a constant reader all his life, and would cheerfully read anything whether it was readable or not. Tho did not he somewhere confess to himself that he did not read things thru? Mr. Huneker, who is well on the richer side of thirty, would seem to read everything printed about five minutes after it has left the press, and before anybody else has had a chance to see it. There are so many capital letters on the pages of his own books

that it makes one dizzy to look at them. Whether or not he reads thru all the books he mentions is of course (as he is a reviewer) a question. And, then, both Mr. Huneker and the Doctor belong to the trade, so to say. Another startlingly prodigious reader is Theodore Roosevelt, hilariously past thirty, and not exclusively identified with literary "shop." He is continually discovering and vigorously recommending new poets and short-story writers whom professional critics have not yet had time to get around to. It does not appear that a fundamental or organic change in the composition of the human brain which inhibits reading occurs more or less suddenly at thirty.

Why then do so many reading animals cease at about that time to read? Butler does not say. Arnold Bennett (was it not?) has asked what's the use of his reading more, he knows enough. Hazlitt, in his own case, surmised that the keener interest of writing rather asphyxiated the impulse to read. And, doubtless, that generally is about the size of it. As in the cure of the drink habit, a new and more intense interest will drive out the old. The reader, of course, is a spectator, not an active participant in the world's doings. After thirty, desirable citizens of ordinary energy have little opportunity for the rôle of noncombatant, and the taste of action and of success, like the taste of war, makes them impatient with quieter things. Failures read more than successful men. Bachelors no doubt read much more than husbands. And fathers seldom are great readers. This last fact may explain the observation that even college professors do not

read fanatically. When they are "off" awhile they "play with" their children (children are great enemies everywhere to reading), who are much more real to them than study.

In one of his later books George Moore chronicles his resolve to cultivate the habit of reading, to learn to read again. And he sucks much naïve pleasure from the contemplation of this prospective enterprise; but he finds it very difficult to persevere in it, and drifts away instead into reveries of what he has read. There is a thought here, however, to be hearkened to: the idea of learning to read again.

What is it that happens to one in consequence of his ceasing to read? He suffers a hardening of the intellectual arteries. There are quaint old codgers one knows here and there who declare that in fiction there has "been nothing since Dickens." They are delightful, of course; but one would rather see than be one. We all know many persons whose intellectual clock stopped some time ago, and there are people whose minds apparently froze at about the time when they should have begun to ripen, and which are like blocks of ice with a fish (or a volume of Huxley) inside. Nothing now can get in.

At those times of earnest introspection, when one would "swear off" this or that, would reduce one's smoking, would adopt the principle of "do it now," and so on—at those times an excellent New Year's resolution, or birthday resolution, or first day of the month resolution, would be to re-learn to read, to keep, as Dr. Johnson said of his friendships, one's reading continually "in good repair."

On Saturday, June 3, this great parade of 130,000 persons proclaimed Chicago's belief in national preparedness. The marchers are passing north on Michigan avenue. Eight other cities from Connecticut to Utah had similar parades that day.

A WORLD PLAN FOR DURABLE PEACE

BY FANNY FERN ANDREWS

SECRETARY OF THE AMERICAN BRANCH OF THE CENTRAL ORGANIZATION FOR A DURABLE PEACE

OF all the efforts designed to place the nations on a permanent basis of international order, the Central Organization for a Durable Peace occupies a unique position. This was formed by the International Confidential Meeting at The Hague in April, 1915, when thirty international jurists, statesmen, economists and publicists from Germany, Belgium, England, Austria, Hungary, Italy, Holland, Norway, Sweden, Denmark, Switzerland and the United States came together to discuss the basis of a durable peace.

This remarkable group, representing belligerents and neutrals, stipulated that their deliberations should not be concerned with the present war, and further determined that the names of the members should be held confidential and that the sessions should not be open to the press. It was only under these conditions, in fact, that the belligerent members were willing to take part in a conference while their respective nations were at war. The wisdom of these rules is apparent. The confidential character of the meeting rendered discussion free and unembarrassed by fear of unwise publicity. It was only after the close of the meeting that the eager press learned the conclusions which were summed up in what was called the Minimum Program. The names of the participants were still held confidential. As the Minimum Program, however, began to influence the minds of thinkers beyond the countries represented in the confidential meeting, and national groups of the Central Organization for a Durable Peace became established, the International Executive Committee voted to publish the names of that committee and also the names of those who are actively engaged in promoting the plans of the Central Organization. The program of this unique organization is now given to the public with a plea for united support.

The Central Organization for a Durable Peace is inspired by the conviction that the fundamental basis of a new world order which must come after the present war must be laid today, and it offers the Minimum Program "as a foundation for common action." The nine points of this program were drawn up with the view of meeting the practical situation after the war.

The establishment of a durable peace involves two steps: (1) The settlement of immediate questions, those touching the political, financial and territorial situation; and (2)

the reestablishment and the strengthening of international law.

In the congress that will assemble to draw up the terms of peace there will probably be a limited number of states, for it is natural that the people who have carried the heavy burden of the war will reserve to themselves the right to regulate the settlement of immediate questions. In order that this settlement, however, may not result in a mere armistice, having in it the seeds of future war, it must adhere to certain principles. The Minimum Program points out two safeguards. It calls attention, first, to the principle of nationality. The Central Organization for a Durable Peace recognizes that the political frontiers in Europe, coinciding only rarely with the limits of nationalities, are a constant cause of war. It does not attempt to regulate these con-

ditions, which are the result of an historical evolution, but it urges that whatever may be the issue of the war, the number of such cases may not be augmented by the next treaty of peace. The second safeguard is the insistence that states shall introduce in their colonies, protectorates and spheres of influence, liberty of commerce, or at least equal treatment for all nations. In this domain, we find a fruitful source of conflict, and it is incumbent upon any congress which bases its settlement on the principles of a durable peace to deal with this branch of economic rivalry because of its potency in creating dangerous oppositions and thereby provoking wars.

The program anticipates the calling of two assemblies, a comparatively small body to draw up the terms of peace as just described, and a large body representative of all civilized states to deal with the reestablishment and strengthening of international law. It is evident that the matters mentioned above concern the whole body of civilized states, since there can be no permanent settlement of some of the questions which immediately concern the belligerents until many world questions of international law are satisfactorily dealt with. In this connection, the problem of armaments and the freedom of the sea are especially urged for present consideration.

It is necessary to organize peace if it is to be durable. The program proposes, in addition to the Hague Court of Arbitration, a Court of Justice, a Council of Investigation and Conciliation, and the permanent organization of the Hague Conference. Thus no entirely new institution is included in the plan. The Hague Court of Arbitration presents a successful record of fifteen cases since its organization in 1902. The Second Hague Conference voted by a large majority for the project of an International Court of Justice, altho, as is well known, it failed of realization on account of the difficulties incident to the problem of its composition. The idea of a Council of Investigation and Conciliation for dealing with non-justiciable questions, those indeed which are most likely to lead to war, has developed from the Commission of Inquiry established by the First Hague Conference. Finally, to look forward to the development of the Hague Conference into an international assembly, meeting periodically to formulate and codify rules of international law, coincides with the spirit of the Second Hague

THE MINIMUM PROGRAM

1. *No annexation or transfer of territory shall be made contrary to the interests and wishes of the population concerned. Where possible their consent shall be obtained by plebiscite or otherwise.*
2. *The states shall guarantee to the various nationalities, included in their boundaries, equality before the law, religious liberty and the free use of their native languages.*
3. *The states shall agree to introduce in their colonies, protectorates and spheres of influence, liberty of commerce, or at least equal treatment for all nations.*
4. *The work of the Hague Conferences with a view to the peaceful organization of the Society of Nations shall be developed. The Hague Conference shall be given a permanent organization and meet at regular intervals.*
5. *The states shall agree to submit all their disputes to peaceful settlement. For this purpose there shall be created, in addition to the existent Hague Court of Arbitration, (a) a permanent Court of International Justice, (b) a permanent International Council of Investigation and Conciliation.*
6. *The states shall bind themselves to take concerted action, diplomatic, economic or military, in case any state should resort to military measures instead of submitting the dispute to judicial decision or to the mediation of the Council of Investigation and Conciliation.*
7. *The states shall agree to reduce their armaments.*
8. *In order to facilitate the reduction of naval armaments, the right of capture shall be abolished and the freedom of the seas assured.*
9. *Foreign policy shall be under the effective control of the parliaments of the respective nations.*

Secret treaties shall be void.

Conference in providing for the calling of the third.

Besides urging the consideration of those principles of durable peace which should govern the peace settlement congress and the plan for international organization, the Central Organization for a Durable Peace believes that the stability of peace will never be maintained wholly thru measures of international order. In speaking of the limitations of international law, Mr. Root said: "Law can not control national policy, and it is thru the working of long continued and persistent national policies that the present war has come. Against such policies all attempts at conciliation and good understanding and good will among the nations of Europe have been powerless." The program mentions two measures in this domain which are especially indispensable: (1) The guarantee to the national minorities of civil equality, religious liberty and the free use of their native languages; (2) the parliamentary control of foreign politics with interdiction of all secret treaties.

The most striking part of the Minimum Program, and that which offers a great departure from present international procedure, is the provision for an international treaty, binding states to refer their disputes to an arbitral or judicial tribunal or to the Council of Investigation and Conciliation, and further to use concerted diplomatic, economic and military pressure against any state that breaks the treaty. According to this plan, we find developed a world League of Peace, which, if supported by a strong public opinion, can come into existence thru the action of the world congress to convene after the war.

The Central Organization for a Durable Peace has already formed national groups in almost all countries to make a technical study of the proposals laid down in the Minimum Program. Nine Research Committees have been organized, representing the nine points of the Minimum Program. Some thirty-five research studies, including nine prepared by members of the American Committee, have already been published. These are now used by the various national groups as a basis of technical study and discussion, and after final editing, they are to be sent to the governments of the world.

Thru these study groups, which now represent twenty-six nations, this organization is building up a united support of the underlying principles of equitable law, and is thereby destined to become a world factor in influencing the great settlement. The effort demands the support of the world. The people of one nation alone, or of a group of nations, cannot effect a new world order; it is a task for the civilized world. The work of the Central Organization for a Durable Peace may be described as a simultaneous world study to prepare for action at the supreme moment of the world's history which we shall witness after the war.

Boston, Massachusetts

For the King

The Dish of the Palaces
Nearly All the World Over

"I was taken," he writes, "through the Emperor's kitchen, and what do you suppose? Why, there was Quaker Oats." But in his own kitchen it wasn't.

It's a curious fact. We Americans import Scotch and Irish oats to sell at fancy prices. But in the British Isles, where these oats grow, Quaker is the dominant brand.

And some of us take any oats that are offered, thinking oat flakes much alike.

But the connoisseurs of a hundred nations send here for their favorite oats.

Here is one American product—one of the few—which has won the whole world's admiration. Don't you know that such a product must deserve supremacy?

Quaker Oats

The Supreme Morning Dainty

Oats, to have the finest flavor, must be Northern grown.

But we go further. We take the choicest Northern oats and pick out the choicest third. That is, we discard two-thirds of the oats because they are underfed.

From the big, plump grains—just the cream of the oats—we make

these luscious flakes. That's why this flavor has won the world.

Remember that. Without extra price—without extra effort—you can get Quaker Oats when you order. You can breakfast the same as kings. After that, a lesser oat dainty will hardly be served on your table.

10c and 25c per package
Except in Far West and South

A \$2.50 Aluminum Cooker

Made to our order, extra large and heavy, to cook Quaker Oats in the ideal way. Send us five trademarks—the picture of the Quaker—cut from the fronts of five Quaker Oats packages. Send \$1 with them, and this double cooker will be sent by parcel post. This offer applies to the United States and Canada.

Address **The Quaker Oats Company, 1708 Railway Exchange, Chicago**

What Good Was Your Schooling?

A Composite Educational Autobiography of Independent Readers

WITH a view of getting some light upon the much discussed question of the merits and defects of the school system, we called upon our readers in the issue of January 10 to answer these two questions:

1. Of all you were taught at school what has proved most useful to you in after life?

2. What have you had to learn since leaving school which you might have been taught there?

Those who responded represented all kinds and degrees of education and of practical life, so we have in the letters an experience meeting of the widest scope on what knowledge is of most worth.

The first lesson we learn from them is the impracticability of prescribing any single course of study as suited to all minds and future careers. Almost every conceivable study is mentioned among those which have proved most useful, and some inconceivable studies are mentioned among those most missed. Many, it is true, specify the same study, but do not agree as to what they got out of it. It is therefore impossible to classify and tabulate the answers, and we can only give in a general way their trend.

English in its double sense of composition and literature is most often mentioned. Perhaps then we should begin our quotations with a teacher of English in the Horace Mann School of Columbia University.

Question I. English! Hence, expression, communication—a broad highway, easily traveled, between mine and the world's life. Hence, also, acquaintance with the treasures—and treasurers—of literature—of "the best that mankind has thought and said and done."

Question II.—Perhaps a course in *how to teach* administered to most college and university professors. Students are developed into cisterns, not dynamos! A course, in any subject, which puts a premium on power and original, creative effort on the part of students, would be the most useful course I did not get.

F. H. BAIR
New York City

I. Of all that I learned at school, the English language has been most useful to me both in its technique and its literature.

II. I wish I felt equally safe and firm in planning meals, home-sewing, house decoration, and kindergarten amusements. In less than a year of such courses in school I could have arrived definitely at information toward which I now travel a fitful and worried march.

MRS. HENRY A. DANFORTH
Charleston, Missouri

I. Language, commencing with McGuffey's spelling book—learned by heart, every word—McGuffey's readers, Kidd's education, Harvey's grammars, Harkness' Latin grammars and Cæsar's Commentaries.

II. Proper consideration for others. Everything that helped one to cultivate the love of the beautiful.

FANNIE A. CALDWELL
Piqua, Ohio

I believe what I value most has been my love of good literature, which we all imbibed from McGuffey's old fifth and sixth readers. We had daily drills in pars-

ing and sentence construction, but we were *never once* told to speak correctly.

The old fashioned reader with its "gems of choice literature," nowadays so sneered at, is regarded with gratitude by those who were drilled in it. Many of our correspondents specify the bits of poetry and prose they had to memorize as "the most useful" of all they learned at school.

The reading and learning by heart of classic bits of English prose and poetry, starting a real love for the best in literature. Next to this, a grounding in Latin that helped much in the use of English and in the understanding and study of Romance languages.

E. H. SMITH
Philadelphia

A love of reading, a training in thought getting, in concentration—the memorizing of poems of Shakespeare, Scott, Cowper, Tennyson and others, while very young, were the best things I got at school. The seeds from which my ideals grew many years after were these stored-up thoughts of the masters.

ETHEL SPRIGGS
Sarahsville, Ohio

The classicists turned out strong in this questionnaire. They are evidently not afraid to put their favorite study to the pragmatic test implied by the wording of the question. We will first call upon a chemist to testify:

I believe Latin and Greek were my most useful studies. They were the key that unlocked some of the world's best literature, and the logical background for subsequent modern language study. The close application demanded to master these subjects, and the student habits thereby acquired, have proved of permanent value. The professors were men of strong personality, real teachers, and not a little of the benefit came from associations with them.

NICHOLAS KNIGHT
Cornell College, Mount Vernon, Iowa

The most useful thing that I learned at school was an interest in Latin literature gained while listening to older pupils translate Virgil. This led to my own later study of Latin after leaving school and to my wider knowledge of language forms. Whatever of later professional success I have had is by a house-that-Jack-built process referable to this and to my home training.

E. I. HARRIS
Washington State Normal School,
Ellensburg, Washington

I am particularly glad that my language work was studying Latin and Greek, not the inanities in English that are sometimes taught at the present day; that I had *real* metaphysics.

"Down mid the tangled roots of things
That coil about the central fire,"
not experiments in the behavior of chickens, and that I had Dio Lewis' "Light Gymnastics" instead of the terrible athletics that are breaking down the hearts of our children and youth today.

SAMANTHA WHIPPLE SHOUP
Indianapolis, Indiana

1. "Small Latin and less Greek" learned in two years in the Boston Latin School opening up a new world to me; but being poor I had to stop and go to work.

B. L. S., 1865
Boston

Mental arithmetic—the very name of which is a reflection on other kinds of arithmetic—is mentioned by several as a most valuable exercise.

In the early '50's, in a "Little Red School House" in Maine, I had a drill in

Colburn's Mental Arithmetic, conducted by the schoolmistress of that period. I believe it was the most important event of my early schooling. The inevitable result of such a mental gymnastic was to induce a habit of brain activity, sometimes brain agility.

S. E. GEDDES
New York City

Fifteen minutes of arduous mental gymnastics started the educational ball rolling every morning of my school days. Important practical drill in remembering telephone numbers and messages, shopping lists, etc., were judiciously mixed in with the memorizing of really good prose and verse. Then there were always a few minutes of stiff mental arithmetic that ended the "memory" period like a snap of the whip, and the whole idea was one of the most productive in the curriculum.

ELEANOR WOODS BURR
New York City

If we count the votes, then the three R's have it by a large plurality. More than half our correspondents specify "reading, 'riting and 'rithmetic" in some form, as their "most useful study."

But many mention less tangible kinds of education:

I. I drove down from "Muskrat Medder," where I was the head of a mouse and attended school in the city, where I immediately became the ninetieth odd hair on the tail of a lion. This consciousness that there are so many people in the world smarter than I am was the most valuable thing I gained from my schooling.

II. I should have been taught: To endorse a check correctly; to put the "Dr." of a bill in the right place; to pound the nail and not my thumb; to read "sermons in stones, books in the running brooks"; to love Jesus; to tend a garden; to write legible words instead of hen-scratches; to spell most words of six letters and a few words with ten; to stop when I've said enough.

RALPH C. JENKINS
Manchester, Vermont

The most useful thing I learned in college was reverence for and belief in authority.

The greatest lesson I have had to learn since is reverence for and belief in myself.

This is not a paradox. These lessons are not contradictory; they are supplementary. "Faith without works is dead."

LEE W. COOKE
Walla Walla, Washington

The most useful thing that I was taught at school: know thyself and not everything.

Have had to learn since leaving school: to be alert, prompt, systematic, considerate, and last but not least: cultivate sunshine on life's journey.

FRANK JOHNSON
Pomeroy, Iowa

Much criticism and ridicule has been directed against the college student for his propensity to choose by professors instead of by subjects in his electives. But this course is not so irrational as it may appear, to judge by the many correspondents who refer to the influence of some teacher rather than the learning of a certain study. For instance, the principal of the Mars High School:

Outside of the three R's I learned nothing while in school. Of course, I passed the examinations. Either a well trained dog or boy can do this—if subjected long enough to the beating in methods of our public schools. But one thing I did assimilate, namely, the spirit of a teacher. It haunted me in after years like a ghost.

Wonderful Bird Books

Now Sent FREE!

Mail Coupon for This Examination Offer

Be able to tell every bird you see. To know our little feathered "pals" as they flit by. To know the bad birds from the good ones. What a delight it is! This knowledge *all* yours if you will but cut off and mail the coupon at the bottom. And more, too. Knowledge of all the flowers, butterflies and trees. Books you can put in your pocket when you go out. They open up beauties you may never have seen. They

give you a bigger, better education. No place where there is a child should be without these books. Let your children have this knowledge. This special offer brings a wonderful library of Natural History to you without a cent of expense. You ought to see these books. Act while this opportunity is open. Examine the complete set at your leisure. Let your family and friends see it. Then decide whether or not you will buy it. Nothing for you to risk. Send the coupon.

Know Every Bird— Flower—Butterfly—Tree

(The Pocket Nature Library Will Tell You)

700 COLOR PICTURES

Every feather of the birds shown in the exact coloring just as if you had the bird in your hand. Every petal and stamen of the flower just as colored or fashioned by Nature. All the wonderful hues of the butterflies—every secret of the trees. You don't need to ask. Pull one of these handsome limp leather bound volumes from your pocket. There it is. Just what you want to know. All nature like an open book. The very things you have wanted; and carried as easily as a pocket book. The only pocket nature guide with colored illustrations. The principal facts about each bird, butterfly, flower or tree goes along with each illustration.

No need to search through ponderous, technical, scientific books to know about the marvels of the great outdoors. A group of naturalists show you the better way to learn—in direct contact with the living things—and with a handy authoritative guide. You can get more out of an hour with the Pocket Nature Library than you can get in a day, yes, or a week, wandering blindly through field and forest. Think what these little books would mean not only to you but to the little son or daughter whose perceptions are just awakening. What a help in

developing the ability to observe and to learn at first hand these books would be.

Mail This Coupon—Send No Money

Merely send this coupon (without money) and the four books will come to you prepaid. Look at them. See the wonderful colors. Make up your own mind. If you want them send only 95 cents, then \$1.00 per month for four months (or \$4.50 cash). If you don't want them send them back at my expense. But get them just to look at anyway. Send coupon today.

Nelson Doubleday, Dept. 375, Oyster Bay, N. Y.

"WASTED"

WASTED light and flaking paint! Do you realize how much *wasted money* it means?

Three thousand of the biggest plants in the country realize it, and they now treat their ceilings and walls with a finish that *increases daylight 19 per cent. to 36 per cent.* and is permanent.

By using this finish, they help their workmen do more and better work; they decrease accidents; they save as much as three-quarters of an hour electric lighting every day; and they all save scaling and recoating of cold water mixtures, and flaking of paint into the machinery.

In addition, they have ceilings and walls that can be washed like a dinner-plate, and are thus kept wonderfully clean and sanitary.

The finish they use is Rice's Gloss Mill White (Barreled Sun-

(Reg. U. S. Pat. Off.)

light), an oil paint, made by a special process, discovered and owned exclusively by the makers.

Repeated tests have shown, without a single exception, that Rice's remains white longer than any other gloss paint.

By the Rice Method, it can be applied over old cold-water paint. It does not flake or scale with the jar of machinery, it does not yellow like ordinary oil paints, and saves big money on painting, because it does not need renewing *for years.*

Write for our interesting book "More Light"—and sample board.

ON CONCRETE SURFACES. On inside concrete Rice's Granolith makes the best possible primer for a second coat of Rice's Gloss Mill White—giving a glossy tile-like finish at no more expense than lead and oil paint. *Rice's Granolith.*

94 STYLES, sizes and colors in Ranger bicycles. Most complete line in America. Other guaranteed models \$11.95, \$14.75 and \$17.60. A few good second-hand bicycles taken in trade, \$3 to \$8 to clear.

Tires, lamps, wheels, sundries, parts, and all bicycle supplies at half usual prices. **Do not buy** until you get our catalog and offers. **Write Now.**

MEAD CYCLE CO., DEPT. K 198, CHICAGO

Not history outlines, not dates, not names she used to make us learn, but the spirit of her face went home. It led me into pastures of thought where I finally learned to live.

In answer to the second question I might say that I have had to learn how to react against an iron-faced world without beating my brains out. My classroom experiences as a student made me too conscious of the unreality of life. Bread and butter, sin and suffering, selfishness and love, justice and injustice—the approximate meaning of these things as I would have to find them was not brought home to me. My teachers were strong on the past but weak on the present. Get stronger teachers in the school room, especially men that can and will think courageously and then we shall have men and women going forth from our schools eager to sacrifice for the redemption of our social life, political, religious, economic. **A. H. FORMAN**

Mars, Pennsylvania

Many of our women correspondents complain that their schools and colleges failed to provide for the expanding opportunities of feminine life. We surmise that the next generation will have the same complaint to make of some present-day schools.

Since leaving school I have learned that every human being has some one power by which he may reach happiness and usefulness, and that every life should be planned for the use of the special gift with which the individual may be endowed. In common with most girls' schools my Alma Mater was diligent in season and out of season to keep us "womanly." As individuals we were to be all that was pure and lovely, but no ideals of active life were held out to us. It was generally understood that we would have a year or two of young ladyhood and drift into matrimony. In the case of a majority of women this kind of training may be fraught with no evil consequences, but thru dependence and marital misery a sorrowful minority realize that they and the world would have been better off if they had been taught as individuals and not as a sex whose work in life was predestined to lie in only one field of usefulness. Some men who are square pegs get into round holes, but thousands of round female pegs are forced into square holes with utter unconsciousness of the lifelong tragedy involved. **MRS. L. H. HILL**

Bastrop, Texas

The women of the Library Club of Glen Elder, Kansas, took The Independent questions as the topic of a meeting and got a very frank and interesting discussion out of them. We quote a few of their experiences:

I wish I had learned that fooling the teacher was really harming myself.

Learned truthfulness is advisable even with little children.

I wish I had *not* been taught to count on my fingers. It seems impossible to break the habit.

I learned to mind at school. I always had my way at home.

My drill in accurate spelling has made me the dictionary of the family.

The most useful thing was the Golden Rule.

I wish I had been allowed more chance for self-expression—not forced to express the teacher's ideas.

Our second question, concerning the sins of omission of the schools and colleges, called out, as might be expected, more various replies than the first, but they fall readily into two general classes; one calls for more practical, especially vocational, instruction; the other complains of the lack of training in character-building, personal efficiency and the art of getting along with other people.

We will consider the practical demands first, as they are easier met. Among the "long felt wants" mentioned are knowledge of applied science, especially mechanics; manual training (the kind that really trains), domestic science, business methods, law, hygiene and agriculture. We give a few specimen replies:

What I have had to learn in the years since leaving school that I might have learned while there is largely a practical acquaintance with what might be called the mechanics of everyday life. I think it possible to instruct all children in simple everyday mechanical operations, such as would be suggested by locks and hinges, a bicycle or a sewing machine.

FLORA WARREN SMITH SEYMOUR
Chicago

All of my life I have felt the lack of general and specific physical and manual training—the practical application of principles of mathematics, chemistry, physiology, psychology, etc., to the actual work of everyday life. So I say, not mildly but from passionate conviction, that courses in practical business, domestic science, kindergartening, carpentering, etc., should accompany mental training. Much of the time in school was wasted, because many of us could have done twice the work in the time if we had not been limited to the grade schedule. This unused time and certain hours of the long summer vacation days could well have been devoted to "play" in the form of vocational work.

MARY WHITE SLATER
Ironton, Ohio

I think that my school should have taught me some handicraft and that its failure to do so was its most obvious failure. It is true that for a year or so I was kept sawing and planing at little bits of wood for a very few hours a week, but I cannot say that I even learned to drive a nail without an even chance of hitting my thumb. The classes were too large, the work stereotyped and formal, the teachers undertrained, overdriven and probably underpaid. Other students were far more skillful than I and received better marks, but none of them seemed to find in this inadequate routine shopwork either pleasure or enhanced ability to do.

P. W. S.
New York City

No man or woman in these days can afford to be ignorant of the working and construction of an automobile. It ought to be part of everybody's education.

FREDERICK A. BINNEY
San Diego, California

In the secondary schools I ought to have received:

1. Training of the fingers by means of sewing.
2. Training of the eye by means of drawing.
3. Training of the ear by means of singing.

4. Training of the whole body by means of physical exercises so that instead of being flat-chested and stoop-shouldered I might now be supple and strong.

In college I should have been taught dietetics and chemistry applied to food and cleanliness.

I did receive the ability to enjoy good music, and as I am a near-monotone I greatly appreciate it.

MRS. A. J. ERICKSON
Franksville, Wisconsin

The most serious lack in my training was the absence of any course of instruction which could give me even a meager knowledge of my present profession of home-making and child culture.

A. E. BAKER
Baltimore, Maryland

Chemistry would have prevented me from committing many gastronomical crimes and taught me how to live to be a hundred years old and be useful to my fellow-man.

C. BIERCE
Memphis, Tennessee

Forty-one Years of Telephone Progress

The faint musical sound of a plucked spring was electrically carried from one room to another and recognized on June 2, 1875. That sound was the birth-cry of the telephone.

The original instrument—the very first telephone in the world—is shown in the picture above.

From this now-historic instrument has been developed an art of profound importance in the world's civilization.

At this anniversary time, the Bell System looks back on forty-one years of scientific achievement and economic progress, and gives this account of its stewardship:

It has provided a system of communication adequate to public needs and sufficiently in advance of existing conditions to meet all private demands or national emergencies.

It has made the telephone the most economical servant of the people for social and commercial intercourse.

It has organized an operating staff loyal to public interests and ideals; and by its policy of service it has won the appreciation and good will of the people.

With these things in mind, the Bell System looks forward with confidence to a future of greater opportunity and greater achievement.

SEA PINES SCHOOL Of Personality For Girls

Rev. Thos. Bickford, A.M., Miss Faith Bickford, Principals, P. O. Box P, Brewster, Cape Cod, Mass.

Sea Pines is the Recognized Pioneer School of Personality

Happy home life; personal attention and care. Students inspired by wholesome and beautiful ideals of efficient womanhood. The Cape climate is exceptionally favorable for outdoor life. One hundred acres; pine groves; 1000 feet of sea-shore. Ponies; horseback riding. Hygiene and morals observed especially for results in health, character and initiative. Gymnastics, Music, Handiwork, Household Arts, French, German and Spanish by native teachers. College Preparatory, Cultural, Domestic Science, Secretarial and other courses leading to Personality Diplomas introductory to definite service. All branches of study under experienced and enthusiastic instructors. For booklet and further information, address

Brookfield

The Open Air School for Her

Teaches your daughter how to realize the durable satisfactions of life. The Directors believe that this end is attained through helping the growing girl to establish habits which keep her well; make her think clearly, make her live in right relations to her world.

The aim at Brookfield is to give the girl her fullest power, rather than to cram her mind with a specified quantity of book-learning.

Open air sleeping, study and recitations. Open air dining room. Domestic arts, gardening, physical training, summer and winter sports, dancing, story telling, dramatic training, music.

Write personally to

Miss Helen Fairman Cooke,
The Brookfield School,
North Brookfield, Mass.

The Sargent School for Physical Education

Established 1881. Largest normal department for physical education in the world. General and special courses prepare for healthy womanhood. Address for booklet.

Dr. D. A. SARGENT, 32 Everett Street, Cambridge, Mass.

Wheaton College for Women

Only small, separate college for women in Massachusetts, 4-year course. A. B. Degree. Faculty of men and women. 2-year diploma course for high school graduates. 18 buildings. 100 acres. Endowment. Catalog. REV. SAMUEL V. COLE, D.D., LL.D., President. Norton (30 miles from Boston), Massachusetts

WALNUT HILL SCHOOL

24 Highland Street, Natick, Mass.

A College Preparatory School for Girls. 17 miles from Boston. 40 Acres. Skating Pond. Athletic Fields. 4 Buildings. Gymnasium. Miss Conant, Miss Bigelow, Principals.

DEAN ACADEMY

FRANKLIN, MASS.

ARTHUR W. PEIRCE, Litt.D., Principal

MONSON ACADEMY FOR BOYS

Established 1804. 15 miles from Springfield. An endowed school. Certificate privileges. Completely equipped athletic field. Modern dormitory. Gymnasium. Rate \$300. Fund for boys of proven worth. For catalog and book of views, address the principal, Monson, Mass.

BOSTON UNIVERSITY

Law Medicine
College of Liberal Arts
Theology Graduate Department

The College of Liberal Arts now occupies its new building next to the Boston Public Library and offers the advantages of a modern college course. The building is equipped with Laboratories, Department Libraries and has fullest use of the Boston Public Library. The professional schools located in the heart of the city not only offer the usual courses of instruction but afford unusual opportunities for self support and for the practical training in the several professions. The Graduate School offers exceptional opportunity for research work.

LEMUEL HERBERT MURLIN, President
Copley Square, Boston, Mass.

A school where girls learn self reliance. 23 miles from Boston. Extensive grounds—modern buildings.

ABBOT ACADEMY
Andover, Massachusetts
Miss BERTHA BAILEY, Principal

College Certificate Privileges. General course with Household Science. Founded 1828.

Mr. Bierce, like many of our other correspondents, is perhaps asking more than the schools in their present imperfect state can be expected to teach. Chevreul is the only chemist we remember to have lived more than a hundred years.

Cooking and sewing. My mother did not have time to teach them to me at home, and I could learn neither till after I was married, and had to learn them from neighbors' books, by experiment, or any way I could. With three babies, coming right along, one after the other, my lack of knowledge on these subjects has been deplorable.

ANNA GILLESPIE McCLELLAN
Greeley, Colorado

I might have been given:

1. A short, simplified course in banking and trade operations *acted out*.
2. Some concrete examples of business organization.
3. A few lessons on the uses and handling of tools, wood finishes and building materials.
4. Some definite knowledge of the different lines of work that make up our industries, of the opportunities that exist in each line, and of the qualities and qualifications that each line calls for, to the end that I might intelligently have chosen a vocation for which I was by nature fitted.

NORMAN P. LAWSON

Corfu, Washington

II. There is no subject that I have had occasion to study since leaving school that I believe should have been taught there unless I may regard as such the art of handwriting; the formation of a neat and thoroly practical hand is a matter of importance but too lightly esteemed and its successful teaching in the United States seems to be almost an unknown art.

BREWSTER PHILLIPS

Biltmore, North Carolina

A course in agriculture would have been a blessing to me. I studied about the earth, but it was of a far-away earth instead of the world at home. I could describe the course of the Yang-tze-Kiang river and a hundred other streams that drained strange lands, but I was not taught the value of drainage for my own home fields.

L. DILLON

Bedford, Virginia

But more often than the demand for the applied physical sciences comes the expression of a need of what might be called applied psychology and sociology, that is, of some form of education that shall enable one to develop his faculties and to deal with fellow-men. Our correspondents are not very definite about how these things can be taught, if at all, in the schools, but they evidently feel the lack of something very essential in their training. Apparently it is more a matter of discipline, experience and moral culture than any formal instruction. But a few samples of answers to our second question will define the need better than a definition.

I failed to get a clear conception of the demands and responsibility of society and thereby neglected the social side of life which enables one to be a good mixer.

S. F. GOLLEHON

Tazewell, Virginia

A knowledge of human nature in real life. Few things could be of greater or more lasting value than a careful study of the nature and effects of the motives and ideas which mold the character and govern the conduct of our fellow-men.

CHARLES RICHARDSON
(age 75)

Philadelphia, Pennsylvania

What I think I lacked most was the ability to meet people fairly and openly in the affairs of everyday life. Particularly

to meet those of opposing views without giving unnecessary offense and yet stand firmly for what I consider to be right.

A. H. COUCH

Haviland, Kansas

Practice in oral and written expression, a *synthetic* use of the school subjects, some knowledge of the underlying impulses, incentives and mental methods of ordinary men.

ALFRED GUILLON

Berkeley, California

Born a poor farmer's boy I was never taught in school independent thinking or any standard of true values, so that I might live a full life without wealth or fame. God forgive my well intentioned teachers; from them I learned chiefly what *not* to teach others.

W. J. MEREDITH,

Vice Principal, Montezuma Mountain Ranch School for Boys
Los Gatos, California

What I was not taught and learned later, and painfully, was the ability to discriminate between capital and income, not in the general but the individual sense, and with reference to health as well as wealth.

A. B. JACKSON

North Adams, Massachusetts

Self-reliance. The school system of today tends to place all responsibility on the teacher. This is wrong. Unless a scholar is made to feel that it is *he* himself who is responsible for his own welfare he will never attain success.

W. L. BIDDLE

Philadelphia,

Typewriting. Also more efficient methods of work, conserving energy and increasing output. Perhaps this cannot be learned in any school as well as one learns it by experience and intellectual alertness, but a beginning along these lines might well be made in school or college.

R. S. BOARDMAN

Bloomfield, New Jersey

I. Chiefly that I was not different from other boys and that all human beings have many points of similarity.

II. Everything in essentials and all of the little that I really know. It was outside of school that I learned how to learn and by association with other and older people to see what they saw.

PRINCE TANNATT WOODS, M. D.

Silver Lake, Massachusetts

We conclude with a few replies not easy to classify, but too interesting to omit.

I. Psychology, in my junior college year, brought me up with a start. It taught me keen observation and introspection.

II. I have had to learn thoroughness. My teachers did not seem able to make things appeal to me. Moreover, they were easily satisfied and accepted work that was so poorly done that I actually formed habits of incompetence. Why not give the curriculum a rest and agitate for thoroly trained, well educated teachers? Is not the teacher the curriculum after all?

R. W. LEWIS

Pacific College, Newberg, Oregon

I believe that of all I learned at school the habit of "looking it up" in an authority instead of asking my neighbor has helped me most to keep up to date and correct in my various professions of wife, mother and housekeeper.

The subject of efficiency, personal and occupational, has seemed, since I began to study it, to have been the most essential subject omitted from the curriculum of my schools and one perfectly possible to teach there.

MRS. F. C. JACCARD

Anaconda, Montana

I. A constructively critical attitude on life—without faultfinding—I believe to be the most useful thing gained from my university training. No one course or person was responsible. The spirit of the University of Michigan, some professors, notably Smalley and Taylor in economics, a tradition of friendly criticism in my fraternity—all helped.

C. B. TAYLOR

Des Moines, Iowa

TENNESSEE

MARTIN COLLEGE, PULASKI, TENNESSEE

A Junior College with Preparatory Department. Moderate Rates. Modern Buildings and Equipment. In the Blue-Grass Hills of Sunny Tennessee. Careful Supervision. W. T. Wynn, President.

I. Music is the most useful thing I learned at school. In prosperity a pleasure to myself and friends; in adversity, a means of livelihood.

II. I have had to learn method, organization, and, greater than all, a *fixed, definite object*. This is the greatest lack of our schools. We find ourselves too late.

MRS. JAMES BACON

Winthrop, New York

I. The most useful thing I learned at school was that the sum of the three angles of a triangle is equal to two right angles; in other words, that there are things in the universe that are beyond debate.

(REV.) ALBERT DONNELL

Burlington, Massachusetts

1. To observe.

2. To observe better.

NATHANIEL BOWDITCH POTTER

New York City

School introduced me to habits of mental concentration. Beyond that little.

It should also have taught self-control, health principles, love of work, thrift, value of time, use of leisure, helpful fatherhood, the service of society, Nation, and God; also knowledge and appreciation of trees, flowers, birds, constellations, pictures, sculpture, architecture, music, biography, history, literature; also interest in uplift, and familiarity with child psychology, world classics in translation, and the literary and spiritual values of the Bible. I needed bread; I received stones.

THEODORE C. BLAISDELL

Dean of the School of Liberal Arts
Pennsylvania State College

PEBBLES

"Carranza," says an exchange, "dearly loves a joke." Egotist!—*Columbia State*.

"See America first" also applies to international relations.—*Chicago Daily News*.

If there is no change in the Mexican situation, it at least has nothing on the Mexican Treasury.—*Washington Post*.

The Plumber—Take it from me, Joe, them that doesn't believe in preparedness ain't no good on earth. By the way, ye'll have to go back to the shop for a monkey wrench and the soldering outfit.—*Judge*.

A society for disseminating religious literature once sent a bundle of tracts to a railway manager for placing in the waiting room, with the title: "A Route to New Jerusalem." He returned them with the message:

"We cannot place the tracts, as New Jerusalem is not on our system."—*New York American*.

I met a politician,
Of greetings he was chary;
He passed me by with frosty eye—
This was in January.
I met a politician,
The same, on one hot noon;
He bade me stand and wrung my hand—
For this, you see, was June.
—*Columbia State*.

An aged negro was crossing-tender at a spot where an express-train made quick work of a buggy and its occupants. Naturally, he was the chief witness, and the entire case hinged upon the energy with which he had displayed his warning signal. A grueling cross-examination left Rastus unshaken in this story: The night was dark, and he had waved his lantern frantically, but the driver of the carriage paid no attention to it.

Later the division superintendent called the flagman to his office to compliment him on the steadfastness with which he stuck to his story.

"You did wonderfully, Rastus," he said. "I was afraid at first you might waver in your testimony."

"Nossir, nossir," Rastus exclaimed, "but I done feared ev'ry minute that 'ere durn lawyer was agwine to ask me if mah lantern was lit."—*Puck*.

Catalog.

Ossining-on-Hudson, New York

The New Books

HALF TRUTHS

To call a book *Essays and Literary Studies* and expect it to sell is a flattering tribute to the reputation of the author, and fortunately one which Stephen Leacock's popularity warrants. But the admirers of "Moonbeams from the Larger Lunacy" may be surprized and the seekers for deep philosophy in "Behind the Beyond" will be interested to find a book by Mr. Leacock serious as well as clever, thoughtful and humorous at the same time.

Of the several essays included, two betray Mr. Leacock's classroom point of view—rarely acknowledged in his writings. The Lot of a Schoolmaster sugar-coats numerous educational theories and suggestions, full of valuable information, which by no means prevents them from being entertaining. And because he can show us one professorial mind which is not "seriously damaged by education and by perpetual contact with students" Mr. Leacock makes convincingly *The Apology of a Professor*.

Then he turns to a consideration of American Humor—not yet boiled down to wit—and sidesteps *The Woman Question* by remarking that "Perhaps in the modern age it is not the increased freedom of women that is needed, but increased recognition of their dependence. Let the reader remain agonized over that till I write something else."

But meanwhile he pays sincere tribute to *The Amazing Genius of O. Henry*; attempts *The Rehabilitation of Charles II*, whom he succeeds in making out a first class hero; and incidentally tells us how to read his books, in which "Most of the statements are at best only half truths. But the half truth is to me a kind of mellow moonlight in which I love to dwell. One sees better in it."

Essays and Literary Studies, by Stephen Leacock. Lane. \$1.25.

WHY THEY FIGHT

With a reminder of General Sherman's definition of war we pass from the introductory pages of explosive wrath at the Germans for their superior efficiency and scientific weapons, in Frederic Harrison's *The German Peril*, to the substance of his book. Herein he shows comprehensive grasp of the trend of events and remarkable foresight. From papers of his printed from as far back as 1870 until two weeks previous to the Great War he demonstrates that again and again he endeavored to rouse his money-seeking, sport-loving fellow countrymen to the sense of a threatened human cataclysm.

He maintained that neither the German people, as such, nor their Emperor, peace abiding from policy, wield-

Mariensfeld Outdoor School for Boys

At Samarcand, North Carolina

This successful school, completely equipped with buildings, streams, swimming pool, automatic water system, tennis courts and other requisites for accommodation of fifty boys and masters will be made over to a head master, competent and able to carry it on, at a moderate price, on easy terms, by the retiring owner, Dr. Hanford Henderson, Samarcand, North Carolina.

What's Keeping Me Back?

You've wondered why you don't get ahead. Why your pay isn't increased. Why you don't get promoted. You've blamed everything and everybody, when the real drawback is *yourself*.

You're standing still because you lack *training*. Because you have not *prepared* yourself to do some one thing better than others. If you really want to get ahead, the way is open to you.

For 25 years the International Correspondence Schools have been helping men to climb into good paying positions. Nearly 5000 reported last year that I. C. S. training had won them advancement. You can get I. C. S. training in your spare time in your own home without losing a day or a dollar from your present employment.

Position, power, good money, independence, are within your reach. The I. C. S. are ready to help you be the man you want to be. Let them show you how. Mark and mail this coupon.

BANKERS
(Est. 1887) Fort Qu'Appelle, Sask., Canada

ed the destiny of the German nation. It was the German Junker caste—the only flourishing survivor in Europe of medieval feudalism, hundreds of thousands strong, who ruled Germany absolutely and were determined to dispute, if not destroy England's commercial rivalry and power. Concomitant was the political situation developing in Europe since 1870, particularly that in the Balkans. Dr. Harrison held that "given the circumstances as they are, and apart from any question of responsibility for those circumstances, the warning of Germany that 'Who attacks Austria, attacks me,' seems such as the average German patriot, with the ideas now dominant, could hardly refuse to back." He goes further and admits sympathy with the German who "finds his redundant population shut out from all the most desirable possessions of the planet," while "England . . . neither seeks to humiliate nor weaken the German Empire, yet she confronts Germany with a maritime power which is not only paramount, but claims that it always must remain predominant." Herein he foresaw diametrically opposed forces leading inevitably toward war, joined by other national currents surging in the same direction.

Finally he looks into the future, when German Junkerdom with its backbone of Prussian Militarism is swept away. It is not a hopeful outlook, and hardly gratifying to the United States to feel that we are to be the financial and commercial residuary legatees of all this ruin, desolation and slaughter. This most illuminating volume is emphatically worthy of Dr. Harrison's long-established reputation as an able and discerning writer on public affairs.

Dr. Thomas F. A. Smith's *What Germany Thinks* is disappointing in that it is not a personal review of a supremely momentous subject, of which he, as late English Lecturer at the University of Erlangen, should be a well qualified exponent, but is, for the most part, a partisan treatise compiled from printed and verbal expressions of the German attitude toward the war. While everything republished or reported in Dr. Smith's book may be authentic, still there doubtless are contrary revelations of German thought not quoted which would relieve Germany, as a people, somewhat from the deliberate wickedness Dr. Smith sets forth to prove out of her own mouth. He finds himself called upon, here and there, to shift his ground a little. He yields the inefficiency, the lack of common knowledge pos-
sessed by the British diplomatic and consular services in Germany, together with the "dry rot" in England.

Herewith another book which goes deeper into the origin of the war than Alsace-Lorraine, the Serbian pistol shot, or the German invasion of Belgium. In *Germany vs. Civilization* William Roscoe Thayer treats it as a world embracing conflict of ideals as between despotism and democracy, barbarism and all we have striven to attain in betterment of the human race, of long growth and of desperate future portent.

For Sprains Lame Muscles

Absorbine, Jr., brings quick relief. Keep it always at hand for instant use.

Athletes use Absorbine, Jr., for the muscle that has been strained, for the cut or laceration that runs a chance of infection; for the abrasion that pains and the limbs that are stiff and lame from over-exertion.

Absorbine, Jr. THE ANTISEPTIC LINIMENT

When applied to cuts, bruises and sores, it kills the germs, makes the wound aseptically clean and promotes rapid and healthy healing. It allays pain and inflammation promptly. Swollen glands, painful varicose veins, wens and bursal enlargements yield readily to the application of Absorbine, Jr.

Absorbine, Jr., is made of herbs and is non-poisonous—safe to use anywhere, even by the smallest member of the family.

It Combines Efficiency with Safety

Only a few drops of Absorbine, Jr., are required at each application, which makes it an economical liniment to use. One ounce of Absorbine, Jr., added to a quart of water or witch hazel, makes an antiseptic, general liniment of more than ordinary efficacy.

Absorbine, Jr., \$1.00 a bottle at most druggists or delivered

A Liberal Trial Bottle will be sent to your address upon receipt of 10c in stamps

He recalls a Germany which, for its solid plodding qualities, won his admiration; but which is now engulfed in the terrible pagan forcefulness of the ruling caste of Junkerdom. Again appears the question how far the Emperor has been a free agent in directing German policy. A German view of him revealed in private discussion may throw light on this subject. According to this the German Emperor was never the Junker ideal, nor was he popular with the German masses. Somewhat curiously this was chiefly owing to his physical defects. His stature, infirmity and general build were not of the approved German pattern for a Kaiser, in nowise resembling the heroic mold of "Unser Fritz." Besides he was the Englishwoman's son! He soon grew to comprehend this unfavorable attitude toward him, and made almost desperate efforts to prove his sturdy Germanism in spite of it. Hence his grandiloquent utterances, his impulsive actions, and his anti-English sentiments. How far these would seem to have imprest his subjects is doubtful, since they brought down upon him the sobriquet of The Gadabout—as nearly as the term can be translated. Mr. Thayer does not seem to have lit upon this view, tho other pro-Ally writers hint the German Emperor's position was not entirely secure in the councils of Junkerdom.

The German propaganda in the United States is reviewed and we are warned not "to be lulled into inaction by the belief that this titanic struggle does not and cannot concern us," for the "Germans make no secret of their calculation that, when they have destroyed the British Empire, only Russia and the United States will stand between them and world dominion in a final triumph of despotism over democracy."

The German Peril, by Frederic Harrison. London: Unwin. \$1.25. *What Germany Thinks*, by Thomas F. A. Smith. Doran. \$1.25. *Germany vs. Civilization*, by William Roscoe Thayer. Houghton, Mifflin. \$1.

PSYCHOLOGY AND ECONOMICS

All economic theory is more or less related to prevailing psychological beliefs, but it is seldom that the economist takes the trouble to check his theories against the more advanced teachings of contemporary psychologists. Professor Taussig's Brown University sesquicentennial celebration lectures therefore have a certain refreshing quality that other economists may do well to study. In *Inventors and Money-makers* the author may be said to cashier the traditional "economic man" and to deal with the more familiar organism that obeys his impulses with very little thought of material gain. People have the "instinct" to contrive, and they will continue to invent, just as they will continue to write verses and make graven images, whether we have patent laws or not, whether we can capitalize inventions or not, whether we need the money or not. The classic arguments for privation and economic conflict as the sole sources of "incentive" to effort are shown to be untenable for the class of people whose distinc-

A BOOK OF PRINCETON VERSE

Edited with Preface by Alfred Noyes

This Princeton verse, written during the last six years on the Princeton Campus, was selected by Alfred Noyes, who also contributes the Preface. The volume is analogous to some of the college anthologies which have recently attracted attention in England. The entire work rings sound and the verse is of a strong, clean character. The poems are original and highly distinctive in every way.

tive economic contributions are most significant. And the prevailing antagonisms in industry are shown to be economically wasteful as well as socially injurious in that they force so many workers to bridle their constructive instincts.

As for the money-makers, they follow the constructive as well as the accumulative instinct, altruistic motives no less than emulative ones. The directors of corporations have frequently shown themselves imbued with a sense of responsibility, and a captain of industry may conceivably conduct his economic functions in the spirit of a patriotic and devoted statesman. The discussion again brings forward the question whether industrial leadership can be reconciled with industrial democracy.

A radically different application of modern psychology to economics is *The Executive and His Control of Men*, by Enoch Burton Gowin, of New York University. This essay postulates the increase of executive ability as the great economic and social need of our times, and proceeds to analyze the sources of the executive's power. It embraces the principles of scientific management applied to the increase of power, and to the control of others—"motivating the group." In spite of the distinctly commercial attitude of the author, the book contains a mass of valuable material.

Inventors and Money-makers, by F. W. Taussig. Macmillan. \$1. *The Executive and His Control of Men*, by Enoch Burton Gowin. Macmillan. \$1.50.

JEWS IN GREECE AND ROME

In the present volume Max Radin, a young scholar of much promise, has made a needed study of the relation of the Jewish people to the Greek and Roman civilization about them during the period from the return from the Captivity to the Conquest by Christianity in the Roman Empire. For the material of this study the author has depended upon the Old Testament and its Apocryphal writings, the works of Josephus, and particularly the collection of classical references to the Jews made by M. T. Reinach. The New Testament sources are scarcely referred to, the author appearing to regard them as comparatively late and untrustworthy. While his reading has covered a wide field, he has given the result in broad outline, not confined by any means to what is directly Jewish. Thus chapters are given to the discussion of Greek and Roman religious ideas and to the constitution of city governments and, particularly, Alexandria. We observe that the author does not seem to regard the Persian period as critical for Jewish religion, nor does he explain the belief in magic and in good and evil spirits. He has taken pains, at considerable length, to defend the Jews against absurd charges, such as their worship of the golden head of an ass. While the apologetic purpose is not concealed, the book will be of value to other than Jewish scholars.

The Jews Among the Greeks and Romans, by Max Radin. Philadelphia: Jewish Publication Society. \$1.50.

Insurance

Conducted by

W. E. UNDERWOOD

A STRIKING COMPARISON

Occasionally I am in receipt of requests from readers seeking information about the Royal Arcanum, a fraternal life insurance order organized in 1877, which has a present membership of about 240,000 persons, assets of more than \$12,000,000 and an aggregate outstanding insurance of about \$450,000,000.

The order has unlimited power of assessing members for the purpose of raising funds with which to meet its liabilities. To that extent it can be regarded as solvent. But measured by the tests to which a regular life insurance company must conform, its so-called reserves, or surplus funds, are greatly inadequate. As a means of illustrating the difference between its methods and those practised by an old line company I reproduce, in my own way for the sake of brevity, a comparison I saw between a Royal Arcanum contract and one of the Mutual Benefit, each for \$3000, at age thirty-five, both issued in 1878. Time is the supreme test in such a case. In 1878 this insurance cost \$11.76 in the Royal Arcanum and \$78 in the Mutual Benefit. During the subsequent years the cost in the Royal Arcanum fluctuated, but steadily increased. In 1885 it was \$20.16; in 1895, \$25.20; in 1905, \$66.51; in 1915, \$160.20. The Mutual Benefit's premium remained at \$78 a year thruout the period, except as it was reduced by annual dividends.

At the end of 1915 the net cost in the Royal Arcanum was \$2,337.23. The rate had risen from \$11.76 to \$160.20 a year; the policyholder was sixty-three years old and, of course, had accumulated no values. In that respect, he was just where he started thirty-eight years before.

In the Mutual Benefit the gross cost (38 x \$78) was \$2,964. The dividends paid, \$954.22, reduced this to \$2,009.78. The cash surrender value of the policy is \$1,899.24. If the holder of this policy wishes to quit, and takes his cash value, his protection in the company during thirty-eight years will have cost him \$110.54, net.

For the benefit of those who are investing their money and their years in reserveless life insurance, I present this experience as something invaluable because it is actual.

R. J. N., Marion, N. C.—If you can conveniently do so, leave your annual dividends with the company as purchase money for additional insurance payable at death. These additions have equivalent cash values if at any time you wish to convert them or to apply them in shortening the term during which premiums are payable for the original amount.

Across the Continent from Monday to Monday

Cadillac in thrilling dash from Pacific to Atlantic shows incomparable stability and sustained speed

Los Angeles to New York in 7 days, 11 hours, 52 minutes

THE quickest way to appreciate the wonder of this triumphant trans-continental Cadillac trip, is to close your eyes and call up two pictures—one of the start, and the other of the finish.

Transport yourself first, to beautiful Los Angeles, and imagine a Cadillac leaving the city one minute after midnight on a Monday morning, the second week in May.

Then, blot out the picture of Los Angeles and substitute New York, and try to conceive *the same car with the same driver swinging blithely up Broadway the Monday following.*

No effort of your imagination, no words of ours, and nothing less graphic than a motion picture record can portray the heroic character of the work done by this Cadillac in the interim—between these two Mondays in May.

But the start and the finish, the distance covered, the remarkable time made, the great reduction made from the previous record—all these spell the superlative character of the performance so plainly that no motorist can fail to grasp its meaning.

The Cadillac which 'conquered the continent' was just such a Cadillac as you might buy and drive yourself.

It was equipped as your Cadillac would be equipped, with no special preparations other than those which would ordinarily be made for a long distance tour.

The trans-continental Cadillac was not a specially built car 'stripped for action'—but a fully equipped standard Roadster; and, granting that you possessed the stamina of its single driver, the journey was one which you yourself might take if you were so inclined.

But, because of the terrific speed almost continually sustained, it involved, of course, hardships to man and car of an unprecedented character.

What it proves of Cadillac stability and endurance is aptly illustrated by a comparison between the Cadillac cross-continent record and the railroad schedule between the two cities.

The distance by rail is 3240 miles—the distance covered by the one Cadillac was 3371 miles.

In the regular railroad schedule between Los Angeles and New York, in spite of smooth tracks, solid road-bed and clear right-of-way, a relay of twenty-two locomotives is called into action.

Consider, now, the almost miraculous endurance of the car, handicapped a hundred times over in the matter of road-bed, yet it traveled its distance without so much attention to its motor as the cleaning of a spark plug.

Its rate of travel ranged from only 5 miles per hour, plowing through hub-deep mud, to 68 miles per hour on smooth stretches.

The railroad schedule is 90 hours—and the Cadillac *cut 91 hours and 23 minutes off the previous motor car record* made by the same driver in another make of car.

The Cadillac left Los Angeles at 12:01 A.M. Monday, May 8th, and arrived in New York City at 2:53 P.M. Monday, May 15th, with intervals for food and sleep.

In that eventful period of a little more than a week, it was put through a more terrific trial of stamina than the majority of cars encounter in ten years of travel.

Over mountain ranges, along precipitous passes, through desert wastes, fording unbridged streams, and through roads almost impassable at their best but made worse by this spring's copious rains, the Cadillac hurtled heroically on—not merely defying destruction, but unruffled, undisturbed and undaunted.

The wonder of the thing, is not that the trip was made without disaster.

The real wonder of it is not in the limited time that elapsed.

No, the real wonder, and the really valuable lesson, is that this wonderful thing was done with such unprecedented ease.

That this trans-continental Cadillac broke the previous record by nearly four days is incidental to the real achievement.

The real achievement rests in the fact that it emerged from the fray virtually as good a Cadillac as when it began.

It is still a Cadillac with many [thousands of miles of service ahead of it.

All that the Cadillac has demonstrated before is now demonstrated anew in another way.

We all know, now, beyond doubt, that there is not in this nation a set of road conditions which can successfully challenge Cadillac construction.

We all know that the Cadillac has again proven itself to be

The World's Greatest Road Car.

UNCONVENTIONAL CONVENTION NEWS

The tumult and the shouting, such as they were, have died. The captains and kings and the delegates and Mr. Brown and the reporters and the favorite-son fat ladies have departed. They were a fickle lot, those favorite-son fat ladies. All wore Hughes badges today.

Big Mike has the floor now. His power is as great as that of Penrose, Murray Crane and Barnes put together. He has only to say "Sweep," and every man in the building will obey him.

It's a hard task that Big Mike and his delegates have before them. History in the making is a mussy thing. Ask Mike, and he will tell you that there's never a world crisis but leaves its egg shells, its broken ham sandwiches and its lemon soda bottles behind it.—*New York Tribune*.

[APPLAUSE]

Whose name, resounding thru the hall,
Provokes a chorus far from small—
Inspires applause from one and all?
Most anybody's.

Whose name, upon the waiting ear
Descending loud and strong and clear,
Will cause the long and hearty cheer?
Whose won't?

Who will, 'mid waving hats and coats,
And cheers from thrice three thousand throats,
Poll a majority of votes?

Read the front page.
—*New York Tribune*.

Under the green and white trimmings on the ceiling of the Coliseum the giant amphitheater looks not unlike the bottom of a swimming tank. The resemblance was heightened by the fact that all day long myriads of bubbles were rising.

Governor Willis, of Ohio, stayed under water longest. He nominated Theodore Burton and surprised everybody when he named his candidate. During the time he was quoting from the Gettysburg address and the second inaugural, it looked very much like Lincoln, but later he seemed about to throw his strength to Blaine. Maine cheered him wildly.

At the end of the first half hour Willis was still going strongly, using the breast stroke for the most part. Willis is a man of great strength and lung power. One of the achievements which brought him the Governorship was the fact that he ate ten chicken pies at a county fair. This was duly chronicled in the Ohio papers, and cartoonists of that state are fond of drawing the doughty Governor with a lunch basket strapped about his waist.

It is possible that Burton's sponsor would still be speaking but for a delegate

from Ohio who sat in the front row, not ten feet from the Governor. While the speaker was in the middle of one of his most eloquent flights the delegate seized a ham sandwich in both hands and held tight for fear of being stampeded.

Seeing the sandwich, Willis quickly got down to personalities and named his man. Burton, it seems, "is common without being commonplace." His manner was described as "cordial without being effusive," something after the demeanor of John J. McGraw toward a new umpire.

Senator Fall did not take long in nominating Roosevelt. As soon as he said "the one colossal figure of American manhood" the galleries began to cheer.

William R. Wood, who nominated Fairbanks, broke all the rules. He named his candidate three times before he finished. This lessened the dramatic element in his appeal somewhat, because when he got down to the "who was it?" everybody knew the answer in advance. The inspiring slogan which Wood pinned on his candidate was "he has never given offense to anybody."—*New York Tribune*.

Up in the gallery above the speaker's platform a short, plump young woman arose and turned loose the "rebel yell." It threw the first touch of life into the convention. The Root men cheered her and laughed, and one of them gave her a flag. She arose again, and this time she let out that famous screech four times. This time another man gave her a flag. From that time she led the Root demonstration.

The "rebel yell" is a noise like no other; it goes screaming across a hall or a field like the shriek of a shell; it seems to possess the power of motion. Beside it, hurrahs are whispers, and a scream is a whine. This young woman knew exactly how to produce that horrific sound; it is safe to say that if she let it off on top of the Singer Building she would make the babies cry in Central Park.

In the row in front of her there was a nice old gentleman with white whiskers, with a nice old lady beside him, and every time Mrs. Blanche Root, of Washington—the young woman under consideration—turned on that shattering yell they would both shudder and put their fingers in their ears. Presently the whole convention was watching the old gentleman and the old lady and howling with laughter. Every time it laughed it would shout, and this helped along the Root demonstration mightily. The nice old couple, still shuddering and stopping their ears with clocklike regularity, were totally ignorant of the large part they were playing in creating sentiment favorable to the nomination of Root, were oblivious, in fact, of everything except the distressing noise produced by the young woman behind; and this added greatly to the convention's contentment with the whole proceeding. . . . By this time Job Hedges had become interested. He mounted a chair and signaled to Mrs. Root, far up in the gallery, from his place on the floor. Mrs. Root arose and looked at him expectantly. Mr. Hedges wagged his finger at her and opened his mouth, producing therefrom no sound, but going thru the motions of a "rebel yell."

Mrs. Root obliged—obliged with joy. The nice old couple stuck their fingers in their ears and shuddered, and the Root demonstration was on again. Thereafter Mr. Hedges conducted her. Yes, he conducted her, like an orchestra leader. Using his forefinger as a baton, he beat time, and she followed him closely and with a touching confidence. A man from Tennessee, the home of the "rebel yell," got jealous and gave the "rebel yell" himself, but it was a feeble thing to Mrs. Root's. Hedges looked scornfully at him and he wilted; and then Hedges turned toward the gallery again and gave Mrs. Root the pitch, and she rose to it with a "rebel yell" that made all her previous efforts seem like a whisper.—*New York Times*.

WHAT WAS DEMONSTRATED AT CHICAGO

THE conventions at Chicago have demonstrated two facts. One is the irresistible power of public opinion. There were but two serious candidates at Chicago. The politicians wanted neither of them. They had to take one of them or they would have had to take the other. The politician is impotent when public opinion sufficiently bestirs itself. The nomination of Mr. Hughes, like that of Mr. Wilson four years ago, was made in spite of the politicians, tho in the case of Mr. Hughes those gentlemen capitulated more gracefully. The presence of two such candidates in the field during the coming campaign presents a new hope for the rising power of the people over their self-appointed managers.

Mr. Hughes is a man whom everybody respects and who will command support outside the limits of his own party. His record is honorable, his ability is proved and his character is irreproachable. He had no part in the factional fight of 1912, and is the one man to reunite the divided party.

The conventions demonstrated as well the bigness of Theodore Roosevelt. In the face of a demand of unparalleled vigor and insistence from the party which he

created that he bear their standard once more he has not yielded. He has taken the broader view. He will support Mr. Hughes, and it will not be easy. For it will mean going back to the party which he left because he believed it had committed a crime of which he was the victim. It will mean supporting a man with whom he is not sympathetic by temperament and from whom he believes he has not received fair treatment in the past. Whatever the merits of this belief, the fact that he holds it makes the path hard. His refusal to accept the Progressive nomination is a stunning blow to most of the Progressives who followed the exodus four years ago, burned their political bridges behind them and staked their all on his leadership. But the Progressive party is disintegrating and if Mr. Roosevelt galvanized it into life for another campaign all hope of his coöperating with the Republicans would be gone, doubtless, forever.

Now his declaration cannot fail to exalt him in the estimation of his countrymen. Indeed it is not inconceivable that if he throws himself wholeheartedly into the fight for Hughes he may yet be the dominant personality of the campaign.

KITCHENER OF KHARTUM

THE introduction of scientific method into warfare has not impaired the power of personality. The bigger the machine the greater must be the man to manage it. In the peaceful days of 1914 an effort was made by the government to have Earl Kitchener shelved by a sinecure. But when the storm broke he was nominated by acclamation for War Minister. He alone saw what must be done. He alone had the power to do it. England had at that time as little appreciation of the magnitude of the task before her as the United States had when Lincoln called for 75,000 men for three months to put down the rebellion. People said that the war would be over by Christmas. Kitchener said it would begin in May. People said that England would have done her duty when she fulfilled her promise of 1911 to send 160,000 men to France. Kitchener said millions of men would be needed and for three years.

And he got them. "Kitchener wants you" proved a more effective recruiting advertisement than "Your King needs you." Never before in the history of the world has a man raised and equipt a volunteer army of five million men. Probably no one will ever have to do it

again, so both pacifists and militarists hope, tho with different reasons in mind. The country called him and he called the country. Both responded nobly. What was at first sneered at as "Kitchener's mob" is now respected as "Kitchener's army." That this army has not yet gained a victory cannot rightfully be called his fault. Troops can be extemporized. Generals have to be trained. Lord Kitchener has been criticized—and justly—for failing to provide the quantity and kind of ammunition needed by modern warfare and for neglecting to organize in the factory as well as in the field. But this came from attempting to do too much by himself and cannot detract from his great achievements. He had been relieved of part of his multifarious duties and it was expected that the responsibility of his office would before many months have been divided or devoived upon another. But death came to him, as doubtless he would have wished to have it come, in the path of duty and in the hight of his power and reputation. England's loss is irreparable, but Kitchener's life came to a noble and appropriate close. His grave is deeper than any dug by man and, like some ancient king, two hundred of his warriors are buried

in his tomb. No coffin could be found for him more fitting than a British cruiser, for the enumeration of his manly qualities reads like the catalog of ships. "Indefatigable," "Indomitable," "Inflexible," "Implacable," "Invincible"; these are the adjectives his biographers use in describing his character.

He was of the hero type, whom women adore and men follow. In O. Henry's best story, the "Unfinished Story," it was Kitchener's portrait on the bureau that saved the shop-girl in her hour of temptation. While still living he became a legend and figured in many a story and poem. Conan Doyle's "Bimbashi Joyce" and Kipling's "Kitchener's School" will come to mind. Khartum, which stood for England's disgrace, for it meant the sacrifice of Gordon and defeat by the Mahdi, became to him a title of honor. He fought the desert with a railroad and he conquered the Sudanese twice, first by force and second by fair dealing. He foiled the French in their attempt to acquire the Nile valley, yet they will mourn his death as much as the English. Colonel Marchand, whom he met and checkmated at Fashoda on the Nile in 1898, he met again a few months ago in France, this time not as foe and rival but as friend and ally. Now both are dead.

When Kitchener was twenty he went on a holiday to his father's home in Dinan, France. The Germans invaded the country and young Kitchener promptly enlisted in the French army as a private. His father had him discharged and sent him back to Woolwich Military Academy. But early ambitions are not so easily quenched and Kitchener ends his career at sixty-five as he began it, fighting to free France from the Germans.

IN A DOZEN WORDS

NOBODY wanted Hughes but the people. The office, therefore, sought the man.

A FORTUNATE DEATH

THE death of Yuan Shih-kai from stomach trouble, whether natural or artificially induced by himself or others, removes the greatest obstacle to the security of the Chinese republic. Yuan might have been revered by future generations as the Washington of his country, but instead he will be regarded as its Benedict Arnold. When he was chosen in February, 1912, as the first president of the whole of China, he commanded the confidence or at least the support of all factions, conservatives and radicals, Manchus and Chinese. But instead of devoting his great administrative powers to establishing the new republic, he declared himself emperor and aspired to become a god. The proofs of his conspiracy to overthrow the constitution that he had sworn to protect have now been placed before the world in a pamphlet recently issued by the republican leaders in revolt against his authority. This pamphlet, which bears upon its cover our good old American motto: "Rebellion to tyrants is obedience to God," contains in Chinese and English the code telegrams sent out from Peking to the provincial authorities instructing them to force the election and forge the returns in order to make it appear that the people favored the restoration of the monarchy. We quote a few significant sentences from these secret instructions, proving that for ways that are dark and tricks that are vain Yuan Shih-kai was peculiar.

It was never intended that the citizens should have any choice between a republic and a monarchy. For this reason at the time of voting all the representatives must be made unanimously to advocate a change of the republic into a monarchy.

In order to clothe the proceedings with an appearance of regularity the representatives of the districts, tho they are really appointed by the highest military and civil officials of the province, should still be nominally elected by the districts. The necessary documents . . . should be properly antedated.

The Superintendent of Elections should then under cover of inviting them to a social gathering or dinner party, request their presence at his official residence and improve the occasion . . . by making known to them the names of those who are to be elected. As these documents concern the very foundation of the state, they will, in case they become known, leave a dark spot on the political history of our country. Upon their secrecy depends our national honor and prestige in the eyes of both our own people and foreigners. . . . The Central Government has concluded that it would be better to sort out and burn the documents so as to remove all unnecessary records and prevent regrettable consequences.

But some of these documents escaped the fire and abundantly justify the Yun-nan province in starting last January the revolt against Yuan Shih-kai in which most of the southern provinces have joined. The Chinese republicans blame President Goodnow of Johns Hopkins for the civil war that has involved the country during the last six months, for his opinion as constitutional adviser was put forward at Peking as the justification of Yuan's assumption of the throne. Dr. Goodnow is reported to have said in his memorandum on the best form of government for China:

It is of course not susceptible of doubt that a monarchy is better suited than a republic to China. China's history and traditions, her social and economic conditions, her relations with foreign powers, all make it probable that the country would develop that constitutional government which it must develop if it is to preserve its independence as a state more easily as a monarchy than as a republic.

With Professor Frank Goodnow giving such advice as this; with Professor Jeremiah Jenks sending out circulars eulogizing Yuan even when he expelled his opponents from parliament, "and by so doing silenced and terrified the others"; with the American Government delaying the recognition of the Chinese republic as long as possible and withdrawing from the "six-power loan" necessary for the defense and development of the country, it is no wonder that the Chinese republicans felt themselves betrayed in the house of their friends. They had a right to expect from America sympathy and aid if not official support in their noble endeavors to gain political freedom, but instead they received indifference and distrust. Now that Yuan Shih-kai is out of the way and Li Yuan-hung, a real republican, is in the presidential chair, we earnestly hope that the Chinese people will have an opportunity to prove that Dr. Goodnow is wrong in believing that the Chinese are unfit for a republican form of government.

THIRD PARTIES

THE brief history of the Progressive party proves that it is easier to start something than to keep it going.

OUT OF THE MOUTHS OF THE FACULTY

CERTAIN professors of the political sciences at Columbia took a significant step recently, when they decided to investigate, on their own initiative, the controversy which has kept 50,000 garment workers in New York idle for more than six weeks.

They invited representatives of the Manufacturers'

Association and the unions to meet them and present their respective pleas. The unions accepted the invitation; the manufacturers declined, but did send a considerable amount of documentary material. This the investigators studied carefully, together with the evidence offered by the union spokesmen. After submitting their digest of the facts to the Manufacturers' Association for verification, they issued a public statement, from which The Independent quoted on June 5, expressing their belief that the rights of the dispute lay with the workers, and giving their reasons.

The method of the study was unimpeachable; its motive and effect seem to us admirable. A disinterested group of experts, like the instructors of a strong university, can serve the community well in clarifying public issues on which the individual citizen has little or no critical information except that furnished by a hasty and none too impartial daily press. At Columbia, of course, one would expect the liberal view to prevail, tho that view unfortunately is not always characteristic of academic persons. But in the great universities, both east and west, the faculty has so often and so heartily taken its part in public service of one sort and another that the taint of the cloister has become purely imaginary and there is small reason to suspect bias.

It is reasonable to believe that in the long run faculty judgment would be worthy of thoughtful acceptance by the man who will not judge without knowledge and has neither time nor aptitude for getting that knowledge by himself. The university ought to help mold public opinion more directly than thru the classroom, and in doing so it is serving the state in a way for which it is peculiarly fitted.

FAIR AND SQUARE

THE country is to be congratulated that the issues of the campaign will be measures, not personalities. It is the habit of neither Charles Evans Hughes nor of Woodrow Wilson to descend to abuse.

The fight will be fair, square and vigorous, and whichever wins, the country will not go to the dogs.

VIA PANAMA

IT was particularly unfortunate for us that the opening of the Panama Canal should have been followed so quickly by its closing, at a time when its chief rival, the Suez Canal, had been put out of business by the war. But now that the Panama Canal is again open and, according to Colonel Goethals, "for keeps," its advantages are becoming realized. In the first month after its reopening 137 ocean ships past thru its locks, which is more than the monthly average before the slides closed it. The New Zealand Shipping Company, which runs a line of Royal Mail steamers from England to New Zealand, has announced that its steamers will hereafter go by way of Panama instead of around the Cape of Good Hope as hitherto.

Besides being safer from submarines the Panama route is 2380 miles shorter than the Cape route from London to Wellington. The chief objection to the Panama route has been that it involved a longer voyage in the tropics and this required a greater consumption of coal, since coal is used for cooling the refrigerated steamers that bring meats to Great Britain. Just now, however, the price of coal at the Cape turns the scale

in favor of Panama. It is evident that the future of Panama depends upon how cheaply coal and oil can be furnished at Balboa.

FRENCH LEAVE

IN the tedious, long distance and entrenched warfare of our day it is the newest fighting-man, the aviator, who retains most of the old romantic spirit of individual heroism. When Navarre, the French champion, brought down his seventeenth German in single combat, his officers were at a loss how to honor him, since for previous achievements he had won all the badges and ribbons at their disposal. So they called in the victorious airman and asked him to name his own reward. "Forty-eight hours in Paris," answered Navarre.

There spoke the true Frenchman. So spake Hervé Riel, two centuries before, when Admiral Damfreville offered him any reward he chose for saving the French fleet from the British:

"Since 't is ask and have, I may—

Since the others go ashore—

Come! A good whole holiday!

Leave to go and see my wife, whom I call the Belle Aurore!"

That he asked and that he got,—nothing more.

Whether M. Navarre has a wife whom he calls the Belle Aurore we do not know, but the holiday he asked, ending with a banquet at a restaurant on the Champs Elysées, that he got and nothing more.

THE DICKENS YOU SAY

A LETTER by Charles Dickens, recently sold at auction in New York, contains the following passage:

I fear the North to be utterly mad and war to be unavoidable. I do not doubt that England could shell the City of New York off the face of the earth in two days.

Yet it was Dickens who by his jibes and sneers at our hypocritical pretense of freedom spurred the American people to get rid of slavery at any cost.

His letter is dated December 1, 1861, and obviously refers to the "Trent" case, where we took two Confederate emissaries from a British ship. Yet when a British cruiser searched an American ship, the "China," and took from her all the Germans and Austrians, did any of our leading novelists, say Owen Wister, demand that London be shelled off the face of the earth? Not so that you could hear them.

We apologized for our blunder in the "Trent" case and gave up Mason and Slidell. England is expected to apologize for her blunder in the "China" case and give up the thirty-eight Germans and Austrians. This is a better way of settling our differences than shelling each other's cities off the face of the earth.

MEN AND MEASURES

THE Republican Platform and the Progressive Platform are practically identical.

It was men, not measures, that separated the two conventions.

CONVENTIONAL HISTORY

THE Republican Convention—Anybody but Roosevelt.

The Progressive Convention—Nobody but Roosevelt.

TO THE GRADUATES OF 1916

I WAS graduated from Amherst College sixty years ago and had hoped to be able to meet the few of my class who continue after so many years, but physical weakness prevents, and I venture to say a few words out of my own experience to those who are beginning their life where mine own ends.

The trustees of the college have been good enough to add my portrait to those belonging to the college, and I am not sorry that the accessories are such as to suggest my interest in Oriental archeology, because it is one of the subjects to which, for a number of years, I gave special study, altho by no means my life work. Forty years ago, on the fiftieth anniversary of the founding of Amherst College I presented a translation of the cuneiform inscriptions in the college cabinet.

At that time I believe I was the only man in the country who had begun the study of Assyriology, and I was ambitious to pursue the subject, but I soon discovered that the field was so broad that it required more than all one's time to cover it, time which I could not give. Meanwhile the universities, led by Johns Hopkins, established such a department, and I was content to give my spare hours to a field in archeology not covered by others.

I do not pretend that archeology is an important study. It is not especially practical. It is like astronomy, which is the queen of all the physical sciences and the most useless of them all, and one which has added almost nothing to human wealth and comfort since the days when Ulysses boasted that as a pirate guided by the stars he had harried the Mediterranean coasts. No more can one's studies in archeology add wealth to the world. It will not improve our ancestors to learn what was their ignorance or what gods they worshipped, but such ancestral history is as fascinating as the study of astronomy, and it is a worthy ambition to add something to human knowledge, even if no material advantage appears to follow. It is the dessert after the meal, the spice of recreation that gives savor to the loaf and roast of service. Life is service, but life is not all service. There must be relaxation and play, and the desire to add something to human knowledge is one of the keenest of delights. Of course one must serve, that is what he lives for, to make the world happier and better, freer, to extend the rule of liberty and justice everywhere; but if one can also have the consciousness that he is adding a little something to the sum total of human knowledge he may feel he has not lived quite in vain. But the great mass of one's human life and endeavor should be given to service, while the spare hours of lamplight can be allowed for the excitement of less useful study.

I have a young business friend who once surprized us at a prayer meeting by saying "I know well enough that Jesus Christ was the great model for us all, but I always like Gunga Din." Kipling tells us of that black, barefoot Hindu heathen, with his water bag on his back, carrying drink for the weary and wounded soldiers, bullied and insulted, but always patient, faithful and

fearless in his humble duties, and it is not strange that the poem ends:

By the living Gawd that made you
You're a better man than I am, Gunga Din.

It is the willingness of service, whether great or small, which brings satisfaction. When Milton lost his eyesight "overplied in liberty's defense," he took pride in the sacrifice.

This thought would bear me through the world's vain
masque
Content, though blind, had I no better guide.

And I may venture to say that in no other service of my life do I take so much satisfaction as in the remembrance that I initiated and pushed to conclusion the work of organizing the federation of our American churches, and that I wrote the invitation to the denominations which met to organize the Federal Council of Churches, and no other disappointment has been so keen as that which followed my failure once, and twice, and a third time, to unite two or more denominations in corporate union. Where I failed wiser and more fortunate ecclesiastical statesmanship will yet succeed.

In another of his poems, perhaps the finest, Kipling gives honor to those supra-human heroes who have created our civilization:

Such as fought and sailed and ruled and loved and made our
world,

and whose spirits rest in felicity, as it were, above the pole of the heavens, yet ready to do God's service.

Tis theirs to sweep through the ringing deep where Azrael's
outposts are,
And buffet a path through the pit's red wrath when God
goes forth to war.

To this company of the world's mightiest victors came the spirit of Kipling's brother-in-law, but a very different man was he.

He scarce had need to doff his pride or slough the dross of
earth.

E'en as he trod that day to God so walked he from his birth,
In simpleness and gentleness and honor and clean mirth.

"Simpleness," "gentleness," these were not their virtues. Their biographers, from Alexander and Julius Cæsar down to Cecil Rhodes, have forgotten to extol their simple and gentle nature, but that's a quality that any one of us can reach. And

So "cup to lip" in fellowship they gave him welcome high,
And made him place at their banquet board, the strong men
ranged thereby,
Who had done his work and held his peace, and had no
fear to die."

"He had done his work" in fearless patience, but that is what Gunga Din did. It is what any one of us can do and so

Beyond the loom of the last lone star through open dark-
ness hurled;

Further than rebel comet dared or hiving star-swarm
swirled,

Sits he with those who praise our God for that they served
His world.

"They served God's world." That is feasible for any of us, and I would have the youth who now go forth from these halls pledge a solemn oath by the living God that made them that when sixty years from now, in the year 1976, their feeble, trembling relics shall return to lead this academic procession, it shall be recorded of the noble clan of 1916 that they served God's world. That is all, and that is enough.

WILLIAM HAYES WARD

WHAT HUGHES THINKS

In 1908, when Charles E. Hughes was Governor of New York State and was being talked of for the Presidency, there was then as now a great desire on the part of the public to know his views on the great problems of American politics. To meet this need The Independent, with the cordial coöperation of Mr. Hughes, compiled a volume of his most important public utterances. This volume, issued under the imprint of G. P. Putnam's Sons of New York, consisted of 289 pages

containing fifteen addresses and papers. It was provided with an introduction by President Jacob Gould Schurman of Cornell University (who wrote on Hughes in our issue of May 29, 1916) and a preface by Hamilton Holt. From this book, which is the only volume of Justice Hughes's writings, we select the following quotations, which have not only a close bearing upon the issues of the campaign but also serve as an index to the character and caliber of the man.—THE EDITOR.

WE are devoted to the interests of peace and we cherish no policy of aggression. The maintenance of our ideals is our surest protection. It is our constant aim to live in friendship with all nations and to realize the aims of a free government secure from the interruptions of strife and the wastes of war. It is entirely consistent with these aims, and it is our duty, to make adequate provision for our defense and to maintain the efficiency of our Army and Navy. And this I favor.

By his vigorous administration, his virility, his broad humanity, and his determined opposition to notorious abuses, our fellow citizen, the distinguished President of the Republic, Theodore Roosevelt, has won the hearts of the people. We have not only his example, but we know that he is and has been in cordial sympathy with every effort for efficient administration, for the correction of evil and for the improvement of our laws.

I have been a Republican from the time I came of age. There is no political organization in this country which at this time has such an opportunity of serving the people by efficient administration and by wise constructive effort in the correction of known evils. The party has its future in its own keeping, and if it will measure up to its traditions and meet its opportunities it will for many years be invincible.

It has been stated that I have not paid sufficient attention to those who are politically active and who bear the burden and heat of the day in political campaigns. It has been said that I regard political activity as a disqualification for public office. Now no cause can be advanced without hard work and it must be the object of zealous devotion. I esteem those who in an honorable manner work for the party.

In education, in journalism, in the professions of medicine and law, in trade and commerce, in every department of activity, and every sphere of philanthropy, our citizens of German birth or descent furnish constant examples of notable effort and of the highest achievement. We can not write any chapter of the history of American endeavor without doing them honor.

Making all allowance for the extremes of avarice and artifice, for the unwholesome spectacles of exploitation and infidelity to trust, without blinking any evil or glossing over any wrong, the fact remains that the business men of the country are for the most part honest men.

I promise all members of the party fair treatment and just consideration. No individual, or group of individuals, and no private interest will be permitted to dictate my policy. I shall decide and act according to my conscience and as I believe the public interest requires.

To me public office means a burden of responsibility—a burden of incessant toil at times almost intolerable—which, under honorable conditions and at the command of the people, it may be a duty and even a pleasure to assume, but it is far from being an object of ambition.

A sullen and defiant attitude toward public opinion ill becomes an American citizen. Both unprincipled attempts to corrupt it and despotic efforts to defy it must, in this land of sound common-sense, inevitably fail.

With regard to the Filipinos, we are placed under the most sacred obligations. In justice to them and in justice to ourselves, we must omit no effort to prepare them for self-government.

Political activity, by virtue of the experience and knowledge of

affairs gained in it, so far from being a disqualification, may be a most important qualification for office.

I am deeply interested in all efforts to better the condition of our working men. Every practical measure for the real benefit of labor will have my cordial support.

We shall never attain the full measure of our opportunity in this country until the meaning of trusteeship sinks deep into the American consciousness.

I make no request for personal support. So far as I am personally concerned, my interests lie in a profession to which I would be glad to devote myself.

No man is a friend of the Republican party who asks me or any one in authority to appoint a man or to retain a man who is not equal to his job.

We make our appeal to the common-sense of the American people, which has never failed to express itself decisively in a great crisis.

I reckon him one of the worst enemies of the community who will talk lightly of the dignity of the bench.

I have steadfastly refrained from becoming associated in any manner with factional controversies.

The great purpose to be achieved is the prevention of war, and not its regulation.

Federal regulation is not a substitute for state regulation.

I believe in a protective tariff. It is an established policy.

I have asked no man for favors.

I do not aim to be a party boss.

THE MAN WHO MADE A SACRIFICE HIT

THE STORY OF THE WEEK

The Two Conventions

The story of the Chicago conventions is told at length elsewhere in this issue of *The Independent*. A brief summary of their action will be made here.

Wednesday.—Both conventions open, organize and hear keynote speeches, by Senator Harding, of Ohio, for the Republicans, Raymond Robins, of Illinois, for the Progressives.

Thursday.—Progressives hear platform, table it, and invite Republicans to conference. Republicans accept. Conference committee named; meets late Thursday night and reaches no decision.

Friday.—Republicans make nominations and take two ballots, on which Hughes leads but fails to get necessary vote; they adjourn to permit further harmony conferences. Progressives do nothing. Conference committee meets again at night without tangible result.

Saturday.—At 5 a. m. Roosevelt suggests compromise on Lodge. Conference

HOW THE CONVENTION VOTED

committee decides to suggest Hughes to Progressives. Neither suggestion gets any attention. Progressives nominate Roosevelt at 12:31; Republicans nominate Hughes two minutes later. Fair-

banks, Indiana, Republican candidate for vice-president; Parker, Louisiana, Progressive. Hughes accepts; Roosevelt declines. Republicans adjourn without waiting for Hughes' statement, which is printed in full below.

The Republican and Progressive platforms differ rather in emphasis and precision than in substance. Both declare for the enforcement of American neutral rights and duties, for adequate preparedness, for a firm policy in Mexico, for a protective tariff and a tariff commission, for the up-building of an American merchant marine, for woman suffrage, for a budget system of national appropriations, and for Federal child labor and workmen's compensation laws.

The platforms, needless to say, are widely different in tone. The Republican is business-like, matter-of-fact, conventional. The Progressive is eloquent, persuasive, literary. It is cast in the form of an essay and follows close-

HUGHES' PLATFORM AS TELEGRAPHED TO THE CONVENTION

I HAVE not desired the nomination. I have wished to remain on the bench. But in this critical period in our national history, I recognize that it is your right to summon and that it is my paramount duty to respond. You speak at a time of national exigency, transcending merely partizan considerations. You voice the demand for a dominant, thoroughgoing Americanism with firm protective up-building policies, essential to our peace and security; and to that call, in this crisis, I cannot fail to answer with the pledge of all that is in me to the service of our country. Therefore I accept the nomination.

I stand for the firm and unflinching maintenance of all the rights of American citizens on land and sea. I neither impugn motives nor underestimate difficulties. But it is most regrettably true that in our foreign relations we have suffered incalculably from the weak and vacillating course which has been taken with regard to Mexico—a course lamentably wrong with regard to both our rights and our duties. We interfered without consistency; and while seeking to dictate when we were not concerned, we utterly failed to appreciate and discharge our plain duty to our own citizens.

At the outset of the Administration the high responsibilities of our diplomatic intercourse with foreign nations were subordinated to a conception of partizan requirements, and we presented to the world a humiliating spectacle of ineptitude. Belated efforts have not availed to recover the influence and prestige so unfortunately sacrificed; and brave words have been stripped of their force by indecision.

I desire to see our diplomacy restored to its best standards and to have these advanced; to have no sacrifices of national interest to partizan expediences; to have the first ability of the country always at its command

here and abroad in diplomatic intercourse; to maintain firmly our rights under international law; insisting steadfastly upon all our rights as neutrals, and fully performing our international obligations; and by the clear correctness and justness of our position and our manifest ability and disposition to sustain them to dignify our place among the nations.

I stand for an Americanism that knows no ulterior purpose; for a patriotism that is single and complete. Whether native or naturalized, of whatever race or creed, we have but one country, and we do not for an instant tolerate any division of allegiance.

I believe in making prompt provision to assure absolutely our national security. I believe in preparedness, not only entirely adequate for our defense with respect to numbers and equipment in both army and navy, but with all thoroughness to the end that in each branch of the service there may be the utmost efficiency under the most competent administrative heads. We are devoted to the ideals of honorable peace. We wish to promote all wise and practicable measures for the just settlement of international disputes.

In view of our abiding ideals, there is no danger of militarism in this country. We have no policy of aggression; no lust for territory, no zeal for strife. It is in this spirit that we demand adequate provision for national defense, and we condemn the inexcusable neglect that has been shown in this matter of first national importance. We must have the strength which self-respect demands, the strength of an efficient nation ready for every emergency.

Our preparation must be industrial and economic as well as military. Our severest tests will come after the war is over. We must make a fair and wise readjustment of the tariff, in accordance with sound protective prin-

ciple, to insure our economic independence and to maintain American standards of living. We must conserve the just interests of labor, realizing that in democracy patriotism and national strength must be rooted in even-handed justice. In preventing, as we must, unjust discriminations and monopolistic practices, we must still be zealous to assure the foundations of honest business. Particularly should we seek the expansion of foreign trade. We must not throttle American enterprise here or abroad, but rather promote it and take pride in honorable achievements.

We must take up the serious problems of transportation, of interstate and foreign commerce, in a sensible and candid manner, and provide an enduring basis for prosperity by the intelligent use of the constitutional powers of Congress, so as adequately to protect the public on the one hand, and, on the other, to conserve the essential instrumentalities of progress.

I stand for the principles of our civil service laws. In every department of government the highest efficiency must be insisted upon. For all laws and programs are vain without efficient and impartial administration.

I cannot within the limits of this statement speak upon all the subjects that will require attention. I can only say that I fully indorse the platform you have adopted.

I deeply appreciate the responsibility you impose. I should have been glad to have that responsibility placed upon another. But I shall undertake to meet it, grateful for the confidence you express. I sincerely trust that all former differences may be forgotten and that we may have united effort in a patriotic realization of our national need and opportunity.

I have resigned my judicial office and I am ready to devote myself unservedly to the campaign.

CHARLES E. HUGHES

ly the familiar comments of Colonel Roosevelt on what he defines as the vital issues.

On preparedness the Progressive platform has the advantage in stress and precision. It calls for "a navy restored to at least second rank in battle efficiency; a regular army of 250,000 men" and universal military training in time of peace. The Republicans call in more general terms for

a sufficient and effective regular army and a provision for ample reserves, already drilled and disciplined, who can be called at once to the colors when the hour of danger comes.

We must have a navy so strong and so well proportioned and equipped, so thoroly ready and prepared that no enemy can gain command of the sea and effect a landing in force on either our Western or our Eastern Coast.

The Republicans declare for the performance of all our duties and an insistence on all our rights as a neutral, and "believe in the pacific settlement of international disputes and favor the establishment of a world court for that purpose." The Progressives discuss our international obligations at great length and assert that our duty has three phases:

To secure the rights and equal treatment of our citizens, native or naturalized, on land and sea, without regard to race, creed or nativity.

To guard the honor and uphold the just influence of our nation.

To maintain the integrity of international law.

These are the corner-stones of civilization. We must be strong to defend them.

While the Progressives call vaguely for the "re-establishment of our merchant marine," the Republicans come out explicitly for mail subsidies and against government-owned shipping.

Neither party commits itself definitely, as the Congressional Union urged, to the enfranchisement of women by amending the Federal Constitution. The Progressives declare that women should be given "the full political right of suffrage either by state or Federal action," and the Republicans distinctly recognize "the right of each state to settle this question for itself."

A minority report was presented from the Republican Resolutions Committee, embodying in a general way the pro-German position, declaring for a tax on munitions, against the export of munitions, and in favor of government ownership of all munition works. It was overwhelmingly defeated.

The two platforms differ chiefly, however, in their treatment of the whole preparedness - international obligations issue. With the Progressives, as was inevitable, the burden of the whole document is "Americanism and pre-

paredness." The Republicans, while making a firm stand for united loyalty and adequate preparation, treat these issues as important but not exclusively important elements in their established party policy.

Riots in Mexico Anti-American demonstrations in northern Mexico indicate a growing restlessness over the continued presence of American troops. On Tuesday and Wednesday of last week a mob attacked the American consulate, the Foreign Club and American residences in Chihuahua City, and refugees report that an American killed three mob leaders in defense of his house. The disorders followed a mass meeting called by General Jacinto Trevino to consider the defense of the city, as he said. At Durango City the American consulate was burned, and thruout the border states there has been much public talk denouncing the United States.

Meanwhile the punitive force holds its line, which now stretches about 250 miles from Columbus to a point thirty miles south of San Antonio, Chihuahua, and does nothing more. Roads are being repaired in preparation for the rains, and the American troops are scrupulously refraining from contact with Carranza forces.

A PARADE THAT KNEW NO WEATHER

The Woman Suffrage cohorts attended strictly to business in their Chicago parade on June 7. The damp chill of an unseasonable shower did not deter them from their determined demonstration on Michigan Boulevard, to which they confined themselves because there were gathered the Convention delegates whom they were out to convert

T. R.: "THIS HURTS ME WORSE THAN IT DOES YOU"

In Mexico City railroad and general strikes have been put down by the Carranza troops, street cars being run with two soldiers to every motorman, but concessions have been made to the workers in the way of substituting new paper for old in the payment of wages. The Government's efforts to maintain a modest value for its paper money have not been successful. A new issue of 500,000,000 pesos is being put gradually into circulation to retire about 700,000,000 of old paper that is now worthless, and on the basis of a gold reserve fund, which the Government is endeavoring to build up, the value of the new notes is to be fixed at 20 cents national gold (the normal value being about 49 cents American money). But large amounts of the new notes have already been issued and are worth much less than their official valuation.

No answer has been made to Carranza's peremptory demand that our troops leave Mexico. It was said that President Wilson was considering the plan of submitting all differences between the two countries, including large claims for damages, to an international commission of conciliation, provided for in our treaty of 1848 with Mexico.

Cloakmakers and Railroad Men

The garment workers in New York are still striking, and the employers who belong to the Cloak, Suit and Skirt Manufacturers' Association are still refusing to arbitrate the issues. The manufacturers claim that 125 of their 409 shops are

running, but the strikers have organized a huge picket force—15,000, they claim—and at the most only a few workers have gone to their machines. It is also claimed that the employers have opened shops outside New York City where their work is going forward, but such experiments heretofore have not been successful and this maneuver will not seriously affect the strikers' strength. Only one case of disorder has been reported so far.

A number of New York clergymen, including some of the most prominent ministers in the city, have signed a statement condemning the manufacturers for their refusal to arbitrate.

The employers of about 20,000 workers voted last week to ask Mayor Mitchel to arrange for mediation. They are not members of the Protective Association, but are organized as the Mutual Cloak and Suit Manufacturers' Association, and the Independent Cloak and Suit Manufacturers. They did not participate in the lockout, but their employees struck because if these shops were kept open the work of the Protective Association could be done there on subcontract. The union is suspicious of the motives of these manufacturers in thus accepting the principle of mediation, but will probably not refuse to enter into negotiations.

The conference between representatives of the railroads of the United States and the four railroad workers' unions continued during the week without reaching any decisive point. The proposals of the unions have been thor-

ly explained, and the union representatives have asked numerous questions as to the application of the proposed schedules and as to the significance of the railroads' counter proposals. If the railroads refuse to accept the union demands, as seems likely, and insist on a compromise schedule, the conference will come to an end and the four Brotherhoods will vote on the question of giving their representatives power to call a strike. Further negotiations will be based on the results of that referendum.

Dominican Disorders Two thousand marines of the United States Navy are now in Santo Domingo for the purpose of maintaining order and protecting foreigners in one of the little republic's sporadic revolutions, and an additional thousand have been ordered there.

Juan I. Jimenez, the sixth president since the assassination of Caceres in 1911, was recently deposed after it had been charged that his entire family had their hands in the national treasury, and Francisco Henriquez Carajal was chosen to succeed him. Two leaders, General Arias and General Desiderio, are now busy with revolutionary enterprises.

At Puerto Plata, on the north coast, the American consulate was robbed during the last week of May, and marines were sent from Santo Domingo City to occupy that town and Monte Cristi, near the Haytian frontier. They landed on June 1. At Puerto Plata Captain H. J. Hirshinger was shot as the

TO SUCCEED KITCHENER?

Lieutenant-General Sir William Robert Robertson, chief of the Imperial Staff, who may become War Minister

party landed, and the rebels held the fort for two hours. At Monte Cristi there was no resistance to the landing, but a force of rebels attacked the outposts of the marine camp a few days later and were driven off with no American casualties.

Rear Admiral Caperton, who has been in charge of the marines in Hayti, is in command of these forces. Tho we have had a Receiver General of Customs in Santo Domingo since 1907, in charge of the national finances, there is no explicit treaty provision for the maintenance of order there, as there is now in the case of Hayti. W. W. Vick, Receiver General in 1913-14, who received the notorious "deserving Democrats" letter from Bryan, has made a statement in which he asserts that graft runs riot in the Dominican Government and the only solution of the problem is for the United States to assume complete control for from five to ten years.

Revolutionists from Guatemala have been crossing repeatedly into British Honduras and have fought an engagement with a force of British colonials. They killed an American physician, Dr. Le Moise Lafleur, who was making explorations in the Honduras jungle.

Lord Kitchener Drowned

The cruiser "Hampshire" went down on Monday night about eight o'clock off the western shore of the Orkney Islands. All on board, some two or three hundred, were lost except twelve of the men. Among the victims were Earl Kitchener, Secretary of State for War, and his staff, who were

going to Archangel in order to confer with the Russian General Staff at Petrograd, presumably in regard to the supply of munitions for the Russian offensive just started in Volhynia. The party included two of the chief ordnance experts of England, as well as the former counselor of the British Embassy at Petrograd. Mr. Lloyd George, Minister of Munitions, had intended to go to Russia on the same boat, but was detained because the settlement of the Irish question had been put into his hands.

The cause of the disaster is not known. If it was done consciously by a German submarine the German system of espionage must be more complete than has been imagined, for Lord Kitchener's mission and time of departure were known to only a few of the inner circle. He left the train at a small station in Scotland, was taken to the shore in an automobile and conveyed to the waiting cruiser in a destroyer. It is hardly likely that a German submarine should have happened to be lurking in such close vicinity to one of the chief British naval stations. Probably the ship was blown up by a British mine, for the coast here is protected by mine fields and one of them may have been wrenched loose from its moorings by the prevailing storm.

Four boats are said to have got off from the cruiser, which sank in twenty minutes, but none of them reached the shore, altho this was only two miles off. One warrant officer and eleven men were washed ashore on a raft alive and some eighty bodies have been recovered. Several of these had torn off

their finger and toe nails trying to climb up the steep cliffs that fence the Orkneys on their western side.

The loss of Lord Kitchener was a greater shock to the British public than almost any other news of the war, for there was no one in whose ability and energy so much confidence was felt. It is expected that he will be succeeded as Secretary for War by General Sir William Robertson, chief of the British General Staff, as soon as a seat in Parliament can be found for him. He is fifty-six years of age and is one of the very few British generals who have worked their way up from the ranks.

Yuan Shih-kai Dies

The President of the Chinese Republic died at Peking on June 6. He had for several days been ill from a disorder of the stomach and nervous breakdown. There are rumors of poisoning, either as suicide or assassination, but these are officially denied. Upon his deathbed President Yuan expressed repentance for his error in attempting to become emperor and explained that he had been misled by his advisers. He asked for protection to his wives and children and authorized a mandate calling upon all military and civil officials to recognize the authority of the Vice-president, Li Yuan-hung. His eldest son committed suicide on the following day.

Vice-president Li assumed office without opposition and received the recognition of all factions. He is not generally regarded as so able a man as Yuan, but is believed to be a stancher republican. He was, in fact, one of

Brown Brothers

YUAN SHIH-KAI

First President, almost emperor, of China, hated and feared, at once the strength and the weakness of the Republic, probably poisoned

Copyright Bain

LI YUAN-HUNG

Vice-president of China, who became president on the death of Yuan. He had already been acclaimed as president by some of the rebels

the leaders of the revolution which started at Wu-chang in 1911, and overthrew the Manchu dynasty. He was educated in Japan and served on a Chinese cruiser during the war with Japan. He is fifty-two years old, that is, five years younger than the late President.

The death of Yuan has had a favorable effect upon the country. The provinces of Sze-chuen, Hu-nan, Chekiang and Shen-si, which had declared their independence of the Peking government, have returned to their allegiance, and all the other rebellious provinces are expected also to give their support to the new president. In fact, these provinces had some time before asserted their intention of establishing a southern republic with Li Yuan-hung as president, so they certainly ought to be satisfied with the peaceful accession of their candidate.

Fort Vaux Captured

After a week of ferocious fighting the Germans have succeeded in gaining complete possession of Fort Vaux, northeast of Verdun. The recapture of Fort Douaumont and of the Caillette woods south of it last week brought the Germans in behind Fort Vaux and made its ultimate fall inevitable, but Major Raynal, a young officer who had previously distinguished himself by his courage and had been several times wounded, was left in the fort with little more than a thousand men under orders to hold out as long as possible. On the 2nd the Germans stormed the fort and secured a lodgement, but the garri-

son defended the armored casements for five days longer altho they were cut off from communication with Verdun except for an occasional courier who managed to creep thru the lines. But not one in five of those who attempted it were able to get thru the German cordon. The German charges up the hill were met with a fatal fire from the French machine guns, and when the Germans tried to force their way thru the underground passages of the fort, the French beat them back with clubbed rifles and knives, even using their steel helmets swung by the strap as maces. The bravery of the garrison won the respect of the Germans and when Major Raynal finally surrendered, with the

seven hundred men left alive and unwounded, he received the honors of war and was permitted to keep his sword.

The capture of Vaux makes a wide breach in the ring of forts surrounding Verdun at a distance of about five miles. The first of the forts on the northeast side, Douaumont, was taken by the Germans at the beginning of their offensive last February, but their efforts to capture Fort Vaux, which stands next to Fort Douaumont and about two miles away, were unsuccessful altho it was once erroneously claimed to have been carried by storm. The Germans are now beginning the bombardment of Fort Tavannes, the third fort in this sector of the ring. (See the map on the following page.)

Between the present German position and their goal, Verdun, there is Fort Souville, which stands upon Hill 388, near the village of Fleury. Fort Vaux is lower, only 349 meters, while Douaumont stands on the other end of the same ridge as Souville and has the same altitude, that is, 388 meters. The hills on the western side of the Meuse are lower; Hill 304 and Le Mort Homme (295 meters), which the Germans are still trying to gain, are among the highest on this side of the river.

On the British front in Belgium and France the Germans keep up their attacks, inflicting very heavy losses on the Canadians stationed there. A charge of the Württemberg and Silesian troops carried the British trenches at Hooze, southeast of Ypres. The British casualties now amount to about a thousand a day.

THE GREAT WAR

June 5—Cruiser "Hampshire" sunk with Kitchener on board. Russian drive in Volhynia begins.

June 6—President Yuan Shih-kai of China dies. Germans take Fort Vaux.

June 7—Russians take fortress of Lutsk. Austrians have taken 12,400 Italian prisoners since June 1.

June 8—Germans take Hooze from British. Allies compel Greece to demobilize part of troops.

June 9—Russians take Buczacz. Austrians advance upon Asiago, Italy.

June 10—Russians claim 108,000 Austrians taken during the week. Germans south of Vaux take 500 prisoners and twenty-two machine guns.

June 11—Salandra Ministry in Italy resigns on account of Trentino defeat. Russians take fortress of Dubno.

TIGHTENING THE LINES ABOUT VERDUN

The capture of Fort Vaux this week together with Fort Douaumont, captured last February, gives the Germans possession of the ridge commanding Verdun on the northeastern side. The corresponding dominant positions on the western side of the Meuse river are 304-Meter Hill and Le Mort Homme, which the Germans are now striving to gain. The lower line shows the extent of the German advance and the arrows their present attack

Great Russian Drive

One of the most brilliant feats of the war is the Russian offensive against the Austrian front begun last week. Catching the Austrians unawares or at least unprepared, the Russians have broken thru their fortified lines for a hundred miles and at one point made a gain of thirty-two miles. By this swift advance the Russians have taken a large number of prisoners and immense quantities of the ammunition that had been collected behind the Austrian trenches. The week's booty comprises 124 cannon, 180 machine guns and 58 bomb mortars. The number of prisoners reported by the Russian War Office is 1649 officers and 106,000 men. Among them are 2,000 Germans.

This part of the line has been supposed to be defended by forty Austrian and two German divisions, probably not more than 700,000 altogether. Austrian troops have been recently removed from this front to be used for the attack on Italy from the Trentino, and evidently the line was left too weak to resist the Russian thrust. The Austrians have never been able to hold their own against the Russians except with the aid and guidance of the Germans, who have now concentrated all their energies upon the western front.

The Russian offensive is in charge of General A. A. Brussiloff, one of the ablest and most energetic of the Russian officers. His troops are fresh and thoroly equipt with artillery. By means of a lavish expenditure of ammunition he battered down the first line defenses in a single day, and then leaving his big guns behind pushed on as rapidly as possible with field pieces alone. The Austrians had been established on

THE RUSSIANS SWEEP WESTWARD

By a sudden and vigorous offensive the Russians have driven the Austrians back twenty-five miles and crossed the Styr and Strypa rivers. All three of the triangle of Volhynian fortresses, Lutsk, Dubno and Rovno, are now in Russian hands and both Lemberg and Czernovitz are threatened. The Germans hold the northern end of the line in the Pripet swamps. The southern end rests upon the Pruth river. The shaded area is that now in Russian possession

this front ever since September and had, as they supposed, made their trenches impregnable. At some points there were as many as twenty lines of barbed wire entanglements.

The region involved in the fighting is the Russian province of Volhynia and the Austrian province of Galicia. When the Austro-German advance came to a halt last fall their forces held a line extending from the Pripet River on the north to the Dniester River on the south and following in a general way the course of the tributaries of these rivers, the Styr running north and the Strypa running south. The northern end of this line at Pinsk is buried in the midst of the Pripet swamps. The southern end is protected by the Dniester and the Pruth rivers. Previous attempts of the Russians to force either of these flanks have proved fruitless, so now they have hit the line in the middle. Here the Russian frontier had long before the war been protected against Austrian invasion by a triangle of fortresses, Lutsk, Dubno and Rovno. Two of these strongholds the Austrians took, but Rovno they never reached. Now the Russians have regained both Lutsk and Dubno. Lutsk was first taken by the Austrians September 1, 1915, but they lost it three weeks later. The Russians, however, were only able to hold it a few days, and it has been in Austrian hands ever since.

The Russian advance in Galicia is following the same course as their first drive in the fall of 1914, and if it is not checked they will soon get possession of Lemberg, the capital of Galicia, for the second time. They also seem likely to regain Czernovitz, the capital of Bukovina.

THE CONVENTIONS AT CHICAGO

BY HAROLD HOWLAND

It is half-past nine on Friday night. The hungry, disheveled, exhausted crowd in the great Coliseum is going home. On the platform a little group of harassed officials is trying to find out from the restless mass of a thousand delegates on the floor below whether it is also their sovereign will to adjourn. It probably is—but the crowd does not care. It is going home anyway.

It has been a glorious day. For ten and a half hours 14,000 people sat and listened to thunders of oratory that must have echoed across the Stygian shores and shot a pang into the heart of many a togaed shade. They had heard the comforting assurances accumulate that there were just one short of a dozen men, each one of whom was the very man to reunite the Republican party, to send the Democratic administration down to defeat in November, to save the state, to restore the Republic to its former grandeur—sullied now by the crimes of Democratic ineptitude, to bring peace to a warring world, and to set the millennium several notches farther along its road. Every time such a warming assurance had come to them concerning the favorite son of some sovereign state a little cohesive group of delegates, another solid little band of alternates, and scattered patches of citizens along the side lines and in the galleries had erupted and “demonstrated.” They yelled and shrieked and whistled and clapped, waved flags and hats and umbrellas and things. They wore themselves out, tortured their vocal chords into husky mutiny, gradually collapsed into rebellious pantomime, took a look at their watches—and burst forth again. For in a convention “demonstration” time is of the essence of the matter. The favorite-ness of your favorite son is measured by the number of minutes of shrieking and howling that can be evoked from some portions of the crowd at the mention of his name.

The day had been a grand old test of endurance. The waves of oratory had surged and beat upon the gradually numbing brains of the assembled people, the skyrocket and pinwheels and torpedoes and giant crackers of the demonstrations had paralyzed their optic nerves and harassed their ear-drums. When all the enthusiasm had been poured out, which had been painstakingly prepared, fermented, bottled up and brought here from half a score of states for this ebullient day, the con-

vention settled down to business. The balloting began—and the fact which had been becoming steadily clearer as the hours passed sprang into sharp relief. The convention did not know whom it wanted. It had no candidate for the presidency which it was ready and eager to nominate. So the delegates spread themselves all over the shop. A few delegations went solidly for favorite sons. A smaller few voted solidly, as they had been directed by the voters at the presidential primary, but New York had two more or less favorite sons. So had Pennsylvania. Aside from these predestined votes, there were hundreds and hundreds that were cast, it seemed, not from strong conviction, but because they had to be cast for some one. Most of the delegates, it appeared, were waiting for a lead—and did not like the only leads in sight. The Texas delegation was a case in point. Its twenty-six votes were cast like this—Burton 1, Cummins 1, du Pont 1, Fairbanks 1, Hughes 1, Roosevelt 1, Root 1, Sherman 1, Weeks 1, Borah 1, McCall 1, Willis 1, and Taft 14.

Now Mr. Taft was not a candidate

Copyright International Film

FAIRBANKS

The gentleman from Indiana, who never offended anybody, runs again for the Vice-Presidency

for the nomination. So one suspects a humorous intent all round on the part of Texas. Just one-quarter of the states voted solidly for a single candidate and in just one-quarter of those states the vote was for a favorite son, Indiana for Fairbanks, Iowa for Cummins, Ohio for Burton, Illinois too, had a favorite son, but Senator Sherman missed the solid endorsement of his state delegation by just two votes.

The one outstanding fact in the voting, aside from the intricate and artistic pattern in which the shots were spattered all over the target, was the concentration on Mr. Justice Hughes.

Two hundred and fifty-three and one-half votes fell to his lot, and only thirteen states passed him by. Four hundred and ninety-four were needed for a nomination, so that his first vote was just two hundred and forty and a half short of the mark. As the result of the first ballot was announced and the chairman was proceeding to call for a second, a plaintive challenge on a question of personal privilege came from the floor. “We’ve passed lunch,” shrilled the tragic voice, “we’ve passed dinner. Are you going to make us pass supper too?” But a burst of laughter swallowed up the objection and the balloting began again; there was little change in the result. Just as the roll-call was beginning Governor Brumbaugh of Pennsylvania withdrew his name and asked, “Why don’t we nominate the man that fits the platform we’ve adopted, Theodore Roosevelt?” But his advocacy only availed to add fifteen votes to the Roosevelt total of 65, while the Hughes vote went up seventy-five. There the matter rested, as the delegates went out to that belated supper and to overnight thoughts on the state of the union and other important matters.

For three days now the Republican National Convention had proceeded steadily and stolidly upon its appointed course. Everything had been done in the stereotyped way on the stereotyped time table in the stereotyped language. No impropriety or infelicity had been permitted to mar the smooth texture of its surface. The temporary chairman in his keynote speech had been as mildly oratorical, as diffusely patriotic and nobly sentimental as any Fourth of July orator of a bygone day. The whole tone of the convention had been subdued and decorous, with the

decorum of incertitude and timidity. That convention did not know what it wanted. It only knew that there was one thing it did not want, and was afraid of, and another thing it would rather not have and was afraid it would have to take. It was an old-fashioned convention of the hand-picked variety. It smacked of the former days when the direct primary had not yet introduced the disturbing thought that the voters ought to select their candidates and not the office holders and party leaders.

It was a docile, submissive convention, not because it was ruled by a strong group of men, who knew what they wanted and proposed to compel their followers to give it to them, but because it was composed of politicians great and small to whom party regularity was the breath of their nostrils. They were ready to do the regular thing; but the only two things in sight were confoundingly irregular.

The mien of that convention suggested strongly the plight of the man in the fable who announced on a Saturday night, "I'm going downtown to get drunk; and gosh! how I do dread it."

Two drafts were ready for their drinking and they dreaded both. They could nominate one of two men,

and to nominate either of them was to fling open the gates of the citadel of party regularity and conformity and let the enemy in. Roosevelt or Hughes. Roosevelt they would not have. Hughes they would give their eye teeth not to take. No wonder they were subdued and inarticulate. No wonder they suffered and were unhappy. So they droned along thru their stereotyped routine, hoping dully against fate.

Meanwhile a mile away quite other scenes were being enacted. In another place another convention as different from the first as champagne from ditch water boiled and sparkled and effervesced. Its thousand members were possessed of one idea. Its forty-eight delegations rendered spontaneous and untrammelled fealty to a single man. Unbossed, uncontrolled, insurgent, they were cemented into a solid phalanx of purpose by a single overmastering desire.

They knew precisely what they wanted; they proposed to have it or know the reason why. And behind the shadowy curtains of the future their fate lay heavy upon them. For they were destined not to have it. The Progressive party in national convention assembled wanted Theodore Roosevelt once more for their leader. They were ready to put themselves behind him again and fight another bitter, heart-breaking fight on behalf of the thing he represents and the things they all believe in.

On this point they were united to a man. The only point of difference was as to the tactics to be adopted in preparing for the fight. The hot-heads, the irreconcilables, were all for going right ahead, nominating Mr. Roosevelt out of hand, adopting a platform in a jiffy, and going home. They were ready to consign the convention in the other hall a mile away to whatever form of perdition it might choose for itself and to act as tho there were nothing of smallest desirability in the thought of a reunion of Republicans and Progressives. But there were cooler heads among the Progressives. They realized the importance of union between the two parties, whose fundamental principles, no matter how much they might have been degraded by wrong-headed leaders on one side or how much embroidered by scatter-brained reformers on the other, were essentially the same. They believed that failure to get together would mean renewed defeat for both.

So they counseled moderation and deliberation; and proposed that overtures be made to the Republican convention with a view to agreement between the two bodies. The counsel was not taken without vigorous pro-

test and clamorous dissent. But taken it was, and an invitation sent to the Republican convention for the appointment of joint committees of the two bodies for conference. The invitation was promptly accepted by the Republican convention. Forthwith Senator Smoot, of Utah; President Butler, of Columbia; Senator Crane, of Massachusetts; Senator Borah, of Idaho, and A. R. Johnson, of Ohio, on the one side, and George W. Perkins, of New York; Governor Johnson, of California; Horace B. Wilkinson, of New York; John M. Parker, of Louisiana, and Charles J. Bonaparte, of Maryland, on the other, went into conference.

Meanwhile the Progressive caldron seethed on. At intervals it threatened to boil over.

But the cool wisdom of its leaders, reinforced by the knowledge that the attempt at reconciliation had the earnest sanction of the leader at Oyster Bay, kept the fires banked.

The convention in the Auditorium, like the one at the Coliseum, went steadily ahead with its business.

Its Resolutions Committee presented the draft of a platform and it was discussed plank by plank. In the course of this discussion a significant incident occurred, which was without precedent in the history of political conventions. A plank was

HITCHCOCK

The man who managed Taft's first campaign spent two sleepless nights at Chicago—and got Hughes nominated

proposed declaring in favor of national prohibition. Now, political parties, time out of mind, have been afraid of the liquor problem. It is too full of dynamite to make even its open discussion in a political convention an attractive undertaking. But here the Progressive convention set itself to debate the question right out in meeting. After both sides had been presented with vigor and freedom, the matter went to a vote and the plank was rejected. It was rejected not on the merits of the liquor question itself, but on the proposition that the inclusion of such a plank at this time would distract the attention of the country from the real issues of the campaign and substitute for them the single issue of prohibition. Then came an unconventional and startling thing. The chairman invited every delegate who believed in prohibition to stand up, and a great majority of them arose to their feet.

In the Republican convention there was no debate upon the platform. Henry Cabot Lodge, chairman of the Committee on Resolutions, read the committee's draft to the accompaniment of moderate applause for Americanism, preparedness and protection. Then a fiery young man from Wisconsin presented a minority report signed by himself alone in

which numerous radical planks were made to carry pronouncements on pacifism and kindred subjects obviously intended for consumption in German-American sections. The convention refused to take him seriously. Then the platform was adopted without appreciable dissent. One humorous incident enlivened the solemnity of the proceedings over the platform—tho the humor was rather sardonic. The last plank in the platform was read by Senator Lodge thus: "The Republican party, reaffirming its faith in government of the people by the people, for the people, as a measure of justice to one-half the adult people of this country, favors the extension of the suffrage to women"—the pause at this point affording opportunity for a pleasant demonstration by the friends of woman suffrage thruout the galleries. The moment had been anxiously awaited. On Monday evening a new political party had been born in Chicago, to be known as the Woman's Party. It is composed of the women voters of the twelve suffrage states and its one purpose is to use the votes of women in the coming presidential election on behalf of the party or candidate promising most for the passage of the Federal Constitutional amendment extending the suffrage to women. It was an enthusiastic convention and the new party gave some promise of political significance. Its birth had been followed on the next day by a parade in which over five thousand women tramped thru a thin, steady, soaking rain with persistency and cheerfulness. They bore placards and banners whose inscriptions belied the traditional feminine lack of humor.

"Get your ribs back, here they are." "We want to be citizens, do we look desirable?" "Why can't I speak for myself, John?" "Women, the de-voted mothers of our country." "We can vote for President, watch your step." It was a splendid demonstration of feminine spirit and determination.

As Senator Lodge paused and the cheers broke out it looked as if it had had its effect. But soon the shouting died down and Mr. Lodge resumed in a louder tone and with a kind of biting emphasis on the words, "But recognizes the right of each state to settle this question for itself."

Then the jeers broke out from all over the body of delegates while Senator Lodge stood and smiled. It was a big disappointment, but the half loaf of a general declaration in favor of the principle was probably quite all one had any right to expect from such a politicians' convention.

While platforms were being made and adopted, the conference committee was busy talking things over. The first report to the Republican convention announced a gratifying good-will among the conferees and a sincere desire on both sides to get together. It declared further that the Progressive representatives were firm in their conviction that Mr. Roosevelt was the one man on whom the two parties could unite logically and with hope of success. The convention took no notice of the report and the conferees went at it again.

So we come again to Friday night and the end of that weary session of oratorical efflorescence. There was no one in sight but Hughes, tho he had a long way to go to a majority. But the situation was ripe for a rush to the band wagon. The rumor that Illinois would swing from favorite son Sherman to Hughes on the next ballot looked like the beginning of a speedy end. So came Saturday morning. The Progressive convention met first and soon received a report from the conference committee. The Republican members had proposed for the first time with unanimity Mr. Hughes as the nominee of both conventions. But it was apparent that the Progressive delegates would have none of it. They were there to nomi-

PENROSE

He threw away all Pennsylvania's votes on Knox till he caught the drift of things

nate their own beloved leader and they intended to do it whether or no. A telegram was received from Oyster Bay proposing Senator Lodge as the compromise candidate, and the restive delegates in the Auditorium could with the greatest difficulty be held back until the telegram could be received and read at the Coliseum. A direct telephone wire from the Coliseum to a receiver on the stage of the Auditorium kept the Progressive body in instant touch with events in the other convention. In the Auditorium the atmosphere was electric. The delegates bubbled with excitement. They wanted to nominate Roosevelt and be done with it. The fear that the other convention would steal a march on them and make their nomination first set them crazy with impatience. The hall rumbled and sputtered and fizzed and detonated. The floor looked like a giant corn popper with the corn jumping and exploding like mad.

The delegates wanted action; the leaders wanted to be sure that they had kept faith with Mr. Roosevelt and with the general situation by giving the Republican delegates a

chance to hear his last proposal. Bainbridge Colby, of New York, put Mr. Roosevelt in nomination with brevity and vigor; Governor Johnson seconded the nomination with his accustomed fire. Then, as the word came over the wire that balloting had been resumed in the Coliseum, the question was put at thirty-one minutes past twelve, and every delegate and alternate in the convention leaped to his feet with upstretched arm and shouted "Aye."

Doubtless more thrilling moments may come to some men some time somewhere, but you will hardly find a delegate of that Progressive convention to believe it. Then the convention adjourned, to meet again at three to hear what the man they had nominated would say.

At almost the same moment, in the Republican convention, the floodgates were opened and the votes began to pour thru for Mr. Justice Hughes. The name of candidate after candidate was withdrawn, and as the third roll-call ended the nomination was all but unanimous. Then the Republicans nominated Charles W. Fairbanks for Vice-President again, and went away. They had done the thing they did not want to do, and their only consolation was that the one thing they dreaded more had not been forced upon them.

When the Progressives met again they knew that Mr. Hughes had resigned from the Supreme Court and had accepted the nomination. What Mr. Roosevelt would do they could only surmise—and hope. They filled in the time of waiting for his message, which they were assured was on the way, with nominating John M. Parker of Louisiana for Vice-President, with pledging a goodly sum for campaign expenses, with performing certain routine business, and with listening to fighting speeches. As the hand of the clock moved on to five, the hour at which the chairman had promised adjournment, Mr. Robins rose and read the message from the man they had called to lead them again. It fell like lead upon their exuberant spirits. It was not the unqualified acceptance they had dared in their exaltation to hope for. It read thus:

I am very grateful for the honor you confer upon me by nominating me as President. I cannot accept it at this time. I do not know the attitude of the candidate of the Republican Party toward the vital questions of the day. Therefore, if you desire an immediate decision, I must decline the nomination.

But if you prefer to, I suggest that my conditional refusal to run be placed in the hands of the Progressive National Committee. If Mr. Hughes's statements, when he makes them, shall satisfy the committee that it is for the interest of the country that he be

elected, they can act accordingly and treat my refusal as definitely accepted.

If they are not satisfied, they can so notify the Progressive Party, and at the same time they can confer with me, and then determine on whatever action we may severally deem appropriate to meet the needs of the country.

THEODORE ROOSEVELT

Puzzled, disheartened, overwhelmed, they went away. They could not then see how wise, how farsighted, how inevitable it was. Some of them will never see it. Probably few of them as they went out of those doors realized that they had taken part in the last act of the romantic and tragic drama of the National Progressive Party. But such must be the fact. For the march of events was too much for it. Fate, not its enemies, brought it to an end. And in its death it has performed a sterling service. Without its presence at Chicago Mr. Justice Hughes would never have been nominated for the presidency. That politician-hyphen-made convention of politicians would have selected some one of their own kind and sent him blindly out to meet his fate.

CRANE

The thought that the Progressives were negotiating with Crane and Smoot—rock-ribbed Republican regulars—was galling to men like Johnson

HUGHES—MAN AND STATESMAN

BY GEORGE W. WICKERSHAM

FORMER ATTORNEY-GENERAL OF THE UNITED STATES

IN the long and varied history of American politics, the career of Charles Evans Hughes affords one of the few and most striking examples of the application of the true republican principle that the office should seek the man, not the man the office. Mr. Hughes has been Governor of the state of New York, Associate Justice of the Supreme Court of the United States, and is now become the candidate of the Republican party for the presidency, without in any instance lifting his hand or raising his voice to obtain any of those positions. He affords a demonstration of the real value lying behind that much-abused word, "preparedness." His whole life has been a course of preparation for the work which successive public demands have laid upon him.

He comes of rugged Welsh stock. His father was a Baptist minister, born and reared in Wales, the exponent of a strong, independent, individualistic faith. Charles was born at Glens Falls, New York, in 1862, and was brought up amid simple surroundings. He never knew that "chill penury" which represses "noble warmth." But he enjoyed the advantage of an early life of self-denial and the need of earning by his own efforts everything but the bare necessities of life.

Hughes was graduated at Brown University in 1881; taught Greek and mathematics for a time in a school at Delhi, New York; then studied law at the Columbia University Law School and was admitted to the New York bar in 1888, the year of his marriage to the daughter of Walter S. Carter, the head of the firm of lawyers who employed him.

After three years' experience in a law office, he accepted a professorship in the law school of Cornell University, where he taught the law of contracts and international law for two years. In 1893, he returned to New York and became junior partner in his father-in-law's firm. During the next seven years, despite the exactions of a growing practise, he was a regular lecturer at the New York Law School. This work not only required him to continue the systematic study of the law, as few successful practitioners in our large cities are able to do, but it gave him a training in the art of exposition which contributed much toward making him a convincing advocate, a forceful debater, and a powerful campaign orator.

His practise developed in the field of commercial law and litigation. He soon became recognized by his fellows at the bar as a formidable antagonist. His professional work was characterized by thoroughness of preparation. Thus his cases were won before they came into court. His presentation of facts was lucid and convincing, and his clear statement of applicable rules of law soon won for him the confidence of the bench.

His successes at the bar never were won by mere cleverness or chicanery. They were attained by the exercise of that genius which Daniel Webster declared was the only kind he ever knew—the genius for hard work. They soon brought public recognition. In 1905, there was a legislative investigation into the gas companies of New York. It was carried on under the chairmanship of State Senator Frederick W. Stevens, who retained Hughes as counsel to the committee. The work was done quietly and effectively. It required a knowledge of complicated and intricate accounting, and in that field Hughes had no superior. The report, which he drafted, was considered a model by all those who had occasion to examine it. It was made the basis of valuable constructive legislation. It was followed by the creation of a commission to regulate the operations of gas and electric companies, and the fixing of an eighty-cent rate for gas.

His work with that committee led to his retention as counsel in the following year to the committee appointed by the Senate of New York to investigate the great life insurance companies, of which Senator Armstrong was chairman and Senator Stevens a member. The demands for this investigation and the problems presented by it required treatment very different from that which had sufficed with the gas companies. There was a widespread impression that the great wealth and vast power of the large life insurance companies had been used to influence legislation, control elections and affect official action, both state and national. It was also charged that officers and directors of these companies had abused their powers, and thru underwritings, and otherwise, enhanced their personal fortunes, sometimes at the expense of their companies.

The series of questions prepared by Mr. Hughes and sent to the executive officers of the various companies as the first step in the investigation, was

so searching in character, so intelligently framed to develop the ultimate facts by which the management of these companies must be judged, that a perusal of them brought a sudden realization of the meaning of the phrase "pitiless publicity." The public examinations of witnesses which followed, turned a calcium light on to the inmost recesses of the administration of the life insurance companies. Many abuses were revealed, and officials responsible for them driven from office. But the inherent financial soundness of these great and useful organizations was demonstrated and with the correction of abuses and changes in the personnel of their management public confidence was restored. The work of Mr. Hughes was not merely destructive. On the contrary, he had the satisfaction of demonstrating the inherently healthy character of the American life insurance business, and its reliability as a means of securing the families of many thousand persons of small means against want or dependence. The public was convinced that the needed surgical work had been performed by an unflinching hand, the diseased parts cut out and a sound healthy body left.

A widespread demand arose among all classes of the people that the man who had so ably and fearlessly performed that work should be placed at the head of the State government. His nomination for the governorship on the Republican ticket in the autumn of 1906 was in compliance with this demand. While, officially, the Republican nominee, then, as ten years later, Mr. Hughes was not the choice of the leaders of the political organization. He was the choice of the people. At the ensuing election he was the only candidate elected on the Republican State ticket.

When he assumed the office of Governor on January 1, 1907, he knew that he was put there to represent the people of the State, and he interpreted the people's will as no political manager at that time was able to do, and as few elected officials of government ever have done. He was a militant executive, swift to divine the public thought, inflexible in his determination to have placed on the statute book laws which he knew the people rightly demanded, implacable in dealing with every form of abuse of public trust.

His greatest constructive work was the Public Service Law, which

he drew and caused to be enacted and which has served as a model for almost every other state in the Union. He was no corporation baiter. He believed in the fundamental duty of government to protect the legitimate rights of private property. But he fully realized the just concern of the public in all corporations engaged in operations under franchises granted by the people.

When, shortly after the enactment of the Public Service Law and the appointment of the commissions in conformity with it, the legislature passed an act fixing a uniform passenger rate of two cents per mile over all the railways of the state, he vetoed the measure, pointing out that one of the very purposes of the creation of the public service commissions was that these bodies, clothed with appropriate powers and administrative machinery, should investigate questions of that character, and, upon ascertaining all the facts involved, determine whether or not particular rates were unduly high or unjustly discriminatory, and in the public interest should be changed.

With similar vigor and unswerving determination, Governor Hughes compelled the repeal of the act of the legislature under which gambling on horse races was carried on in defiance of the express provisions of the State Constitution. On the other hand, when inflammatory attacks were made in the "yellow" press upon the New York Stock Exchange, accompanied by demands for drastic measures to control its operations, Governor Hughes, before acting, appointed a commission of bankers and lawyers of recognized integrity and disinterestedness to examine into the complaints and recommend what legislation, if any, was necessary for the public protection. He was ever swift to attack abuses. But in public life, as in private, he always insisted upon ascertaining the facts of any given case before determining upon his course of action.

While he had been always a member of the Republican party, throughout his term of office, Mr. Hughes sought support and political strength from the people directly rather than from any political organization. He developed in an extraordinary degree the faculty of talking to crowds in the language they understood. He appealed to "the man in the street"—to employ a phrase of his coinage. He trusted in the common sense and inherent sanity of what Mr. Lincoln called "the plain people." In return, they understood and trusted him. His renomination and reelection as Governor

in 1908 became as irresistible as the progress of a live glacier. During the presidential campaign of that year, Mr. Hughes made his first appearance on the stage of national politics. His speech on the national issues delivered at Columbus, Ohio, September 1, 1908, was regarded at the time by men of all political creeds as one of the most lucid and convincing presentations of political issues in the annals of American oratory. Sober judgment has since confirmed that opinion.

Mr. Hughes's style of speaking is simple and devoid of rhetorical embellishment. His method consists in marshaling his facts and presenting them in language so simple that the ordinary mind easily can understand their meaning and significance. He has the magical power of coining phrases which touch the imagination and linger in the memory.

While the judicial quality of patiently investigating the facts and hearing both sides of a case has been carefully cultivated by Mr. Hughes, he is far from being neutral in his feelings. It is impossible for those who know him to believe that he was indifferent to the German occupation of Belgium or the destruction of the "Lusitania."

It is said that recently, in discussing with some friends the possible effects of the European war, he pointed out that one of its most serious results to us would be that when it ended the American people would be the only "soft" nation in the world. All the others would have been hardened by strife.

No institution over which Mr. Hughes has any control will long remain "soft." Under his determined will, directed by his clear, vigorous intelligence, the national impulse towards "preparedness" will receive a practical and intelligent direction which will fit this nation to take its proper place in the councils of the world and to protect the rights and interests of its citizens at home and abroad.

When Mr. Hughes, six years ago, accepted President Taft's offer of an associate justiceship of the Supreme Court, he turned his back upon political life and deliberately dedicated himself to the arduous duties and secluded existence of the judiciary. Doubtless he believed that ample opportunity would be afforded for the exercise of his best thought and labor, and nothing in his opinions from the bench affords any reason to doubt the continued vigor of his thought or expression.

But his seclusion was to be of short duration. The people literally have beaten a path thru the wilder-

ness to his door, and called him forth to the field of political strife.

Cincinnatus was not summoned from his plow by a more imperious public demand than has Hughes been called by the people of his political faith to exchange comfort, certainty of position and the life which was his highest ambition, for the toil and vexation of a political campaign having as its highest reward the incumbency of the most exacting office ever created by man. But Charles Evans Hughes is by nature a fighter. His opponents forgot this fact when, during the long and trying period just passed, he remained silent, true to the proprieties of his judicial office, refusing to lift hand or voice for a position he did not seek, or to repudiate the accusation of timidity which was unknown to him, and the imputation of opinions which he held in abhorrence.

The reputation for austerity and coldness acquired by Mr. Hughes during his struggles with adverse forces in Albany was speedily dissipated by the congenial atmosphere he found in Washington, both in his official and his social life. No one is a more popular dinner companion than he. His broad culture, wide reading, quick wit and easy manner have made him a welcome guest wherever people of intelligence and refinement are assembled. The life of a member of an appellate court compels a toleration of the opinion of one's associates, and requires patient attention to views however divergent from one's own. For a man of strong self-confident nature, no training could be more valuable than that which first requires attention to arguments presented by opposing counsel, then discussion with other judges, gradual modification of views and opinions, and finally concurrence in a general conclusion. A president with such a training would certainly avoid the reproach so commonly expressed concerning Woodrow Wilson, of unwillingness to confer with others or even to listen to facts or opinions which he had reason to think might be at variance with his *a priori* assumptions.

Mr. Hughes is possessed of those qualities of sobriety, self-command, perfect soundness of judgment and perfect rectitude of intention, which Lord Macaulay ascribed to John Hampton. These qualities, added to an intuitive knowledge of the people, and a rare understanding of popular thought, afford reason to those who know him to believe that no better qualified candidate for the presidential office ever has been presented to the people of these United States.

New York City

UNCLE SAM—"I'M PROUD OF YOU BOTH—NOW FOR A GOOD SQUARE FIGHT!"

THE WOMAN OF YESTERDAY

BY CORRA HARRIS

AUTHOR OF "A CIRCUIT RIDER'S WIFE," "THE RECORDING ANGEL," "THE CO-CITIZENS"

THE one woman whom we really know, and concerning whose future there can be no reasonable doubt, is the Woman of Yesterday.

She is the fanciful heroine of ballads and romance because only one-half the history of this country has been written. If her services and sacrifices had been recorded they would have been different, but they would not have been less important than the best deeds of her bravest men, and we should discover in her more than a figure of speech in poetry and fiction. She accomplished some of the best and sternest scriptures of American life. She was intelligent. She had the courage of a pioneer, and the patience of a saint, and she was no less progressive than the woman of today. She started further back in time and had further to go. This is the only difference. She was a pioneer who faced a wilderness and wrought with faith and infinite labor to establish the ideals of liberty and righteousness upon which this civilization was founded. If the women of today run with the same courage the race that is set before them, if they preserve these ideals with the same fortitude, they will do well, but not better than she has done.

She was a gentlewoman who practised her virtues delicately and in secret as if these were the ritual of her faith.

SHE was a domestic economist who never wrote a paper nor addressed a club on this subject. But she literally practised these arts of the home about which we agitate more than we achieve. She was that woman of the proverbs who "looketh well to the ways of her household and eateth not the bread of idleness." She made the things which we buy, and she knew better how to save than we know how to spend. All the doors of industrial and professional life were closed to her. Nevertheless she was, strictly speaking, a producer, not a consumer. She founded the best and most stable American home that has ever existed, and she maintained it with a dignity and diligence which the woman of today cannot surpass. She produced great men, not great issues, and she did not produce herself at all. She was only the blessed medium through which all life flowed, receiving from her a certain fineness, a color of the spirit, a vague and gentle effulgence. She was not the epochal woman. She was the

mother and patient prophet of that woman.

They who fail to comprehend that the woman of today is the product as well as the descendant of the women of yesterday do not know her history. She led no movements, but she herself moved ever forward in the sweeter grace of silence.

SHE was the most truly and wisely progressive woman this country has yet produced. She failed of recognition deliberately. She had not advanced so far as organizations and attendant publicity. But she deserves no less praise for that which she accomplished. There is not a single righteous issue advocated by the women of today which cannot be traced back to this silent, diligent, thoughtful woman of yesterday. It was Frances E. Willard, a woman of yesterday, who first advocated the cause of temperance. The idea of suffrage for women is older than Susan B. Anthony. Frau Cower was the Grand Old Woman of Germany. She gave sixty of her eighty-six years to those reforms which have resulted in wider opportunities for German women. She was working for this long before there was a single women's organization in Germany. Mademoiselle Minot did the same thing in France many years ago. When the manhood of the British Empire was concerned with wars and bloodshed, it was Florence Nightingale, a woman of yesterday, who founded the Red Cross and financed it from her own fortune when the government failed to support her. Have the women of today with their colossal organization and their wealth accomplished any better work than this? It was a woman of yesterday, the mother of a large family, who did the work of her home and wrote "Uncle Tom's Cabin." I am from the South, and I

do not think the facts justified the passionate ardor of that story, but has any woman of today written a book which has had so much influence upon American life? It was a New England woman of yesterday who accomplished humane reforms in the treatment of the insane. There is the statue of a woman with a sun-bonnet on her head in New Orleans, raised to the memory of an old Irish woman of yesterday who loved and gave her life for the poor in that city without straining her fortune through a charitable organization. It was a Georgia woman of yesterday who worked single handed with the Legislature of that state until she accomplished reforms in the treatment of women prisoners.

AND the spirit of the pioneer persisted in these women to the last. Until recently a very old woman of yesterday lived on a farm near my home in the Valley. When the Civil War closed, her husband returned to her a helpless invalid. She ploughed her fields, cut her wheat with an old-fashioned hand cradle, bound and shucked her sheaves, and harvested all her crops. She never bought anything. She literally made a living for her family out of the ground, and they lived well. She spun and wove their clothes, she kept an immaculate house. She was the mother of ten children. She brought them up in the faith and gave each of them a college education. They are the best people in the community. Not one of them failed her. She was never twenty miles from the place where she was born in her life. Are there many women of today who can give a better account of themselves? We are so much taken up with our "preparedness" plans for living that we do not realize that this woman of yesterday did prepare and that she is still far ahead in actual service.

There is no standard of morals however high, no culture, no ideal of justice for which we merely contend, that she did not practise with modesty and patience. She left us to reap the harvest of her labors with the same spirit of willing sacrifice which marks her history from the beginning.

The women of today hold in trust the heritage of the women of yesterday for the women of tomorrow, and it is our most sacred duty that they may receive it from us with interest, not squandered by idleness nor damaged by decadent theories.

The Valley, Georgia

WHY WE HONOR HER

She was a gentlewoman.

She was a domestic economist.

She wrought to establish the ideals of liberty and righteousness.

She had the courage of a pioneer and the patience of a saint.

She founded the best and most stable American home.

She was the most truly and wisely progressive woman this country has yet produced.

There is no standard of morals however high, no culture, no ideal of justice for which we merely contend, that she did not practise with modesty and patience.

CARTY'S HALL

BY JOHN FINLEY

For the first time in the history of the world, so far as known, a meeting was conducted by telephone, as if the participants were in the same city and hall, tho some of them were three thousand miles away. It was a meeting of the American Institute of Electrical Engineers, and several sections met in the cities named, motions being put in one, seconded in another, and voted for in all. Dr. J. J. Carty, who presided, received next night the Franklin Medal in recognition of his achievements in telephony

Carty? You've never heard of Carty? Well,
That's no reflection, as it seems to me,
On Carty,—Carty who's been farther heard
Than any other man that ever lived,
Excepting Vail who from his New York tower
Called Carty up in Honolulu once
And conversation held without a wire.
"What hath God wrought!" were man's first words
Transmitted o'er Atlantic's wire-strung shores;
But o'er Pacific's waves the first to fly
Were simply "Hello, Carty! Are you there?"

Well, Carty hired a hall, as big it was
As all outdoors. One wall was firmly set
On Plymouth Rock, where freedom-loving waves
Still beat upon a "stern and rock-bound coast";
The western looked upon the placid sea,
Which from a lonely peak in Darien
Balboa saw, and had a Golden Gate
Which oped upon the jewelled Orient.
The other walls to North and South were hung
With tapestries diaphanous and dim,
Woven of straight imaginary lines
Of latitude, and filmy argent threads
Spun on gray waters and the desert plains.
And o'er these walls there spread a ceiling such,
By night, as that which ever hangs above
The hurrying migrants to and from New York
In its vast terminal, yet vaster far,
And sprent with stars, millions of miles away,
With which such as Pupin have often talked
In spectroscopic tongue and learned what things
Are burning in their hearts beyond our ken,—
Such was the wondrous hall which Carty hired,

Almost as large as all the ancient world
Of Ptolemy, from Ethiopia
To Thule, and from Sera to the sea.

You think this but a wild Arabian tale?
But let me tell you more: Last night did I
Attend a meeting in this spacious "Carty Hall,"
And Carty was presiding genius there.
A black-haired, wiry, Celtic man he was,
Of gentle, clear-voiced, speech and wireless ways.
Without a gavel, such as chairmen use,
To order he commanded all the host,
Wide-scattered as the flocks on Grampian Hills;
And many thousands hearing made response,
From far Atlanta to the farther sea.
Chicago, Philadelphia, Boston,—all
Cried "here," New York and San Francisco, too;
They listened all to speeches and to songs,
They stood as one and cheered the Stars and Stripes,
Tho mountains, lakes and prairies lay between—
For "Carty's Hall" was The United States.

'Tis prophesied that all the quick and dead,
From Boston to Bombay and back again,
Shall at one moment hear the selfsame sound,
The stirring sound of Gabriel's final trump;
But long before that day shall come, perchance,
A Carty, or his scientific heir,
Will make the universe his "Carty Hall"
Wherein each earth-encircling day shall be
A Pentecost of speech, and men shall hear,
Each in his dearest tongue, his neighbor's voice
Tho separate by half the globe.

THE NEW BOOKS

THE AMERICAN SHORT STORY

Of the twenty-two hundred most promising short stories by American writers, which were published in 1915, Edward J. O'Brien has selected the twenty "best"—a collection of such wide range and diverse style as to represent almost every type of deservedly popular magazine story. In a foreword Mr. O'Brien analyzes the entire short story product of the year, which, he says, impresses him "more than ever with the leadership maintained by American artists in this literary form." He lists and grades these authors in four groups: A Roll of Honor, the ones who fall just short of excellence, the merely good, and the negligible.

But it is as an explorer rather than as a judge that Mr. O'Brien makes his work most valuable. Discovering new authors and comparatively unknown magazines is his specialty. Perhaps his zeal in that direction influenced his choice of Zelig by Benjamin Rosenblatt as the best short story of the year. It appeared in "The Bellman," a weekly magazine which Mr. O'Brien puts at the head of its class among fiction periodicals. Probably most of its readers will disagree as to the first of the collection—In Berlin, by Mary O'Reilly. The Water-Hole, by Maxwell Burt; The Bounty-Jumper, by Mary Synon; and T. B., by Fanny Hurst may all be ranked as better than the "best." But at any rate it needs no vote to determine the worth of the collection as a whole—good tales, varied, well-told, new, are sure of popular approval.

For *They of the High Trails*, romances of life in the Rockies, we are not so optimistic. Hamlin Garland writes of the outdoors understandingly; he makes us feel the vastness and the solitude of the mountains, and their power in shaping the lives of men. But when he sets people to influencing people his insight is less true. He falls back on the accepted formulas of magazine fiction, and the men and women in his stories fail to live up to the possibilities of their setting.

Rex Beach gives us the other extreme in *The Crimson Gardenia and Other Tales of Adventure*. Each plot is shaped by a tyrannical ruling passion, and from Alaska's icy mountains to the tropics' coral strand the masculine emotions predominate.

It is a relief to turn from these crude colors to the delicately shaded sketches of *Stamboul Nights*, photographic in their realism, yet subtly interpretative of the Oriental people. H. G. Dwight has done more than record his experiences—he has sensed their dramatic values and put into words all their atmosphere as well as action. The Leopard of the Sea is a vivid tale of a ship's last voyage—altogether different, of course—yet comparable to Kipling's *The Ship That Found Herself*.

Two other collections of short stories

interpreting a people have recently been published. *God's Remnants* is a series of pictures of the Jewish race, in Austria, Galicia, Poland, Russia, London, New York—wherever the Chosen People gather to uphold their traditions. Samuel Gordon has drawn the significant characteristics of the Jewish temperament with a sympathetic presentation of their racial point of view, too frequently misunderstood. *Beggars on Horseback* deals more definitely with individuals and suggests rather than explains their characteristics as a people. These are uncanny, Poe-like tales of Cornish peasant women, who live their philosophy of life unhampered by convention. F. Tennyson Jesse sketches them with clear-cut, forceful skill, directed by a remarkable imaginative power.

Thru all these various collections of stories there runs a trace of the exaggerated American demand for novelty, a fault induced perhaps by our insatiable appetite for fiction. Fortunately, however, our best writers are wise enough to disregard this demand of the public—and the public likes them for it. William Allen White has long been famous for his studies of plain Middle Western folk, the people who live "in Our Town." His latest book, *God's Pup-*

pets, includes four long short stories, humanly interesting and squarely true to life. We know the characters they portray as real people, but he makes us know them better than we usually succeed in knowing real people.

Perhaps we need not worry about this exaggerated demand for novelty, after all, for the final verdict of popularity seems to go to the genuinely worthwhile. People have enjoyed for more than twenty years the *Stories of H. C. Bunner*, now collected in two volumes. All the old-time favorites are included—Love in Old Cloathes, The Midge, The Zadoc Pine Labor Union, Our Aromatic Uncle, and enough others to provide good reading for many summer afternoons.

The Best Short Stories of 1915, ed. by Edward J. O'Brien. Small, Maynard. \$1.50. *They of the High Trails*, by Hamlin Garland. Harper. \$1.35. *The Crimson Gardenia and Other Tales of Adventure*, by Rex Beach. Harper. \$1.30. *Stamboul Nights*, by H. G. Dwight. Doubleday, Page. \$1.25. *God's Remnants*, by Samuel Gordon. Dutton. \$1.35. *Beggars on Horseback*, by F. Tennyson Jesse. Doran. \$1.25. *God's Puppets*, by William Allen White. Macmillan. \$1.25. *The Stories of H. C. Bunner*. Scribner. 2 vols. \$1.25 each.

PRESENT DAY SCRIPTURES

President William DeWitt Hyde pursued a novel course in delivering the Lyman Beecher Lectures on Preaching at Yale this year. Instead of dwelling upon the technical devices or philosophy of preaching, he sets forth the Gospel which is to be preached and practised. He finds *The Gospel of Good Will* not only in the historic documents and creedal statements of Christianity, but "revealed in contemporary scriptures," which, at their best, interpret the religious life of our time.

He takes a text and lesson from some recent well known writing and from it draws his Gospel message. In Jerome's "The Passing of the Third Floor Back" he finds the real essence of the gospel of good will, Christ's expectation of men. From Masfield's "The Everlasting Mercy" and "The Widow in the Bye Street" he draws lively portrayals to show the meanness of sin; and in Brook's biography of William H. Baldwin, Jr., "An American Citizen," he sees the religion of good will exprest in the social service and trusteeship of a great business and industrial leader. In like manner he treats Sarolea's "How Belgium Saved Europe" as a true embodiment of Christian sacrifice; and Riis's "The Making of an American" and "The Battle with the Slum" as depicting the typical, practical reformer moved by Christian idealism.

Thomas Mott Osborne, Charles Rann Kennedy and Winston Churchill also furnish materials for separate phases of the subject. A lucid style, a sympathetic treatment of present tendencies, and a high ideal of Christian service make this a fascinating volume.

The Gospel of Good Will, by William DeWitt Hyde. Macmillan. \$1.50.

DAILY PAPERS

"Well," said Father Payne, "a great deal of the news most worth telling can be told best in pictures. I believe very much in illustrated papers. They really do help the imagination. That's the worst of words—a dozen scratches on a bit of paper do more to make one realize a scene than columns of description. I would do a lot with pictures, and a bit of print below to tell people what to notice. Then we must have a number of bare facts and notices—weather, business, trade, law—the sort of thing that people concerned must read. But I would make a clean sweep of fashion and all sensational intelligence—murders, accidents, sudden deaths. I would have much more biography of living people as well as dead, and a few of the big speeches. Then I would have really good articles with pictures about foreign countries—we ought to know what the world looks like, and how the other people live. And then I would have one or two really fine little essays every day by the very best people I could get, amusing, serious, beautiful articles about nature and art and books and ideas and qualities—some real, good, plain, wise, fine, simple thinking. You want to get people in touch with the best minds!"

From *Father Payne*, Putnam, \$1.50.

PEBBLES

It's a wise Verdun trench that knows its permanent master.—*Washington Post*.

The peace between Italy and Germany is a peace that passeth all understanding.—*Philadelphia Inquirer*.

A favorite son is a candidate who feels just as good coming back as he did going out.—*Baltimore American*.

Whoever loses at Chicago, the esteemed telegraph companies are going to be heavy winners.—*New York Tribune*.

Every Congressman hopes, for the safety of the country, that the petunia seeds he sent out will grow.—*Toledo Blade*.

Isabel—Are you sure you really love me?

Arthur—Dearest, I would be President of Mexico for your sake.—*Cornell Widow*.

Speaking of preparedness, the av. coll. grad. gets good training for the boredom that will be his when he enters the Great Outside. He has to listen to the av. baccalaureate sermon.—*New York Tribune*.

You chase a street car, and you see
How fast a car can go;
But when you've caught it, goodness me!
Why does it run so slow?
—*Cincinnati Enquirer*.

Will there be, one wonders, enough "Americanism" to go around? There are three parties to be supplied, and the amount, take it from the chairman of any party's committee, is limited.—*New York Tribune*.

The headline writers don't dare to be too daring. A copy reading friend of ours confides that he didn't have the nerve to head the story of the negro delegates at Chicago "The Conventional Blacks."—*New York Tribune*.

The visitor at the asylum paused before a lunatic who alternately smote his head with a hammer, ceased and smiled beatifically.

"Why do you do that?" he queried.
"Because," quoth the nut, "it feels so good when I stop."—*Brunonian*.

"Two and two," said the candidate whose "views" were being waited for, "are four." "Hooray!" shouted his backers. "We told you his principles were sound!" And the partisan press—or is that redundant?—headlined "Blinx Lauds Truth; Raps Foes of Sum Theory."—*New York Tribune*.

Edgar, aged five, was driving from the station on his first visit to Maine. His mother, noticing a troubled look on his face as he looked about, said:

"What's the matter, dear? Don't you like the beautiful country?"

"Yes, mother, but on my map Maine is red!"—*Harper's*.

Down on the station platform at Tuscaloosa, Alabama, a traveling salesman from Atlanta was "killing time" until one of the semi-occasional trains which run in that section should happen along. At the far end of the platform, in the sun, an aged darky sat on a bench in reverie. The salesman, for want of something better to do, began conversation.

"Good morning, Uncle!"

"Mawnin', Marse Clint!"

"What's your name, Uncle?"

"Mah name?" He looked up, surprised at the stranger's ignorance. "Mah name's G'o'ge Wash'nton, Marse Clint!"

The drummer scratched his head in mock perplexity.

"George Washington—George Washington," he mused, aloud. "Seems to me I've heard that name before, Uncle."

"Reckon y'all has," replied the aged one, complacently. "Ah been 'roun' heah goin' on eighty-foah years, Marse Clint!"—*New York Times*.

Night or Day, at Work or Play B.V.D. Conserves Your Comfort

NOTHING is so typical of the American "level head," as the nation-wide popularity of B.V.D. It is the Summer Underwear of Efficiency—of the man who conserves his comfort at work or at play, just as he conserves his health—as an asset.

Loose fitting, light woven B.V.D. Underwear starts with the best possible fabrics (specially woven and tested), continues with the best possible workmanship (carefully inspected and re-inspected), and ends with complete comfort (fullness of cut, balance of drape, correctness of fit, durability in wash and wear).

MR. PURINTON'S EFFICIENCY QUESTION BOX

262. Mr. C. T., Arkansas. "Please inform me concerning a good diet for a person preparing to run a long race."

Natural wheat, oats, corn, rye, barley; figs, dates, prunes, raisins, fresh milk and eggs; limited portion of nuts; occasional fish, fowl or game; plenty of fruit and vegetables; a little pure candy, especially chocolate. No red meat, pork, salt or canned meat; no tea or coffee; no spices, greases, condiments; no pastry; no stimulants, carbonated beverages or ice-water; no denaturized fare such as white flour bread or patent breakfast foods. Investigate the remarkable endurance tests made on special diet by Chittenden and others at Yale—you might get particulars from Prof. Irving Fisher, New Haven, Connecticut.

263. Professor A., New Hampshire. "Am thirty-four years of age, have had theological training, been in school work in America and mission work in Burma, want to enter business or the consular service. My present plan is to apply for a position as teacher in the Philippines, then study a mail course with the American Law and Consular College in Washington, D. C., and learn Spanish also. (a) Is the plan a good one? (b) Is the institution mentioned the best for my purpose? (c) How should I apply for a teaching position in the Philippines?"

(a) We think so. (b) It is hardly safe to declare any school the "best"; we do not, however, know of a better one for your purpose, unless you can find a local institution more convenient in the Islands. (c) Apply for information to the United States Commissioner of Education, Washington, D. C. The man to give you most excellent advice, if he will do so, is Right Rev. Charles H. Brent, bishop of the Philippine Islands, Zamboago, Philippine Islands.

264. Miss E. U., California. "I graduate from high school this June, and it is necessary that I immediately earn my living. Is there any work I could do in which I could use my knowledge of history and debating? I have had four years of history, and short terms of civics and economics."

You might obtain a position in a literary research bureau; a public library; a woman suffrage campaign organization; the office of your state historian or the woman's department of a national association like the National Civic Federation. Apply also to your State Federation of Women's Clubs. Get copies of the largest newspapers in Los Angeles and San Francisco; then try to discover how your special knowledge could be made to serve the newspaper, and ask for a job accordingly. Typewrite all your letters—your penmanship is poor. If you knew typewriting, bookkeeping or office filing, you would have three times as good a chance for a desirable position.

265. Mr. C. F. B., New York. "I am a public accountant, and have heard much lately in regard to personal efficiency. I greatly need the benefit of an understanding of this subject. Will you kindly indicate how I may best pursue the study?"

Obtain as many as possible of the efficiency articles and Question Box answers in back files of The Independent. Read my book, "Efficient Living," grade yourself on the different tests, and ask us how to increase your lowest percentages. Apply to Efficiency Publishing Company, Woolworth Building, New York, for a list of modern books on the subject. See announcement on page 445 of The Independent for March 27, 1916, and keep in touch with the work of the Institute, chronicled in these pages.

266. Mr. C. H. R., New Jersey. "(a) Can you advise me where to obtain instruction in commercial art? (b) Can such study be done after business hours? (c) Is the profession overcrowded? (d) How is the work best disposed of?"

(a) We infer your wish to study by correspondence. Write these schools for data: Fine Arts Institute, Omaha, Nebraska; Federal School of Commercial Designing, Warner Building, Minneapolis, Minnesota; W. L. Evans School of Cartooning, Leader Building, Cleveland, Ohio; Rosing School of Lettering and Design, Union Building, Cleveland; De Beck and Carter Feature Service, First National Bank Building, Pittsburgh. Also get a copy of the *Students' Art Magazine*, Lockwood Publishing Company, Kalamazoo, Michigan. (b) Yes—while you are learning the technique. (c) With amateurs, but not with artists of talent and skill. (d) Ask the schools mentioned above, prior to enrolling.

267. Mr. L. T., Nebraska. "I am a high school senior, nineteen years old. (a) I would like your advice as to a profitable means of making some of my college expenses during the summer months. (b) I am told that Chautauqua systems employ young fellows to set up tents, look after the grounds, etc. Will you please give me the address of some such companies?"

(a) You might sell books, life insurance, office appliances or household utensils; work in hay fields; buy a candy machine and follow the outdoor amusement companies, or obtain a concession at a summer resort; wait on table in a summer hotel or boarding house; act as agent for weekly and monthly periodicals. Apply for a summer job to the new Federal Employment Bureau—ask your local postmaster for details.

(b) Chautauqua Institution, Chautauqua, New York; Community Chautauqua, Incorporated, Equitable Building, New York City.

268. Mr. S. Y., New York. "What system of saving should one take, to save \$500 in five years, by monthly payments?"

The Postal Savings system would probably serve as well as any; inquire at your post office. Write also The American Bankers' Association, 5 Nassau Street, New York, for their literature on cultivation of thrift. A series of booklets on savings may be had from John Muir & Co., 61 Broadway, New York.

269. Miss H. W., Maine. "I want information regarding the Gary System of Education. I would be very glad to 'Learn to do by doing' if I could make expenses. I have a seminary education and have taught rural schools. (a) Could I get a chance as assistant in any of the Gary Schools? (b) If not, could I take a correspondence course?"

(a) Apply to the Commissioner of Education, Washington, D. C., for a list of schools conducted on the Gary plan; write the principals of the schools you prefer, as to obtaining a position.

(b) No correspondence courses are offered, to our knowledge. The Gary plan is more for the utilization of school buildings and the practicalization of teachers and scholars than for the adoption of a new scheme of education proper. It cannot be used, except inferentially, by teachers apart from a Gary School. Read "Schools of Tomorrow," by John and Evelyn Dewey, published by Dutton at \$1.50, for general information.

270. Mr. L. H. O., Argentina. "I want more energy, more vitality. I feel too much like a half-empty bag, instead of an overflowing one. I believe I am weak in both mind and body—perhaps more exercise would improve matters. I work ten hours as cashier and bookkeeper, and with two for travel and one for lunch have little time each day for exercise. Please make suggestions."

You can do tensing and breathing exercises while traveling. You can omit lunch—or make it liquid—and take a brisk walk at the noon hour. You can systematize your work so as to cut an hour off each afternoon, and spend the hour in the open air. You can sleep outdoors, in a sleeping porch or a window-tent.

Secure magazines listed in Question Box answer No. 241, issue of April 24, 1916. Study the advertisements and investigate. Meanwhile reduce your breakfast a third or a half, and watch yourself brace up.

NEW HAMPSHIRE

HOTEL WENTWORTH

NEWCASTLE-BY-THE-SEA, PORTSMOUTH

NEW HAMPSHIRE

NO hotel on the New England coast is more notable in the beauty of its location, the attractiveness of surroundings and perfection of service. Located on the sea, in the center of a large private park. Accommodates 500. Local and long distance telephone in each room.

WHAT THE TOMMIES THOUGHT OF KITCHENER

BY WILLIAM J. ROBINSON

These personal impressions of Lord Kitchener are written by an American who fought for fourteen months as a British Tommy. His graphic description of "Killing the Wounded" was published in The Independent of May 29.—THE EDITOR.

LORD KITCHENER was not a sentimental man. He was generous in his reward of the right, and he was terrible in his punishment of the wrong. Yet he was loved. "Tommy" is not given to sentiment as a rule, and he doesn't care much for any one who is. He loves a strong man; and Kitchener was his ideal.

Lord Kitchener, like his men, despised a fop. I saw "K. of K." but twice during my time of service, and it was the second time I saw him that the following incident happened. He was to review a new brigade at a point "somewhere in France," and I took two of our officers down to the railroad to meet his train. These officers were to serve with the guard of honor which was to meet him. There were officers from practically all of the units then in France there at the station, and they lined up according to rank while waiting for the train.

Contrary to the popular idea in this country the monocle is not common among army men. I think I am safe in saying that not one in a hundred officers would be bothered with one. The few who do use them are generally the fops, and they are ridiculed for their silliness. As I sat at "attention" at the wheel of my car I noticed one officer, a subaltern by the way, who had a monocle screwed in his eye, and he bore other marks which placed him in the "asses" class.

Finally the train pulled in, every one sprang to "attention" and Lord Kitchener stepped from the train. He returned the general salute, and shook hands with some of the senior officers. Then he walked down the line of officers on the platform. As he came to the "gay dog" with the monocle he stopped. "Is there anything the matter with your eyesight?" he asked. "No, sir," replied the subaltern.

"Then take that thing out!" growled "K. of K.", and I noticed that his order was not long in being obeyed. Needless to say the story flew like wildfire.

I have talked with men who have served under him in South Africa, Egypt, and India, and I can truthfully say that I have never heard a man say a word of anything but admiration for him. The grief felt by the civilian population in England will be great, but I know the sorrow felt by the men of the British Expeditionary Force will be the deepest, for he was the leader, the man who never failed them, and the man they would go thru ten thousand hells to serve.

MOUNT GREटना PARK

On Line of CORNWALL & LEBANON RAILROAD

The most popular and attractive mountain cottage resort in the State

HOTEL CONEWAGO, MOUNT GREटना, PA.

A modern up-to-date resort hotel will be open for the season on June 29th. This hotel is pleasantly located on an eminence above Lake Conewago and is becoming more popular each year. Cottage Settlement and Hotels protected by sewerage system and disposal plant. Apply to SAMUEL H. LEWIS, Newport Apartments, 16th and Spruce Sts., Philadelphia, Pa., until June 20th; after that date at Hotel.

DATES OF CONVENTIONS, ETC.

United Brethren Assembly, Aug. 1-10.

Annual Assembly Reformed Church, Aug. 5-12.

Write to the undersigned for copy of beautifully illustrated booklet of Mount Greटना.

YOUR BODY IS HUNGRY FOR

FRUIT VIGOR

It needs Fruit-Vigor's upbuilding salts of fruit to keep it healthy. Most ailments arise because the ordinary daily food lacks these vital salts. The morning drink of Fruit-Vigor—refreshing and invigorating—frees the body from ailments and from the misery of taking physic, pills, mineral waters, oils or enemas. Makes pure blood, restful sleep, sound digestion, wholesome skin, and a clear brain.

By mail—1 jar \$1—4 jars \$3.50—6 jars \$5.00.

STEWART FOOD COMPANY, 546 Security Bldg., CHICAGO

THE HORROR OF THE FIRST-LINE TRENCHES

"I fought at Ypres. I fought at St. Julien. I fought at Lacouture and Festubert. I fought at Cuinchy. I fought at Givenchy and La Bassée, and in the first-line trenches at Messines. And before all these I fought in the first line at Richebourg and Laventie, and I live, one of sixteen alive out of 500."

That is the remarkable record of Romeo Houle, a Massachusetts boy who enlisted as private in a French Canadian regiment when the war broke out. In the spring of 1916 the American Government procured his discharge, since he had enlisted when he was under age, and he came back to this country, "the one I'd best die for, if die I must for any." He tells graphically the story of what war means to the men in the trenches:

The true story of the trenches has never been told. I know, because for many months I have lived in trenches. I have slept daily in dread of bullet, shrapnel, mine, and deadly gas; and nightly in fear of mine and gas—and the man-eating rats.

I am one of the few soldiers living who entered the front trenches at the opening of the war and who lived to fight the Germans in the front trenches in February, 1916. And returning unexpectedly, snatched by the American Government out of the very jaws of death, I discovered how much American people have been talking of the trenches and how little, after all, they really know.

Who has seen hell? Who has experienced the horrors of Milton's terrible vision or the slow tortures of Dante's inferno? God! If Dante's dream madness were truth, and those seven circles were seven encircling battle lines in northern France or the torn fringe of brave little Belgium, I could stand up and say there is no agony of body or mind which I have not seen, which I have not experienced. I thank God and give Him the glory that I still am sane.

Gas? What do you know of it, you people who never heard earth and heaven rock with the frantic turmoil of the ceaseless bombardment? A crawling yellow cloud that pours in upon you, that gets you by the throat and shakes you as a huge mastiff might shake a kitten, and leaves you burning in every nerve and vein of your body with pain unthinkable; your eyes starting from their sockets; your face turned yellow-green.

Rats? What did you ever read of the rats in the trenches? Next to gas, they still slide on their fat bellies thru my dreams. Poe could have got new inspiration from their dirty hordes. Rats, rats, rats—I see them still, slinking from new meals on corpses, from Belgium to the Swiss Alps. Rats, rats, rats, tens of thousands of rats, crunching between battle lines while the rapid-firing guns mow the trench edge—crunching their hellish feasts. Full fed, slipping and sliding down into the wet trenches they swarm at night—and more than one poor wretch has had his face eaten off by them while he slept.

Stench? Did you ever breathe air foul with the gases arising from a thousand rotting corpses? Dirt? Have you ever fought half madly thru days and nights and weeks unwashed, with feverish rests between long hours of agony, while the guns boom their awful symphony of death, and the bullets zip-zip-zip ceaselessly along the trench edge that is your skyline—and your death-line, too, if you stretch and stand upright?

Yes, I, Romeo Houle, know the trench. I longed for big adventures, you see, and now, ah, God! I am sick of adventure, for the adventures I have had will plague my sleep until I die.—*New York Times.*

What's Keeping Me Back?

You've wondered why you don't get ahead. Why your pay isn't increased. Why you don't get promoted. You've blamed everything and everybody, when the real drawback is *yourself*.

You're standing still because you lack *training*. Because you have not *prepared* yourself to do some one thing better than others. If you really want to get ahead, the way is open to you.

For 25 years the International Correspondence Schools have been helping men to climb into good paying positions. Nearly 5000 reported last year that I. C. S. training had won them advancement. You can get I. C. S. training in your spare time in your own home without losing a day or a dollar from your present employment.

Position, power, good money, independence, are within your reach. The I. C. S. are ready to help you be the man you want to be. Let them show you how. Mark and mail this coupon.

The Market Place

FOR MORE REVENUE

Owing mainly to the projected increase in the army and enlargement of the navy, Congress must provide for additional revenue by new taxes. Some thought that an increase of \$225,000,000 would be needed, but Secretary McAdoo has said to the House committee on Ways and Means that \$150,000,000 will be sufficient. Estimates unofficially made some time ago have recently been reduced by unforeseen yields of revenue from existing laws. For example, the Treasury Department expects that the income taxes for the fiscal year ending with this month will amount to at least \$110,000,000, altho only \$80,000,000 was collected last year, and the Department's estimate, in December last, of the receipts for the current year was only \$85,000,000. Prosperity accounts for the addition. And it is predicted that internal revenue collections will show a new high record. There are additions of \$5,500,000 for tobacco and \$10,000,000 for distilled spirits. These changes are ascribed by the Treasury Department to prosperity, increases of wages, and a more effective enforcement of the laws against those who seek by fraud or otherwise to avoid payment.

The bill for new taxes must originate, of course, in the House, where the Democratic members of the Ways and Means committee are now at work upon it. They have reached an agreement as to inheritance taxes and the proposed additions to the taxes on income, but have found some difficulty in framing a list of taxes to be imposed upon munitions and other war supplies. It is reported that the inheritance tax will not be applied to any estate which does not exceed \$100,000, and that the committee will not ask for a reduction of the present income tax exemption limits of \$3000 and \$4000. But taxes on all incomes exceeding \$10,000 will be heavily increased.

In the same bill provision will be made for a Tariff Commission of six members (not more than three from one and the same political party), which will be empowered to make investigations at the request of the President or of the committees in Congress which have charge of tariff legislation. It is now expected that the bill will also impose duties—which may be temporary—for the encouragement and protection of manufacturers of dyestuffs in this country. For dyestuffs we have been dependent upon Germany.

Foreign Securities

Are they yet a purchase? What countries offer the most attractive opportunity for the investor?

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

BEST BY EVERY TEST

Chairman Kitchin says that the committee's bill will make it possible for manufacturers here within the next five years to produce at least sixty-five per cent of the quantity required for domestic consumption. Probably the new Tariff Commission and the Federal Trade Commission will be authorized to defend our manufacturers against a possible "dumping" of foreign goods here at low prices after the war. The stamp taxes of the present law will be repealed. After the national political conventions the bill will be reported to the House.

RAIL AND MOTOR STOCKS

In May the average advance for railroad stocks on the New York Exchange was about 3 points. For the shares of industrials the gain was slight, and 2 points measured the average addition for combined representative groups of both kinds of securities. That month saw the beginning of a new speculative movement in the stock of motor companies, due to reports about mergers and consolidations, in which well known and notably successful corporations were involved. This movement was subjected to some restraint when the rate for call loans rose, on the 6th inst., to 4 per cent for the first time since the Exchange was reopened in December, 1914, but it continues to be the most interesting feature of the market. The advance of the call interest rate was due in part to the demand for large sums to be used in the motor merger operations.

Many who know how railroad earnings, both gross and net, have been growing do not see why the market value of railroad shares has not moved upward in accord with these gains. In April several prominent roads made new high records. The New York Central's increase was 52 per cent; the Pennsylvania's was 55. A statement published by the Interstate Commerce Commission shows that the net per mile for all the roads in the ten months ending with April was increased by 36 per cent. But it must be borne in mind that there has been continuous selling here of stocks owned abroad, and that there has been no settlement of the wages controversy between all the companies and their employees. This dispute is now the subject of conferences in New York. If the demands of the men should be granted the cost of operating the roads would be increased by about \$100,000,000 a year. A strike would cause great loss; a compromise must largely reduce net earnings.

By a new tax of 10 per cent on income, added to 25 per cent now paid, the British Government promotes the sale of American railroad stocks owned in Great Britain. This tax is imposed if the securities be not sold to or deposited with the government in accordance with the mobilization plan. One estimate is that \$400,000,000 of securities held abroad have been absorbed by our market since January 1, in addition to \$1,500,000,000 taken before that date. Continuous liquidation on

SOCIETY AND PRISONS

By Thomas Mott Osborne

Do you believe in prisons for punishment or prisons for reform?

What would you think of a hospital where patients were kept for a specified length of time and were either dismissed before they were cured, or were kept on months and years after they were cured?

Four-fifths of the sixteen hundred and more convicts now at Sing Sing have been in prison before, showing that our system does not reform.

The defects of the old prison system and the success of Mr. Osborne's ideas for its reform, in practice at Auburn and Sing Sing Prisons, are strikingly described here.

THE RURAL SCHOOL PROBLEM

"A nation-wide and intensive interest in the rural school" was declared at the recent meeting of the Department of Superintendence, of the National Education Association, at Detroit, to be "the most important problem of American education today."

The Magazine, Education, for June

is a special rural school number. Among the distinguished educators who contribute to this number are the following:

Hon. Mason Stone, State Superintendent of Education for Vermont.

Hon. David Snedden, Commissioner of Education for Massachusetts.

Principal William B. Aspinwall, State Normal School, Worcester, Mass.

George A. Works, Professor of Rural Education, Cornell University.

Edward J. Ward, Specialist, Bureau of Education, Washington, D. C.

President Kenyon L. Butterfield, Massachusetts Agricultural College.

Rev. Howard A. M. Briggs, Huntington, Mass.

H. L. Clough, Inspector of Rural Schools, Connecticut.

No one who is interested in the Rural School question should fail to see this June number of EDUCATION. It will be sent postpaid by the publishers on receipt of 35c.

EDUCATION opens its 37th year with the September number. The subscription price is \$3 per year. Master M. T. Pritchard, of the Everett School, Boston, says of it: "As necessary to a teacher as a medical journal to a physician."

THE PALMER COMPANY

Educational Publishers, 120 Boylston St., Boston

foreign account, and the possible or probable effect of the labor dispute, tend to prevent any considerable upward movement in railroad shares.

A long list of increased or extra dividends has tended to support the market, although such advances as might have been expected do not yet appear. Increased rates or extra payments have been announced by five copper companies, two companies that produce zinc, one cotton mill in Fall River, and a powder company, whose special payment of 23½ per cent makes 79 per cent in one year on a capital of \$120,000,000. Oil companies continue to distribute great profits in cash or stock. With good reason there is cheerful activity in the industrials on the Exchange and elsewhere.

THE YEAR'S GRAIN CROPS

In the Government's crop report for June we have for the first time an official estimate of the new crop of wheat. Another billion crop—last year's was 1,011,505,000 bushels—could not reasonably have been expected, for the enormous yield in 1915 exceeded the greatest of preceding crops by 120,000,000 bushels, and the average for eight years by 300,000,000. But it is disappointing to learn that only 715,000,000 are promised this year. There is, and will be for some time to come, an exceptionally good market for all the wheat that we can spare.

There are only 469,000,000 bushels in winter sown wheat in sight, altho 655,000,000 were harvested last year, and the estimate of spring-sown (not included in preceding reports), is 246,000,000, against a yield of 356,000,000 in 1915. A large reduction of acreage is noticeable. This was due mainly to unfavorable weather at seeding time and to large supplies still on hand. And the condition of the growing plants has been far below normal and the ten years' average. Since the May report the winter estimate has been reduced by 30,000,000 bushels. Condition is only 77½, against 88 one year ago, and a ten years' average of 86. Still, the new crop promises to exceed the annual average to which we were accustomed for a series of years preceding 1914. Demand for export shows no decline, and reports from other parts of the world indicate that it must continue.

Last year we had a record breaking crop of oats. Now, on about an equal acreage, poor condition permits a promise of 1,255,000,000 bushels, against last year's 1,540,362,000, but there have been only two larger yields. On a reduced area the barley crop will be cut down from 237,000,000 to 189,000,000 bushels. All of the June estimates may be improved in the harvest totals. Such changes have sometimes taken place in past years.

The following dividends are announced:

Liggett & Myers Tobacco Company, preferred, 1¾ per cent, payable July 1.

American Car and Foundry Company, preferred, 1¾ per cent; common, ½ per cent; both payable July 1.

American Can Company, preferred, quarterly, 1¾ per cent, payable July 1.

New fireproof home on shores of Lake Geneva. Modern sanitation, ventilation, heating, lighting. High scholastic standards; certificate privileges. Outdoor life emphasized. Fixed charge covering board, tuition, uniforms, pocket money. Address COL. R. P. DAVIDSON, Supt., Lake Geneva, Wis.

SUMMER CAMPS

Pine Tree Camp for Girls On beautiful Naomi Lake, 2000 feet above sea in pine-laden air of Pocono Mountains. Four hours from New York and Philadelphia. Bungalows and tents on sunny hill. Experienced counselors. Hockey, basketball, canoeing—all outdoor sports. Tutoring if desired. Endorsed by parents and girls. Penn. Philadelphia 905 S. 47th St. Miss Blanche D. Price.

MAKE MONEY

Writing Photo Plays \$35-\$200 each. Easy to learn. Turn your spare time into cash. Special offer, our \$10 photo-play writers' Course complete, postpaid, only \$3. Booklet FREE. Scenario Exchange, 2058 W. 107 St., N. Y.

FACTORY to RIDER

Saves you big money. Buy direct and save \$10 to \$20 on a bicycle. **RANGER BICYCLES** in 94 styles, colors and sizes. Greatly improved; prices reduced. Other reliable models, \$11.95 up. **WE DELIVER FREE** to you on approval and 30 days trial and riding test. Our big **FREE** catalog shows everything new in bicycles and sundries. A cyclopedia of information which every person should have. Write for it. **TIRES**, lamps, wheels, parts and supplies at half usual prices. A few good second hand bicycles taken in trade \$3 to \$8 to clear. **Do not buy a bicycle, tires or sundries until you write and learn our wonderful new offers, low prices and liberal terms. A postal brings everything. Write now.** **MEAD CYCLE CO. DEPT. K-198 CHICAGO**

INTERLAKEN SUMMER CAMP

MID-JUNE TO SEPTEMBER FIRST

Where boys grow brown and strong and develop the moral fibre of manhood. 700-acre estate. 200 acres of woods and meadow. Land sports, hikes and camping amid the sand dunes. Boating, fishing, swimming. Ponies. Boys build their own huts, their own boats—have opportunity to "make things" in wood, iron, brass and copper in the famous Interlaken School shops. Interesting experiences of haymaking, threshing, harvesting on the Interlaken 500-acre farm. Registered dairy herd. Sheep. Land and water fowl. A summer's recreation with responsibility for useful work added. Leadership and initiative developed through "boy government," under trained men counselors from the Interlaken School—where boys learn by doing. No extra charge for tutoring. For views and full particulars, address

Director of Camp, Box 128, Rolling Prairie, LaPorte County, Indiana

Insurance

Conducted by

W. E. UNDERWOOD

ON CHOOSING A PLAN

One of the most difficult of the tasks set me by correspondents of this department involves the selection, with supporting reasons, of one out of two or more plans of life insurance proposed by the writer. It is made difficult by the fact that I am generally without any but the most meager information about the seeker of advice, sometimes not even his age being furnished.

Circumstances govern this matter. Chief among these are: income, occupation, the source of income, present and future; number of dependents and probable duration of dependency; approximate amount of premium which may be spared annually, and of prime importance, age at nearest birthday.

Just as in whist, one in doubt is admonished to lead trumps; so in this matter, if in doubt take the Ordinary Life or a long term Endowment. Persons up to 45 will find the latter affording numerous advantages; those beyond that age would better choose the former for general, all-round service.

In addition to wife and children, men should remember several other facts in building up a line of life insurance. Among these, their own old age, the misfortunes of which are to be guarded against, a mortgage on the family home, which should be neutralized by a special policy for the same amount; and the business ability, or lack of it, of their beneficiaries. The improvident inclination of beneficiaries demands, for the conservation of the life insurance money, that most of the fund be payable in monthly or quarterly instalments. This is achieved under the Income Policy.

C. C. S., Carlsbad, N. M.—The accident and casualty companies write so many different policies it would be difficult and impracticable to select one fitted to the needs and circumstances of any individual. The North American Accident Insurance Company is thoroly sound and reliable. Write to the Chicago office, state what you need and they will serve you properly.

B. O. G., Eveleth, Minn.—The National Life Insurance Company of the U. S. A. has assets of \$13,407,828 and a net surplus of \$1,011,330. As you see, it is financially satisfactory. You do not state what kind of policy you have; at present, only non-participating insurance is written. The management is of average ability. If your policy has any age, keep it.

I. C. P., Monmouth, Ore.—Efforts have been made to secure a statement from the Bankers' Life of Lincoln, Nebraska, itemizing the sources from which it pays its deferred dividends on matured policies, but the company refuses to make one. I am of the opinion that a very respectable proportion of them come from the heavy charges it makes against reserves on surrendered policies.

An Ounce of NUJOL is Worth a Pound of "Cure"

Use NUJOL to PREVENT constipation

A LITTLE care about eating, a moderate amount of exercise and the use of Nujol as an internal lubricant to counteract any tendency to costiveness will keep most people from constipation.

Nujol relieves constipation without upsetting the digestive processes or forming a habit. It acts in effect as a mechanical lubricant, softening the contents of the intestines and so encouraging normal, healthy bowel movements.

Most druggists carry Nujol, which is sold only in pint bottles packed in cartons bearing the Nujol trademark. If your druggist does not carry Nujol, we will send you a pint bottle pre-paid to any point in the United States on receipt of 75 cents—money order or stamps.

Write for booklet, "The Rational Treatment of Constipation." Address Dept. 12.

Nujol

REG. U.S. PAT. OFF.

FOR CONSTIPATION

STANDARD OIL COMPANY

(New Jersey)

Bayonne,

New Jersey

Approved by Dr. Harvey W. Wiley, Director of Good House-keeping Bureau of Foods, Sanitation and Health.

Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three year's course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—\$10.00, \$12.00 and \$15.00 per month; the increase made yearly

ADVERTISE HONESTLY

SAYS THE

ASSOCIATION OF NATIONAL ADVERTISERS

The following Declaration of Principles was unanimously adopted by this Association, at Dayton, Ohio, May 5th, 1916:

RESOLVED that we, members of the ASSOCIATION OF NATIONAL ADVERTISERS, are opposed to advertising of the following kinds:

All advertising that is fraudulent or questionable, whether financial, medical or any other, all advertising that is indecent, vulgar or suggestive either in theme or treatment; that is "blind" or ambiguous in wording and calculated to mislead; that makes false, unwarranted or exaggerated claims; that makes uncalled for reflections on competitors or competitive goods; that makes misleading free offers; all advertising to laymen of products containing habit-forming or dangerous drugs; all advertising that makes remedial, relief or curative claims, either di-

rectly or by inference, that are not justified by the facts or common experience; and any other advertising that may cause money loss to the reader or injury in health or morals or loss of confidence in reputable advertising and honorable business.

RESOLVED that we recognize our own obligation as advertisers to conform to these principles.

RESOLVED that we urge upon all publishers and upon all sellers of advertising space or service, a strict adherence to these principles and that in so far as the exigencies of our individual business will permit, we direct our advertising to those mediums which make the observance of these principles their rule and practice.

The Association of National Advertisers represents the leading advertisers of America. They stand as one man behind these resolutions. They are determined to do everything in their power to

**MAKE IT IMPOSSIBLE FOR THE
ADVERTISING FRAUD TO LIVE**

RED LIGHTS AND RED TAPE

Where would you put red light "exit" signs on a Chautauqua tent which is open all the way around? This is the fine legal question which the State Superintendent of Police of Connecticut had to decide when the Chautauqua Association opened up in Stamford, and Stamford did not have motion pictures because the Chautauqua representative and the State Superintendent of Police could not agree on where the legal "exit" to a wide open tent should be.

The association, in order to keep within the law, sent its representative, H. E. Wells, to Hartford to interview the Superintendent of Police as to the requirements.

"Motion pictures in a tent!" exclaimed the Superintendent of Police. "No such request has ever been made in Connecticut. We've never had motion pictures except in buildings. We haven't any laws on our statute books to cover any such case."

When the representative explained that motion pictures are a part of the program and had been given in the neighboring states, the Superintendent of Police said that he sometimes made concessions. Connecticut towns had no authority in the matter, since concessions lay within the power of the state official only. After much discussion he conceded the privilege for Chautauqua to run motion pictures, provided it marked the exits to the tent with red lights and fastened the chairs down.

"These are excellent rules for a building," replied Representative Wells, "but how can I fasten seats to the ground?"

The Connecticut Superintendent of Police shook his head thoughtfully, then added, "You'll have to tie them together with ropes."

"And where," inquired Mr. Wells, "shall I put the red exit lights on a wide open tent?"

That seemed to be a poser for Connecticut. But shades of the blue laws, the state Police Superintendent handed down the decision that the exit lights should be placed at the right and left of the platform.

This was too much for the Stamford Chautauqua. The management concluded that in case of accident roped together chairs would be dangerous. Secondly, it seemed as if red light exits anywhere on an entirely wide open Chautauqua tent would look ridiculous anyhow. But, thirdly, red lights hung on the dressing rooms for program talent, located at the right and left of the platform, could but mislead a panicky audience to the only obstructions in the tent. So that, finally, the law-abiding Stamford Chautauqua had no motion pictures at all.

Shakespeare celebrations go on apace these days. But the Vincent Chautauqua Circle in Des Moines, Iowa, has the lead in tercentenary preparedness. Twenty-three years ago it inaugurated Shakespeare parties and has held them annually ever since.

Auto-Intoxication—Dangers and Relief

Hazy dullness—half headaches—inability to think—these come from the stupefaction, or partial paralyzation, of your brain by poisons which come from food waste fermenting in the colon—the lower part of your digestive tract. This condition is called "auto-intoxication," a scientific word signifying intoxication from poisons generated inside the body. Indigestion and constipation are symptoms of auto-intoxication. And—the dangers it leads to are far greater—nervous exhaustion, high blood pressure, sclerosis of the liver, kidney disorders, sometimes malignant growths. Great medical authorities now recognize that auto-intoxication, from poisons generated by food waste fermenting in the colon, gives rise to many serious troubles. And yet—a clean colon, doing its work thoroughly and well, is easy to have.

Laxative Drugs Afford But Temporary Relief

And they over-strain the bowel walls and aggravate the danger. Natural methods are the only ones which afford real relief—so you will have a clear head, renewed energy, bodily comfort, health and joy in life. This is explained fully in a new book called "Colon Hygiene." It tells you what to do—a thoroughly scientific book yet easy for anyone to understand and follow. Written by the greatest diet authority in the world—over 400 pages, with many illustrations, diet tables and full instructions for self-care. No drugs. No apparatus. Only a little attention to diet, exercise, rest and sleep. Send for this book today. Examine it FREE. If you do not find it what you need, return it in five days and pay nothing. If you keep it remit only \$2—a low price for knowledge of such importance to your health. Send for "Colon Hygiene" NOW. Learn how to rid yourself for all time of indigestion, auto-intoxication, constipation and worse dangers.

J U S T A W O R D

The next issue of The Independent, dated the day before Independence Day, will have a striking cover devoted to a portrait of Major-General Leonard Wood, whose timely article on the subject of universal military training will be the leading feature.

Two and a half pages of this issue are devoted to comments on the union of Harper's Weekly with The Independent. It is doubtful whether any other equal space contains matter that will be read with greater interest. Of course it was and is impossible to find space for printing all the friendly and complimentary messages that have come to us concerning this historic event. We appreciate them all, and hereby thank every one who has taken the trouble to put on paper the congratulatory words which seem to be in the minds of practically all the readers of Harper's Weekly, as well as of The Independent.

The Independent has been doing some rather lively pictorial work of late, in honor of its union with Harper's Weekly—the most distinguished illustrated journal in the history of America. The photograph of Mr. Hughes and his daughter which was reproduced last week as a frontispiece was made in Washington on Sunday, and forty-eight hours later completed copies of The Independent containing it were in the hands of readers—together with a complete story of the two Chicago conventions, a cover portrait of the Republican candidate, a late and striking picture of Colonel Roosevelt, and a double-page picture of the convention in session at the Coliseum.

This is the third annual Chautauqua Number of The Independent—and the cover design will be, we feel sure, an interesting suggestion to all true Chautauquas of the Round Table conferences which represent so much of the Chautauqua spirit. How many readers of The Independent, we wonder, know that "King Arthur's Round Table" is a real piece of furniture? It was a dozen years ago that the writer saw it, quite by accident, hanging on the wall in the Great

Hall of the Castle at Winchester, England, built by William the Conqueror. Tennyson's poems had long been familiar, but there was in mind no more expectation of seeing a Round Table of real English oak than of seeing the father of Hamlet at Elsinore. It is worth while to add that the table is something like seventeen feet in diameter, and that its appearance is accurately given in this reproduction of a rare engraving bought in Winchester.

OUR RECORD ON HUGHES

From The Independent—Jan. 30, 1908.

Governor Hughes richly deserves the support which his party in New York will give him. He has been faithful not only to his party, but to all the people of his State. An earnest Republican, he laid aside his party affiliations when he assumed the duties of his high executive office. Representing all the people who desired good government, he believed that if he should do his duty he could rely upon them to hold up his hands. They will never forget either his firm confidence in them or his devotion to their interests.

From Harper's Weekly—May 23, 1908.

The record of Governor Hughes is written in existing and working laws, not in interviews nor in fruitless agitation.

From The Independent—Aug. 6, 1908.

There should be no question about it. In the interest of clean politics and good government Governor Hughes should be chosen by acclamation. Throughout his term his service has been an admirable example of devotion to the interests of the people. When menaced by defeat he has always called upon the people for their support and they have given it to him.

From Harper's Weekly—Oct. 24, 1908.

How then should an independent minded citizen of New York vote this year? As we have observed before, there seems to be no valid reason why a Republican should refuse to support Governor Hughes. His administration has been notable for integrity, efficiency and resistance of influence by party leaders. . . . How any member of his party pledged to the maintenance of the Republican theory of government of people for their own good can consistently vote against Hughes passes our comprehension. He is the most exact embodiment of that theory now living, surpassing by far in strict interpretation and rigid determination the variable Roosevelt and of course to a yet greater degree the tolerant and broad-minded Taft.

From Harper's Weekly—Nov. 7, 1908.

Governor Hughes pulled thru and on the whole we are not sorry. . . . It would have been a pity to defeat the most notable representative of the best type of public servant the country has developed in recent years. . . . Moreover, aside from his deserts as a public official Governor Hughes fairly won his election personally. By sheer force of ability he became the most notable figure in the campaign.

What Every Voter Should Know About the National Issues of 1916

A Message to The Independent-Harper's Weekly Readers

I SHOULD not be willing to authorize this advertisement, if the financial consideration were not entirely secondary to my earnest desire to contribute in so far as I may to a clearer understanding of the vital political issues of 1916 on the part of the great army of intelligent voters who read The Independent. I look upon this as a real national service.

I shall here confine myself almost entirely to what others have said about my new book, "The National Issues of 1916," in the hope that many of you will be sufficiently interested to let me send you, without placing you under any obligation, a copy of this 435-page book, handsomely bound in cloth, for examination.

Just mail the coupon. No immediate remittance is necessary—unless you prefer. If you find that the book is what you want send me \$1.50. If you do not care to keep it return it at my expense and you will then owe nothing.

The five divisions of "The National Issues of 1916" take up in turn The Flag and the Nation, Lincoln and Nationality, A Tariff Commission, An American Banking System, and An American Merchant Marine.

And now, let others describe the scope and value of this work as they see it:

President Nicholas Murray Butler of Columbia University says: "It deals, with clearness and conviction, with those questions which now most fully engage the attention of the American people. Our fellow-citizens will be assisted in voting intelligently by reading it."

United States Senator Knute Nelson says: "Your book will prove a 'Bible' and a veritable reservoir from which to draw facts and arguments in the coming political campaign. Every Republican speaker who intends to discuss the issues of the campaign ought to have this book at his side, for there is no better store-house from which to obtain arguments and facts."

Senator W. E. Borah of Idaho says: "It is a splendid, thorough, comprehensive discussion of some of the most vital issues of the day."

Senator W. L. Jones of Washington says: "You are entitled to a vote of thanks from the country for the forceful and comprehensive treatment of the issues of vital interest to the people of this country. The book is a mine of information upon all the issues discussed, and your discussion of the facts is most interesting and illuminating. This work will really be a handbook in connection with the coming campaign."

Mr. Robert L. McCabe of Ohio says: "Your book should be made the leading textbook on Americanism and placed in the hands of every voter. Not only that but if our public men would read and master the clearly stated principles of this book

they would be infinitely better informed and better prepared to legislate for the nation."

President Alba B. Johnson of the Baldwin Locomotive Works says: "The book contains a vast amount of useful information and many interesting discussions of present-day political and economic problems. It is well worth being read by every American citizen."

Professor John W. Wetzel of Yale University says: "Your first chapter, 'The Flag and the Nation,' is a veritable 'New Testament' for the inspiration and upbuilding of this Republic. It should be scattered broadcast over this country, from the Atlantic to the Pacific, by the million. In fact it should be made a part of the regular curriculum in our public schools and colleges, and the girls, as well as the boys, of the country should be required to commit it to memory."

The New York Sun says: "For all those who would look further ahead than next election day, for whom all the issues of the campaign are not crowded into a partisan phrase—Anything to beat Wilson—or—Anything to re-elect Wilson, who would know what the U. S. must do to make the most of the opportunities that are open to them, this is a book worth while."

Philadelphia North American says: "This is no mere campaign document—on the contrary, much of the contents of Mr. Fowler's book relates the patriotic concerns that are far removed from partisanship. It is a notable contribution."

The Financial Age says: "He has no personal fads or fancies to saddle upon the public, but from study and reflection simply writes down his observation of the natural evolution of banking caused by the practices of the people, and points out in a convincing manner the sound economic

principles upon which an independent banking system capable of serving all the established banks in the country should be founded."

The Financier says: "Mr. Fowler has not only written the American textbook of the future, but he has outlined what undoubtedly will be, sooner or later, the real system of American banking. His views on this question are based on premises as sound and certain as the law of gravitation, and his conclusions hold equally true. No man can say that he understands the theory of banking until he has read Mr. Fowler's book."

The Albany Times-Union says: "This book is a plain, common-sense interpretation of national problems, written for the voter. He is admirably qualified to analyze our national needs."

The Iola Register of Kansas says: "His discussion of the merchant marine, the tariff, and other great questions which are to be conspicuous in the coming campaign, is so informing and convincing, it certainly is true that every Republican who expects to participate in the coming campaign, either as a writer or a speaker, should have the book, for he will find a mine of material from which to draw, both for facts and for arguments, with no danger that his facts ever will be questioned, and little fear that his arguments ever will be refuted."

The Commercial and Financial Chronicle says: "We have never seen the principles underlying a bank note currency, and its functions, presented with greater lucidity and with more convincing and compelling logic. Nor have we ever seen an argument on the subject fortified with such a wealth of illustrations derived from history and experience."

The Philadelphia Inquirer says: "An especially lucid, vigorous, comprehensive, authoritative and convincing review of the political situation which ought to be in the hands of every voter and particularly of every young voter, throughout the land."

The Marine Journal says: "To those who are seeking for the reason why our shipping has disappeared from the sea and why it seems so herculean a task to restore it, Congressman Fowler's book will be a revelation."

The Bankers' Magazine says: "Not since the days of Alexander Hamilton and Albert Gallatin has there been anything presented in the banking and financial literature of America, so sound, comprehensive and so absolutely overwhelmingly convincing as the truths which Mr. Fowler clearly and logically sets forth."

The privilege of offering to Independent-Harper's Weekly readers for free examination my handbook for voters and students of present day issues is one that I count very highly. As a member of the United States House of Representatives for sixteen years and Chairman of the Banking Currency Committee for eight years I enjoyed a rare opportunity to form the ground-work for this book and to store up material from actual experience, first hand study and intimate acquaintance with the great National problems which I have endeavored to clarify and illuminate in "The National Issues of 1916."

CHARLES N. FOWLER

Hon. Charles N. Fowler,
Salem Avenue, Elizabeth, N. J.

Please send me, for free examination, without obligation, one copy of "The National Issues of 1916." After examination I will remit only \$1.50 or return the book within 5 days, at your expense.

THE CHOICE OF A UNITED PARTY

THE MARCHING SOLDIERS

FOR the first time in the history of the nation the President of the United States has called out the entire National Guard to secure our country's border against invasion.

In every one of the forty-eight states—and from almost every town—are marching to the appointed rendezvous our sons, brothers, husbands and fathers.

They go with devotion to the flag, and all that the flag stands for. They go to protect American life and American honor. They go with enthusiasm, because it is their duty to go, and it is for this purpose that they became soldiers and swore allegiance to their country. They go with serious recognition of the horrors of war—more keenly alive in the consciousness of the world than ever before in the history of mankind.

That their going may help to check the international tragedy that today seems so nearly inevitable is the hope and prayer of all.

That the men will do their duty, will honor their country, will fight if fighting comes, with the courage and vigor of their fathers, we all believe and know.

THE CAMPAIGN IS ON

THE Democratic convention at St. Louis disclosed a perfectly united party. There was not even a rumble of discontent at any point of the proceedings. Mr. Bryan, who had been looked upon as a severe critic of Mr. Wilson on the score of his advocacy of preparedness, came out whole-heartedly as a supporter of the President. The elements which had been most hostile to Mr. Wilson at Baltimore four years ago, Tammany in New York and the Roger Sullivan machine in Illinois, uttered not a syllable of protest at St. Louis.

In renominating Mr. Wilson the Democratic party not only did the inevitable thing, it did the one thing that it could have done that holds most promise for the nation's future well being. It is a splendid prospect that the voters of the United States have before them next November—the opportunity to choose between two men of such high character as Mr. Wilson and Mr. Hughes, and particularly between two men both of whom are products not of machine politics and blind conformity to party traditions, but of the reaction against these sinister tendencies in our political life. There are differences between the two men, but they are not divergencies in fundamental purpose, in honesty of conviction, or in personal character. They are rather differences in temperament, in type of mind, in method of approach to the problems of political life, in intellectual power, and in the qualities of leadership.

No member of either party need feel called upon to forsake his party standard because it is not worthily borne. No independent voter need be swayed to either side in the present contest by any considerations other than those of intellectual agreement with the program proposed by either leader or preference for the type of leadership offered in their respective persons. In casting his ballot in November the independent voter—and it is largely the independent voter that decides such elections as that of this year—will find it a close thing between Mr. Wilson and Mr. Hughes.

In the campaign now beginning The Independent will

carry out its important function of presenting with fairness and impartiality both sides in the contest. Its performance of this function will not be impaired by the fact that it favors the election of Mr. Hughes. Beginning next week The Independent will set forth, in a series of editorials on the parties, the platforms and the personalities of the candidates, the reasons for such advocacy.

OUR DUTY IN MEXICO

OUR relations with Mexico were never more critical. Whether we shall have war with that distressful country depends on whether some Mexicans want it or not. It lies apparently in the hands of General Carranza to will war or to decree peace.

It is not a question of American intervention in Mexico. It is not the time now to consider what we may ultimately be forced to do there for the sake of ourselves, of the Mexican people and of civilization and good order in the Western Hemisphere. Our problem now is more circumscribed.

We have sent American troops into Mexico and massed American forces along the border with a single purpose. We propose to protect American territory from invasion, to punish those lawless men who have made predatory attacks across the border and to insure our immunity from attack by cleaning up the parts of Mexico contiguous to our boundary. We intend to use whatever force is necessary to accomplish this purpose effectively.

The President has already made use of all the forces of the regular army that are available for active service. He has now found it necessary to add to those forces the National Guard of the United States. He has done this not because our purpose has broadened or our intention become magnified. He has done it because the de facto President of Mexico threatens to oppose us in our lawful and righteous purpose.

We would execute our purpose in friendly coöperation with General Carranza if he will. But if he will not, no bluster, or threat or act of his shall deter us from the prosecution of our duty. The work we have set out to do shall be done, come what may.

This is not intervention. The United States wants neither intervention nor war. It will do everything that a nation can honorably do to avert those catastrophies. It will meet Carranza and the Mexican people more than half way in conference and deliberation and council. The American mind is set not upon conquest or even aggression, but upon its plain duty.

THE ROUND TABLE

AS the symbol of Chautauqua we print upon our cover in its original colors the Round Table preserved in the castle that William the Conqueror built at Winchester. Whether it was painted in the days of Arthur or Stephen or Henry VIII does not matter to anybody but the antiquarian. The rest of us take such relics at their real value, that is to say, their legendary value, what they mean. Now the Round Table differs from other tables in that it is round. It is, to use the language of science, acephalous. Here a MacGregor may assert that where he sits is the head of the table, but anybody else has an

equal right to claim the same. According to Layamon's Brut the Knights of Arthur's court got into a fight one Yuletide over which should sit at the head of the table and several of them were slain. As a rebuke for such table manners King Arthur killed the men-folk of the family of the knight who started the row and cut off the noses of his women-folk. Then in order to prevent similar disputes over precedence in the future—for incidents like this are quite out of place at a Christmas feast and cause unpleasant feelings—King Arthur had a table constructed at which there should be no head.

So Arthur sat henceforth an equal in the circle of his knights, *primus inter pares*, all vowed to high emprise and chivalrous devoir;

In that fair Order of the Table Round
A glorious company, the flower of men,
To serve as models for the mighty world,
And be the fair beginning of a time.

So ever since the Round Table has stood for democratic comradeship in aspiration for the highest conceivable ideal. It was not by chance that it was chosen as the symbol of the Chautauqua Literary and Scientific Circle. For more than a generation the Chautauqua Round Table has met in the Hall in the Grove and in other halls and other groves thruout the country. Admission to the League of the Round Table is the reward of those who follow for five years a persistent course of study. The monthly *Round Table* bulletin serves as a telephone central to keep in touch those who sit around its vast circumference.

A circle has neither top nor bottom, beginning nor end. It is the emblem of equality and eternity. The Chautauqua Circle is a school without a teacher. Some stints; they kept their own study hours; they maintainers. In Chautauqua all are learners. They set their own stints; they keep their own study hours; they maintain their own discipline; they pursue their own paths toward their common goal. Like a knight-errant each sallies forth into the land of the unknown in search of adventure, pledged to a lifelong quest of the Holy Grail of Eternal Truth, that is never to be found but ever to be sought.

EVERYBODY FOR SUFFRAGE BUT THE ANTIS

THE two great political parties in convention assembled have declared for woman suffrage. The month of June in the year 1916 will stand as one of the most important milestones on the road to full democracy. With the political parties for it, who that counts politically can be against it?

Of course it is not all over yet. We shall not have universal suffrage tomorrow or next month or even next year. For, alas, the gap between the political platform and the statute book is often dishearteningly broad. Then, too, each party accompanied its declaration of belief in woman suffrage with a weasel phrase that sucked a lot of the life blood out of it. Both parties would leave the matter to each state to decide for itself. Well, a quarter of the states have already achieved full democracy by that road. With the declaration of the two parties in favor of the principle to help along, the coming of suffrage, even state by state, should be speeded up.

What can any good party politician say to the question, "Do you or do you not accept the declaration of

your national party platform in favor of woman suffrage?"

Democracy does march.

JAMES J. HILL: MASTER OF EFFICIENCY

WHEN a great man dies, people forthwith begin to look for the secret of his greatness. Sometimes they find it; often they overlook it because they are blind and call it luck.

James J. Hill was a great American. His legacy to his heirs is in money a certain number of millions of dollars. His legacy to the country in which he lived is a vast new territory, peopled and made productive; thousands of miles of railway projected, built and made profitable; the commerce and agriculture of a region the size of an old world empire developed and made prosperous; an example of enlightened, unselfish citizenship; an influence spanning the continent and widening the vision of the train man and the office boy as well as the captain of industry and the master of commerce.

Hundreds of thousands of men and women are more prosperous and more happy because he came. America is a greater nation because he saw and conquered.

What is the secret of it all? Not luck. The really great are not great because they are lucky, they are lucky because they are great.

James J. Hill was a master of efficiency.

Not efficiency in any narrow and niggling sense of stop-watch time studies and leak-plugging economies, and minute-saving improvements in method. All these are good, but they are not good enough.

Efficiency has been well summed up in an epigram: Doing the right thing at the right time in the right way. The first requisite to this right doing is vision. If there was any one thing that characterized James J. Hill in surpassing degree it was this elusive quality. His imagination projected itself into the future and laid hold on realities that were to be. He dreamed dreams and the dreams came true.

As a youth in Canada a vision came to him. A traveler stopping at the Hill homestead tossed the young man as he left an American newspaper and called out, "Go there, young man. That country needs youngsters of your spirit." The next morning young Hill chopped his last tree on the old homestead—the stump still bears the rudely cut legend, "The last tree chopped by James J. Hill"—and set out for the land of opportunity across the border.

Twelve years later he landed from a Mississippi River packet at St. Paul and began to look about—and always ahead. After twenty years of a successful business career, the vision broke upon him with compelling force of the great territory in the Northwest that needed only transportation facilities to become an empire of agricultural richness. Like most prophets, he was laughed at for his dreams. But he was more than prophet, and "Hill's Folly," as his Great Northern railway enterprise was called, soon became a great and powerful reality. It opened up a new land to settlement and development. Through the genius of its creator it turned that unpeopled wilderness into a land of fruitful farms and thriving towns.

He had not only the vision to see, but the will to do. When his imagination showed him the way to an in-

spiring goal, he set out upon it with vigorous energy and kept to it with grim persistence. He foresaw not what was going to happen anyway, but what ought to happen—and then went out and made it happen.

When no one else could see that there was room for a fourth railroad system to the Pacific Coast, he saw it. When no one believed that a new road could compete with the established lines founded on government land grants and aided by government subsidies, he believed it, and made his own unconquerable energy and his own grim determination take the place of those artificial advantages.

He added to the faith of a clear vision and the energy of an indomitable will the knowledge and the intelligence of a master mind. He saw what was to be done, he determined that it should be done, and he knew how it must be done.

There is the triple secret of his success: vision, knowledge, will power. There is the triple secret of all efficiency: to see, to know, to do.

The monument to his greatness is a vast territory taken from forbidding wilderness and transformed into smiling affluence. The inscription upon the monument, for those who have eyes to read, is James J. Hill, Master of Efficiency.

OSBORNE VINDICATED

THE whole American people will rejoice that, under its decision last week, the Appellate Division of the Supreme Court of New York has left very little of the indictment against Thomas Mott Osborne, former warden of Sing Sing Prison. It has reduced it to the simple charge of neglect of duty, whatever that may mean. Thus the whole legal campaign against the greatest prison reformer of modern times collapses.

Governor Whitman should forthwith restore Mr. Osborne to his post. This is the very least a grateful state can do for the man who has demonstrated that the law of love still operates on earth—even among the outcasts and sinners.

THE PARAMOUNT ISSUE

NOW that the conventions have concluded their work we can see just where the difference between the parties lies. It is "Americanism versus Americanism." With two great parties struggling to stand on the same platform the campaign promises to be a hot one.

THE DEATH OF FREE TRADE

ONE of the economic results of the war which we must recognize whether we like it or not is that free trade has been killed or at least postponed to a future too far to be foreseen. The trade conference of the Allied Powers held this month in Paris for the purpose of shutting German products out of their markets after the war means that some sort of a tariff union will be established between them. Since England is the leader in this movement for protection, the Paris conference marks the definite abandonment of free trade by the power that originated the doctrine and has clung to it longest.

Reginald McKenna, Chancellor of the Exchequer, and Bonar Law, Colonial Secretary, speaking respectively for the Liberal and Unionist members of the Cabinet,

have announced that the British Government will join its Allies in such a movement. The self-governing dominions of the British Empire have long ago repudiated the free trade policy of the mother country, and have erected tariff walls even against English goods. India threatens revolution unless she is allowed to do the same.

The frankest confession of this change of mind and the clearest expression of the reasons for it comes from Premier Hughes of Australia, who took part in the Paris conference. In an address to the British Imperial Chamber of Commerce he said:

I certainly approach the matter without bias against what is called free trade. When fiscalism was a live question in Australia I was a free trader of free traders. The "Wealth of Nations" was my Bible; Adam Smith was my prophet. But it was always disconcerting me to see how blind the world has been to the great virtues of free trade. Tried by this standard, it would appear that Britain was the only country in the world that was in step!

But if it were a question of trade only affecting our pockets, the fiscal question might fairly be left to settle itself. But it reaches down into the very roots of our lives. You cannot proceed upon the assumption that the economic policy of a nation has no relation to its national welfare. The relations between the two are inseparable, intimate, and complex. This fact is fundamental; to ignore it is not only to invite but to ensure national destruction. For a time the trade of a nation that treats trade as if it had no connection with national safety may make great strides, as did ours, but there comes a day of reckoning to such nations, as it has come to us.

I am no more concerned to deny that a case can be made out in favor of allowing trade to flow along what are termed its "natural channels" than I am to deny the virtues of the Spartan method of producing a virile nation by exposing its weaklings to certain death. Much might be said for both, but modern sentiment is definitely against the one and the inexorable circumstances of the modern world are against the other.

The present and prospective abandonment by Great Britain of the policy on which its commercial dominance has been built up leaves Holland as the only free trade nation in the world. Holland is quite a country when the tide is out, but in comparison with others it constitutes hardly more of an exception than the *Freibezirk* or free port district of Hamburg.

Up to 1860 it seemed likely that free trade would sweep over the world. But the tide has been ebbing ever since. In 1861 the Morrill tariff bill was passed as a war measure and protection was more firmly entrenched by the McKinley bill of 1890 and the Dingley bill of 1897. The Wilson bill of 1894 and the Underwood bill of 1913 made some reduction in the duties, but left the principle of protection essentially unshaken. France had been tending toward free trade up to the Franco-Prussian war, but after that turned in the other direction and the tariff laws of 1881 and 1892 were planned deliberately as protective rather than revenue measures. Italy, Austria, Belgium, Switzerland and Spain changed their policy during the same period in the same direction. The Prussian policy has always been protection, so much so that one is tempted to translate Hohenzollern as "high tariff." The German empire grew out of a customs union, the Zollverein of 1831, and it must be admitted that it has prospered as much commercially under protection as its great rival, England, has under the opposite policy.

The war, by increasing the fiscal burdens and by intensifying the national spirit, will drive in the same direction, and we cannot expect any country to stand out against it. Free trade is undeniably dead, and whether we may hope for a resurrection depends upon the

strength of our faith in the coming of the Great Day when all artificial barriers between the nations shall be removed.

A FRIENDLY MEXICAN STATE

ONE encouraging feature of the Mexican situation is the evidence that Lower California does not share the enmity against the United States manifested generally in Mexico, but especially in the southern part. Colonel Esteban Cantu, Military Governor of the territory of Lower California, has declared that in the event of war between the United States and Mexico, Lower California will remain neutral. He made the same announcement when the American troops were landed at Vera Cruz. If this neutrality is maintained the city of San Diego and the Imperial Valley will be free from the danger of an invasion from the peninsula. We trust that in the final settlement our government will see to it that Lower California does not suffer from its friendly action in this crisis.

CONSTANTINE OF CONSTANTINOPLE

THE Athenians who assembled in mass-meeting last week to express their sympathy for the President of the United States as a victim like themselves of the tyranny of Great Britain alluded to their sovereign as Constantine XII. This harks back to 1453, when the eleventh and supposedly the last of the Constantines was struck down by a Turkish sword and cried in vain for a Christian to cut off his head. The Turks who that day battered down the walls of Byzantium with their new weapon, the cannon, have held the city ever since, but now there are many aspirants for it, the Czar of the Russias, the Czar of the Bulgars, and the King of the Hellenes among them. The last mentioned, half Dane and half Russian and married to a German, has no claim to the succession by right of Byzantine descent. The imperial line ran out with Ferdinando Paleologus, who found a humble grave in St. John's churchyard, Barbados.

The people who now live in Greece have perhaps as little of the old Greek blood as they show of the old Greek spirit, but because they speak Greek and because they have named their king Constantine they claim to be heirs of the ancient glory of the Greek Empire on the Bosphorus. That is why they refuse to join with the Allies in giving Constantinople to the Czar. Better the Turk than the Russian, they think, because the Turk's hand is weakening, but the Russian bear never lets go what he gets his claws on.

THE VERDICT OF HISTORY

FIVE hundred representative American citizens have given their signatures positively and definitively supporting France, Great Britain, Russia and Italy against Germany, Austria, Turkey and Bulgaria. Herein they express, we believe, beyond question, the almost unanimous judgment of the American people.

Have they a right thus to express themselves? Who are these five hundred men? Are they qualified to speak the judgment of the people?

Three-fourths of them are college and university professors. Of all classes of Americans, they are students. It is their business to know the conditions of public his-

tory. They have the time for study. They have the documents and the libraries. If there is any class in the community that has the right to form and express a sound judgment it is these teachers of economics, ethics and history. They represent all our leading colleges and universities in all our states. What they say in sharp condemnation of the Teutonic Allies in beginning and conducting this war is what nine-tenths of their associates would say. Thru them intelligent America has spoken to the world. They have given their full sympathy to the one side and their condemnation of the other.

And they are not prejudiced. A multitude of them, hundreds perhaps, have studied in German universities, many more than have attended lectures in Great Britain or France. They loved Germany—they have dear memories of its universities. Some are of German birth or parentage, but they all agree, and with them the country agrees, that the course of Germany in this war is indefensible. But one criticism has been raised against their utterance. One or two congressmen and some others have complained to the President that these men have violated his instructions to the people urging them to maintain strict neutrality. Many of these signers are instructors in state universities supported by the public funds, and it is implied that they have no right to take sides or express a judgment on matters of public concern. Then who does have this right? They are qualified, and it is their business to teach. Not simply to teach the youth, but also to teach the nation. The liberty of speech is not forbidden to college teachers. We are not willing to understand that the President has undertaken to forbid the expression of public or private judgment, and if he had been so foolish as to define neutrality as silence there would have been every reason to protest against his prohibition.

The judgment of these five hundred leading men is a decision of American intelligence, and the decision of the world. They have anticipated the verdict of history.

WHAT WE DID FOR CANADA

IF all Americans were as frank in recognizing international debts and as judicious in making international comparisons as the editor of the *Edmonton Journal*, we and our Canadian neighbors would be spared a good deal of the bumptious talk that spread-eagle "statesmen" sometimes indulge in. He says:

A peace-at-any-price speaker in Madison Square Garden, New York, the other night told the crowd that Canada was politically as well off as the United States and that therefore the American Revolution was an unnecessary war. Canadians think they are better off politically than the people of the United States, but, if they are, it is largely because of the armed fight for the principle of self-government which the fathers of the republic made. If it had not been for the recognition, which that struggle enforced, of the folly of such a policy as George III's, the British Empire, such as we know it today, would not have come into existence.

John A. Macdonald, the Canadian publicist who is as staunchly Liberal as the *Edmonton Journal* is conservative, says that the development of the colonies—Canada or Australia—into a nation without a war, and the deliberate establishment and maintenance of self-government by the United States, are the outstanding phenomena of modern history. The fathers of our nation were pretty deeply involved, directly or indirectly, in both these tremendous achievements.

THE STORY OF THE WEEK

National Guard Called Out

To protect the American border from Mexican raids, the President has called out practically the entire state militia. The National Guard of Arizona, New Mexico and Texas had already been summoned; the new order calls troops from the remaining forty-four states (Nevada has no organized militia). The total paper strength of the militia in these states is 125,606; about 100,000 troops are called, leaving the rest for emergency and recruiting service.

The official summons to the governors of the states based the call upon "the possibility of further aggression upon the territory of the United States, and the necessity for the proper protection of that frontier." These forces will be used for border patrol duty only, for the present, as until the new law providing for the "Federalization" of the militia goes into effect, on July 1, they cannot be sent out of the country except by authority of Congress and after they have themselves volunteered. But their presence will release for General Pershing's use the regular troops, supposed to be about 40,000, who are now patrolling the border.

Seven destroyers and nine other small war vessels have been ordered to Mexican waters, seven to the east coast, probably to Vera Cruz and Tampico, and the rest to the west coast. This brings the total of American war vessels on Mexican duty to twenty-five, the battleship "Nebraska," at Vera Cruz, being the largest.

of raids in the Laredo and Brownsville regions, resulting in the crossing of the Rio Grande by a third and a fourth American force in direct defiance of Carranza and of his local commander.

As we reported two weeks ago, General Gavira, of the Constitutionalist army, conferred with General Pershing and agreed to place his troops in such a way as to avoid clashes between the American and Mexican forces. General Trevino, who commands the Carranza Army of the North, first notified General Pershing that Gavira had no authority to enter into such an agreement, and then transmitted Carranza's order to the American general to stay where he was or leave Mexico. General Gavira was recalled to Mexico City, where, according to unconfirmed rumors, he was executed.

General Pershing holds a line of 250 miles with his force of about 10,000 men. It stretches from Columbus, New Mexico, to Namiquipa, with field bases at El Valle and Colonia Dublan, and is dependent on motor truck trains, moving over miserable roads, for its supplies. Large stores of food and munitions have been stored at the field headquarters, Namiquipa, and the field bases.

The Carranza manifesto, if literally applied, would prevent the occasional excursions which American troops have been making to run down bandits. For instance, Pedro Lujan, a Villa lieutenant who was one of the Columbus raiders, was captured on the 13th at a point thirty-five miles east of

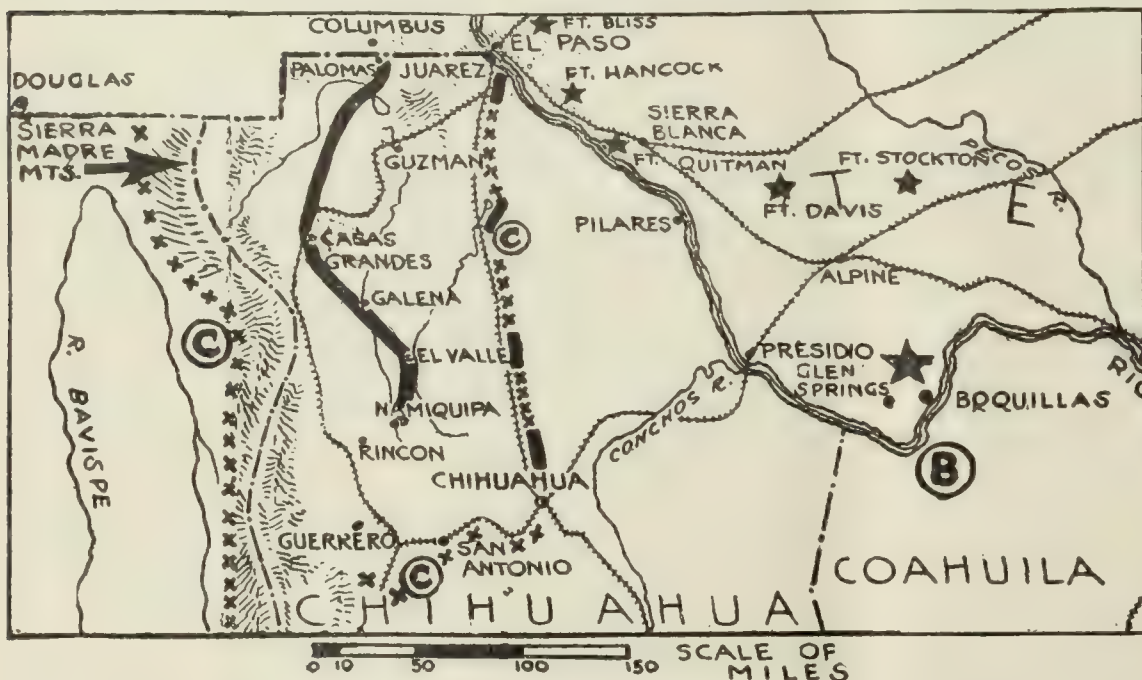

25,000 or 30,000 troops under his command. The American forces hold a compact line, however, and a considerable amount of entrenchment has been done.

Raiding Southern Texas

The storm center on the Rio Grande has been moving steadily to the southeast. The Villa raid, which precipitated the sending of the punitive force, was made at Columbus, New Mexico; a second raid harried several towns in the "Big Bend" region of Texas, then raids were reported from the vicinity of Laredo, one a repetition of the Columbus incident; and the latest disorders have roused the country about Brownsville, almost at the mouth of the river.

The horse-stealing expedition, near Laredo, mentioned last week, proved to be of some importance, tho no horses were taken over the border, because one of the three bandits who were shot down by a sheriff's posse was identified as a lieutenant-colonel in the Constitutionalist army, named Villareal. After this additional troops were ordered to the border to reinforce General Funston's patrol, 600 from the Engineer Corps, from the city of Washington, and 1000 from the Coast Artillery, mostly from the northern Atlantic fortifications.

More serious forays followed. At two o'clock in the morning of June 15 a band of about a hundred Mexicans attacked the camp of the Fourteenth Cavalry at San Ignacio, near Laredo, and killed three privates and wounded six before they were driven off. Major Alonzo Gray crossed the river in pursuit, but failed to find the bandits' trail and soon returned to the American side. Nine Mexicans were killed in the fight. General Alfredo Ricaut sent 1000 troops from Matamoras to chase the bandits. American troops are patrolling the border at Laredo and the international bridge has been closed.

The Mexican Crisis

War with Mexico seemed nearer when this call was issued than at any time since the Vera Cruz expedition. The threatening situation had two phases: Carranza's peremptory declaration, made thru General Jacinto Trevino, that any movement of General Pershing's troops from their present position, except to retire from Mexico, would be resisted by force; and a series

Namiquipa. But General Pershing replied to General Trevino that he could not recognize the Mexican general's authority to control the movements of the American force, and it is expected that the order will be ignored. The Carranza forces have been so disposed as to enclose the American line roughly in a long "V" stretching south from the American border to a point below Namiquipa, and Trevino is said to have

THE BLAZED TRAIL

ONCE THERE WERE THREE PARTIES, NOW THERE ARE TWO ON ONE PLATFORM

On June 16 a detachment of the Twenty-sixth Infantry was fired on from the brush by a band of twenty-five or thirty Mexican bandits near San Benito, west of Brownsville. General James Parker promptly sent a troop of cavalry across the river on the trail of this band, and additional troops followed. About 400 cavalymen encountered a force of Mexicans near the border and fought a stiff skirmish in the dense brush, apparently without casualties.

General Ricaut responded with an ultimatum announcing that he would attack this force if it was not withdrawn. This was in harmony with Carranza's declaration in his note of May 22 that the sending of any additional troops would be considered an act of invasion and would be resisted. Railroad tracks on the bridge between Brownsville and Matamoras were torn up and the population of Matamoras was armed.

The American detachment, the third squadron of the Third Cavalry, under Major Edward Anderson, went two miles into Mexico, camped and sent out scouting parties. The band of bandits having apparently been dispersed, and

no further traces of them being found, the force returned to the United States when General Ricaut had promised that he would capture and punish the raiders. As they were returning, a few mounted Mexicans, led by an officer partly in Carranzista uniform, attacked them, and were put to flight with two killed.

The tension in northern Mexico increases. At Juarez, opposite El Paso, volunteers have been called for and are training for a possible break with the United States. City officers have been fired on in El Paso. American consuls from Matamoras, Monterey and Saltillo, and Piedras Negras have left their posts. Mass-meetings and newspaper attacks on America continue.

The reply to Carranza's note was delayed in order to include references to the fresh outrages, but it was understood that it would contain a flat refusal to withdraw the American troops from Mexico, and would accept Carranza's alternative and make a clear statement of the American position that the troops must stay until Carranza proved that he could patrol the border effectively.

day. It required a little juggling, but the matter was finally arranged, and the nomination was made at five minutes before midnight on Thursday night.

Among the interesting features of the convention were the spontaneous and genuine enthusiasm for Mr. Bryan, the impressive silence of Tammany Hall and all other normally recalcitrant elements, and the fact that one delegate spoiled the unanimity of things by voting against the candidate of the convention.

Incidentally, Woodrow Wilson, of New Jersey, President of the United States, was nominated to succeed himself; and Thomas R. Marshall, of Indiana, Vice-President of the United States, was nominated to succeed himself.

The Democratic Platform The platform adopted at St. Louis naturally indorses the administration of Woodrow Wilson, and challenged comparison of the party's record, its keeping of pledges and its constructive legislation with "those of any party at any time." It

The Democratic Convention

The Democratic National Convention at St. Louis was a model of unity and harmony. It bubbled with enthusiasm and sparkled with hope and confidence. The only task that it found at all difficult was to stretch out its proceedings over a long enough time to enable the city of St. Louis to make as much money out of the delegates and guests as a convention city is by common consent entitled to. But thru the Fabian tactics of the chairman of the Resolutions Committee, this desirable end was accomplished and the hotelkeepers and other entertainers of the city received their full due.

One other problem was a little perplexing—that of so arranging the program that the candidate for the Presidency should not be nominated on Fri-

ARMORED TRUCKS TO FEED OUR TROOPS IN MEXICO

Nearly all the trucks which serve as connecting links between all parts of the 250-mile line in Mexico and the base at Columbus carry machine guns for protection

points with pride to the achievements of the past three years in reforming the tariff, rescuing "our archaic banking and currency system" by means of the Federal Reserve Act, creating a Federal Trade Commission, thru which "fair competition in business is now assured," lifting "human labor from the category of commodities" and securing "to the workingman the right of voluntary association for his protection and welfare," improving the postal service, and placing it upon a self-supporting basis.

The platform emphasizes the note of Americanism and uses strong words of criticism of all those whose activities are antagonistic to it. It says:

Whoever, actuated by the purpose to promote the interest of a foreign power, in disregard to our own country's welfare, or to injure this government in its foreign relations, or cripple or destroy its industries at home, and whoever by arousing prejudices of a racial, religious or other nature, creates discord and strife among our people so as to obstruct the wholesome process of unification, is faithless to the trust which the privileges of citizenship repose in him and is disloyal to his country.

We, therefore, condemn as subversive of this nation's unity and integrity, and as destructive of its welfare, the activities and designs of every group or organization, political or otherwise, that has for its object the advancement of the interest of a foreign power, whether such object is promoted by intimidating the government, a political party, or representatives of the people, or which is calculated and tends to divide our people into antagonistic groups, and thus to destroy that complete agreement and solidarity of the people and that unity of sentiment and national purpose so essential to the perpetuity of the nation and its free institutions.

The platform commits the party on the subject of preparedness without being specific as to the measure of preparedness that is necessary. It says:

We, therefore, favor the maintenance of an army fully adequate to the requirements of order, of safety, and of the protection of the nation's rights, the fullest development of modern methods of seacoast defense and the maintenance of an adequate

reserve of citizens trained to arms and prepared to safeguard the people and territory of the United States against any danger of hostile action which may unexpectedly arise; and a fixed policy for the continuous development of a navy worthy to support the great naval traditions of the United States, and fully equal to the international tasks which the United States hopes and expects to take a part in performing.

The platform repeats, in practically identical language, what President Wilson said at the annual meeting of the League to Enforce Peace in Washington the other day:

We believe that every people has the right to choose the sovereignty under which it shall live; that the small states of the world have a right to enjoy from other nations the same respect for their sovereignty and for their territorial integrity that great and powerful nations expect and insist upon, and that the world has a right to be free from every disturbance of its peace that has its origin in aggression or disregard of the rights of peoples and nations; and we believe that the time has come when it is the duty of the United States to join with the other nations of the world in any feasible association that will effectively serve these principles, to maintain inviolate the complete security of the highway of the seas for the common and unhindered use of all nations.

It reasserts the Monroe doctrine; declares that our troops must stay in Mexico until the repetition of incursions into the United States by Mexican bandits is improbable; indorses the shipping bill now before Congress; declares for improved legislation governing labor conditions in Federal employ; favors the enactment of a Federal child labor law; indorses the "purpose of ultimate independence for the Philippine Islands" expressed in the preamble of the Philippine bill; and recommends the extension of suffrage to women by the several states.

Returning to the subjects arising from the Great War, the platform makes this utterance:

We again declare the policy that the sacred rights of American citizenship must

be preserved at home and abroad, and that no treaty with any other government shall receive the sanction of our government which does not expressly recognize the absolute equality of all our citizens, irrespective of race, creed or previous nationality, and which does not recognize the right of expatriation.

The American Government should protect American citizens in their rights, not only at home but abroad, and any country having a government should be held to strict accountability for any wrongs done them, either to person or property.

At the earliest practical opportunity our country should strive earnestly for peace among the warring nations of Europe and seek to bring about the adoption of the fundamental principle of justice and humanity, that all men shall enjoy equality of right and freedom from discrimination in the lands wherein they dwell.

Railway Men to Vote on Strike The possibility of a nation-wide railway strike was brought one step nearer last week, when the conference of railway men and union representatives in New York broke up after two weeks' fruitless effort to adjust the demands of the men and the counterproposals of the railways. A referendum will now be taken by each of the four unions on the question whether their representatives shall be given the right to call a strike in case the railways hold their present position. This would not immediately result in a strike, but would put the union officials in a better tactical position when negotiations with the railroads are reopened. The vote will probably take about five weeks to poll, and a two-thirds vote is necessary before a strike can be called.

The railroad managers, calling attention to the threefold interest of the employees, the railroad owners, and the public, suggested to the unions that the matter be referred for adjustment either to the Interstate Commerce Commission, which should be specially empowered by Congress to fix wages if its present authority proved inadequate, or to a board of arbitration to be created under the Newlands Act. The union men deny the right of the Commission to fix wages, and refuse to consider arbitration until they have used the threat to strike as a weapon. Union sentiment among railway men is strongly against arbitration, for they regard the arbiters as being incapable of making a technical award so clear and definite that it cannot be misconstrued in application.

Consequently they insisted on their own terms, an eight-hour day and time and a half for overtime, in exactly the form in which they were submitted. The railroads, declaring that they must be allowed a voice in the adjustment of these terms to existing wage schedules, stood pat for several detail provisions, of which the most important was that double compensation should not be paid for the same service or time.

The Pennsylvania Railroad has taken the first step to fight the proposed strike by calling on all "loyal" employees for volunteers to take the places of striking engineers, firemen, conductors and brakemen should a strike be begun.

Four Months at Verdun

Since the Germans began their attack upon the French fortress of

Verdun on February 21 the fighting has been incessant in that sector and the end of it is not yet in sight, for the Germans have not yet slackened their efforts nor the French their resistance. From its length, the number of men and guns engaged, the fierceness of the fighting and the expenditure of ammunition, Verdun would have to be called the greatest battle in the world's history but not necessarily one of the "decisive battles," for it is hard to see what effect its outcome may have upon the war except as it exhausts the strength of one or both the combatants. If the French continue to hold out the situation will remain the same as it was at the beginning. If the Germans persist until they take Verdun their victory will be an empty one, giving them little prestige except that of conquering an apparently insurmountable obstacle at a frightful cost. For the French would then withdraw to the western side of the Meuse, taking a new position on a shortened line, less strong perhaps than the Verdun hills but still not untenable if they have the men to hold it.

Indeed, it is said that the French General Staff favored withdrawing to the western side of the river when the German attack began, but the government overruled them because of the political effect that the abandonment of this famous fortress would have upon the French people and the outside world. This rumor of a proposed withdrawal has been confidently affirmed and authoritatively denied and the controversy over it has led to a demand for a frank discussion of the situation between the government and the Chamber of Deputies. Accordingly a secret session of the Chamber has been held, the first since 1871, when the Assembly at Versailles held a secret session to consider the communist rising in Paris.

Altho the loss of Verdun three or four months ago would have been a severe blow to French prestige, it would not be so regarded now, for the defense has been conducted with consummate courage and skill. General Fétain has contested every foot of ground as stubbornly as possible, yet he has not wasted men in attempting either to hold on to untenable positions or to recover them when lost. When it is decided that a certain fort or line of trenches must ultimately be captured all troops are withdrawn except enough to man the guns.

The small number of prisoners is one of the most amazing features of the battle. A hill that required months of bombardment and the sacrifice of thousands of men to capture may yield only two or three hundred prisoners. Fort Vaux is an instance of this. For three months the Germans, according to the French official estimate, fired 8,000 projectiles a day at this fort, yet when it was taken last week the garrison found in it numbered six or seven hundred.

This week the Germans have followed up their success at Vaux by attacking and gaining some foothold upon Hill 321, which is the next hill to Douaumont in the direction of Verdun. On the other side of the Meuse river the Germans have admittedly lost some trenches on Hill 304 and La Mort Homme.

The British Front

There has been much speculation as to why the British Army on the Continent has been inactive at a time when the French and the Italians were so hard prest and the Russians were creating a diversion on the eastern front. Last year the British twice undertook an offensive, at Neuve Chapelle in March and at Loos, September, 1915, but in both cases they were checked before they had made any considerable advance. These failures were said to be due in part to the incompetency of the officers and in part to the deficiency of forces and shells. The latter defects at least have now been remedied, for Great Britain has raised and armed five million men and a large part of these are in France

and Belgium. The Germans opposite the British front are estimated to number from 600,000 to 800,000. The troops of which the German order of battle is supposed to be composed is given in the accompanying map. This, of course, is not official, and since the information on which it is based is obtained from spies, aeroplanes and prisoners, and since the various divisions are being shifted about, the map cannot be taken as accurate. But Winston Churchill, former First Lord of the Admiralty, who has been serving on this front, stated in Parliament that he had every reason to believe that the map was substantially correct.

Colonel Churchill criticized the government because of the large proportion of inactive men kept in England or back of the trenches in France. There were, for instance, 200,000 officers, each of whom had to have a servant. He further said in the House of Commons:

What is the proportion of rifle to ration strength? Half the total ration strength of the British Army is at home and half abroad. Of the half abroad, one-half fights and one-half does not fight. Of the half that

WHAT THE BRITISH ARE FACING

This remarkable map, prepared by the London Times, is the first case where an attempt has been made by a British expert to give the disposition of the German forces on the battle line. The British now hold the line between Ypres and the River Somme. Between Ypres and the sea the line is mostly held by the Belgians

parts about three quarters, perhaps rather less, fight as infantry in the trenches and in the assaults, and nearly all the losses fall on them. The other quarter of the half consists of artillery and other services who come under fire, who render most effective service against the enemy, but do not suffer anything like the same proportion of casualties. On this calculation, which is a very liberal one and one very much on the safe side, for every six men who were taken from the nation at the one end one effective infantry rifle was produced over the parapet at the other end. There are two conclusions to be drawn. First that the number and proportion of those who actually fight ought to be greatly raised; and could be greatly raised by a comparatively small addition of the total aggregate. Secondly, that so far as possible able-bodied men, and especially young men employed on all the other parts of the organization, ought to take their turn at the front, and not leave it to the same lot to go on continuously, and go back wounded, time after time, until they were finally knocked out. It happened to my own battalion to receive a draft of thirty-five men of whom twenty-six had been previously wounded, some of them very severely. And this at a time when there are probably over 2,000,000 of men in the army who have never heard the whistle of a bullet.

The Allied armies are now under the command of one joint council, so we may assume that it is with the full approval of General Joffre that the British have not attempted to relieve the pressure upon Verdun by an attack upon the other end of the German line. The British forces are probably ready for action, but are being held until the time appointed for them to strike. There are many things to indicate that that time will soon come.

The Russian Steam Roller This appellation, which the press gave to the Russian advance into East Prussia at the beginning of the war, is much more appropriate to the present Russian drive, for it is crushing everything before it. Along a front of three hundred miles the Russian line has moved westward and in the center of this sector the gain amounts to forty miles within two weeks. Two fortresses, Lutsk and Dubno, have been regained by the Russians and they have for the fourth time taken Czernovitz, the capital of Bukovina. The amount of booty captured is enormous; 163 cannon, 266 machine guns, 139 bomb throwers and 32 mine throwers. Most astonishing, however, is the number of Austrian prisoners. Over 150,000 are reported captured, including one general, three commanders and 2467 other officers.

The capture of so many prisoners is said to be due to the way the Russian artillery is employed. First the fire is directed upon the front trenches until these become untenable; then the guns are elevated so that an impassable curtain of fire is thrown behind the positions about to be evacuated and the Austrians thus caught between two fires have no option but surrender. The efficiency of the Russian artillery is ascribed to the American and Japanese ammunition which all thru the winter has been shipped over the Siberian railroad from the Pacific ports of Vladivostok and Dalny. The rapid pursuit of the retreating Austrians was car-

ried out in part by young Belgians in armored motor cars.

The Austrian line thru which the Russians have broken was strongly entrenched, altho weakly manned, for troops had been withdrawn for service in the Serbian and Italian campaigns. The foremost line of entrenchments consisted usually of a deep ditch, boarded over and protected in places by iron roofs. In front of this were some twenty lines of barbed wire entanglements. The shelters or dugouts in which the men lived were fifteen feet underground and were in some cases handsomely fitted up with upholstered furniture, musical instruments and pictures. Deep and crooked communication trenches led to the listening pits in front and to the second and third lines of trenches behind. The second line was put a mile and a half behind the first, and in the rear of this the Austrian soldiers had put in flower and vegetable gardens where the Russians found potatoes, radishes, lettuce and onions growing. The guns were placed in casements of reinforced concrete. Light field railroads connected the entrenchments with the supply bases behind, and the advance of the Russians was so swift that much of the rolling stock fell into their hands.

The rapid advance of the Russians north of the Pruth river cut off the Austrians in Bukovina from those in

Galicia and on the evening of June 17 the bridgehead on the northern bank of the river opposite Czernovitz was carried by storm and 1000 prisoners taken. This gave the city of Czernovitz into their hands, but the bulk of the Austrian garrison appear to have withdrawn into the Carpathians to the west.

Italian Ministry Out Premier Salandra, when called to account before the Italian Chamber of Deputies, was obliged to confess that his optimistic assurances of the safety of the country had proved unfounded and that the Trentino frontier had not been adequately protected or properly defended against the Austrian invasion. As a consequence, he found himself without a majority in the parliament. The King has asked Paolo Boselli, former Minister of Finance, to form a new cabinet out of the best men in all parties. Baron Sonnino, veteran Minister of Foreign Affairs, and General Morrone, Minister of War, will be continued in the cabinet, which includes also two Socialists and one Republican. Probably there will be no decided change in policy, as only thirty-seven votes, those of the orthodox Socialists, out of 508 members, were cast against continuing the war.

General Brusati, whose incompetency is blamed for the Italian defeat, is said to have owed his position to his having been the brother of the King's aide-de-camp. He has now been removed and the Italian defense strengthened, so the Austrians have made little progress in the past week, tho they report some gains south of Arsiero and Asiago. The need of men on the Galician frontier to meet the Russian drive will probably relieve the pressure on the Italian side, but according to reports from Rome no Austrian troops have yet been withdrawn from this sector.

In Defense of Bagdad The Turks seem to be offering a successful resistance to the Russian and British advance upon Bagdad. After the Russians had taken Trebizond and Erzerum it was commonly assumed that the Turkish power in Asia Minor had collapsed and it was even prophesied that the Grand Duke Nicholas would soon reach the Bagdad railroad and the Tigris river or even Constantinople. But since then the Russian armies in Armenia and Persia have made little progress. Their advance westward from Erzerum has met with what Constantinople calls a decisive defeat in the mountains before Erzingan. The column that was moving south from Erzerum toward Bagdad has been checked. The column that crossed the Persian border at Khanikin, also headed toward Bagdad, has been driven back over the border with the loss of 800 men.

The British also, if we may accept the Constantinople reports, have met with reverses upon both the Tigris and the Euphrates rivers, which, it appears, they have been attempting to reascend toward Bagdad. A force from

THE RUSSIAN DRIVE

During the winter the Austrians and Germans occupied the line marked on the map but since the first of June the Russians have advanced over the shaded area beyond and captured the fortresses of Lutsk and Dubno and city of Czernovitz

Kurna where the two rivers join was sent up the Euphrates in boats, but on trying to land on the northern bank was attacked and routed by the Turks, leaving 180 dead behind. Some of the British boats on the river were sunk by the Turkish guns.

The Turkish Minister of the Interior, Talaat Bey, in reporting the results of the investigation of Armenian troubles, states that it was necessary to deport the Armenians from certain localities because it was found that they were conspiring to assist the Russians in conquering the country, and in fact had actually taken up arms against the Ottoman government in some places. He admits that in the process of deportation some abuses unfortunately occurred, but the perpetrators are being tried and punished. Fifty-one Turkish soldiers convicted of mistreating Armenians have been shot.

This very mild statement of the case bears little resemblance to the reports received from eye-witnesses of the massacres. According to the American Board of Commissioners for Foreign Missions the 20,000 Armenians in Erzerum were all killed with the exception of two hundred of whom thirty were saved in the house of the American missionary, Mr. Stapleton. The Moslems came several times and demanded that the Armenian girls be given over to them, but Mr. Stapleton answered, "You must kill me before you can touch them." The Russians entered the city just in time to prevent their house from being blown up and looted like the others.

Allies Blockade Greece The grip of the Allies upon Greece has been strengthened so that the Greek government has been practically displaced in Macedonia by British and French administration. The Allies have declared martial law in Salonica and taken possession of the Greek railway, postal, telegraph and customs systems. A French naval officer has taken the place of the Greek commander of the port. The national banks of Greece proposed to issue an additional \$6,000,000 in paper currency to supply the pressing needs of the Greek government, but the Allies have refused to allow this under threat of withdrawing all financial assistance in the future.

The Greek army, which was mobilized last September, has been for the most part kept under arms ever since, but now the Allies have insisted upon its being disbanded. King Constantine insisted that the army was necessary for the defense of the country and tried to compromise by demobilizing half of it. But the Allies are trying to force him to issue an order for complete demobilization by blockading the Greek coast.

The Greek ships in British and French ports were held and no coal or food was permitted to enter Greece except for use of the Allied troops. Since Greece is dependent upon its commerce

Sturtevant in New York Tribune

ARE WE STILL WINNING, WILHELM?

and there was only food enough in the country to last ten days, the people are threatened with starvation unless they give in.

These violent measures have aroused great indignation in Athens and mass meetings were held denouncing the conduct of the Allies toward neutral nations and "especially toward the President of the United States." A mob of several hundred made demonstrations before the British and French legations and the offices of the Venizelos newspapers. Ex-Premier Venizelos is hated because when in power he tried to bring Greece into the war on the side of the Allies. Skoloudis, the present premier, is striving to preserve neutrality, in spite of the pressure of the Allies.

Altho Greece is by treaty of the powers a free and independent state the British and French have been using Greek territory as tho it were their own ever since the war began. The Gallipoli campaign was conducted from the Greek islands in the Aegean and the island of Corfu has been utilized for the rehabilitation of the Serbian army, which has now been transported to Salonica, where several hundred thousand British and French troops are now assembled for an attack upon Bulgaria.

THE GREAT WAR

June 12—Allies blockade Greek ports. Austrian seaplanes bombard Venice Arsenal.

June 13—Canadians recover lost ground at Zillebeke. Russian advance in Galicia continues.

June 14—Conference of Allies meets at Paris to devise means to check German commerce after the war. Food riots in Holland.

June 15—Germans attack Hill 321, south of Douaumont.

June 16—Turks claim victories over British and Russians in Mesopotamia.

June 17—Russians capture Czernovitz. Austrian attacks at Asiago continue.

June 18—General von Moltke, former Chief of General Staff, dies in Reichstag, at memorial service for Field Marshal von der Goltz.

The Bulgars, claiming the same rights of occupation of Greek soil as the Allies, have advanced down the Struma river and taken possession of the Greek forts at Rupel and Demir-hissar, to the east of Salonica. The Allies interpreted this concession to the Bulgars as indicating an intention on the part of the King of the Greeks to take the side of the Central Powers, so they are determined to have the Greek troops sent to their homes.

The Battle of Skagerak Both the Germans and the British claim as a victory the naval engagement in the North Sea on the last day of May. The Kaiser declares that the British supremacy of the seas has at last been overthrown and he has promoted Vice-Admiral Scheer to Admiral because of his defeat of a British fleet greatly outnumbering his own. On the other hand, A. J. Balfour, First Lord of the Admiralty, asserts that "Great Britain not merely obtained the honors of battle, but also its substantial fruits."

The number of ships lost on either side is not yet certainly known. The German Admiralty has admitted the loss of battle-cruiser "Lützow" and the cruiser "Rostock" as claimed by the British, but formerly denied by the German Admiralty "for military reasons." The loss of the new and largest of the German battle-cruisers, the "Hindenburg," is still denied at Berlin.

On the other hand, the Germans assert that the British superdreadnought "Warspite" was sunk. The captain of the "Warspite," however, gives out an interview in which he tells how he brought her safe back to port, altho even some of the British observers thought her lost when her steering gear was shattered and she drifted into the midst of the German fleet. She was shelled by six German ships, but managed to escape under cover of the smoke and spray.

Leaving out the "Warspite" and the "Hindenburg," the Germans figure that their losses were 60,720 tons against 117,750 tons on the part of the British. They further claim that the British navy has lost 130 ships of all sorts since the war began, with an aggregate tonnage of more than 600,000. So far as reported, the British loss of life is 343 officers and 6,104 men; the German is 173 officers and 2,414 men. The Germans saved 177 of the officers and men on the lost British warships.

According to the British Admiralty, the "Hampshire" went down from striking a mine, not from the torpedo of a German submarine. Lord Kitchen-er when last seen was on the quarter deck about to enter a boat, but the night was so stormy that no boat could keep afloat.

It is reported that on the same day of the battle of Skagerak fourteen German merchant-steamers being convoyed across the Baltic were attacked by Russian destroyers, which sank two of them and a small auxiliary cruiser.

"HE KEPT US OUT OF WAR"

SOUNDING THE KEYNOTE AT ST. LOUIS

BY HAROLD HOWLAND

"WITHOUT orphaning a single American child, without widowing a single American mother, without firing a single gun, without the shedding of a single drop of blood, Woodrow Wilson wrung from the most militant spirit that ever brooded over a battlefield an acknowledgment of American rights and an agreement to American demands."

Crash! Bang! The explosion had come. The Coliseum at St. Louis was in cheerful, jubilant, orderly tumult. The permanent chairman of the Democratic Convention, Ollie James, the genial giant from Kentucky, "with the shoulders of a buffalo," as I heard him described by his introducer on a similar occasion eight years ago in Denver, had just put into thunderous words the thought which the Democrats hope to drive home to the people of the United States in the next five months. Delegates and spectators clapped and shouted for a while and then eager voices began to chant, "Say it again! Say it again!" So he said it again, with a little more fire and a little more punch. Then the crowd went mad, and with the aid of the band kept up its delighted frenzy for a quarter of an hour or so.

On this the second day of the con-

THE DEMOCRATIC DOVEKEY

vention the good old Democratic party was enjoying itself hugely. It had had a pretty good time the day before when former Governor Glynn of New York had first blown the keynote on the pitch pipe of the temporary chairmanship. Mr. Glynn is Irish, with plenty of Celtic fire and flow of words. The crowd had made him, too, "say it again," when he declared that though the policy of neutrality of President Wilson might not satisfy the fire-eater or the swashbuckler, it does

satisfy the mothers of the land at whose hearth and fireside no jingoistic war has placed an empty chair. It does satisfy the daughters of this land from

whom bluster and brag have sent no loving brother to the dissolution of the grave. It does satisfy the fathers of this land who will fight for our flag, and die for our flag when Reason primes the rifle, when Honor draws the sword, when Justice breathes a blessing on the standards they uphold.

The floor and the galleries enjoyed and approved that thoroly, and promptly set the expectant welkin echoing with their endorsement of it. But they did not get thoroly aroused to the spirit of the occasion until the second day, when the booming voice of Ollie James said it all over again.

By that time every one had realized that the convention had just one real function to perform. The candidate had already been selected by the logic of events and the momentum of public opinion. The ratification of the nomination even was hardly necessary. The platform would be the natural product of three things, the party record, the pronouncements of the Republicans at Chicago, and the wishes of the President. All the convention had to do was to aid by its presence and its enthusiasm in sending ringing thru the land the keynote of the campaign.

Well, the task was well done. There is no uncertainty about the keynote. It took shape in a dozen

St. Louis Post-Dispatch

THE WALKLESS PARADE—A SOLID LINE OF WOMEN WHO ONLY STOOD AND WAITED FOR SUFFRAGE AT ST. LOUIS

different ways in the words of orator after orator, but translated from oratory into colloquialism it runs, "He kept us out of war."

It received its final seal of approval just before the nomination of the Presidential candidate on Thursday night. For two days the crowd had been spoiling for a speech from Bryan. He was not a delegate to the convention—his party associates in Nebraska had not wanted him to be—but, as he had done at the two conventions in Chicago, he occupied a prominent seat in the press gallery. Every time he came in the delegates and spectators cheered him. Then when Ollie James had shot his bolt of oratory, a roar of "Bryan—Bryan—Bryan" began to beat in waves of sound upon the chairman's devoted head from all over the Coliseum. Ollie James struggled manfully with gavel and waving hand for a chance to say something, but the roaring crowd would have none of him. At last it had to take breath for a moment, and the chairman was able to interpolate the information that Mr. Bryan had slipped out to make a speech somewhere else, and that the chance to hear him must come later.

In the evening the moment came, and the former Secretary of State

THE SCHOOL MASTER

BY HARRY KEMP

*School Master—yes. School Master of the World,
No hasty demagog who would have hurled
His Country into war! A Man whose pride
Stands clear of leaning unto either side
Of hate and murder, see him tower supreme
Above the blinded sneers, with his great dream
Of peace for all the world. He would not bring
Upon our souls that dreadful old-world Thing
That drags asunder on its rack of hate
The Life of Europe. Good and wise and great,
Lofty in vision, humble in his pride,
He has THE GREATEST TEACHER on his side!*

in the Wilson Cabinet made an up-standing, uproaring, fighting speech in praise and endorsement of his quondam chief. The climax of his eulogy came when he thundered out, "I have differed with the President as to some of his methods, but I join with the American people in thanking God that we have a President who does not want us to take part in this war." The now familiar keynote met the now stereotyped response—if the adjective is not out of place in describing anything so spontaneous and genuine and hearty.

It is a good keynote. It is a popular one. And already it has performed one valuable service. It has removed the single possibility of dissension in the Democratic ranks—at the moment when the reunion of Progressives and Republicans makes unanimity the one indispensable condition for the Democracy. It has brought Mr. Bryan back from outside the breastworks. The atmosphere of that convention showed all too plainly that Mr. Bryan—off the ticket—is still a substantial political asset.

Conventions are different. The Progressive convention seethed; the Republican convention sulked; the Democratic convention smirked. The Bull Moose could not help seething; it is (was, must we say now?) made that way. The Elephant could not be blamed for sulking; it was not only led to bitter water, it was made to drink. The Donkey is entitled to smirk; it has a splendid rider with a splendid record behind him.

The convention smirked and preened its feathers and grew complacent whenever it got its mind off the keynote and took thought for the party record. It was the first time in twenty years, as Ollie James pointed out, that the Democratic party had had a record. He said:

During the three years of its national control, Democracy has enacted into law more progressive remedial legislation than the nation has ever had written

upon its statute books since its birth. In former national contests in the last two decades, our party came as a prophet. Today we come with deeds, not words; with performance—greater than our promise. The Democratic party has kept its word with the American people. We have made good.

He then proceeded to point out two amendments to the Federal Constitution, one to tax the wealth of the country thru the income tax, the other to "free the Senate of the United States from the control of the great

interests by making it elective by the people at the polls." He held up also the Underwood tariff, the Federal Reserve Board, and the rural credit law as shining examples of Democratic constructive legislation.

Mr. Bryan, when his turn came, drove home the same record of constructive achievement with those triple-barreled detonations of hand on hand with which he characteristically punctuates his most earnest statements.

The Democracy smirked, and nominated Wilson and Marshall—at five minutes of twelve on Thursday night, because Friday is an unlucky day—and adopted a platform, and went home, contented, happy, hopeful, confident. For why should it not be?

And it will be a very pretty fight.

Twice he has nominated Woodrow Wilson for the Presidency. Once his man won the nomination and the election; the second time—

EDUCATION IN THE NEXT GENERATION

BY GEORGE E. VINCENT

PRESIDENT OF THE UNIVERSITY OF MINNESOTA

THE American people from now on will be forced more and more to consider their lives and activities from a national standpoint. Whether or not the country should be ready for war, it must be prepared for a peace which will bring challenges and tests. World markets are not to be mastered by "manifest destiny," nor is moral power to be exerted by mere assertion. The days of drift, of self-indulgence, of slipshod methods, of complacency, of isolation are numbered. Will Americans have the intelligence and character to train, discipline, organize, unify themselves, or must they undergo an ordeal imposed from without?

The tasks to be undertaken are heavy and exacting. The efficiency of underlying industries, notably agriculture, must be greatly increased; the problems of marketing must be more satisfactorily solved; an alert and resourceful commercial organization both governmental and private must be set up in foreign countries; conduct of public affairs, taxation, municipal, state and Federal administration must be of a better, more modern kind; public health must be safeguarded, child welfare promoted; housing, industrial insurance, relations of employers and workmen must receive careful attention; differences of race, language, and traditions, of economic and social status, must be reconciled; moral standards must be sturdily maintained; a sense of national purpose and ideals, of loyalty and devotion must be deepened.

EDUCATION FOR NATIONAL SERVICE

EVERY one of these tasks, and countless others, make demands upon the educational system of the country. Education, therefore, may no longer be looked at individually or locally; it must be considered nationally. Attention shifts from the personal career of the pupil to the needs of the country. For Emerson America spelled in capital letters "opportunity"; tomorrow "national service" will appear in larger type. The ideals of West Point and Annapolis will translate themselves into the standards of technical and professional training of all kinds. The same spirit

Few educators are so well acquainted with the broad field of university and popular education as President Vincent of the University of Minnesota. He is the son of Bishop Vincent, who founded Chautauqua, and himself served as editor of the Chautauqua Press, vice-principal, principal and president of the Chautauqua Institution before his recent election to the office of chancellor. His teaching was done mostly at the University of Chicago, where he became dean of the faculties of art, literature and science in 1907; he has held his present office at Minnesota since 1911. He is the author of "Social Mind and Education."—THE EDITOR.

may be expected slowly to permeate the entire educational system.

Long before the war brought Americans face to face with a new national situation, there were many signs of discontent with the organization, methods, ideals and results of education in the United States. Nowhere more than in schools, colleges and universities did the tendency to follow tradition, to drift, to "muddle thru" seem more pronounced. Business men, parents, teachers, pupils, college professors and students have been finding fault.

Here are some of the things they have been saying: Training for occupations has been neglected; children leave school because they are bored; they drift into "blind alley" occupations; the studies of the elementary school are too formal and meaningless to hold the interest of the pupils; school children learn nothing thoroughly and well, but have a vague smattering of many things; the rural schools are backward and country children are slighted; the great mass of teachers are ill-trained, inexperienced, underpaid, ephemeral, "a mob of mobile maidens meditating matrimony"; the school is not connected closely with the life of the community which it is supposed to serve; colleges are loafing places for young barbarians without mental interests; even the graduate work of universities is too much a kind of formal and pretentious erudition; professional schools for all their efficiency are sending out lawyers, doctors, engineers, dentists, bent upon personal success and regarding the public as a mine to be worked rather than a community to be served.

These indictments as a whole are too sweeping, indiscriminating, unfair. They vary widely in their validity and value. As a symptom they are significant and encouraging. An enlarging group of educational leaders, specialists in education, college professors, school superintendents, principals and teachers is alive to the situation.

While these people naturally resent such criticisms as seem to be an outcome of ignorance, self-interest, or class feeling, they welcome all suggestions, and are always experimenting fruitfully with new ideas and methods. The chief hope for the gradual development of an educational system fitted to serve the national purposes lies in this company of open-minded men and women.

Educational experiments now being carried on suggest possibilities for the future. University practice schools, public school systems, private institutions, and individuals are testing new theories and methods in elementary education. In the vocational field, bureaus of guidance, trade schools, continuation classes, part time shop and class schools are in operation. Pre-vocational subjects, manual training, shopwork, domestic science, commercial branches, and agriculture are being taught in hundreds of high schools. College curricula are being gradually modified to give more room to the natural and the social sciences. There is a tendency also to introduce courses in business, journalism, and other pursuits which have a vocational or professional character. The scope of popular education is being extended by means of University Extension, short courses, correspondence teaching, reading courses like that of the Chautauqua Circle, and in many other ways. Industrial and educational surveys such as those recently undertaken in Richmond, Minneapolis, and Cleveland are significant and promising evidences of scientific interest.

THE MACHINERY OF EDUCATION

THE present situation, then, reveals an encouraging spirit of educational pioneering and many things already accomplished. The main lines of development in the creation of a system which shall be in the best sense national begin to emerge. Attention may first be turn-

GEORGE E. VINCENT
PRESIDENT OF THE UNIVERSITY OF MINNESOTA
CHANCELLOR OF CHAUTAUQUA INSTITUTION

ed to organization, the machinery of administration, supervision, public support, standards.

The deadly effect of mere mechanism is well-known. Bureaucracy is always a potential blight. But no system can get on without organization. So far American education has suffered more from unorganized localism. The rural district, the village and town unit have asserted their right to manage their own affairs independently. Politically elected county superintendents—many of them excellent individuals—as a class must give more time to their political fences than to their pedagogical flocks. Many states distribute school funds from the state treasury. But too generally these forms of state aid serve to lower rather than to supplement local tax rates. Even when the subsidy is conditioned upon an equal local contribution, the plan results in rewarding the strong rather than in helping the weak.

EDUCATING ALL CHILDREN

THE general policy which seems likely slowly to be adopted in the different states will assert the state's equal interest in all the children of the commonwealth, and will explicitly demand an equal educational opportunity for all children, poor or well to do, rural or urban. This policy will involve several lines of development; consolidation of one-room schools into central, graded schools to which pupils are transported in public vehicles; supervision by appointed superintendents and assistants with professional training; administrative units, based on the county, or socially homogeneous, with boards sharing local responsibility with a state board of education; a state school fund carefully apportioned so as to stimulate local activity and to maintain standards; provision for turning over to the State Board the administration of backward, sparsely settled, or negligent districts which fail to maintain satisfactory schools; more severe requirements for teachers' certificates with correspondingly increased salaries, provisions for promotion, premiums on permanency, pension systems; and in the rural regions especially, school manses which will provide for teachers comfortable and dignified living quarters. High school opportunities will be brought within the reach of every ambitious country boy or girl, either at the nearest consolidated school or at the town high school, where the rural pupil will be maintained at the expense of the district.

The state system will also include vocational and cultural continuation

classes, "short courses," correspondence teaching, social center activities for adults. In this way localism will yield to a unified, well-administered state system concerned with providing opportunities of an appropriate and equivalent kind for all the people of the state. Local responsibility will not be wholly surrendered; it will be shared with the state authority whose leadership will be recognized. This central organization will probably consist of a state board of education, a board-appointed state superintendent of recognized professional standing, and a staff of competent supervisors and specialists. State funds will be apportioned by this board.

Just as each state will attempt to equalize educational opportunities within its own borders, so the Federal Government will be compelled to cooperate with the states in bringing about something like democracy in education thruout the nation. "States' rights" will not be overridden; the subtle influence of subsidy will accomplish in this larger field what it is already doing within the individual states. For years state agricultural colleges have been supported in part by grants from the Federal treasury. From the same source state extension work in agriculture and home economics is receiving a progressive appropriation. A bill is now before Congress to stimulate by a similar subsidy the teaching of industrial subjects thruout the Union. The policy of national subsidy for education is under way and gaining momentum; the national aspect of education is clearly recognized.

One may be in heartiest sympathy with this general policy, and yet foresee serious dangers if the policy is not well considered and wisely administered. There is very real peril from a pedagogical pork-barrel. It is easy to imagine the perfervid eloquence with which a congressman would denounce any attempt to oppose an educational bill carrying a large appropriation for his district when he might hesitate to urge a new post office or the improvement of an unnavigable creek.

NATIONAL DEPARTMENT OF EDUCATION

CONGRESS ought to provide an adequate educational administration before the subsidy policy goes much further. The status of the United States Commissioner of Education is eloquent of the value which the people place upon education as a national function. A subordinate of the Department of the Interior, poorly paid, with pitifully meager appropriations and a wholly inadequate

staff, destitute of real authority, the United State Commissioner of Education at a given time commands respect by reason of his personal qualities, almost in spite of his humiliating position.

The new responsibilities which face the country will compel a recognition of the importance of education as a national task. There should be a Federal department of education with a secretary. A national board should be created, an adequate staff of supervisors and experts provided. All legislation concerning education should be either initiated by the board or submitted to it for advice; all Federal subsidies should be distributed under its authority. Such a national department would coordinate, complete, and give Federal leadership to a national system of education.

WHAT ENDS SHALL WE SEEK?

WHAT aims will the national and state administrations set up as they work out a more conscious, purposeful system of education? They will have to keep in mind: first, training for occupational efficiency; second, the encouragement of spontaneity and initiative, and, third, the fostering of capacity for civic life. The nation will depend for highest success upon the ability of its citizens to do their work expertly and economically, to discover new and useful ways of thought and action, and to live together on terms of mutual confidence and good will as they work for common ends.

Plato's philosophers in the *Republic*, endowed with almost supernatural insight, assigned the children to the social status and occupations for which they were by nature fitted. This was true vocational guidance. No time and effort were wasted. Each child was predestined and prepared. There were no blind alleys. In America there are people who would have the children of the obviously humble quickly set upon the paths to shop, mill, department store, field, mine or railway. There is an insistent demand for "practical" training with no "frills" or "fads." Manual dexterity, minds early automatic in a certain routine, docility and "contentment" are requirements. The men who half unconsciously are seeking employees see the first function of national education, but they are in danger of ignoring the other two. They do not realize that there are no philosophers to assign American children at the outset to their places in the social order, nor that in a way these children are later to form a part of that control which democracy substitutes for the all-

wise philosophers of Plato's "Aristocracy of Intellect."

In the elementary school, the basis of the national system, will begin the guided growth which will contribute to all three of the educational aims, occupational skill, initiative, civic consciousness. It is certain that the elementary school of the future will be far less formal. Arithmetic, reading, grammar and nature study will emerge much later as conscious tasks. Even then they will be taught in a quite different way. Doing, seeing, handling things; excursions in the country; observation and recording of weather conditions; study of rocks and soils of plants, trees and animals; visits to stores, post office, fire-engine houses, to farms, creameries, elevators, following up vivid interests; making houses and furniture; finding out about familiar things, like food, clothing and shelter; using weights and measures, figuring because one wants to know results; listening to stories, retelling them, learning to read them, playing and working with one's mates; learning the need for rules and respect for others' rights—these are the materials and methods which in the earlier years will almost wholly take the place of books. Bodies and minds will grow; dexterities and concrete, vivid experiences will accumulate ready for the reflective, more formal training to follow.

IS "MENTAL DISCIPLINE" NEEDED?

GOOD people are shocked by the idea of this "royal road," this "primrose path." What of discipline and duty, and the moral power which comes from doing disagreeable things? The answer is that enough children have already been subjected to this demoralizing theory and practise to give some notion of results. It is fairly well established that boys and girls who under this system postpone formal studies make progress so rapidly that on entrance to high school they are quite able to hold their own in reading, spelling, and arithmetic, while in freshness of interest, wide range of practical knowledge and experience, and ability to reason independently they are noticeably superior to the graduates of the conventional school.

By the eleventh or twelfth year, tested by the varied experiences of the earlier grades, children begin to display special aptitudes and interests. These will influence the activities and studies suggested to the pupils. The persons assigned to the work of vocational guidance will begin to discuss with boys and girls their future plans. Courses will be adapted to individual needs. Out of

This is the sixth article in The Independent's series on THE NEXT GENERATION IN AMERICAN LIFE. "Government of the People, for the People and by the People" has been discussed by William Allen White, "Country Living in the Next Generation," by Liberty H. Bailey, "Business Tomorrow," by Elbert H. Gary; "A Religion for Democracy," by Shailer Mathews, and "Woman in the Market Place," by Margaret Deland.

the elementary school pupils will be guided according to aptitudes, ambitions and circumstances to schools of different types which give special training in mechanical pursuits, commercial subjects, fine and industrial arts, agriculture and rural life, general education, preparation for technical and professional schools or colleges. Many pupils will be directed to special occupational courses which they will pursue until they are of legal age to enter upon wage earning.

Even when students have begun to work they will not sever their connection with the educational system. In part time or continuation classes they will learn to connect theory and practise and will follow pursuits of a cultural or recreative character. Thru evening classes, social centers, extension activities, debating clubs, public libraries, reading courses, civic associations, public concerts and recitals, popular lectures, exhibitions of industrial arts, social museums, etc., the whole adult population will realize that national education is a continuous growth from childhood to the end of life.

The system sketched above offers an opportunity for self-development, spontaneity and personal initiative. The pupil is not cowed by coercion. He has been allowed to express himself in many ways, by work, talk, drawing, singing, playing. He is not forced to learn meaningless symbols, to accept a great number of statements on the authority of book or teacher. His knowledge is personal and first hand. He has the habit of dealing with concrete realities, of finding out things for himself, of inventing ways of solving problems—in short he has been learning to think. This is so valuable a national asset that it would be a calamity if the demand for premature ability to read, write, cipher and work docilely were to regiment American children into methodical, lock-step, disciplined automata for common industrial and commercial uses. Quite apart from the rights of these children to enjoy a period of free, spontaneous, happy growth, the short cut to efficiency

theory would do untold harm to national welfare and the democratic idea of life.

In secondary and higher education problem solving and tests of thinking power rather than information will be the rule. Even now the imaginative teachers of law, economics, political science, and the natural sciences do not ask for definitions but set problems for the student to discuss in the light of all his knowledge of the situation. This is true education because it is so much like life. In a democratic society the conventionalizing forces, imitation, fashion, social rivalry, tyranny of the majority, are so strong that the duty of education to promote individuality and independent thinking is imperative.

CREATING A SENSE OF THE NATION

IN seeking the third end, the fostering of civic loyalty and idealism, national education will aim to cultivate in young and old the historical and social imagination. History, the social sciences, literature and philosophy as the expression of human culture will constitute the "New Humanities." From the earliest years of the elementary school thru the university and all the agencies of popular education, effort will be made to develop in every mind some sense of the vast, ongoing collective life men call the nation, a panorama of the past with its great figures, its story and song, its struggles and victories, its mistakes and failures. And this will be done with the hope of projecting into the future a vision of purpose and responsibility which will give meaning to each individual life. A national education would be a failure which did not transcend material efficiency and touch this with idealistic aims and loyalties.

Yet it would be a narrow conception of true culture which did not place the nation in its relation to general civilization, and inspire a patriotism which seeks to make one's country strong and true not only to its own interests but to those of all mankind. National education should produce not Chauvinism but chivalry.

This national system will not be all under national and state control. Privately endowed universities, colleges and schools will continue to be experimental laboratories for educational progress. Uniformity in educational methods would be unfortunate. The very principle of spontaneity and initiative calls for a variety of institutions free to try new things, but proud to declare themselves a part of the national system and ready to serve the common country.

SUMMER SCHOOLING

BY PERCY H. BOYNTON

THE BODY OF CHAUTAUQUA

BY E. H. BLICHFELDT

“WHO steals my purse steals trash.” An article about building and machinery at Chautauqua is a treatise of non-essentials, not that physical properties could be dispensed with altogether but that they are accessory; something before them determined their evolution. When a disastrous fire had visited Chautauqua in 1909, the Institution sent out to its friends the confident message, which was quoted from Boston to San Francisco, “You can’t burn down an idea.”

It may have been half-counterfeit satisfaction, to be sure, with which the early Chautauquans declared that when they grew tired on the flat amphitheater benches, they “leaned back upon the salubrious atmosphere.” Mark Hopkins on one end of a log and a boy on the other might, provisionally, have constituted a university; but if they had done so, the log would naturally and inevitably have become, in course of time, paraphernalia *emeritus*. Housing, environment, and access are demanded and commanded by the educational genius, though not by the recluse. So the Chautauquans of the early 70’s, while rejoicing in things as they were, started a program of material growth.

Yet the order is important. Chautauqua did not begin with an aggregation of material, into which life must somehow be pumped. It began with an idea, and the contagious enthusiasm of a group of people for that idea, as they saw it incarnate in one man. This genius, which soon became social rather than personal, diffuse rather than particular, gradually lifted roofs over the heads of its devotees, gave dignity and solidity to their gathering places, provided facilities for their community life, and adapted their surroundings to their growing needs from year to year.

To infer that Chautauqua has become rich and can order costly structures and roadways at will would be beside the mark. On the contrary Chautauqua still lives from hand to mouth, as an educational institution ought. With what justification could it grow rich? President Frost of Berea College worthily put this thought, when he declared, “Berea can never be rich as long as anybody in these mountains is poor.” Chautauqua is poor in the sense that recognized needs or opportunities every year must be disregarded for lack of means. When a need becomes vital enough and articulate enough,

however, means and disposition to provide for it somehow come forth.

It is as a sign of “inward grace” that Chautauquans recognize in external growth a cause of rejoicing. Brick paved high-ways, double-track interurban car lines, entrances of brick and concrete in good architectural design, landscape treatment on a broad scale, educational buildings in comprehensive groups, hotel rooms with steam heat and other like conveniences, private residences costing a fortune to build do not grow up around an enterprise of fleeting character; yet all these things are taking shape of late at Chautauqua. The fact is that the parent institution of the Chautauqua movement, on Chautauqua Lake, in western New York, has within a decade passed into a wholly new phase, the “city of tents” giving way very fast to a city that “has foundations.” Electric light and power plants, gas mains, water supply and sewerage, paved sidewalks, year-round office buildings of fire-proof or slow burning construction are among the things that one by one have supplanted the earlier makeshifts. Over a quarter of a million dollars is being expended this year to present the assembly to 1916 visitors in its

A NEW PORTAL FOR CHAUTAUQUA—THE INTERURBAN ELECTRIC RAILWAY STATION

now well defined character as a permanent institution.

The visitor will be met by two important and striking improvements in two approaches—the water gate or pier, where will enter the visitor coming by steamboat from other points on Lake Chautauqua, and the land gate, where will enter the visitor coming by trolley from any direction or by motor car over the excellent highway which connects with the great east-and-west thoroughfare at Westfield, New York. These portals, the former always beautiful but of late inadequate, the other a back-yard entrance in the past, are both being enlarged, made commodious, and architecturally beautified to comport with the dignity of the institution. The interurban car line that skirts the grounds thruout their length is being pushed outward so as to increase the acreage and interpose a border of parks and lawns between the town and the passer-by. Incidentally, the line is thus made to pass close to the fine Chautauqua golf grounds. On the outer edge of this newly annexed strip the new colonnaded station is to be built, at a cost of some \$40,000. A brick-paved

state highway along the new line of traffic, double tracking of the electric road, landscape gardening, and the like, are accessories of the plan.

North along the highway, next to the big garage that fronts the station, the largest public school of its sort in New York State is in process of erection. It is significant as to the year-round population that is fast growing up about Chautauqua, a summer resort originally of only a few weeks' life each year. This is classed as a rural school, incorporating three former districts, and serves nearly 250 children. The plant, on which \$30,000 has already been expended, is to have a \$50,000 addition.

All this is outside the gates. So also is the superb manor that one of the family of Packards of automobile fame is putting up, though it is near enough to the gates for hourly migration between private park and public forum. Within the assembly grounds the summer schools establishment at one end is being very considerably enlarged, and at the other end a home for deaconesses of the Methodist Episcopal Church, a fine memorial to James Fenton of

Buffalo, will be the tenth denominational building at Chautauqua.

The opportunity for some man or woman of wealth and vision to supplement what has been done, without embarrassing the administration of the general scheme by misfit provisions and restrictions, would seem to be no longer obscure or doubtful. A library building with fireproof housing for art exhibits, full and dignified furnishing for the Hall of Philosophy, shrine of the home readers, and for the Hall of the Christ, headquarters of the religious department, more good road building, substantial and beautiful seats about all the parks, still further gifts to the Summer Schools, so that they may complete their quadrangle of recitation halls and have endowed dormitories for teachers and students of limited means, these are some of the purely physical needs. Such needs proclaim themselves all the more loudly and all the more confidently because of the demonstration of the past few months that Chautauquans and others believe in Chautauqua and that they mean it shall continually enlarge its usefulness.

Chautauqua, New York

CHAUTAUQUA BEFORE CHAUTAUQUA WAS

BY IDA M. COLE

NO spot in America has been the scene of more spectacular pilgrimages than the shores of Chautauqua Lake. The tall trees could relate wonderful tales of days long before the French occupancy, when this beautiful region knew only the moccasined tread of the "red

ruler of the shade"; of the days when the Eries fought heroically for their native land and were exterminated by the hostile Senecas.

As you see the evening lights streaming from the windows of hundreds of houses on the Chautauqua Assembly grounds, you think of that

night, years and years ago, when, the historian tells us, the Senecas took horrible revenge on the Eries and all along the lake region there burned a "thousand fires," each fire an Erie burning at the stake. That was fifteen years before La Salle came over the portage and sailed down the lake

THE NEW BOAT LANDING AT CHAUTAUQUA

GATHERED ABOUT THE HALL OF PHILOSOPHY UNDER THE TREES AT CHAUTAUQUA

and he must have seen on either bank the old Erie villages overgrown with vines and crumbling in decay.

Standing at the foot of Miller Tower, on the grounds of the Chautauqua Institution, and looking toward the head of the lake, one can visualize the appearance of that intrepid band led by the famous explorer La Salle, who after traversing the portage from Lake Erie dropt their canoes into Chautauqua Lake. What a motley crew it was which followed La Salle that day—French soldiers, Canadian settlers and Indians—on their mission to establish the claim of France to the newly discovered territory.

But La Salle was not the first white man to find this region. In 1615, five years before the Pilgrims landed on the Massachusetts coast, the youthful Etienne Brulé, accompanied by twelve friendly Hurons, sailed on Lake Chautauqua. On his journey from Canada he came over the old portage to the present village of Mayville, and there embarked on Chautauqua Lake, passed into the Chadakoin, and thence to the Allegheny. He is said to have been the first white man to visit Chautauqua county. A few years after Brulé's journey, La Salle came and still later this lake was the scene of the picturesque expedition under de Celoron.

Another band which probably came this way, seeking not territorial conquest but a haven of peace, was the group of Acadian pilgrims on their way to the "Beautiful River" which carried them "into the golden stream of the broad and swift Mississippi."

While Longfellow in "Evangeline" does not state the way of journeying, yet of all the conjectural routes this is the most plausible. For it is known that for centuries the Indians followed this route from gulf to gulf, a distance of some four thousand miles, from Barcelona on Lake Erie, over the portage to Chautauqua Lake, a distance of some eight miles, then over the waters of Chautauqua to the Chadakoin and to the Allegheny.

It is said that a barn some five miles from Chautauqua Institution drains one side into the Gulf of St. Lawrence and the other into the Gulf of Mexico. It is certain that the divide between the two great systems—that of the Great Lakes and that of the Mississippi—is situated where the barn stands.

Chautauqua Lake is only a few miles from Lake Erie and several hundred feet higher, so that at first thought the visitor takes it for granted that it drains into the Great Lakes and is surprised to find that such is not the case.

In 1749 still another voyage, as picturesque as it was momentous, was made by Capt. Bienville de Celoron. In July of that year he landed at Barcelona and started over the old portage for Chautauqua Lake. In his company were men who had explored the primeval forests of Canada, soldiers, sailors, pioneers, a Jesuit priest and Indians. Some of these men afterward became famous for their valorous deeds in the French and Indian war.

Celoron had in his possession several leaden plates, duly inscribed, which he was to bury at certain

points as tokens of French occupancy. One of these plates bore the name Tchadakoin, the first time the name was used by civilized man. The manuscripts kept by Celoron on this voyage and the diary and maps of de Bonnecamps, a member of the expedition, have been preserved, the former by the French Government and the latter in the possession of the Jesuit College at Quebec. The name Tchadakoin appears on de Bonnecamps's maps. This is supposed to be the French rendition of the name "Ja-da-quah"—Chautauqua.

A spectacular expedition and one of far-reaching importance, since it was one in the chain of events which finally led up to the Seven Years' War in Europe, was the landing at Barcelona of the French forces who transformed the old portage into a military built road. In the spring of 1753 Governor Duquesne of Canada sent an expedition to build a string of forts in the Allegheny Valley and make a route southward which they thought would be better than the one followed by Celoron and La Salle. A detachment of this force was sent by the governor to cut a wagon road from Barcelona to Lake Chautauqua. Traces of this old French road still remain and now the automobile whizzes over parts of that old portage over which the Indian once carried his canoe and the French explorers and gallant soldiers trod with certain step as they declared the claim of their native land against the English.

Barcelona is now a little fishing village with its quaint lighthouse and other reminiscences of "days of old when knights were bold." The dense

CELEBRATING RECOGNITION DAY, CHAUTAUQUA'S COMMENCEMENT—TO BE HELD THIS YEAR ON AUGUST 16

forest has been cleared to make way for prosperous villages. The fierce and beautiful wildcat, for which this region was once noted and which gave the Eries the name of "Nation of the Cat," has gone the way of the buffalo. The shores which were thick with tall trees when Etienne Brulé passed them are now lined with attractive residences, and the name on the leaden plate borne by Celoron has since become synonymous with

Christian culture. Many reasons have been given for the name, Chautauqua, but that generally accepted by historians is the tale of the party of Seneca Indians who, on one occasion, as they were journeying up the trail, caught a muscallonge in Lake Chautauqua, threw it into the bottom of the canoe, where it lay during the trip over the portage. On reaching Lake Erie they found the fish still alive and threw it into that lake.

Previous to this time no muscallonge had been found in Lake Erie and the subsequent abundance was attributed to this finny ancestor taken from the lake at the other end of the portage, which was accordingly named by the Senecas "Ga-jah" (fish) and "Gadah-guah" (taken out). In time the prefixes of both words were dropt, leaving "Jah-dah-guah" (the place where the fish was taken out).

Chautauqua, New York

SUMMER SCHOOLING

BY PERCY H. BOYNTON

DEAN IN THE JUNIOR COLLEGES, UNIVERSITY OF CHICAGO; PRINCIPAL OF SUMMER SCHOOLS, CHAUTAUQUA INSTITUTION

THE summer school movement of this last generation has been one of several agencies to bring American education closer to the life of the people, a development in which education as a whole has been moving parallel to science, religion, and philosophy. Plant breeding, the layman's movement, and pragmatism are all floated on the same current with vocational training and vacational schools. Forty years ago American philosophy was still absorbed in the contemplation of Kant and Hegel, religion was expressed in sectarian theology, and science was a noble but a remote pursuit. Naturally the colleges and universities in which these subjects were studied were places where, as Lowell fairly said, "nothing useful was taught."

With the founding in 1874 of what is now Chautauqua Institution there was ostensibly started "a system of popular education" which was sup-

posed to stand in contrast with the college system of education maintained for the cultured and professional classes. The contrast, however, has always been more apparent than real. In the early years the main issue was a question of opinion as to whether the summer could be turned to academic account, especially in a six-week session. Half the first set of courses at Chautauqua were in the nature of regular college work in ancient and modern languages. The remainder were normal school studies in pedagogy. From the outset came people who gained in these weeks their first view of the "college outlook," or who returned for further vistas in which they could not possibly indulge themselves during the school year.

In these later days Chautauqua has continued to be popular in a legitimate sense—has even become much more so than at first—but most of

the universities and many of the colleges are now unwilling to be outdone. The regular college menus are displayed—cafeteria fashion—with a seductive array of pedagogical side-dishes, and the people swarm to them. In 1915 at the summer sessions of the leading twenty-three universities there were 35,642 students. Yet in the face of European war and California expositions, Chautauqua lost—for the first time in six years—only a small percentage of its more than 3000 students. In both college and Chautauqua camps there has been a skillful attack in the double problem of finding out what the public wanted, and of teaching the public to want what it ought to.

What has taken place at Chautauqua in the way of natural growth in the forty-two years since its founding can be stated in a formula which is almost too neat to be credible. The saving fact about it is that the for-

Sutton

Gertrude McKelvey Cawein, widow of the poet, is to read poetry at Chautauqua in August. Her programs include an afternoon of her husband's work and also readings from Masefield, John Luther Long and the Irish playwrights

mula states only the broadest aspects of a story which is humanly full of inconsistent and contradictory and—still worse—irrelevant details. They are inconsistent, like the decline of interest in Anglo-Saxon and the persistence of enthusiasm for Hebrew; contradictory, like the right-handed introduction of pageants and “moral-interludes” and the left-handed opposition to the theater; or irrelevant, like the rise and fall of “pyrography,” “mothercraft” and other ill-fated subjects of the moment.

Yet, largely speaking, the first stage in the Chautauqua summer schools was the oldest fashioned stage of study-for-knowledge courses. The founders started with a School of Languages, and a Teachers' Retreat, which was a school of pedagogy. When they introduced the first lectures on science, the lecturers did all the talking and experimenting and the students listened and watched; and for ten years they stuck to books and abstractions and had a pleasantly exciting time pursuing knowledge as it appeared on the printed page and was heard in the fluent period of the instructor and public lecturer.

The second stage marked the addition of various activity courses. The first three on the records happened to be an alliterative trio, music, microscopy, and mineralogy. It would have amounted to the same thing if they had been birds, botany, and bookbinding; the significance lay in the fact that two new kinds of work were being offered, science courses involving observation, and process courses demanding proficiency in technique. It was an important

step, tho merely in keeping with the progress of the times, for it led eventually to the present modest group of scientific subjects which can be well presented with the simple laboratory equipment available at Chautauqua and the rich natural resources of the region; and it led further to the present departments of Library Training, Home Economics, Music, Arts and Crafts, Expression, Physical Education, and Practical (business) Arts which were useful in 1915 to more than 1400 students.

The third aspect of Summer Schools—and all other educational work—is only now developing, and at Chautauqua is developing rather slowly. This is the direct attempt to promote a sense of social responsibility. One reason, perhaps, why this has been hitherto neglected in formal classroom study at Chautauqua is that the aroma of social service is generally permeative there. It is the twentieth century equivalent for the old time “odor of sanctity.” It suffuses the headquarters of the Department of Religious Work, it is wafted from the public platform in scores of sermons and addresses, and it is perceptible in the whole atmosphere of the city, in the woods, which is itself a vastly interesting social laboratory. Yet in the last two seasons courses have been introduced or re-established in history and social science, and this year the problems of internationalism at peace and at war will be discussed in class and conference as well as in lecture halls.

Thus the Summer School idea, undertaken very early at Chautauqua, has been adopted as widely in the colleges as the Summer Assembly

Olman

idea—which has converted Chautauqua to a common noun—has been adopted by the local uplifters and the enterprising bureau managers. And the evident reason is that both ideas are fundamentally sensible. The colleges recognize now that there are other adults than their own graduates who can get some good out of college courses, that if there is any virtue in the use of the margin, the first of all to be used is the wide expanse of summer, that the teacher in particular can gain more literal recreation by spending some of the vacation in the class room than by dedicating it all to the front porch.

Furthermore the Summer School idea is so practical and sound that nothing but its wide adoption has saved Chautauqua from being utterly overwhelmed by over-patronage. Rapid as have been the establishment of new schools and the growth of the old ones, Chautauqua has grown along with them. Permanent plants, libraries, and laboratories have given the colleges certain advantages that Chautauqua has always recognized; but as their superior equipment has logically confined certain kinds of advanced work to them, Chautauqua's superior flexibility has led to the experiments in new fields which have more than once led to further extension of college enterprize. There is little rivalry; only coöperation and parallel endeavor; and to any one with a bit of experience and some imagination it is perfectly clear that there are more things for the Summer Schools in the next generation than are yet dreamed of in the philosophy of 1916.

Chautauqua, New York

The Independent-Harper's Weekly NEWS-PICTORIAL

What the Balkans were to the peace of Europe—when there was peace in Europe—the railroads are to the economic prosperity of the country. Representatives of 235 systems on the one hand and 350,000 employees on the other have broken off their conference over the demands made by the Brotherhoods of Locomotive Engineers, Locomotive Firemen and Enginemen, and Railroad Trainmen, and the Order of Railway Conductors. A strike vote will now be taken. Elisha Lee, of the Pennsylvania Railroad, on the right, was chairman at the conference for the railroads; Warren S. Stone, on the left, Grand Chief Engineer of the Brotherhood of Locomotive Engineers, headed the union conferees.

THE MAN PREPARED

BY EDWARD EARLE PURINTON

AUTHOR OF "THE TRIUMPH OF THE MAN WHO ACTS"

HAVE you read the story of Pétain the Prepared?

Here it is. Read it, heed it, rouse your friends with it, save it for your children's children. Over the blackness and earthiness of the Great War it shines like a star in the night.

Only yesterday, as time goes, Pétain the Prepared was a common French soldier. Today Pétain the Prepared is the world-famed hero of Verdun, the idol of the French Army, the savior of the French people. Pétain did the impossible; not because he was Pétain, but because he was Pétain the Prepared.

He spent forty years getting ready for the crisis at Verdun. When the man was ready, the crisis called the man. Suppose he *was* sixty years old before his chance came—what of that? His job was to get ready—not go hunting chances. *You* may be thirty or forty or fifty, and your chance hasn't come. What of that? Your job is to get strong enough and big enough to handle your chance when it does come.

At the beginning of the siege of Verdun, a rabble of high-strutting military dolts had seats of honor over Pétain. That didn't worry him—he was too busy outgrowing the small place given him. They botched the defense, used the wrong tactics, lost men and ground. Pétain said nothing, he only worked harder getting ready. Thousands of good men, conscientious in their business or profession, lose the chance of promotion because they childishly criticize their superior officer, instead of learning silently from his mistakes and resolving to make *their* work error-proof.

HOW PÉTAIN WINS

PÉTAIN is a wonderful athlete—he holds the record for holding his tongue. He never talks of what he is going to do, he merely does it. And he never lets others talk of what he has done—he is already planning something so much bigger that his former achievement looks now like a boy playing marbles. In our schools, stores, factories, offices and armies may be seen hundreds of thousands of young men who move their tongues but nothing else. The more you are heard, the less you will be heard of. And fame? Oh, fame is all the things you didn't say about yourself.

In the stretch of his sixty years Pétain never had time to polish up the brass buttons of his uniform, wax his mustache, and visit the photographer with a smug self-conscious look of high elation. Pétain hates photographers. He muzzles reporters. He looks thru politicians. He regards fashion-mongers as he would ants. He sweeps away the artificial with one good swing of his fencing-foil, and his mind is always fencing. The man born to conquer does not let you think of his clothes. Fate never pinned a medal on the breast of a fashion model.

Another thing Pétain forgets. He forgets to count how many times he tries to do a thing—he just keeps on trying till he does it right. In this respect he is like Edison, Vanderlip, Burbank, Hammond, Eliot, Gary, Peary and others of our own great men. In advance of the crisis at Verdun *he* had charted on the map of his mind more than 500 strategic positions and martial encounters. For every move the efficient Germans made, or any move they could make, Pétain had a counter-move ready. We are all under fire, at the hands of Fate. Can we meet with the calmness, power and skill of Pétain each and any emergency that could arise in our business, our home, our financial, social and personal life? Have we figured out these emergencies ahead—five hundred or one hundred or twenty or even ten—and overcome them by forethought, imagination, diagrammatic detail?

Pétain is confessedly a dreamer. Not only that, but he proclaims it the duty of a soldier to think and dream battles! Are you ever tempted to ridicule a dreamer? Don't. He may some day command a situation that you, spiritually blind, could not even see.

One of the special delights of this remarkable warrior is a habit of doing hard jobs for others, after the specified others had failed to do them and said they could not be done. When the corps of a stupid general was in wild retreat, Pétain took charge, gave the men a spine, showed the men a man, led the men to victory. When the Germans fortified a key situation and called it impregnable, Pétain was summoned and was given

three days in which to break down the German defense. Pétain was thru the lines in three hours. What about that extra hard problem in your business or profession? Have you made it a habit to overcome in three hours any difficulty that your superior officer would take three days to solve? When your associates leave a task unfinished how long do you let it lie there a failure? Would you rather see it done than get your dinner on time?

Pétain has a number of watchwords—the slogans of his leadership and of his life. Among these are: Patience, confidence, independence, persistence, energy, tact, speed, concentration. He everlastingly drills these principles into his men. But first he made himself live them. Precisely what physical powers, mental traits and moral qualities are needed in you to make you a man the size of Pétain—equal to your chance when it comes? How are you developing these guarantees of greatness? Influence doesn't happen; it is a confluence of hidden forces in yourself. Men follow the man who follows a light. Your light, what is it? How hard are you following it? Would you die following it? If not, you could not serve as cup-bearer for Pétain. No man lives until he would gladly die for something greater than life. We are nothing to the world until our work is everything to us. Whether we have chosen to lead an army, or teach a school, or serve a parish, or build homes, or write poems, or cobble shoes, does not really matter. All that matters is how we lose ourselves in our work.

And two hundred thousand of the Kaiser's picked men lie rotting at Verdun. And two hundred thousand tons of the Kaiser's steel and copper have been aimed at Verdun—only to spend and bury themselves in the earth. Pétain the Prepared was stationed on the breastworks at Verdun. Calmly and surely, in his curtain of fire, he rolled back the world's greatest army. Not then was he Pétain. He was just The Prepared—an impersonal, overmastering force. The man prepared is a match for the world. To him the world must yield, before him the world must bow, of him the world must learn, in the end.

EFFICIENCY TEST OF PERSONAL PREPAREDNESS

FOR ANY MAN WHO EXPECTS TO WIN THE BATTLE OF LIFE

DIRECTIONS. Read first Mr. Purinton's article on "The Man Prepared." Then allow yourself enough time to think out these answers deliberately. Where the answer is Yes, write numeral 10 in blank space opposite. Where it is No, leave space blank. Where it is uncertain, write numeral under 10 expressing degree of assurance. This Test, while incomplete, is a fair gauge of the scientific, forward-looking, attitude of mind which tends to keep a man prepared for anything. Duplicate copies for your friends, clients or employees may be had from the Efficiency Publishing Company, Woolworth Building, New York.

1. Are you planning to do your best work after sixty?
2. At your present rate of saving money, will you be financially independent at sixty?
3. Do you know exactly how you would meet your worst possible "misfortune"?
4. Can you make every obstacle and failure a stepping-stone to a higher success?
5. Are you systematically overcoming your known physical and mental weakness?
6. Have you made a careful study of the maintenance of vigor into the years of old age?.....
7. Is the science of locating and seizing opportunity your continual study?
8. Do you accomplish more work, better work and better paid work, each year?
9. Are you like General Pétain (see article) in at least ten points of personal preparedness?
10. Are you strongest when fighting for a principle?

Add column of numerals and find your approximate grade in efficiency of personal preparedness

We are amazed and thrilled by the superb sight of one man holding at bay the mightiest army in the world's history. But when we look around, right here at home, we are shocked and appalled by facts as ugly as the feat of General Pétain was glorious.

WE ARE UNPREPARED

WE are the nation of the unprepared. It took nothing more than a cheap Mexican bandit like Villa to show how fearfully we were unprepared for war. But, for peace, and everyday life, and a safe and happy future we are as little ready. We are, in fact, the June-bug among nations. We start to buzz and bat around only when our day of opportunity is closing and the light in some other nation's house—the glare of war just lately—reveals the darkness in our own atmosphere. Look at these facts recently compiled by an expert.

Tho our national wealth is \$187,000,000,000 — three times that of France and twice that of Great Britain or Germany—about 12,000,000 of our citizens are in actual want, and one person in every ten dying in a large city is buried in a pauper's grave.

Every year we spend \$90,000,000 for candy, soda water and moving-picture shows; while to ethical and industrial education in foreign lands we give only \$20,000,000. Yet the stabilizing force of America's future is the religious extension work of today. We think more of our palate than we do of our posterity.

Our annual income of \$35,000,000,000 is the largest proportionate increase of any nation; yet we rank

fifteenth in relative number of savings-bank accounts; and of the 20,000,000 homes we occupy, more than 14,000,000 are encumbered by mortgage, rent or otherwise.

Nearly 2,000,000 children from ten to fifteen years of age are working—and growing prematurely old and sick, when they ought to be in school. Of our 18,000,000 adult wage-earners, 15,000,000 are inadequately trained or temperamentally unfit for the work they are trying to do; hence they can never succeed as they should. Every year 35,000 workers in American industries are killed, and 1,590,000 injured by shop machinery and railroads. This army of cripples, if saved and prepared, could effectively guard our entire coast from invasion by any foreign power.

The need for industrial, financial, educational and social preparedness is here, all about us, all the time. Must Fate plunge us in war to cleanse us of our national sins and follies? Or have we the courage and wisdom to redeem ourselves?

Now the individual is the nation. *The man who has formed the preparedness habit* is the man to save his country, his community, his family and himself. The technical details of national preparedness must be founded on the broad base of PERSONAL PREPAREDNESS. To be ready for whatever comes—physically, mentally and morally ready; here is the test for a soldier and a man!

To be prepared for life is to be ready in two ways—against calamity and for opportunity. Calamity is really opportunity hiding in a shadow. Our worst foe is usually our best

friend in disguise. Not then hating our foes, how may we discover them, attack them, outwit them, surpass them, learn from them without being injured by them?

How did Pétain hold Verdun? By learning who and what his foes were, their wonderful efficiency, and how and when and where they would probably attack—then massing all his forces behind his weakest point! Mental shrewdness we must have to locate our enemies, but also moral braveness to mend our own weak spots! The strength of a man lies in his wrath at his weakness.

What do you fear? Why? Fear is the guaranteed seed of failure. And everything we call misfortune is the fruit of some failure in ourselves. Do you fear pain, poverty, loneliness, grief, loss, unpopularity, abuse, drudgery, fatigue, responsibility, failure, disease, old age, death? Is there anything or anybody that could make you lose heart, or presence of mind? If there is, prepare! Be sure that whatever can test you most will some day come to you. Don't wait and have to run like a rat to its hole. Study your moves and martial your forces while yet there is time.

The common tragedy of life is to be unequal to the unexpected. The crown of every conqueror is moulded from a crisis; and in lifting or lowering men the agency of Fate is an emergency.

Make a friend of Misfortune; you will have a friend you can always count on. Ask yourself what the worst affliction could be, and prepare to meet it. Should it come, you might falter in the depths of sorrow, as all

The \$100,000 Man Who Went to School Again

Do you know why most inexperienced promoters fail in trying to raise money for a new business, and how to avoid their mistakes ?

Do you know what facts to get in order to figure the percentage of its sales that a business can afford to spend for advertising ?

Can you build up a safe, yet efficient series of collection letters ?

Do you know how to satisfy a bank as to your deserving a loan ?

What are the six things a business man should watch for and satisfy himself on before he signs his name to a business paper . ?

THIS is an inspiring story of a big-minded business man. Some men regret that their training in business is not *complete*. Some men never even realize it. This man realized it, but he did no regretting. Despite his wide experience, despite his huge income he left his business for a year and enrolled for a university course in business with men young enough to be his sons, while he *learned the fundamental principles* that were back of his income and back of his experience, so he could *control* them. The problems he had to solve in his business were far more complicated than those listed here. If any man cannot answer them, however, he should let the story of this business genius sink in.

Can you analyze the market of a proposition so as to tell accurately whether it will be cheaper to sell direct by mail, or through usual trade channels ?

Do you know how the manager of a business keeps tab on just how profitably each department is being run ?

Can you analyze a product so as to show what style of advertising is best for it ?

Can you pick from a book-keeper's trial balance or balance sheet, the essential facts the manager of a business should know ?

Could you apply the principles of Scientific Management to a new job ?

MANY BIG MEN DOING THE SAME

We men who are struggling along, earning \$1,000, \$2,000, \$3,000 and \$5,000 a year—worrying day and night to increase this a paltry few hundred—should beware not to consider this inspiring man exceptional. If we do, we may miss the lesson of him.

That Fatal Mistake!

We may make the mistake of thinking that we know enough about business; that this open-minded man was but a crank; that he, too, knew enough, but just wasn't satisfied. The fact is, he is far from exceptional. *The brainiest men in America today are doing what he did, for exactly the same reason he did it.* The only difference is that they do not have to leave their business as this man did. Instead, the Alexander Hamilton

Institute now brings this business training right to their desks or their home reading table.

Alfred I. DuPont, executive head of the DuPont Powder Companies, capitalized at \$120,000,000; Melville W. Mix, President of the Dodge Mfg. Co., a \$1,500,000 corporation; Geo. M. Verity, President of the American Rolling Mills, a \$5,000,000 corporation; N. A. Hawkins, General Sales Manager of the Ford Motor Car Co., Wm. Ingersoll, Marketing Manager of the biggest watch company in the world; and scores of other men, of like calibre.

The motives that prompted these men to this action; how they are profiting by it—and how you can profit are explained in the book "Forging Ahead in Business," which will be sent you free on request. To get it, clip the coupon below.

Already 40,000 Men Enrolled

One can hardly name a nationally-known business in this country, in which many of the coming young men, and often the leading executives, are not enrolled in the Alexander Hamilton Institute. In the United States Steel Corporation, no less than 450 rising young men are enrolled. In the Standard Oil Company, there are 215; in the Ford Motor Car Co., 185; in the Westinghouse Mfg. Co., 275; in the General Electric Co., 240; in the great National City Bank, 63; in the Pennsylvania Railroad, 76; in the National Cash Register Co., 187; in the Goodyear Tire and Rubber Co., 164;—and so on, down the list of the biggest firms in America.

Altogether, up to date, 40,000 live-wire men in business have enrolled in this great course of business training. Surely you should read the free book that explains the idea back of such a movement.

HOW MEN MAKE GOOD

What the Alexander Hamilton Institute has done for its subscribers will probably never be known in its entirety. But daily there filter into the headquarters in New York many intensely human stories showing how it helps men make good.

One day you hear of a brilliant lad of twenty-two, in a big New

York bank, rising to a \$9,500 job and giving credit to the Institute for his success.

The next day a factory manager writes that the course has just helped him save his firm \$7,000 a year, and that "a fair slice" of this went to increase his salary.

The next day a man in a Western concern tells how he saved the

firm \$37,000 a year by *one suggestion*, and what happened then to his salary.

A "copy writer" rises to be advertising and sales manager. A billing clerk wins a position as head accountant with his concern. A general manager saves his firm from impending bankruptcy.

These are only typical cases.

There are literally hundreds of them—many of them really amazing cases—of men grasping big opportunities, and succeeding in enterprises they dared never even attempt before. And it's all explained in a most interesting way in the free book "Forging Ahead in Business." To get a copy fill out and send in the attached coupon.

Based on the Actual Experience of the Most Successful Business Men

The Institute collects, classifies and transmits to you through the Modern Business Course and Service the best thought and practice in modern business. It will give you a thorough and sound training in the fundamental principles underlying all departments of business—it will give you a knowledge that could be otherwise obtained *only* by years of bitter experience—if at all.

Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Alexander Hamilton Institute. This advisory council includes Frank A. Vanderlip, President of the National City Bank; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the famous engineer; Joseph French Johnson, Dean of the New York University School of Commerce, and Jeremiah W. Jenks, statistician and economist.

"Forging Ahead in Business"

A careful reading of his 128-page book, "Forging Ahead in Business," which we will send you free, will repay you many times over. It will help measure what you know—what you don't know, and what you should know—to make success *sure*. Every business man with either a business or a career to guide to bigger, surer success, should read this book. You need send no money for it—simply the coupon below.

Know a man by his "hand"

This book, "What Your Handwriting Reveals," gives the clues to character revealed by every person's penmanship, as described by William Leslie French, the celebrated Graphologist. It is illustrated with fifty specimens of handwriting. You will probably recognize yours among them.

A new edition has been printed to supply the great demand. If you desire a copy, it will be sent with twelve different patterns of Spencerian Steel Pens on receipt of 10c.

If you desire to try a Spencerian Pen, we will be glad to send you sample free, on request. Say if you prefer stub or fine point. Mention this magazine.

Spencerian Pen Company
349 Broadway, New York

must falter when human hearts break; but men should in the end pursue the plan laid out, and go on with their work. How would *you* meet *your* keenest hardship, rise to your most painful test, bear your supreme loss? Prepare for the hardest thing, and all things grow easier.

FOES YOU MUST MEET

DIVIDE your campaign of personal preparedness into lines of defense and offense, with your foes and your allies properly balanced. First, as to defense. Among the assailants for whom one should prepare are these: Failure, Sorrow, Disease, Age, Death. Why let these foes rush upon us and ride over us—us with our armor off, guns spiked, swords dull and flags in the dust? We should, we can, forestall them; by summoning as our allies Faith, Courage, Knowledge, Forethought, System, Science, Work.

Prepare to meet Failure. And not once, but often. I know a man who had twenty battles with Failure, one after another, and each fight seemed lost. His war with Failure lasted thirty years. At the close he had so everlastingly routed Failure that the world crowned him the most successful man in his field who ever lived. Few of us fail enough. Envy the man who makes a big mistake, he's going somewhere—but pity him if he makes it twice, he's crawling back. When Failure attacks you, mark the weak spot aimed for and strengthen it. Do this well enough, and Failure stops.

Prepare to meet Sorrow. If your best friends should all die or desert you, could you face the world with a smile? If you lost all your money, would you feel just as rich? If you lost your reputation, would you have as much character left?

Prepare to meet Disease. If you want to endear yourself to your wife, learn to endure pain as sweetly as she can. There is nothing to fear in disease—except the fear. But almost every man has a constitutional weakness that he must guard against. What is *your* weak spot—heart, stomach, liver, lungs, kidneys, nerves, eyes? Are your daily habits ordered with a view to correcting that and keeping your health defense high?

Prepare to meet Age. What are you going to do when you're seventy or eighty? Loaf on your family and friends? Depend on their charity—moral or financial? Mumble of the past and hobble in your mind as in your muscles? Die in heart and brain before you die in body? Or grow younger, stronger, wiser, braver, happier and better as the little years go by? Will you be financially inde-

Time! ARNOLD BENNETT and Providence have endowed us with twenty-four hours a day.

Carnegie and the lowest worker in his mines, Wanamaker and his youngest errand boy, Rockefeller and the garage workers who sell his gasoline—all have the same.

But until Ingersoll made the watch accessible to the millions only the *well-to-do* had time; poor people *guessed* at it—and continued poor.

*The Man Behind
the Counter*

There are Ingersoll Watches for everyone: Little ones, big ones, watches to be carried in the pocket; to fit on the wrist; to stand on the desk or table; to go into ladies' hand bags; to be fastened beside the bed or the stove in the kitchen; the new "Radiolite" that tells time in the dark; in all twelve different sizes and kinds from the famous Dollar Watch to the new, thin, 7-Jeweled, accurate, bridge-model Reliance at \$3.00.

MATSUMOTO-DO
Dept. 530 Tokyo, Japan

pendent at sixty? Are you absorbed in a fine work that you can still be doing, no matter how old the world calls you? A man should be in his mental prime at sixty. Whoever is not, died in his youth.

Prepare to meet Death. Not only in a religious sense, but in a psychological and biological sense. Do you know what Death is for, why necessary, how welcomed—and yet postponed? Have you studied the conclusions of the world's thinkers, scientists and philosophers regarding the final transition? Are you so thoroly convinced of the truth of immortality that you rely on it merely as an intelligent man, quite apart from the faith of your church? All that dies when we die is our fear of Death. When we overcome that we can die as calmly, bravely and superbly as the millions of soldiers whose hearts remained whole as their bodies bled away on the battlefields of Europe.

PREPARE FOR THE BIGGEST THING

BUT the test and sum of our preparedness is to prepare for life—to wage an offensive warfare as fiery as our defensive is firm. The great thing to fight for is opportunity. Gain this, hold it, utilize it, and you have won the world.

The president of the largest corporation of its kind in the world states that he always has a number of \$10,000 positions waiting, unfilled and unasked for. He can't find the men to hold them. A \$10,000 man is sure of a job, while a \$500 man goes begging. Are you a \$10,000 man, or more? If not, why not? If you don't expect some day to be earning five times what you earn now you should be ashamed of yourself. You are mentally asleep. Of course, a man can be a moral giant—and financially poor; but if he knows his job, works his job, and has a job worth having, he won't stay poor.

Your big chance, has it come? Are you sitting around waiting for it? Then you will die Expecting. Pull yourself together, prepare for your chance, get up and go out and hunt it. You can no more get a chance without a focus than you can get a picture without a camera. Put your mind in shape to record and develop your chance when it looms ahead.

Prepare by *action*. Things turn up for the man who digs. Doing big things means trying new things. A man, like a tree, is fruitful only after he branches out.

Prepare by *thrift*. The chance of a lifetime may be lost because you haven't a few thousand dollars, or even a few hundred, in cash for immediate use. Never let a pay-day go by without putting something in the

Barreled Sunlight

A Tungsten for Sunlight

Reg. U. S. P. Off.

What Tungsten Filament did for electricity, Rice's Gloss Mill White (Barreled Sunlight) does for daylight. Treating ceilings and walls of factory buildings with it increases daylight 19% to 36%—saves half to three quarters of an hour of time you would burn artificial lights.

RICE'S GLOSS MILL WHITE

is an oil paint made by a special process discovered and owned exclusively by the makers. There is no substitute. It is the only oil paint giving a glossy tile-like finish at no more expense than lead and oil paint. It is as clean as it is bright—can be washed like a piece of white china. Sanitary.

By the Rice Method, it can be applied over old cold-water paint. Over 3,000 plants have proved Rice's the most efficient finish for ceilings and walls. Repeated tests have shown without a single exception that Rice's remains white longer than any others. Users are protected by the Rice Guarantee.

Write for our Booklet—"More Light"

U. S. GUTTA PERCHA PAINT CO.
30 Dudley Street, Providence, R. I.

On Concrete Surfaces

On inside concrete, Rice's Granolith makes the best possible primer for a second coat of Rice's Gloss Mill White.

RICE'S GRANOLITH

Headaches—How Prevented

Most headaches come from causes which you may easily remove by giving a little more careful attention to what you eat and drink and the way you work, rest, exercise and sleep. This is fully explained in a new book called "Headaches and How to Prevent Them." The author is a famous Nerve Specialist who has had years of experience in treating and prescribing for cases in which headaches have been an almost invariable feature. Therefore, what he tells you in his book this famous Doctor has learned from actual experience in daily practice. He teaches the importance of correct diet (proper food combinations), daily exercise, and rest and sleep under right conditions—only natural measures which you may easily apply right in your own home and soon learn to follow as a matter of natural and everyday habit. Your headaches disappear—you feel keen, active, strong and full of energy. **Get this book, read and follow it, if you would be permanently rid of headaches. Price only \$1.25, or FREE with an 18 months' subscription to GOOD HEALTH for only \$3.** Write for the book today.

Sent for FREE Examination

Before you send a penny you may examine this book to see whether it is what you need—to find out whether you wish to follow its recommendations for the relief of headache suffering. Write your name in the margin of the coupon and mail it today. We will at once send you the current issue of GOOD

HEALTH and a copy of "Headaches and How to Prevent Them." If you keep the book, you agree to remit \$3 and we send you GOOD HEALTH for 18 months. If you don't want the book, you agree to return it in 5 days, and the examination will not have cost you a penny.

Send No Money—Just the Coupon

GOOD HEALTH PUBLISHING CO.

306 Main St., Battle Creek, Mich.

Send me, all charges prepaid, "Headaches and How to Prevent Them," and the current issue of GOOD HEALTH. After examination I will remit only \$3 for 18 months GOOD HEALTH and keep the book FREE—or I will return the book within 5 days at your expense. (Write name and address in margin.)

NEW GOLD CAMP--BIG FINDS

Six great companies already developed and many others in the making. FREE maps and bulletin concerning ARIZONA TOM REED, in the heart of the district. Owns 9,000 ft. of the Great Pioneer Vein System. One mine has paid 250%. Write today! R. B. DICKINSON, Dept. R., Los Angeles, Cal.

bank. Learn the fascination in watching money grow. Study the science of investment. Plan what you will do with the money you have saved. Ask a rich man, or a bank president, how to save most wisely. Get a book on thrift, and read it in the family, then start together to economize.

Prepare by *work*. More work, better work, faster work—follow these steps and nothing on earth can keep you down. The time to go to work is an hour before you have to. Make believe you like work as much as play. Do your work so well you are proud of it—then you will like it. Failure sits on the doorstep of the man who hates what he has to do. You say you aren't appreciated and you aren't paid enough? Do you need a pat on the head and a sugar-plum for doing what you ought to do? In the end, work wins. The hardship of the present means nothing when the hope of the future means everything.

Prepare by *study*. Carry a book in your pocket as an efficiency habit. Learn self-improvement in your spare time. Locate and investigate the correspondence schools that may teach you self-advancement. Join some national organization of leaders in your profession; and equal, then surpass, the leaders. Know all the magazines and books of technical worth in your line. Study your men, materials, methods with the zeal you would put into a game of chess or baseball. Study yourself constantly, humbly, critically, ruthlessly; and make yourself over as you will have to, to make yourself overcome the world.

Prepare by *service*. Only what we do for others makes us immortal. This life is so short we cannot afford to waste it in self-seeking. And the big chance comes to him who is ready to advance the welfare of the world. The great misfortune is to worship fortune. Every man who earns a huge salary, from the President of the United States down, made his place by exalting the service rendered above the money received.

Personal preparedness, the need of the hour, will be the watchword of the man out to win.

Here's to the brightness of your armor, the keenness of your sword, the steadiness of your march, the pulse of your fighting blood!

Every full-size man has to fight; the man who is wrong has to fight himself, and the man who is right has to fight the world. Hail to you, conqueror, in both battles! Some have bled more than you are bleeding, yet have lived to wear the laurel-wreath. And the real reward of any triumph is to know you can!

Pleasant Comment on the Union of Harper's Weekly with The Independent

HON. WOODROW WILSON, President of the United States: The combination of The Independent with Harper's Weekly seems to me a particularly happy thing. The two journals have grown thru very much the same period of our national life, each has maintained high editorial standards, and both have acquired a permanent hold upon the interest of thoughtful people thruout the country. I congratulate you upon the happy combination.

HON. THEODORE ROOSEVELT, ex-President of the United States: I am heartily glad to congratulate you upon what you have just accomplished. I have been intimately associated with the president of the Independent Corporation, the publisher and the associate editor of The Independent in journalistic work in recent years, and they and their associates have my very best wishes for their continued success.

HON. WILLIAM H. TAFT, ex-President of the United States: I am very glad that The Independent has taken over Harper's Weekly. I am sure that this union of two of the oldest and best known periodicals under the single management of The Independent will be for the public good.

HON. CHARLES W. FAIRBANKS, ex-Vice-President of the United States: I thank you for copy of The Independent, with which Harper's Weekly has been incorporated. I heartily congratulate you upon this forward step of The Independent. The Independent and Harper's Weekly have for many years been upon our regular list of family magazines. They have each exercised a widespread and wholesome influence. The consolidation, I venture to believe, will greatly strengthen their power for good thruout the entire country. Accept my best wishes in your new undertaking.

HON. CHARLES S. WHITMAN, Governor of the State of New York: I want to congratulate both parties to the union. I am sure that I express the sentiment of all who like myself have read the two periodicals for many years when I wish for the new weekly long life. May it render as real and genuine public service in the years to come as have the two journals out of which it has grown each rendered in the years that are gone.

MAJOR-GENERAL LEONARD WOOD: I congratulate your company on the taking over of Harper's Weekly, and trust that under your direction this well known weekly will resume the place it so long held as one of our very influential publications. Its coming under the control of the Independent Corporation places two of the oldest and best known periodicals in America under a common management.

HON. R. C. STEARNES, State Superintendent of Public Instruction, Virginia: The merger of The Independent and Harper's Weekly means the combination of two good things whose long recognized usefulness will be quadrupled in the future. In the past I have read both periodicals with pleasure and profit. In the days to come I expect to derive even greater satisfaction and more substantial benefits from the combined magazine.

HON. A. O. THOMAS, State Superintendent of Public Instruction, Nebraska: If this union produces a magazine in keeping with the strength of the two contracting parties, I am sure it will be a very valuable contribution to the reading public.

HON. E. J. TAYLOR, Superintendent State Department of Education, North Dakota: The new journal, if it may be so called, is one which will surely meet with great popular favor.

HON. JOHN D. SHOOP, State Superintendent of Schools, Illinois: The blending of these two great publications with their wealth of history and influence contributes to the literary world a noteworthy example of progress. Each rich in history and

prestige will supplement the other in the larger field of influence on which they are now entering.

HON. JOHN PURROY MITCHEL, Mayor of New York City: Let me congratulate you on the first issue of The Independent since its absorption of Harper's Weekly. It is highly attractive in its new form. It is as true in journalism, as in most other public and semi-public enterprises, that money standards exercise entirely too much influence, and that we have not enough independent and uncontrolled forces devoted solely to the pursuit of ideals and principles. The Independent has always stood for moral freedom, for official honesty and for the advancement of the true interests of America. It is fortunate that it inherits in Harper's Weekly a splendid spirit and tradition of the same kind from the régime of Mr. Hapgood. I wish you increased prosperity and usefulness.

HON. ALTON B. PARKER, Former Chief Justice of the Court of Appeals of New York: It is a rare union that brings together two publications each having so many years of character building to its credit as The Independent and Harper's Weekly. May the absorption of the latter prove as satisfactory to the owners of The Independent as I know it will to the readers of Harper's.

HON. JOB E. HEDGES: With real interest I note the taking over of Harper's Weekly by The Independent. With the historic context of each of these periodicals there should be added momentum and influence given to The Independent. That periodical occupies a unique field in presenting its weekly summary of local and world events. It seems to me that The Independent is particularly fortunate in its policy. While taking its own stand on all questions to which it draws attention and giving its reasons, it had never appeared to me to do it in such a dogmatic manner that it leaves the reader to two alternatives, of either accepting its views or placing himself beyond the purview of The Independent's approval. It performs a real service in provoking thought on the part of its readers and furnishing them enough data to come to their own conclusions.

SIR EDMUND WALKER, of the Canadian Bank of Commerce, Toronto: I am sure you are to be complimented upon the incorporation in The Independent of a journal such as Harper's Weekly, the memory of which carries one back so far in the history of the United States. That in this way its life should be continued must be a gratification to countless individuals in America.

MR. GEORGE W. PERKINS: I wish you success in your new enterprise. It is full of attractive possibilities and I am sure they will be worked out to the best advantage of the community as a whole.

MR. OSWALD GARRISON VILLARD: The steady growth and development of The Independent is a profound source of satisfaction to all people who believe in clean, responsible and conscientious journalism in America. May it long enjoy the prosperity it deserves.

PRESIDENT J. G. SCHURMAN, Cornell University: You deserve congratulations for your success in uniting these two of the oldest, most distinguished and most progressive and enlightening periodicals in America. As a journal of civilization I wish it the fullest measure of success.

HON. EDWARD HYATT, State Superintendent of Public Instruction, California: I have just seen the first issue of The Independent as combined with Harper's Weekly. Concerning this union of two of the best known periodicals in America, what God hath put together let no man put asunder! I am sure the union will bear good fruit, and I hope to be able to dance at the golden wedding.

HON. JACOB H. SCHIFF: My congratulations upon the consolidation of two of the oldest and most serious weeklies, both of which have retained—notwithstanding the length of their existence—youthful vigor in the treatment of the great issues and problems of the day. I can only hope, as I believe, that this union is destined to bring forth the best and most advantageous results to your increasing circle of readers.

MISS JANE ADDAMS: By rather a curious coincidence I find that the two periodicals I remember from my earliest childhood are The Independent and Harper's Weekly. I suppose my father had other periodicals on his table but those are the two which seem to have remained in my mind, and thru the half century since I have always read them fairly steadily. I am, of course, enormously interested in the incorporation. If the spirit of each can be preserved it will be a wonderful undertaking and I congratulate you upon being at the head of such an interesting experiment in "reconstructing the world in which we live."

MR. DARWIN P. KINGSLEY, President New York Life Insurance Company: I was delighted when the last Independent came to notice, in familiar form, and as a part of the title the words Harper's Weekly. To us older chaps who knew the Weekly when Thomas Nast made his tremendous appeal to the American conscience, the entire disappearance of the publication seemed almost a tragedy. I am glad that you have preserved the name and I have no doubt you will give place, in the new and greater Independent, to the spirit that made the Weekly such a power in the sixties.

HON. CLINTON ROGERS WOODRUFF: The merger of The Independent and Harper's Weekly is a significant event in weekly journalism and will, I think, go far to demonstrate that two and two sometimes make more than four, especially when the units added represent so much in the way of progressive thought and activity. I anticipate that the enlarged Independent will surpass all of its former most creditable records.

MR. HENRY A. WISE WOOD, President American Society of Aeronautic Engineers: I think it a great good fortune that the readers of Harper's Weekly should have had that publication fall into your hands. What you are doing for the columns of The Independent by way of illuminating our national problems and making them easier of solution makes of your publication a public service institution of the highest value. The readers of Harper's are most fortunate in thus having been given the opportunity by you of joining The Independent family.

MR. ROBERT UNDERWOOD JOHNSON: The public is to be congratulated that Harper's Weekly has fallen into such good hands as those of the conductors of The Independent, since its readers will find there the best traditions of the good old type of literary weekly which was so vital and so popular in the period after the Civil War.

HON. CHARLES M. DOW, President National Chautauqua County Bank and former President of the Commissioners of the State Reservation at Niagara: I am always interested in each step in progress of The Independent, which I have read since boyhood. You are to be congratulated on combining with your constituency that of so well known and highly respected a publication as Harper's Weekly. It cannot be regarded as other than a noteworthy event in publishing circles. From the days of George William Curtis, editor, and Thomas Nast, cartoonist, Harper's Weekly has exerted a wide influence on public sentiment in this country. Its former readers will find in The Independent under its present management no loss in vigor nor

independence of thought, and plenty of broad mindedness and liberality.

HON. ALBERT J. BEVERIDGE, ex-Senator from Indiana: Accept my hearty congratulation on having acquired Harper's Weekly. The combination of these two famous journals, The Independent and Harper's Weekly, under your able management, is a notable event in the American literary world. I am delighted with the number of The Independent which you were so kind as to send me. It is admirable from every point of view. I am sure that the union of these two historic periodicals will receive that support from the American public so richly merited by the benefit which this splendid publication gives to its readers.

MR. RICHARD B. WATROUS, Secretary American Civic Association: The marriage of The Independent and Harper's Weekly is a happy one, and the admiring friends of both periodicals are sure to watch with keen interest and profit the successful progress of the united magazines. It would be hard to imagine a better Independent that it has been for the past two years, but this union opens the way for still greater achievements.

HON. PHILIP H. GADSDEN, President Charleston Consolidated Railway and Lighting Company: It was with a great deal of satisfaction that I learned of the incorporation of Harper's Weekly with The Independent. These two periodicals have so long represented the very best thought in our country's life that it is great satisfaction to their readers to know that they have now been brought together under the same management, which is a guarantee that the ideals and principles which they have both so strongly supported and advocated will be preserved for the future, and that their usefulness in guiding and moulding the public thought of America will be enhanced as the years go by.

MR. J. HORACE McFARLAND, President American Civic Association: The Independent has always been just that, if one thinks of independence as upward and forward looking. For Harper's Weekly I have the affection based upon just about fifty years of acquaintance, with the further feeling that its summit of usefulness is yet to be reached in the combination thus just happily effected. If the management of the joined periodicals shall be such as to cause me to think of Harper's Weekly when I see The Independent, and to favorably note The Independent when a Harper's Weekly feature sticks out, then the marriage cannot possibly have other than a wholly favorable outcome.

MR. WILLIAM F. DIX, Secretary Mutual Life Insurance Company: Here are two historic American weeklies which have never lost their dignity through all the changes of magazine fashion nor their hold on the respect and interest of the better class of the reading public nor their close touch with life, joined together to work henceforth as one. The union is a happy one, the subscribers of each are to be congratulated, and you, my dear Mr. Howland, and your associates, are abundantly able to carry forward the high ideals of these two great American periodicals. May a greater success than ever be yours.

MR. MARSHALL BALLARD, Managing Editor *New Orleans Item*: It has been my impression for some time that The Independent has been "coming." Let me express the hope that the two ancient yoke fellows shall derive a new access of youth and vigor from their union.

MR. JOHN A. STEWART, Chairman Executive Committee American Peace Centenary Association: Harper's Weekly and The Independent are bound to the memory of my youth by an indissoluble tie. Such a conjunction of reputation, character, stability and high-minded but human usefulness is one that must appeal to the American people and bring success to the venture so auspiciously and characteristically launched.

DR. CHARLES F. THWING, President Western Reserve University: The union of The Independent and Harper's Weekly is to me a rather personal matter. It takes on the relation of a marriage. For decades I have been a contributor to each. But what I have given to the papers is as nothing to that which they have given to me in opportunity and in enrichment.

DR. GEORGE F. KUNZ, Vice-President Tiffany & Company: I hope that, under the able administration of your splendid corporation, Harper's Weekly will again acquire the place it occupied for so many years—I read it from earliest boyhood until recently—and I have every reason to believe that with your joint abilities and energy, you will make this one of the great periodicals of the country. I wish you every success.

DR. JOHN H. FINLEY, Commissioner of Education of New York State: As one who had to do, for a little time long ago, with that journal of civilization, Harper's Weekly, whose torch is still to be kept burning in the hands of The Independent, I send my good wishes and pray that the flame may leap to greater brightness.

MR. RAYMOND B. PRICE, Vice-President United States Rubber Company: In these times when the unselfish thought and action of every intelligent American citizen are necessary to overcome the abnormal difficulties with which American democracy is now threatened, it must be a rare satisfaction to be connected with a great publicity organization with its almost unlimited power for helpfulness. The fine traditions surrounding Harper's Weekly, and the worthy ambitions of The Independent combine to present a most unusual opportunity for usefulness to this country, and I wish you the fullest measure of success in your great undertaking.

HON. CONRAD H. SYME, Corporation Counsel of the City of Washington: The date, May 22, 1916, marks the confluence of two of the most powerful, truth-seeking and right-thinking forces which have manifested themselves in American journalism. Since 1848, The Independent has sought to truly teach the American people to look forward along righteous lines of political, economic, and ethical progression. It has taught the fundamental principles upon which moral, intellectual, political and economic freedom must be attained; its teachings have been untouched by personal interest and untarnished by unworthy motive, and Harper's Weekly has pursued a similar course of principle. Neither has ever been tongue-tied by authority, shackled by material money standards, or "hog-tied" by self-interest. The combination of the moral and ethical forces of these two publications into united effort along the familiar paths by each so long separately pursued, can result in nothing but great good to our country.

MR. HENRY H. HUNT, Conneaut, Ohio: I want to take off my hat to you on this great achievement. Your publication stands at the head of weekly papers in America, if not in the world.

HON. THOMAS W. MEACHEM, President New Process W. Meachem: The union of two such influential and elevating publications as The Independent and Harper's Weekly is a truly eugenic marriage, promising a plentiful progeny of vigorous and lofty ideas and entitling the matchmaker to the thanks and hearty congratulations of the reading public. May the two who are now one live and prosper.

HON. ELIHU ROOT: I was brought up on The Independent *inter alia*, and I am rather glad that in the combination it has had the lion's and the Weekly has had the lamb's part.

MR. HENRY WOODHOUSE, Governor of the Aero Club of America: Both The Independent and Harper's Weekly have performed a great public service during the past half century as educative forces, and I am sure the amalgamation

will result in the continuance and acceleration of the excellent work these two journals have to their credit.

PROF. A. T. ROBERTSON, Southern Baptist Theological Seminary: I wish you great success in your tremendous opportunity for service represented by the combination of Harper's Weekly and The Independent.

HON. HERBERT W. RICE, President U. S. Gutta Percha Paint Company: I am very much pleased to see that The Independent has taken over the famous periodical Harper's Weekly, thus combining two of the oldest and best known periodicals in America. I do not see how the Harper's Weekly could have fallen into better hands.

DR. HENRY STURGIS DRINKER, President Lehigh University: May I, as a member of the National Institute of Efficiency, of which The Independent is the official organ, express my congratulations at the incorporation of Harper's Weekly with The Independent? This joinder of two of the oldest and best known periodicals in America should certainly result in great benefit to the reading public.

HON. PAUL A. SCHOELLKOPF, Commissioner of the State Reservation at Niagara: I have before me The Independent of May 22, which is an earnest that the high standards maintained by that journal for nearly seventy years, and by Harper's Weekly for nearly sixty years, will be continued in the unified publication whose life of well doing will be, I trust, at least one hundred and thirty years. Every page is full of interest and "punch."

HON. A. T. CLEARWATER, President New York State Bar Association: I have no doubt but that the combined publication will prove to be a benignant and beneficent factor in the progress of civilization, always in the lead of the advance, but never destructive of that which is good. That you will deal fairly with those great questions regarding the solution of which men inevitably differ, and ever will lean to the protection of the rights of the individual as against the oppression of the mass and the powerful is taken for granted by all of us who long have been numbered among your admirers.

MR. PAUL U. KELLOGG, Editor *The Survey*: The uprising of The Independent has been one of the big, encouraging things in journalism in the last ten years. Here's to the next ten. In the days of its adversity and short commons, the two factors which, to my mind, enabled it to come thru were its hospitality to thinkers whose causes were as yet unwon, and the grit of its editor in holding to the full human significance of the magazine's name. With those two factors to hold to, the new and combined magazine need not fear even prosperity.

HON. GEORGE J. MEYER, Commissioner of the State Reservation at Niagara: It affords me great pleasure to learn that the Independent Corporation has acquired Harper's Weekly. This will certainly enhance the value materially of your already famous and widely read periodical, and the two papers incorporated as one will undoubtedly become one of the most desirable periodicals issued and have a tendency to largely increase in circulation.

MR. FRANK KNOX, Editor *Manchester Union*: I congratulate you upon this consolidation and wish for the consolidated magazine a most prosperous and useful career.

MR. GEORGE BATTEN, of the George Batten Advertising Company: I haven't a doubt that The Independent-Harper's under the new conditions will attain an important place in American journalism and secure the circulation and advertising patronage that it deserves.

MR. G. R. CHADBOURNE, Editor *Daily Kennebec Journal*: The combination "looks good" to us. A journal of independent thought and a journal of civilization,

AGAINST INVESTMENT LOSS

there is but one protection—alert application of sound business principles. As a prudent person, you would not think of lending money to an individual until you were satisfied not only of the value of the security offered, but also of the character of the person soliciting the loan.

Now, it should not be so, but the same attitude of mind is not always preserved by the person who becomes a partner in a corporation through the purchase of its stocks, or who becomes its creditor through the purchase of its bonds. The cases are identical.

Yet it is an indisputable fact that men who are careful, intelligent and successful in their ordinary lines of business often exercise so little judgment in the selection of securities that they lose all or the greater part of the money invested.

But how, you ask, can the investor obtain the same detailed knowledge before investing as he would require in ordinary business transactions?

There are card reports—the daily revised Standard Corporation Card Reports—which embody all known facts.

It would be a mistake to represent that Standard Corporation Card Reports can supply information which a corporation refuses to furnish stockholders regarding its own affairs. But Standard Corporation Card Reports do assemble, classify and analyze all available information in a way to make it comprehensible to the user.

No opinions are given, but by remarkable analyses the strength or weakness of a corporation is accurately outlined. With Standard Corporation Card Reports it is entirely possible to tell if a corporation is going forward or backward, if its growth has been healthy or unsound and if it promises well for the future.

Standard Corporation Card Reports are available at 50 cents each.

You would insist on getting detailed reports of any business you were about to engage in. Is it, then, any more than ordinary business caution for you to fortify yourself with reports covering your investments?*

List the corporations on which you would like to have the latest reports. Enclose check, money order or stamps, and the latest Standard Corporation Card Reports will be forwarded you at once, postage prepaid. Your inquiry will be treated as confidential, and your money will be cheerfully refunded upon request.

STANDARD STATISTICS CO., Inc.
47-49 West Street, New York

*Standard Corporation Card Reports have been used for 10 years by the leading banks and investment houses who have them on file for their own and their clients' convenience.

PLEASANT COMMENT

(Concluded)

each standing for human rights and national progress for generations, are joined; the issue should be a triumph for eugenics! The Independent was all that could be asked by the lover of moral freedom and the student of "both sides," but the merger is more.

PROF. W. W. JOHNSTON, Michigan Agricultural College: Congratulations to the management of The Independent! Each of the two magazines now combined has had a long and honorable history, and each has today a well established reputation for independent, courageous, and progressive leadership.

MR. J. WALTER THOMPSON, of the J. Walter Thompson Advertising Agency: I note that you have incorporated the famous periodical, Harper's Weekly, with The Independent. This seems fitting in every way. The putting together of two famous journals ought to make one that will be par excellence of its kind. Both of these publications date back in my own recollection at least fifty years, and with their united clientele and interest should become more than ever a factor in the publishing world.

MR. HOLLINGTON K. TONG: I learn with great pride of the incorporation of Harper's Weekly with The Independent. I am sure that under your able and efficient management the merged Independent will achieve even greater success in the field of magazines.

MR. ARTHUR M. WOLFSON, Principal Julia Richman High School, New York: I have always liked the clean, fresh, forceful point of view of The Independent. Harper's Weekly has expressed my idea of leadership. I am sure that the combination will double the value of the paper.

MR. WILBUR D. NESBIT, Chicago: I note with pleasure that Harper's Weekly has been combined with The Independent. I know that is going to be a good thing for Harper's Weekly, and I certainly hope it will be a mighty good thing for The Independent. You are getting out a splendid periodical. Everywhere I go, I find it on the table of the really live people.

MR. FRANK A. ARNOLD, Editor The Countryside: The famous "War Weekly" is no more, but in The Independent, with its broad, forward outlook, the loyal supporters of Harper's Weekly will find reflected the type of constructive editorial treatment to which they are accustomed, and which will result in permanently transferring to The Independent this large clientele of new and eminently desirable readers.

GRACE RAYMOND HEBARD, Librarian University of Wyoming: It was with sincere regret that I took a wet sponge and a sharp knife to remove the label which for twenty-five years of my librarianship in this university had marked the place in the periodical racks for Harper's Weekly. I feel as tho a friend has gone away, but leaving behind him a most pleasant remembrance. There is one compensation in the disappearance of Harper's Weekly, which has appeared to us fifty-two times a year and given to us many pages each week of desired information, that it is to be wedded to The Independent, which is also one of the household idols.

HON. CHARLES H. LUGG, Superintendent State Department of Public Instruction, South Dakota: What the American people need and what they can appreciate just now is a publication that will give them the facts of the world's news without coloring and without distortion to promote the interests of any particular propaganda. The Independent has been a standard publication for impartial information; Harper's Weekly has been particularly noted for its happy hits in cartoons and illustrations. The combination will find a large field of usefulness and an appreciative army of readers.

NAPOLEON'S disastrous Russian Campaign marks the beginning of his downfall. This map herewith shows his line of march from Berlin to Moscow, a distance of 1200 miles. This march by Napoleon at the head of over 600,000 trained soldiers was made in less than four months. Moscow was captured, but the Russians burned their famous capital and all supplies, forcing Napoleon to retreat in mid-winter. He reached Paris with less than 100,000 men, over half a million of his trained soldiers having fallen along the line of that disastrous retreat.

Once again the thunder of invading armies has awakened Russia from her lethargy. Will the rigors of the Russian climate again prove the salvation of that nation and the turning point in the present tremendous European War? All the causes of the present conflict—the deep racial antipathies, the commercial rivalries, the sting of past defeats, the vaulting ambition for world empire—may be discerned from the pages of history, and the one great history of every empire, kingdom, principality and power, from the beginning of civilization to the present, is the world famed publication,

Ridpath's History of the World

Dr. Ridpath is universally recognized as America's greatest historian. Other men have written histories of one nation or period; Gibbon of Rome, Macaulay of England, Guizot of France, but it remained for Dr. Ridpath to write a history of the entire World from the earliest civilization down to the present. We offer the remaining sets of the last edition

Rise and Fall of Nations

Here you discern the causes which have led to the overthrow of monarchies and kingdoms. Peoples and races, and if History has proven any fact it is that the rich and defenseless nation must sooner or later fall beneath the heel of the more warlike and aggressive power. If you would know the fate of the rich and defenseless nation then read the story of ancient Assyria or Chaldea or Persia or Babylon whose glory now is but a memory must favor adequate preparation for self defense against the aggression of warlike powers. Dr. Ridpath gives the complete history of every race, every nation, every time and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and inspiring has ever been written.

Independent Opinions

We have received several criticisms of the article by J. O. Dimock on "The Farm Horse Doesn't Pay" in our issue of May 29. Of these replies we pick out the following letters for publication as they seem to be based upon experience and careful counting of the relative cost of horse and tractor:

I have farmed all my life, have raised horses, bought and sold horses and have used horses for my farm power. I have also used a tractor and have one at the present time.

I believe the tractor is practical for a large farm of 200 acres or more where the fields are level, the soil is firm, and the fields are square or rectangular, and providing the tractor has a good engineer. I do not, however, believe Mr. Dimock's statement, "that the tractor is of no expense so long as it is not running." For example, say we pay \$1000 for a tractor and borrow the money, paying interest at 8 per cent or \$80 per year. I figure it takes about 2½ gallons of gasoline to plow one acre with any tractor, making a cost of \$110 for plowing 200 acres; just for plowing alone, remember. The average life of a tractor is from five to eight or maybe ten years at the most. The depreciation in ten years would cost \$100 per year. Oil and grease we'll figure at \$5 per year. It is hard to estimate the cost of repairs, for one tractor might run five years with very little repair cost while another might cost a new one in that length of time. Castings and parts are very expensive after the manufacturer's guarantee runs out. Let's figure the repair cost at an average of \$35 per year, which is, I think, reasonable.

Now if every farmer was an experienced and expert engineer it would add favor to the tractor a little, but I believe that unless the farmer is a good mechanic it will pay him big to hire a good engineer. An engineer would cost more than an ordinary farm hand: Let's figure his wages at \$60 per month. A \$1000 tractor and outfit ought to plow ten acres a day, taking twenty days to plow the 200 acres (providing everything goes well). Engineer hire \$40. We would have to pay \$150 for a special plow. Interest on this \$12. The annual expenses would figure up as follows:

Interest on investment	\$92
Depreciation of tractor and plow per year	110
Gasoline, 200 acres plowing.....	110
Repairs	35
Engineer	40
Cyl. oil and trans. grease.....	5
Total	\$392

Now I would like to know where Mr. Dimock got his information that the horse is not a satisfactory worker for the conditions existing on a farm. If he is writing from experience he must have kept horses such as were represented in the cartoon.

The modern farmer keeps nothing in the line of horses except good brood mares. It is an established fact that a good mare will raise a good colt every year. This colt will bring enough to pay for the mare's feed the whole year. There is always and always will be a demand for good horses. The man holding the reins over the backs of six powerful brood mares hitched to a gang plow need not envy his neighbor who drives a tractor, unless as previously stated he has a large level farm. In my mind I doubt very much if Mr. Dimock ever had experience with farming or that he ever

What's Keeping Me Back?

You've wondered why you don't get ahead. Why your pay isn't increased. Why you don't get promoted. You've blamed everything and everybody, when the real drawback is *yourself*.

You're standing still because you lack *training*. Because you have not *prepared* yourself to do some one thing better than others. If you really want to get ahead, the way is open to you.

For 25 years the International Correspondence Schools have been helping men to climb into good paying positions. Nearly 5000 reported last year that I. C. S. training had won them advancement. You can get I. C. S. training in your spare time in your own home without losing a day or a dollar from your present employment.

Position, power, good money, independence, are within your reach. The I. C. S. are ready to help you be the man you want to be. Let them show you how. Mark and mail this coupon.

I. C. S., Box 4514, Scranton, Pa.

INTERNATIONAL CORRESPONDENCE SCHOOLS Box 4514, SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

What Statesmen of two nations think of Sanatogen

It is not surprising that so many statesmen, both here and in Europe, have found Sanatogen of such splendid aid in keeping body and nerves at a high point of efficiency.

For the men who represent the nation are of the same human stock as the rest of us—their organisms are subject to the same raids by overwork and strain. And their experience with Sanatogen is simply the experience of countless men and women in other walks of life.

The endorsements here printed are typical of the many hundreds of letters received from prominent men and women—leaders of thought and action—who thus have voiced their sincere gratitude for Sanatogen's beneficent effects, just as more than 21,000 physicians—representing the medical profession of five continents—have approved its use.

In the face of such unparalleled endorsement can you fail to realize that Sanatogen stands ready to help you—whenever you are in need of its aid?

Sanatogen is sold by good druggists, everywhere, in sizes from \$1.00 up.

Grand Prize, International Congress, of Medicine, London, 1913.

Sanatogen

ENDORSED BY OVER 21,000 PHYSICIANS

Send for "The Art of Living," a charming booklet by Richard Le Gallienne, the popular poet-author, touching on Sanatogen's kindly help, and giving other interesting aids in the quest for contentment and better health. INTERLAKEN SUMMER CAMP

MID-JUNE TO SEPTEMBER FIRST

Where boys grow brown and strong and develop the moral fibre of manhood. 700-acre estate. 200 acres of woods and meadow. Land sports, hikes and camping amid the sand dunes. Boating, fishing, swimming. Ponies. Boys build their own huts, their own boats—have opportunity to "make things" in wood, iron, brass and copper in the famous Interlaken School shops. Interesting experiences of haymaking, threshing, harvesting on the Interlaken 500-acre farm. Registered dairy herd. Sheep. Land and water fowl. A summer's recreation with responsibility for useful work added. Leadership and initiative developed through "boy government," under trained men counselors from the Interlaken School—where boys learn by doing. No extra charge for tutoring. For views and full particulars, address

Director of Camp, Box 128, Rolling Prairie, LaPorte County, Indiana
CHICAGO REPRESENTATIVE, Phone Kenwood 4375

had the experience of paying for the expense of the tractor.

If a man runs a tractor for a ten hour day, he won't feel like putting on headlights and running all night. If he runs two shifts he must have another engineer. What's more, he won't feel like taking his family to a dance thirty miles away at night. He had better spend his spare time looking over his tractor, tightening up nuts, etc.

The brood mare should pay for her keep, so I cannot see any reason why the average farmer should worry his head about a tractor.

RAY W. HODGSON

St. Cloud, Minnesota

From an experience of some ten years in North Dakota, where we have ample room to try horses, tractors or whatever power we wish, I venture to disagree flatly with some of Mr. Dimock's arguments.

The first argument against the horse is that he works on the average only three hours a day. No doubt Mr. Dimock has good authority for this statement. Still, consider a minute. It is a well known fact, that we work about as little, here in the North, as in any farming community. We cannot seed, hay, harvest, thresh and plow for the next crop in less than six months—from April 15 to October 15. More commonly we spend seven or more months. We work from ten to fourteen hours a day during that season. We have to, in order to finish. If we worked only ten hours a day, for only six months of the year, our horses would work five out of every twenty-four of the hours in a year.

The next point is well taken. The tractor more adequately responds to the rush seasons. This spring, our season is at least two weeks late. Every farmer is in a mad rush to get his crop in. Every hour counts. Across the road is a two section farm, on which six fine horse teams strain from six-thirty to six-thirty, six days in the week. Behind the machine shed stands a \$2000 tractor, used only for grinding feed. Why? Because the land is so wet the engine buries itself in the field. But even if it could run, the farmer would not use it. He ran it one day this spring and decided that the wear and tear on the gears, the danger of wiring and the cost of buying fuel, and yet keeping his horses idle, was prohibitive. We need speed this year if we ever did. Yet, within a radius of three miles, there are six tractors lying idle, while the horses till the fields. Experience has proved, to the satisfaction of the hard-headed business farmer, that horses *do* the work, *when* it should be done, at a less average expense than the tractor.

Third, it is claimed that to be efficient a farmer must direct the work of many horses. Occasionally, perhaps, but sometimes more than sometimes. I have never seen the tractor that will efficiently manipulate a corn cultivator. Have you? I have never seen a tractor advertised to plow a 45° hillside of New England. Have you? And yet it is considered necessary to plow corn and potatoes and do many of those inefficient, but useful jobs. Our next neighbor rented a big bunch of virgin prairie land. He broke, pressed and drilled in fifty acres a day for forty even days. It was only possible, of course, because the land was level as a floor—stoneless, swampless, and in one big piece. That was in 1910. In 1911 he seeded back 1500 acres; in 1912 he couldn't borrow any more money for gasoline and seed so he sold his bonanza outfit and went back to farming. We do not need a machine that will plow fifty acres a day sometimes, in some places. We do need, and must have, power to plow ten, or even five acres, every day, on most any kind of a field.

A. R. JAQUA

Leal, North Dakota

Mr. Dimock, to whom we submitted some of these letters, writes us as follows:

The article on the farm tractor was meant to be suggestive and prophetic rather

er than a statement of facts as they are today. Yet since the article was published I have read that the headlight has actually been used for night plowing because of the rush of work consequent upon continued rains.

My suggestion of the road traveling tractor was based on Henry Ford's statement to an engineering friend of mine. He expects to produce a tractor that will do the work on the average small farm, and then make a speed of twenty miles on the road. A prophecy by Mr. Ford in regard to motor problems is entitled to the best respect of the country.

The critic quoted above has raised an economic objection by figuring the first cost of the tractor at \$1000, and the interest on this cost at eight per cent and the depreciation at ten per cent. Possibly these figures are correct for today, but I venture the prophecy that they will not be correct five years hence, for Mr. Ford's tractor is promised at from \$250 to \$300. Moreover, this same critic in figuring costs between horse plowing and tractor plowing does not take into account the value of the man's time.

Mr. Hodgson bases his figures on conditions existing in Minnesota today in regard to costs and interest charges. He is perfectly correct in suggesting the big farm as the proper field for the tractor. I will go him one better and suggest that the big farm is the only proper field for the farmer's activities. A very little study in the subject of farm management will tell him that the small farmer hasn't the ghost of a show to make a good living. Between the lines, I must here state that "size" is not simply a matter of acres. The florist with his greenhouses may be carrying on a large business with mighty little ground.

In these northeastern states, with their uncertain weather, the item of insurance is a good sized factor. During this wet spring many farmers have been unable to get their crops into the ground because the rains have delayed them beyond any calculations. A little added cost, making possible the planting of crops, would save enough in a single year to make up a small discrepancy.

JULIAN A. DIMOCK

East Corinth, Vermont

An Illinois correspondent says that to "print both sides" according to our custom is not sufficient in the case of the presidential election because there is a third side, the anti-preparedness, which is not likely to be represented in either of the party platforms:

For the first time in the history of this country millions of her citizens will be disfranchised next November. Never before have the issues been more clearly defined, but without a candidate and an organization the citizens holding to certain definite and well-defined principles will remain silent rather than cast his vote for a condition that his conscience, business and family interests rebel against.

The old parties are committed to Preparedness, and next November it will simply be a choice between the size of their guns and their number. Are we to have a million or half a million men taken from their homes, school houses and industrial life and made ready for the trenches? The voter will be called upon to decide this issue, but he will not be informed that it is the first step to Militarism, that regardless of either party we have turned away our form of government and propose to adopt methods employed by the monarchs of Europe that have kept their broods on the throne for ages, and enslaved their subjects except those that have fled to America to escape military duty.

Is it reasonable to suppose that those two or three millions of foreigners but naturalized American citizens will vote for the same form of government they have already escaped from? To a man, these industrious, frugal and useful citizens will vote against militarism; increased taxation, conscription and the disgusting army

SCHOOLS AND COLLEGES

Metropolitan Hospital Training School for Nurses

BLACKWELL'S ISLAND, NEW YORK CITY

NURSES' RESIDENCE

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence is removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—\$10.00, \$12.00 and \$15.00 per month; the increase made yearly

For information address Superintendent, MISS AGNES S. WARD

Crane Normal Institute of Music

Price \$1.25 Postpaid

"In these electric-days a book like this is as the touch of a cool hand upon a fevered brow."—*Times-Union*.

The Nunc Licet Press

Room 330

920 Nicollet Ave. Minneapolis, Minn.

aristocracy and flunkysim. A tremendous "vest pocket" vote is ready to come from the taxpayers who see a burden about to be placed on them and their descendants for future ages and generations. These men will not talk but they will vote to protect themselves against such burdens of taxation as their foreign brethren are breaking under; the mother that secretly yearns for her boy will either vote or use her influence to secure votes to keep her boy "out of the trenches." The laborer, the farmer, the Christian and all genuine Americans that are naturally opposed to royalty and their forms of preparedness, will quietly cast their vote for freedom against militarism, financial oppression and conscription. Let a call be issued for a national convention stating the issues involved and let the representative members of the citizens above mentioned meet and form a "National Party" or the American Party, nominate a candidate to represent them from these plain people; an Abraham Lincoln, the man of the hour will be discovered.

ADDISON C. THOMAS

Winnetka, Illinois

Have just read your editorial of May 1 on "The Divorce Evil." The churches of this country could stop the divorce business if they took a firm stand, as the Roman Catholic Church does. I am a Protestant, but I admire the consistency of the Roman Catholic Church on this question.

Barring action by the churches, a most effectual halt in the wicked business could be made if the press would turn its attention to the repeal of our alimony laws. There is no doubt at all that alimony figures large in the minds of many would-be divorcees, who wrap their clouded name in a cloak of alimony, except for the biblical cause of divorce. No woman who deliberately forswears herself by breaking the solemn marriage vow should be supported by the man she despises. Repeal the alimony laws and the "free life" will lose its attractiveness to very many.

M. D. BROWN

Belleveue, Pennsylvania

Our correspondent may be right in preferring the attitude of the Catholic Church on the divorce question, but he does injustice to the Protestant position when he alludes to it as inconsistent. Both churches are consistent with their historic principles, but they proceed upon different theories of marriage. The theory of the Catholic, Roman and Anglican, is that marriage is an ecclesiastical sacrament and therefore indissoluble. The theory of the Protestant is that marriage is a civil contract, and therefore dissoluble for sufficient cause. The Reformers repudiated the Catholic theory of the sacrament of marriage just as they did the Catholic theory of the sacrament of the Eucharist. Luther and Milton took very advanced ground on the divorce question. The Pilgrim Fathers established civil marriage and civil divorce in New England, and were careful to prevent the clergy from getting control of it. Marrying was entrusted to the magistrate rather than to the minister. The United States as a whole has adopted in its legislation the Puritan system of civil marriage and the Census report showed that divorce is more frequent in those states and parts of states settled from New England than in the Southern States that had been colonized under Roman or Anglican influences. Whether this indicates a higher or a lower state of morals depends upon the point of view.

If either of the belligerents in this war knew the depressing facts about themselves that their opponents know, they would surrender at once.—*Chicago Daily News*.

The official announcements of Washington's preparedness demonstration read: "The only uniforms allowed in the parade will be an American flag and a parasol."

OUR COUNTRY, 'TIS OF THEE

"America First" is the plank for me," Declared the Republican nominee.

"Americanism, I'm for that," Asserted the foremost Democrat.

"All hyphenism is what I hate," Said the Socialist candidate.

"I stand as America's special pleader," Exclaimed the Prohibition leader.

So, whatever happens, this best of lands Will be in safe and protecting hands.

—*New York Tribune*.

One of the Scottish golf clubs gives a dinner each year to the youngsters it employs as caddies. At the feast last year one of the boys disdained to use any of the forks he found at his place, and loaded his food into himself with his knife. When the ice-cream course was reached and he still used his knife, a boy who sat opposite to him, and who could stand it no longer, shouted:

"Great Scot! Look at Skinney, usin' his iron all the way round!"—*Tit-Bits*.

"Say, Reed," said Higgins, as he met a friend, "do you know why you are like a donkey?"

"Like a donkey!" echoed Reed thoughtfully. "No, I don't."

"Because your better half is stubbornness itself," said Higgins.

"That's not bad," said Reed. "I'll have to try that on my wife when I get home tonight."

Accordingly, when they were at dinner, Reed asked:

"Annie, do you know why I am so much like a donkey?"

He waited a moment, expecting Mrs. Reed would give it up. But, on the contrary, she gazed at him somewhat comiseratingly as she replied:

"I suppose because you were born so."—*New York Times*.

Ten Lessons Free Wonderful New Offer

Yes—ten lessons in New Way Typewriting *Free*—if you write at *once*. Every stenographer, every typewriter user, experienced or beginner, should get this wonderful new offer! Now, in your own home, you can quickly and easily learn to typewrite 80 to 100 words a minute, without errors, without

fatigue, and as a result, increase your salary to \$25, \$30 and even \$40 weekly. The New Way has completely revolutionized the typewriting situation. Thousands who formerly wrote 30 to 40 words a minute are now writing 80 to 100, and their salaries have been doubled and trebled as a result!

Salary Increased \$15 Per Week

"The Course proved very profitable to me, as at the time I took it up I was making but \$10.00 per week, and it brought my salary as a stenographer up to \$25."—Mr. Oscar R. Hunter, 2021 H St., N. W., Washington D. C.

From \$900 a Year to \$1800

"From a speed of 30 words per minute, I attained without difficulty a rate of 80 words a minute. I was earning \$900 a year at the time I began the Course, and am now receiving \$1800 in the Isthmian Canal Commission."—Richard Clarke, Care Isthmian Commission, Culebra, C. Z., Panama.

80 to 90 Words a Minute

"Inasmuch as the first seven lessons of the Tulloss System brought my speed up from 40 to between 80 and 90 words per minute, I could not do other than praise the instruction highly."—E. C. Henderschott, c/o Arizona Copper Co., Clifton, Ariz.

Worth 10 Times Cost

"The Special Exercises for Finger Training are simply amazing in their results. Beginning the study of the Tulloss Course as a mediocre typist, writing not over thirty words per minute, I was within a few months enabled to use all my fingers with perfect ease, and reach an average of almost 100 words per minute in doing my regular work. It has been worth to me ten times the money I invested."—Miss Tillie Lalime, St. Hyacinthe, Que., Can.

Over 80 Words a Minute

"As a result of my study of the Tulloss Course, I am now able to strike any letter or character blindfolded and without the slightest hesitation. I do all my work by the New Way system, and my speed has been brought up to over 80 words per minute. I do not think too much praise can be given to the Tulloss School."—C. H. Emerick, Adrian Furnace Co., Du Bois, Pa.

80 to 100 Words a Minute Guaranteed!

Don't confuse this new way in typewriting with any system of the past. There has never been anything like it before. Special *Gymnastic* Finger Training Exercises bring results in *days* that ordinary methods, or "touch" system, will not produce in months if ever. It is without question the greatest advance in typewriting since the typewriter itself was invented—already its success has become world-wide.

So overwhelming has been the success of this easy new way in typewriting that we are now offering the entire Course on *trial*. 10 lessons are *FREE* to every student. The balance of the Course can be paid for a little at a time so you hardly notice the cost. You get an absolute guarantee which provides that, unless you are thoroughly satisfied with the results, the entire course will cost you not one cent.

48 Page Book Free

We have prepared a book which tells all about the New Way in Typewriting. It is a big 48-page book, brimful of eye-opening ideas and valuable information. It explains how this unique new method will quickly make your fingers *strong and dextrous*, bring them under per-

fect control, make them *extremely rapid* in their movement—how in a few short weeks you can transform your typewriting and make it *easy, accurate and amazingly speedy*—how the results of the New Way have doubled and trebled the salaries of thousands of others. Let us tell you about our "Ten Lessons Free" offer as well as our special price and easy terms to new students in each locality, which is made for limited time only. Write at *once*. Tear off the coupon *now*, before you turn the page, or write a postal or letter.

dends in cash or stock. More than \$50,000,000 of gold has come to us since the second week of May, and we are making new loans to the belligerents.

IRON AND STEEL

It has been said that we are now making pig iron at the rate of 40,000,000 tons a year. The output in May was 3,351,768 tons. A total of 40,000,000 may be compared with the largest quantity produced in any preceding year—30,724,581 tons, in 1913. The condition of the steel mills is fairly represented by the reports of the great Steel Corporation, whose net earnings have grown from only \$12,500,000 in the first quarter of 1915 to \$60,713,000 in the first quarter of this year. In that earlier quarter there was not enough set aside to pay the dividend on the preferred shares, but in the later one the payment of that dividend and of the resumed dividend on the common stock left \$32,000,000 to be used in other ways. The company increased the wages of its employees by 10 per cent on February 1, and added 10 per cent on May 1, at a cost of \$33,000,000 a year. It has on hand unfilled orders for 9,331,000 tons of its products. The prices of steel products are now, on an average, about 125 per cent higher than they were one year ago, but only \$5 has been added to the old price, \$28, of railway rails. The price of copper is about 29 $\frac{1}{2}$ cents a pound. In 1915 it rose from 13 to 20 cents.

THE RAILROADS

There is plenty of evidence that railroad earnings, both gross and net, are not declining. We see official reports of an increase of New York Central's net of 52 per cent in April, and an increase for the Pennsylvania of 55 per cent in the same month. These two companies had in the four months ending with April a gross increase of \$60,-

THE COURSE OF FINANCE AND TRADE

A REVIEW OF THE SECOND QUARTER OF 1916

BY FRANK D. ROOT

AT the beginning of the present year industrial and financial conditions in the United States were distinctly favorable. Some of the most notable features of industrial growth in 1915 were mentioned in a brief review published in The Independent three months ago. Attention was also directed to abundant proof that in prevailing conditions there had been no change to our disadvantage during the new year's first quarter.

In the year's second quarter there has been no backward movement. At the furnaces we are now making pig iron at the rate of 40,000,000 tons a year, and a new high record for output was shown in May. The product of our steel mills is limited only by their capacity. Railroad earnings continue to be very large, and three companies have

recently increased their dividend rates. Our exports have for the first time exceeded \$400,000,000 in a month, and our imports have risen to a value never before reported. At the same time the excess of exports over imports—that excess which is sometimes called a favorable balance of trade—is at the rate of nearly \$2,300,000,000 a year. Commercial failures for five months have shown liabilities of only \$99,000,000, against \$170,000,000 in the corresponding months of 1915. Clearings for five months exceed by 43 per cent. those of last year's first five months. In the building projects of four months there is a gain of 18 per cent. The resources of our national banks, \$14,195,000,000, exceed by \$356,000,000 those reported at any time in the past. We read every day of new extra divi-

COURSE OF RAILROAD STOCKS

The gains made in the last quarter of 1915, due to improvement which began to be seen in September, have not been retained since the opening of the present year, altho the losses of the first two and one-half months have, as a rule, been reduced. Advances warranted by earnings have been prevented by continuous selling of American stocks owned abroad, and by the menace of a great labor controversy.

Permanent Charity Fund

BOSTON SAFE DEPOSIT & TRUST COMPANY, Trustee

Permanent Charity Fund is the name given to a Declaration of Trust executed by Boston Safe Deposit & Trust Company to furnish a means by which gifts may be made in trust to charity without fear that changes in charitable needs or in the management of charities will destroy the usefulness of the gift or impair its ability.

The Trust Company will forever hold in trust gifts made to it as Trustee of Permanent Charity Fund and safeguarding the principal will distribute the income in accordance with the terms of the Declaration of Trust either to the charities designated by the giver, or, if such charities are given up or become outgrown, to those designated by a committee provided for in the Declaration of Trust and qualified to pass upon charitable needs.

A pamphlet containing a copy of the Declaration of Trust and an explanation in detail of its purposes and advantages will be mailed on request by

BOSTON SAFE DEPOSIT & TRUST COMPANY

000,000 and a net increase of \$35,000,000. Union Pacific's increase of net in ten months was 31 per cent. The Interstate Commerce Commission shows that for all the roads the net rose, in the ten months ending with April, from \$3053 to \$4173 per mile, or about 37 per cent. Improvement began to be seen in the first weeks of last September. It should be borne in mind that the prices of the things a railroad must buy have been rising. What appears to be a trustworthy list, prepared by a railroad officer, shows an average increase of 53 per cent in the cost of supplies. The increase of earnings and of surpluses, however, has warranted an advance of share prices in the stock market. Tables printed herewith show that the gains made in the latter part of 1915 have not been retained.

The explanation is that price advances in harmony with the notable growth of traffic and earnings have been prevented mainly by the continuous selling here of American railroad securities owned abroad, especially in England; by the menace of the entire railway system's wage controversy with its employees, and by the attitude of some investors who say that the prosperity is only temporary because in large measure it depends upon the war. This quiet selling of securities from week to week by foreign owners or a foreign government tends to restrain, if not to depress. There is evidence that such sales of Steel Corporation shares in the first quarter of this year amounted to \$7,465,000. The number of Steel shares held in Europe before the war, about 1,500,000, has been reduced by more than one-half. There is no available record showing the amount of other sales made here since the beginning of the war. One estimate is that \$400,000,000 is the measure of sales since January 1, and that previous sales were in the neighborhood of \$1,500,000,000. Sir Robert Fleming, a British financier, says we have taken back \$1,000,000,000 worth. Professor Folwell's guess is that we have absorbed \$1,750,000,000 in American securities, the majority of them from Great Britain. The selling is not ended. It has been promoted by the new British tax of 10 per cent on the income of such securities, in addition to 25 per cent already imposed.

It is asserted by the railroad companies that their operating expenses would be increased by \$100,000,000 a year if the demands of the four brotherhoods or unions should be granted. If there should be a strike the railroads would suffer, and if a settlement is reached by compromise there will be an increase of operating expenses and a decrease of net earnings.

FOREIGN TRADE

Six years ago our annual exports had not risen to \$2,000,000,000, but now our products are going abroad at the rate of nearly \$5,000,000,000, surpassing Great Britain's highest record, which was a little more than \$3,000,000,000. Not until this year have the shipments in any month amounted to \$400,000,000, and before last Septem-

OUTPUT OF PIG IRON, TONS

The condition of the iron and steel industry has been called a barometer indicating the condition of trade and manufactures. Pig iron output grew steadily in 1915. In May of this year all records were broken, and production now is at the rate of more than 40,000,000 tons a year.

ber the \$300,000,000 mark had not been reached. It was for the short month of February that \$400,000,000 (nearly \$403,000,000) was first reported. March and April followed with larger amounts. The figures for May are not yet before the public. A new high record of the excess to our credit, \$209,000,000, was made in the short month of February. Thereafter the excess was reduced—not on account of reduced exports, for these were growing—but because the imports were making a new record for themselves and for the first time had crossed the \$200,000,000 line. It should be noted that in April's total of \$217,000,000 crude materials for manufacturers stand for \$95,000,000, while such imports a year ago were only \$65,000,000.

WAR ORDERS AND LOANS

Meanwhile the new war orders have not been of a kind that attracts public attention. Old orders will keep many manufacturers busy for a long time to come. The British Government has recently bought 400,000 tons of shell forgings and \$2,800,000 worth of sugar. France has taken 23,400,000 pounds of tobacco, has ordered 100,000 tons of rails, and is negotiating for a large number of railroad ties. Russia seeks 200,000 tons of barbed wire, 5000 freight cars, 100 locomotives and 100,000 tons of rails. Of 8000 cars made in May 4500 went to fill foreign orders.

Negotiations for a loan to Russia have been in progress for several months, and at last the plan has been completed. A credit of \$50,000,000 is granted by a banking group which includes the National City Bank, the Guaranty Trust Company and J. P. Morgan & Co. Russia pays 6½ per cent. Foreign trade reports show how Russia's indebtedness to us has grown. In

The Union Trust Company of New York will act as Trustee of permanent charitable, educational or religious trusts, created either under a will or a trust indenture, and gives special attention to trusts of this character. The Company also acts in the capacity of Treasurer, Assistant Treasurer, Financial Agent or Depositary for such institutions, and is qualified and equipped to render expert and attentive service in all such relations.

The Union Trust Company's record of fifty years in the continuous administration of all the usual forms of trusts invites confidence in the permanent maintenance of a high standard of ability as trustee.

the ten months ending with April our exports to that country were \$229,000,000, against only \$35,000,000 in the preceding year. The Canadian Province of Ontario is borrowing \$4,000,000 here at 5 per cent. The \$50,000,000 credit arranged for Great Britain at 4½ per cent and based upon deposits of British bonds in the Bank of England expired on June 20 and has been extended for one year at 5 per cent. It is expected that a loan to France, or a credit, of \$100,000,000 will be announced in a few weeks.

CROPS

The government's reports indicate that we shall have this year a wheat crop of only 715,000,000 bushels (which may be compared with last year's extraordinary yield of 1,011,505,000); also, that we must be content with nearly 300,000,000 bushels less of oats than were harvested in 1915, and with a barley crop reduced from 237,000,000 to 189,000,000 bushels. In the face of these reports the price of wheat at Chicago has declined from \$1.17 in April to about \$1.02, owing mainly to large stocks on hand and slack demands from abroad. But what we can spare of the new crop will probably be needed there, as the yield in Europe will fall below last year's.

THE STOCK MARKET

The course of the market for stocks has been comparatively uneventful, except in a recent movement affecting motor shares. At times there have been signs of weakness, due to rumors of impending peace in Europe, and market values were affected temporarily during the controversy with Germany concerning submarine warfare. A majority of the railroad shares, while they have been firmly held, are still below the prices of January 1. In the industrial or war order group there have been wide fluctuations. There has been a pany, which has declared extra dividends, in cash or stock. In this list are seven copper companies, two companies that make zinc, a sugar company, and a cotton goods company in Fall River. One powder company has paid 79 per cent in the past year on a capital of \$120,000,000. The E. W. Bliss Company, which has declared extra dividends, earned 434 per cent. on its capital last year, against 72 per cent. in 1914. Large dividends in cash or stock have been paid by the oil companies. The former constituent or subsidiary corporations of the Standard Oil of New Jersey have recently distributed \$29,300,000 in stock and \$29,731,000 in cash.

A wild movement in the shares of automobile companies was caused by an attempt to combine the Willys Overland, Hudson, Chalmers, Chevrolet and possibly other corporations in a new company that was to be capitalized at \$220,000,000. It was estimated that the annual output of the proposed company would be 480,000 cars. Motor shares went up, those of one company showing a gain of 87 points in a week. But the project was given up on June 14, "on account of complications," the organizers said.

INSURANCE

CONDUCTED BY W. E. UNDERWOOD

LIFE INSURANCE

A special feature of recent life insurance history during the preceding three months was the unexpected action taken by the owners of the Union Central Life Insurance Company of Cincinnati in raising the amount of that company's capital from \$500,000 to \$2,500,000, following an increase in June, 1908, from \$100,000 to \$500,000. This additional (and wholly superfluous) capital of \$2,400,000 was not paid up out of the pockets of the stockholders; it was voted out of the company's funds as profits made on non-participating policies, earnings which, under by-laws provisions that were a dead letter from 1867 to 1908, belong to the stockholders.

The life insurance world was amazed in March at an announcement from the president of the Union Central that a further sum of \$2,000,000 non-participating profits had been capitalized as of March 1. It was a bold move. No going life insurance company needs any capital. In 1908, reversing the precedents of forty years, pleading the necessities imposed by the laws of several states, the management of this company increased the capital fivefold. Its right to do it was challenged by six insurance commissioners in the courts of Ohio. The stockholders won.

No such alleged necessity existed this year. But there was an accumulated sum of \$2,027,000 surplus claimed to have been earned on non-participating surplus since 1908. No half-way measures were indulged in this time—\$2,000,000 of it was voted out as a stock dividend. In order to carry out the plan to transform this money into an investment for stockholders, the company's charter had to be amended; and this was accomplished without attracting attention by filing in the Secretary of State's office at Columbus a document called "Increase of Capital Stock Certificate."

A committee of state insurance commissioners has been appointed to investigate the matter. They are expected to report to the National Convention of Insurance Commissioners at their mid-year meeting in September. That report will be narrowly watched for by the managements of other life insurance companies.

Critics of the Union Central management are skeptical as to the claim that the non-participating business has earned \$2,400,000 and they expect the state investigators either to confirm or to refute that claim. If it is found that the money has actually been earned, they cannot see why the stockholders should not be compelled to withdraw it in cash, instead of leaving it there in the shape of a burden on participating policyholders. Under the provisions of the company's by-laws the stockholders receive an annual dividend of 10 per cent. Here is a possible \$250,000 a year to be paid by policyholders for an en-

tirely useless service. The management claims it is leaving the money in the company in the shape of capital for the security of policyholders. This is a piece of insincerity, as everybody who knows anything of life insurance finance is aware. The company has a clear net surplus of \$3,647,724 and is increasing that with every premium collected.

Leaving this subject, it appears from announcements made by the agency departments of a number of the leading life companies that this year promises to break all previous records in the matter of new business transacted. Up to date there has been an unusual expansion in the volume of life insurance transactions, indicating a high state of commercial prosperity.

THE FIRE INSURANCE FIELD

Estimating the underwriting results of the fire insurance business thus far this year by a comparison of the tabulated fire waste in the United States and Canada for the first five months of 1916, 1915 and 1914, we would be warranted in concluding that the balance is against the companies taken as a whole. Guiding ourselves by the underwriting profit and loss computations for the companies operating in Connecticut as found in the annual reports of the Insurance Department of that state for the last two years indicated, we find that the aggregated net gain in surplus for those companies was \$3,936,413, the recorded fire waste for the first five months being \$81,497,050. In 1914, the fire waste was estimated at \$103,670,250 for the first five months and the aggregate net loss in surplus found by the Connecticut Department for the companies reporting there was \$8,796,709. It now appears that the estimated fire waste for the period January 1, 1916, to May 31, 1916, greatly exceeds that of the same period of 1914, the figures being \$113,528,920.

These two separate sets of figures, it must be understood, are from different sources and are not related to each

other, those for the fire waste being gathered by the *Journal of Commerce* by its correspondents in this country and Canada day by day and compiled monthly, serving only as a close estimate of the burning rate; while the Connecticut figures represent actual results experienced by the companies annually. The two sets have been brought together here merely to indicate probable profit or loss results. They may, when thus thrown into juxtaposition, be regarded as serving that purpose. To illustrate: it is more than probable that as the fire waste during the first five months of 1916 is more than \$10,000,000 higher than for the like period of 1914 when the whole of the latter year showed a loss in surplus, that the results thus far in 1916 are at least as unfavorable to the companies as they were up to June 1, 1914. We cannot, however, conclude that the whole of the year 1916 will prove to be unprofitable, if it is really so to date, for the remaining seven months may change what seems to be the present tendency. If, happily, this should turn out to be the case, we are likely to find it indicated in the figures representing the estimated fire waste. Just now, the outlook is for a net underwriting loss on the fire insurance business of the year 1916.

Since our last review, the most important single event in fire insurance involved the withdrawal of all the outside fire companies from the State of South Carolina because of their inability to continue business there under a new and most drastic law which went into force in April. The companies had endeavored to convince the legislators that they could not with safety to their own interests comply with the proposed provisions and gave warning that if the bill was passed they would retire from the state. But they did not succeed in impressing the politicians in charge with their sincerity, the latter regarding their attitude as a "bluff." The bill became law and the companies promptly retired. Since that time innumerable efforts have been made to effect a compromise, but without avail.

Always serious, the fire insurance situation in Texas has recently culminated in a specific demand made by the companies on its Insurance Commission that rates be advanced 33 1-3 per cent. Hearings for and against were commenced about a month ago and are now in progress. The expense involved in doing the business there is the matter chiefly under investigation, the companies' adversaries presumably contending that the cost is subject to material reduction. As a substantial fact, however, the fire loss in that state is and has been for years abnormal, and it is quite possible that unless an increase in rates to meet them is permitted, Texas will add itself to the territory from which fire insurance companies absent themselves.

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the editor of the Insurance Department.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the METROPOLITAN LIFE INSURANCE COMPANY, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$618.35 absolutely beyond question or doubt. The Annuity Department, METROPOLITAN LIFE INSURANCE COMPANY, New York, will give advice as to the return at any age, male or female.

THE NEW BOOKS

MIRRORS TO RUSSIA

As strangers see family resemblances of which members of the family are unconscious, so English readers see or fancy they see a certain likeness of method, if not of something deeper, pervading all Russian literature. Leonard A. Magnus, in his translation of *Russian Folk Tales*, speaks of this as "factualism," not realism, since that connotes anti-romanticism, but a certain direct simplicity of outlook and of treatment. This does not strike the foreign reader so noticeably in the folk tales, for the reason that these characteristics belong to the legends of all lands. Russian fairy stories, however, differ essentially from the Celtic in the absence of the whimsical and from the German in the lack of homely, intimate touches. The Russian superhumans are saints, witches, wizards, and good fortune comes not from cleverness or integrity, but from pure luck or from kindness. Kindness is the great virtue. On such tales as on facts were all Russian children fed till within the half century. In *Years of Childhood*, the remarkable recollections of Serge Aksakoff, he speaks of the influence of these nursery stories and reprints the favorite of his childhood, *The Scarlet Flower*. In *Oblomov*, too, Goncharov's masterly study of the indecisive, indolent landed class, the fairy tales of the hero's childhood influence his whole life.

The *Years of Childhood*, now first printed in English, is the account of a boy's life in Eastern Russia at the close of the eighteenth century. Written with amazing simplicity, it sets the reader in the midst of living men and women in whose small daily affairs one finds one's self taking an intense interest. As a study in child psychology it is, all unconsciously, a valuable document.

In *Oblomov*, translated by C. J. Hogarth, is another picture of a Russian childhood. The book has also what one finds in Goncharov more than in most Russian writers, most lovely descriptions of scenery. Painting a failure tho it does, the story yet leaves one with a sense of the essential worth of human nature. Comic in their bovine content, tragic in their utter stupidity, pathetic in their gentle virtues, the Oblomovs are yet loveable, while the soldiers who figure in *The Duel*, by Kuprin—also an analysis of an indecisive character—are of the untidy sort distastefully frequent in Russian novels. The publishers describe the sentimental, wobbly hero as of the "Hamlet type," which shows a lack of knowledge of either Hamlet or Romanov. The work has a mission, however. If widely read in Russia it should threaten any military system that fosters such an outrageous, brutal life as that of the army post described. No bet-

ter anti-militarist tract could be found than extracts from these grimy pages.

We have always supposed that Russians must read something besides problem novels and the translations now coming from the presses bring us several cheerful volumes, among them *Makar's Dream*, four short stories by Korolenko. There is romance, affection, humor in these tales, albeit written by a man reared in extreme poverty and, like most of the able youth of his generation, serving his time in Siberia. But he came forth from his six years triumphant, an artist not the wielder of a scalpel.

The same sort of experience acting on a less healthy nature, albeit a more powerful genius, brought forth *Dostoevsky*. The sympathetic but critical study by Soloviev of this tragic figure is another example of that clear cut, bare, forceful writing which seems the inheritance of the Russian, however far in subject matter he journey from the lived-happy-ever-after folk tales of his childhood.

PAST, PRESENT AND FUTURE

Authors are generally agreed that life aboard ship is not conducive to satisfactory work. There are several reasons, the chief of which is that so much depends on whether the ship keeps an even keel or plunges unhappily thru tempestuous waters. Mr. Patterson does not inform us regarding weather conditions on his "Cymbric" Atlantic crossing, but he assuredly presents us in *The Notebook of a Neutral* with a green-porthole-steward-and-beef-tea view of the world, both present and future. No matter if the Entente Allies do win, German *kultur* must triumph. In fact, Great Britain and France are now *kultur*ing themselves as their only possible salvation. Since he does not believe the United States can be induced to adopt *kultur*—the "Cymbric" perhaps gave a dreadful lurch here—we are in for a frightful beating by Germany or Japan—5,000,000 Japanese and Chinese settled on our Pacific Coast. (Eight bells and a stormy night, mates!) In our rich, soft and helpless condition our single hope lies in a threat to stop supplying Great Britain with munitions unless she promises to protect us from Germany or Japan, possibly Germany, Japan and Russia combined. It must be done now, because if we wait until after the war, Great Britain will leave us to our mercenary fate. We hope at this dismal conclusion the steward induced Mr. Patterson to crawl up on deck.

GET THE SAVING HABIT

The habit of saving has been the salvation of many a man. It increases his self-respect and makes him a more useful member of society. If a man has no one but himself to provide for he may be concerned simply in accumulating a sufficient sum to support him in his old age. This can best be effected by purchasing an Annuity or an Old Age Income Policy as issued by the Home Life Insurance Company of New York. The Annuity will yield a much larger income than can be obtained from any other absolutely secured investment. The Old Age Income commences at age 60, but in case of prior death the monthly income immediately accrues to the beneficiary. For a sample policy write to

HOME LIFE INSURANCE COMPANY
256 BROADWAY GEO. E. IDE, President NEW YORK

Most people think of automobile insurance as an old form of protection adapted to a modern invention. As a matter of fact, the self-propelled vehicle is older than most forms of insurance. A Frenchman drove a steam carriage in the days of Marie Antoinette. An Englishman was arrested for joy-riding in 1802. In 1815 the directors of the Hartford Fire Insurance Company were amazed to see a steam locomotive snorting through the streets. We are not told whether they ever considered this strange contraption from an insurance standpoint. But we do know that almost before the motor car had ceased to be an experiment the Hartford Fire Insurance Company was offering automobile policies. Today you can insure yourself from every risk of a motor car through the complete

Good men, whether experienced in life insurance or not, may make direct contracts with this Company, for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

FOUR SCORE YEARS AND TEN

THE PENNSYLVANIA FIRE INSURANCE COMPANY was organized January 26, 1825, and from that day to this has been continuously in business at the same location facing Independence Square in Philadelphia.

Permanence and stability are qualities highly valued in any business, but preëminently so in an Insurance Company whose whole purpose and function is to *make sure*, to afford relief and repair losses after ordinary safeguards have failed.

Nothing demonstrates those qualities quite so well as the actual record of a long term of years. Such a record, 90 years, with ample assets and modern service is the basis of confidence afforded its Agents and the public by

THE PENNSYLVANIA FIRE INSURANCE COMPANY
PHILADELPHIA, PA.

thors make up the volume, *Towards a Lasting Settlement*, edited by Charles Roden Buxton. When such widely debatable subjects as The Basis of Permanent Peace, The Freedom of the Seas, and The Democratic Principle and International Relations are condensed within a few pages, it is impossible to expect full treatment of the various themes. Generally the trend of the papers is toward the conclusion, that the solution of the problem lies in the voluntary willingness of humanity at large to abide by a lasting peace. This would seem to be more logical reasoning than that of those who would force peace upon humanity, for the hand of suppression may fall in oppression, thereby rousing the very evil to be abolished.

Is there any end to the causes of the war? No sooner has one publicist demonstrated his hypothesis, than along comes another to brush aside the former view with never-before-thought-of evidence. Who, for example, would imagine that the French Foreign Legion, beloved of the swash-buckling fictioneer, was one of the offenses Pan-Germanism grasped to demand the subjugation of France. Yet Paul Vergnet proves it out of the Pan-German mouth. Aside from this new origin of the war, the author of *France in Danger* discloses the machinations of the Pan-German League in Alsace-Lorraine and elsewhere.

One element in the German view of the causes of the war should appeal to the jurist. That is blunt frankness in admitting certain responsibilities. Thus, as it were, "I tore up that scrap of paper, invaded Belgium, and would have captured Paris if I could. Necessity compelled me to do these things." Here we have at least tangible ground to stand upon. *Germany Misjudged* is the display of a case for German defense, tho Roland Hugins, while inviting "American Tories" of Entente sympathy to hasten in shiploads for the trenches, fails to condemn equally the German propaganda in this country. Complementary to the above is *Belgium and Germany*, a Dutch view, by J. H. Labberton. As emphatically and heroically as she could Belgium has repudiated this specious plea for German invasion of her territory, tho dubiously granting "Prussia is the ethically sound kernel of Europe, from which in the end is to spring the ethical regeneration of our desperately ailing world."

Two little volumes in vivid yellow wrappers, *France and the War* and *War Letters from France*, are the one by Professor James Mark Baldwin, and the other edited by Lapradelle and Couderc. Professor Baldwin discloses hardly anything new from his subject, tho he announces such is his purpose: "French participation having remained under certain obscurities." A concise recapitulation of all this in a single volume, touched with the author's evident sincerity, is the book's chief recommendation. *War Letters from France* is a collection of admirably selected extracts from the letters of French soldiers. Nothing has hitherto come to

hand which so impressively reveals the patriotic, liberty-loving spirit of the French citizen soldier, in marked contrast to the forceful régime of the German army. There is no need to compel discipline in the French army, it is willingly even gaily borne for the sake of "beautiful France."

The Notebook of a Neutral, by Joseph Medill Patterson. Duffield. 50 cents. *Towards a Lasting Settlement*, ed. by Charles Roden Buxton. Macmillan. \$1. *France in Danger*, by Paul Vergnet. Dutton. \$1. *Germany Misjudged*, by Roland Hugins. *Belgium and Germany*, by J. H. Labberton. Open Court Pub. Co. \$1 each. *France and the War*, by James Mark Baldwin. *War Letters from France*, ed. by Lapradelle and Coudert. Appleton. 50 cents each.

WHAT SCHOOLS ARE FOR

In his *Education and Social Progress* Principal Alexander Morgan very simply and directly traces certain social defects to organic and environmental factors, from which he separates the systematic educational forces. His first desire is to "catch the children young," for he sees no hope in attempting to reform adults with fixed habits and prejudices. In addition to reorganizing the schools to take more definite cognizance of the nature of the developing child on the one hand, and of our complex society and economic system on the other, Dr. Morgan would have teachers selected and trained for conscious coöperation with the social purpose of the times. The school, in addition to providing training for the child, "is also one of the main instruments of society for securing its upward progress."

Education and Social Progress, by Alexander Morgan. Longmans, Green. \$1.20.

HUMAN PERSONALITY

Very serious and important subjects are those which Dr. Smyth has treated in a series of volumes on theology, Christian philosophy and ethics, and none more serious than his present volume, *The Meaning of Personal Life*. The purpose of the first part of the book is an argument against materialism. Even in physical nature the author sees hints of spiritual forces which become clearer as life appears, so that "the pursuit of the course of organic neural differentiation and animal psychology puts us upon the scent of some non-physical form of energy, which introspective psychology shall seek, if possible, to overtake."

By a careful course of study, depending upon the later investigations of psychology, Dr. Smyth shows that the several powers of the mind, whether in instinct, or reason, or feeling, are utterly incommensurable with the forces seen in physical law, which latter have to do with space and dimension, and he reaches the sound conclusion that mind is distinct from matter and that mind uses the brain as an organ of the free-willing soul.

A discussion follows of the growth of personality in the soul, allowing for access of power in ways perhaps mysterious, until he finds in Jesus Christ a new development of personality previously unknown and from which a similar spiritual growth has come to the Christian world. The miracles of healing performed by Jesus he assigns to

SHAKESPEARE'S PORTRAIT ONLY ONE THOUSAND LEFT

In this year when everybody is reading and talking about Shakespeare you will no doubt be glad of the opportunity to secure at nominal cost the excellent reproduction of Leopold Flameng's etching of the famous Chandos portrait of Shakespeare. We have printed a limited number on heavy coated paper. (Size 12 in. by 17 in.) While the supply lasts we shall be pleased to furnish our readers with a copy securely wrapped in a tube in such condition that it will be suitable for framing. Just send six two-cent stamps to cover the cost of wrapping and mailing.

One reader wrote: "It is a rare privilege to get such a famous facsimile at so trivial a sum and I am waiting its arrival with keen anticipation."

natural law, but under laws not yet fully understood, for he seems to assert that a miracle that would contradict natural law is impossible. He finds it reasonable and natural that the church in the earliest period succeeding Paul should have developed a doctrine of the Virgin Birth, but he does not hold it essential to faith.

The Meaning of Personal Life, by Newman Smyth. Scribner. \$2.

MUSIC AND DRAMA

Faxon's Dramatic Index is an invaluable annual for all needing information on stage affairs. It contains references to magazine articles, biographic notes, lists of books on the drama, and also what has been difficult to come at, a record of the prominent moving picture plays. (Boston Book Company, \$4.)

In spite of the index, with familiar composers a-plenty, Geraldine Farrar's *My Favorite Songs* will be something of an unexplored country to the average student. These unworn songs of some of the best of ancient and modern music are a welcome relief and are well worth some effort to become acquainted with them. (Dutton, \$1.)

Collections of music for elementary work are discouragingly prone to be stereotyped and commonplace, but the two volumes *Something to Play* and *Something to Sing* are fairly free from the expected triteness and the critical notes on the songs in the latter are suggestive. Sprinkled thruout are some really good things. (Dutton, 75c. each.)

The workmanship of Theodore Dreiser's *Plays of the Natural and the Supernatural* is excellent. But what is the author trying to get at? The reader's impression is somewhat like the remarks of the "Power of Physics": "Deep below deep! High above high! No beginning, no end! No end—no beginning!" But that is not nonsense. (Lane, \$1.25.)

One of the most interesting of the Tercentenary publications is *A Book for Shakespeare Plays and Pageants*, by O. L. Hatcher. This describes customs, scenes, dress, furniture, contemporary pageants, and is lavishly illustrated. Aside from its immediate use, it is a delightful and valuable collection of all sorts of Shakespearean miscellany. (Dutton, \$2.)

THE MINISTER'S SHELF

A booklet by Richard T. Stevenson, of Ohio Wesleyan University, entitled *Missions versus Militarism*, argues eloquently the thesis that Christianity is the cure of war, and urges the missionary campaign. (Abingdon Press, 50 cents.)

The Afflictions of the Righteous, by W. B. McLeod, is made up of sermons on the Book of Job. Learning, vigorous reasoning, and enthusiasm characterize these interpretations wrought out in the light of Christian truth. (Doran, \$1.50.)

In *Jerusalem to Rome*, Professor Charles F. Sitterly gives a new translation of the Acts of the Apostles in the language and style of present day English. The result is an attractive and self-explanatory translation of the book. (Abingdon Press, \$1.50.)

It is difficult to trace *The Dawn of Religion in the Mind of the Child*, but Edith E. Read Mumford gives us valuable aid. The author is a student of child psychology, and a sympathetic interpreter of children's actions, impulses and questionings. (Longmans, Green, 90 cents.)

The Work and Teachings of the Apostles, by Charles F. Kent, is the latest addition to the valuable Historical Bible series of textbooks for Bible study. It has the same

1610-4T Wabash Avenue, Chicago

excellent qualities of arrangement, translation, and historical interpretation as the preceding volumes. (Seribner, \$1.25.)

The Great Revival in the West, 1797-1805, by Catharine C. Cleveland, gives a careful historical survey of the religious conditions in the West prior to 1800, and a full account of the leaders, extent, phenomena, and results of this great religious awakening. (Univ. of Chicago Press, \$1.)

The Apostles' Creed, by Dr. David J. Burrell, comprises a series of addresses or essays of a dogmatic and homiletic character based on the various words and phrases of this great symbol of the Christian faith. The exposition is strictly orthodox and uncompromising. (American Tract Society, \$1.)

The Law of Human Life, by Elijah V. Brookshire, is an octavo volume of 471 pages and is composed of a series of predictions on biblical characters whose history is treated as symbolical of religious life and experience. This will be approved by adepts in biblical exegesis after the manner of the Swedish Seer. (Putnam, \$2.50.)

The New Home Missions, Dr. Harlan Paul Douglass regards as a group of church activities having for their end the Christianization of the United States. Thus conceived, the social problems of country and city, racial developments and immigration become the central features of the mission program. (Missionary Education Movement, 60 cents.)

The Centennial History of the American Bible Society, by H. O. Dwight, tells of the greatest auxiliary force there is in all Protestant religious work the world over. This enterprise began with printing 6000 Bibles in one language, and issued in its hundredth year over 6,000,000 Bibles and portions of the Bible, in 164 tongues. (Macmillan, 2 vols., \$2.)

SOME GOOD VERSE

Among the sincere little lyrics that make up Muriel Kinney's *Rainbow Gold*, is a lullaby, *Bide a Wee*, which is charming and a bit out of the ordinary in conception. (Badger, \$1.)

In *Wild Apples* Jeanne Robert Foster is no Imagist, and she clings still to form. She is best in objective verse, and of this, one chooses first the lines on the "William P. Frye" that well speak the feeling of those who know the sailing vessels of our "down east." (Boston: Sherman, French, \$1.)

Five Men and Pompey, Sertorius, Lucullus, Crassus, Cicero and Caesar, are live, interesting figures in Stephen Vincent Benét's blank verse, and more picturesque and dramatic, we venture, than if he had used the *vers libre* he likes so well. They are new Lays of Ancient Rome in soberer meter. (Boston: Four Seas Company, 60 cents.)

The Path of Dreams recalls the writings of Whittier's early companions. But George M. McClellan, when he writes of his own people, does more than make a beginning in poetry. The strength of feeling and yet the restraint with which he writes of the negro in such poems as *The Feet of Judas* and *Decoration Day* makes for noble verse. (Louisville, Ky.: Morton, \$1.50.)

Profiles, by Arthur Ketchum, has a group of those naïve few line impressions that stand to poems as sketch book drawings do to pictures. But these are as finished in form as they are unfinished in thought, and there are other poems to which one returns gladly. (Badger, \$1.)

We are glad to welcome the new editions of Vachel Lindsay's prose and poetry—say, rather, all poetry, whatever the form—*General William Booth Enters into Heaven* and *Adventures While Preaching the Gospel of Genius*. He understands our prairie people as few writers do. (Macmillan, \$1.25 and \$1.)

Moore's Larger Stock Loose Leaf Binders and Sheets

Sizes, 12x11, 8½x14, 8x10

If you are looking for an attractive offer of a Loose Leaf Outfit—Ledger—Journal—Cash Book—Factory Costs—in fact any kind of a record—inform us as to your needs.

We then will show you what

MOORE'S MODERN METHODS

can do for you. You will be pleased.

This book of 160 pages of instruction and information on Loose Leaf Bookkeeping mailed FREE on request.

Moore's Smaller Stock Loose Leaf Binders and Sheets

Sizes.
11x8½ Loose Leaf Minute Books
8x10 " " Factory Costs
6x9½ " " Order Books
5x8 " " Handy Books for all purposes
3x6¼ " " Salesman's record books and 40 other forms that may be used in these sizes.

Our Loose Leaf Books will fill your every need

PRACTICAL SCHOLARSHIP

The choice of Mr. Ernest Martin Hopkins to succeed President Ernest Fox Nichols as the head of Dartmouth College is recognition of the growing importance of social organization and of one who has achieved remarkable distinction in this field, notwithstanding he is less than forty years of age. In deciding upon their new president, the trustees declared their belief that "the function of the modern college president is even more to coördinate the work of scholarly men to the end of preparing young people for life than himself to set an example in research and discovery." The new president, however, is likely to do both. While he was an undergraduate at Dartmouth, President William J. Tucker recognized his promise of conspicuous ability and appointed him secretary to the president.

In 1910 Mr. Hopkins resigned his secretaryship to become a student and practitioner of applied economics, and the practical results he has obtained during the past six years have brought him into the front rank of interpreters of the problems involved in the relation of employment and employees, viewed from the standpoint of management. For the Western Electric Company, of Chicago; the Filene Department Store, Boston; the American Felt Company, Boston; the Curtis Publishing Company, of Philadelphia, and later the New England Telephone Company, of Boston, he has done remarkable things as an "expert on human relations," and he has sounded the same practical note in his new capacity. "Dartmouth's progress," he says, "has always been most marked during the periods demanding intelligent service, and the immediate needs of a distraught world must be accepted as the compelling opportunity of the college."

HOW TO BUY ADVERTISING

Advertising is no longer a haphazard matter of guess work, and rule of thumb. It has developed into an art—it would hardly be too much to say a science. The wise national advertiser seeking publicity no longer maps out his course guided by his own personal whims or dazzled by sparkling generalities or wild claims as to circulations. The modern advertiser demands accurate, specific information as to what each periodical has to offer in extent of circulation and in kind of readers. He wants to know what his money is buying. One of the most effective agencies at the service of the advertiser today in his quest for effective publicity is the Audit Bureau of Circulations. This independent, impartial organization with a membership composed of advertisers and periodical publishers, examines the circulation books of the periodicals that belong to it, at irregular and unexpected intervals in the same way that Federal

bank examiners descend upon national banks. Thru the bureau's work the advertiser knows the truth, the whole truth, and nothing but the truth about the circulation of each periodical availing itself of the bureau's service. Such service as the Audit Bureau provides is an exceedingly interesting example of the application in modern business of efficiency methods. The annual meeting of the bureau has just been held in Chicago, and the former officers and board of directors—with a single exception—were reelected. The officers of the bureau are: Louis Bruch, American Radiator Company, president; Curtis P. Brady, *Woman's World*, first vice-president; A. W. Erickson, The Erickson Company, Inc., second vice-president; M. F. Harris, Armour & Co., secretary; Hopewell L. Rogers, *Chicago Daily News*, treasurer; Russell R. Whitman, managing director. The board of directors includes: Frank E. Long, *Farmer's Review*; W. B. Cherry, Merrell-Soule Company; Stanley Clague, Taylor-Critchfield-Clague Company; F. R. Davis, General Electric Company; F. C. Grandin, Postum Cereal Company; O. C. Harn, National Lead Company; Frank C. Hoyt, *The Outlook*; Charles F. Jenkins, *Farm Journal*; Emery Mapes, Cream of Wheat Company; L. B. Jones, Eastman Kodak Company; S. C. Dobbs, Coca-Cola Company; M. C. Robbins, *Iron*

PRESIDENT HOPKINS OF DARTMOUTH

Age; E. R. Shaw, *Practical Engineer*; F. H. Squier, Pabst Brewing Company; William Wrigley, Jr., William Wrigley, Jr., Company; Lafayette Young, *Des Moines Capital*.

REPRESENTING UNCLE SAM

Striking tribute to the value of an efficient consular service was given at a recent meeting of the Associated Chambers of Commerce of the United Kingdom, held in London for the purpose of finding means of stimulating the foreign trade of the empire. During an outspoken discussion of the relative merits of the various consular services two delegates stated that they had failed altogether to get certain information concerning their business from British representatives, who they naturally assumed could supply it. The sequel was that the delegates ultimately applied to the American consuls, and in each case were willingly and promptly supplied with the desired information. In view of the much higher salaries which Great Britain pays her consular representatives, as compared with the United States, the British business men did some hard thinking.

EYES IN THE AIR

"Eyes in the air," which are claimed to have given the German fleet its advantage in the North Sea battle, have other than military uses. Walter Niles, an American aviator who recently returned from Japan, was flying over Mineola, Long Island, when, from a height of over a thousand feet, he saw flames bursting from the roof of a house. Trees concealed the fire from people who were working in a field less than a block away. Dropping within shouting distance, the airman warned them of the fire, and having seen an alarm duly turned in, circled off into the air again. Niles was trying out a new high-power battleplane.

TEACHING THE YOUNG IDEA

Commenting editorially on the formation of the National Institute of Efficiency, the *St. Louis Watchman* says: "By all means let us have efficiency; but let us bear in mind that it is not something we are going to come by in merely mastering the instrumentalities of work. The human will is the controlling element and has to be rightly schooled and directed . . . or there is a primal wastage that no perfection of system can overcome." "Seven little girls of one family up in Saskatchewan, Canada, made up their minds," the writer concludes, "to do without candy and also to do their mother's washing, so that each might be able to defray the expenses of a child that is preparing for baptism over in Africa—\$5 in each case. Here was initiative, zest and work, and here the sesame to genuine efficiency."
